3. Repeal of deduction for certain adoption ex- penses.....	52
4. Deductibility of mortgage interest and taxes allocable to tax-free allowances for ministers and military personnel	53
E. EXPENSES FOR BUSINESS OR INVESTMENT.....	55
1. Limitations on deductions for meals, travel, and entertainment	55
2. Floor on deductibility of miscellaneous item- ized deductions; modifications to certain em- ployee business expense deductions.....	76
3. Changes in treatment of hobby losses.....	82
4. Changes in restrictions on deductions for busi- ness use of home	83
F. REPEAL OF POLITICAL CONTRIBUTIONS TAX CREDIT	88

	Page
Title II. Capital Cost Provisions.....	89
A. DEPRECIATION; REGULAR INVESTMENT TAX CREDIT; FINANCE LEASES.....	89
1. Depreciation.....	99
2. Regular investment tax credit.....	110
3. Finance leases.....	110
B. LIMITATION ON GENERAL BUSINESS CREDIT.....	127
C. RESEARCH AND DEVELOPMENT.....	128
1. Tax credit for increasing research expendi- tures; university basic research credit.....	128
2. Augmented charitable deduction for certain donations of scientific equipment.....	140
3. Tax credit for orphan drug clinical testing.....	141
D. RAPID AMORTIZATION PROVISIONS.....	143
1. Trademark and trade name expenditures.....	143
2. Qualified railroad grading and tunnel bores.....	144
3. Bus operating authorities; freight forwarders....	145
4. Removal of architectural and transportation barriers to the handicapped and elderly.....	147
E. REAL ESTATE PROVISIONS.....	148
1. Tax credit for rehabilitation expenditures.....	148
2. Tax credit for low-income rental housing.....	152
F. MERCHANT MARINE CAPITAL CONSTRUCTION FUND.....	174
Title III. Capital Gains and Losses.....	178
A. INDIVIDUAL CAPITAL GAINS AND LOSSES.....	178
B. CORPORATE CAPITAL GAINS.....	181
C. INCENTIVE STOCK OPTIONS.....	184
D. TAX STRADDLES.....	186
Title IV. Agriculture, Natural Resources, and Energy.....	187
A. AGRICULTURE PROVISIONS.....	187
1. Special expensing provisions: soil and water conservation; clearing land.....	187
2. Dispositions of converted wetlands and highly erodible croplands.....	188
3. Prepayments of farming expenses.....	190
4. Discharge of indebtedness income for certain farmers.....	193
B. OIL, GAS, GEOTHERMAL, AND HARD MINERAL PROPER- TIES.....	195
1. Intangible drilling costs and mining explora- tion and development costs.....	195
2. Modification of percentage depletion rules.....	199
a. Denial of percentage depletion for lease bonuses and advance royalties.....	199
b. Excess percentage depletion for coal and iron ore.....	200
3. Gain from disposition of interests in oil, gas, geothermal, or other mineral properties.....	202
C. ENERGY-RELATED TAX CREDITS AND OTHER INCENTIVES. 1. Business energy tax credits.....	204

	Page
2. Neat alcohol fuels	206
3. Taxicab fuels tax exemption	206
4. Duty on imported alcohol fuels	207
Title V. Tax Shelters; Interest Expense	209
A. LIMITATIONS ON LOSSES AND CREDITS FROM PASSIVE ACTIVITIES	209
1. Overview	215
2. Treatment of losses and credits	222
3. Treatment of portfolio income	231
4. Material participation	235
5. Definition of activity	245
6. Rental activity	248
7. Working interest in oil and gas property	250
B. EXTENSION OF AT-RISK RULES TO REAL ESTATE ACTI- VITIES	255
C. INTEREST DEDUCTION LIMITATIONS	262
Title VI. Corporate Taxation	271
A. CORPORATE TAX RATES	271
B. CORPORATE DIVIDENDS RECEIVED DEDUCTION	274
C. DIVIDEND EXCLUSION FOR INDIVIDUALS	276
D. STOCK REDEMPTION PAYMENTS	277
E. EXTRAORDINARY DIVIDENDS RECEIVED BY CORPORATE SHAREHOLDERS	280
F. SPECIAL LIMITATIONS ON NET OPERATING LOSS AND OTHER CARRYFORWARDS	288

LETTER OF TRANSMITTAL

U.S. CONGRESS,
JOINT COMMITTEE ON TAXATION,
Washington, DC, May 4, 1987.

Hon. DAN ROSTENKOWSKI, *Chairman,*
Hon. LLOYD BENTSEN, *Vice-Chairman,*
Joint Committee on Taxation,
U.S. Congress, Washington, DC.

DEAR MESSRS. CHAIRMEN: This document, the General Explanation of the Tax Reform Act of 1986 (P.L. 99-514), was prepared by the staff of the Joint Committee on Taxation, in consultation with the staffs of the House Committee on Ways and Means and the Senate Committee on Finance. It is comparable to similar material prepared by the Joint Committee staff with respect to other major revenue acts in recent years.

A committee report on legislation issued by a Congressional committee sets forth the committee's explanation of the bill as it was reported by that committee. In some instances, a committee report does not also serve as an explanation of the final provisions of the legislation as enacted by the Congress. This is because the versions of the bill reported by the House and Senate committees may differ significantly from the versions of the bill as passed by the House, as passed by the Senate, or as enacted after action by a conference committee.

The Tax Reform Act of 1986, because of its comprehensive scope and the numerous changes which were made to the bill by the Senate and the conference committee, is an example of legislation with respect to which the differences between provisions of the reported bill or committee amendment and provisions of the public law are significant.

The first part of the document is an overall chronology of the legislative background of the Act in the 99th Congress. (In addition to this overall chronology, specific references to the legislative background of each provision of the Act are set forth in footnotes accompanying the explanations of the provisions in the third part of the document.) The second part presents the general reasons for the legislation. The third part consists of explanations of the provisions of the Act. (Title XVIII of the Act, making technical corrections to prior tax legislation, is not described in this document.) An appendix sets forth the estimated budget effects of the provisions of the Act described in the document for fiscal years 1987-1991.

Sincerely yours,

DAVID H. BROCKWAY, *Chief of Staff.*

I. LEGISLATIVE BACKGROUND OF THE ACT

The following is an overall chronology of the legislative background in the 99th Congress of H.R. 3838, the Tax Reform Act of 1986 (Public Law 99-514).¹

A. Administration Tax Reform Proposal

In May 1985, President Reagan submitted the Administration's tax reform proposals to the Congress.² Previously, the Treasury Department, in response to the President's request in his 1984 State of the Union Address, had conducted a comprehensive study of the U.S. tax system and submitted the results of the study with recommendations to the President in November 1984.³

B. House Action

Ways and Means Committee

H.R. 3838 was introduced and ordered favorably reported by the House Committee on Ways and Means on December 3, 1985, after almost a year-long review of tax reform proposals by the full committee and subcommittees in public hearings and in markup consideration. The following is an overview of full committee and subcommittee activity on tax reform legislation during 1985.

Committee hearings

The Ways and Means Committee held 30 days of full committee public hearings on comprehensive tax reform proposals. The committee began public hearings on comprehensive tax reform proposals on February 27, 1985. Committee hearings on tax reform issues continued on March 26; May 30; June 4, 5, 7, 11-14, 17, 18, 20, 24-27; and July 8-12, 17, 19, 22, 25, 26, 29-31, 1985. Also, a committee hearing was held on May 16, 1985, on proposed technical corrections to the Deficit Reduction Act of 1984 (P.L. 98-369) and the Retirement Equity Act of 1984 (P.L. 98-397).

The committee's tax reform hearing consideration included 1984 Treasury Department recommendations, the President's tax reform proposal made in May 1985, as well as various Congressional and other proposals.

¹ In addition to this overall chronology of the Act, specific references to the legislative background of each provision are set forth in footnotes accompanying the explanation of the provisions in Part III of this document. These legislative background references include, as appropriate, citations to the following: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985 (H. Rep. 99-426); H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986 (S. Rep. 99-313); House and Senate floor amendments to H.R. 3838; and the conference report on H.R. 3838 as filed on September 18, 1986 (H. Rep. 99-841).

² The White House, *The President's Tax Reform Proposals to the Congress for Fairness, Growth, and Simplicity*, May 1985.

³ Treasury Department, *Tax Reform for Fairness, Simplicity, and Economic Growth*, November 1984.

Subcommittee hearings

Several Ways and Means Subcommittee hearings were held during 1985 that related to subject matters included in H.R. 3838.

Subcommittee on Select Revenue Measures.—The Select Revenue Measures Subcommittee held hearings on the following areas:

March 19, 1985 — Targeted jobs tax credit

April 1, 2, 16, 1985 — Acquisitions and mergers (with Oversight Subcommittee)

April 25, 1985 — Attorney's fees

May 22, 1985 — Carryover of net operating losses (NOLs)

June 6, 1985 — Tax burdens of low-income wage earners

Subcommittee on Oversight.—The Oversight Subcommittee held hearings on the following areas:

June 21, 1985 — IRS taxpayer refund delays

July 18, and September 5, 6, 1985 — Retirement income security (with Social Security Subcommittee)

September 20, 1985 — High-income taxpayers and partnership tax issues

Committee markup

The Ways and Means Committee conducted 26 days of markup on tax reform proposals: beginning on September 18, 1985; continuing on September 26, 30, October 1-4, 7-9, 11, 15, 23, 25-27, November 6, 15-17, 19-23; and concluding on December 3, 1985, when the tax reform bill, H.R. 3838, was introduced and ordered favorably reported (by a vote of 28-8). There was also a committee markup on technical corrections to the 1984 tax legislation on September 27, 1985, which was included as a separate title of the bill.

The committee report on H.R. 3838 was filed on December 7, 1985 (H. Rep. 99-426).

House Floor Action

On December 10, 1985, the House Rules Committee approved a modified closed rule on H.R. 3838 (H. Res. 336), making certain amendments in order for House floor consideration. This initial rule failed of passage (202-223, 1 "present") on December 11, 1985. On December 16, 1985, the Rules Committee approved another modified closed rule (H. Res. 343), which was adopted (258-168, 1 "present") by the House on December 17, 1985.

The House passed H.R. 3838, as amended, by voice vote, on December 17, 1985.

C. Senate Action

Finance Committee

H.R. 3838 was ordered favorably reported by the Senate Committee on Finance on May 6, 1986, with an amendment in the nature of a substitute. This action followed an almost year-long comprehensive review in the 99th Congress of tax reform proposals by the full committee and subcommittees in public hearings and markup

consideration. The following is an overview of full committee and subcommittee activity on tax reform legislation during 1985 and 1986.

Committee hearings

The Finance Committee held 36 days of full committee public hearings on comprehensive tax reform proposals in 1985 and 1986. In 1985, the committee held public hearings on comprehensive tax reform proposals on May 9, June 11-13, 17-20, and 25-27; July 9-11, 16-19, and 24-25; September 24 and 26; and October 1-4 and 9-10. In 1986, committee hearings were held on January 29-30; February 3-16; March 4; and April 21.

The committee's tax reform hearing consideration included the President's tax reform proposal made in May 1985, the House-passed bill, and various Congressional and other proposals.

Subcommittee hearings

Several Finance Subcommittee hearings were held during 1985 and 1986 that related to subject matters included in H.R. 3838, as amended by the Committee on Finance.

Subcommittee on Savings, Pensions, and Investment Policy.—The Savings, Pensions, and Investment Policy Subcommittee held hearings on the following areas:

September 9, 1985 — Post-retirement health benefits

November 22, 1985 — Targeted jobs tax credit extension

January 28, 1986 — Retirement Income Policy Act

Subcommittee on Energy and Agricultural Taxation.—The Energy and Agricultural Taxation Subcommittee held a hearing on the following area:

June 21, 1985 — Impact of taxation on energy policy

Subcommittee on Health.—The Health Subcommittee held a hearing on the following area:

September 9, 1985 — Asbestos-related disease trust fund

Subcommittee on Taxation and Debt Management.—The Taxation and Debt Management Subcommittee held a hearing on the following area:

January 31, 1986 — Mortgage-backed securities

Committee markup and reporting of bill

The Finance Committee conducted 17 days of markup on the tax reform bill: beginning on March 19, 1986; continuing on March 24-26, April 8-10, 14-18, 22, 24, 28, and May 5; and concluding on May 6, 1986, when the tax reform bill, H.R. 3838, as amended, was ordered favorably reported (by a vote of 20-0).

The committee report on H.R. 3838 was filed on May 29, 1986 (S. Rep. 99-313).

Senate Floor Action

H.R. 3838, as amended by the Finance Committee, was brought up on the Senate floor on June 4, 1986, and debate on the bill con-

tinued on June 9-13, 16-20, and 23-24, 1986, with passage of the bill, as amended, on June 24 (by vote of 97-3).

D. Conference Action

Conference

The Senate requested a conference on H.R. 3838 on July 15, 1986, and appointed the following conferees: Senators Packwood, Dole, Roth, Danforth, Chafee, Wallop, Long, Bentsen, Matsunaga, Moynihan, and Bradley. On July 16, the House agreed to the Senate request for a conference on the bill, and appointed the following conferees: Messrs. Rostenkowski, Pickle, Rangel, Stark, Gephardt, Russo, Pease, Duncan, Archer, Vander Jagt, and Crane.

Formal conference committee meetings were held on July 17-18 and 21, 1986, and concluded on August 16, 1986, when the conferees met and approved the conference agreement. The conference report on H.R. 3838 was filed on September 18, 1986 (H. Rep. 99-841, Vols. I and II).

House-Senate consideration of Conference Report

The House approved the conference report on H.R. 3838 on September 25, 1986, by a vote of 292-136, after a motion to recommit failed by a vote of 160-268. The conference report was considered by the Senate on September 26, 1986, and passed by a vote of 74-23 on September 27, 1986.

E. Enactment into Law

H.R. 3838, the Tax Reform Act of 1986, was signed into law by President Reagan on October 22, 1986 (P.L. 99-514).

F. House-Senate Consideration of H. Con. Res. 395

On September 25, 1986, immediately after its approval of the conference report on H.R. 3838, the House passed (by voice vote) H. Con. Res. 395, to instruct the enrolling clerk to make certain technical and clerical corrections in the conference report statute.

H. Con. Res. 395 was agreed to by the Senate (by voice vote) on October 16, 1986, with amendments. The House Rules Committee granted a rule on October 16, and the House adopted the rule (by voice vote) on October 17 for consideration of the resolution as amended by the Senate. Also on October 17, the House concurred in the Senate amendment with further amendments and returned the resolution to the Senate.

On October 18, 1986, the Senate agreed (by voice vote) to certain of the House amendments to the resolution, disagreed to certain other amendments, and insisted on certain of its amendments. Also on October 18, the House disagreed to the Senate amendments to the House amendments to the original Senate amendment. H. Con. Res. 395 was not agreed to by both the House and the Senate before the 99th Congress adjourned *sine die* on October 18, 1986.

G. Subsequent Related Tax Legislation

H.R. 5300, the Omnibus Budget Reconciliation Act of 1986 (P. L. 99-509, signed on October 21, 1986), contains a provision (sec. 8002)

increasing the Code section 6661(a) penalty on underpayments of tax to 25 percent rather than 20 percent as provided in H.R. 3838 (sec. 1504). The conference report on H.R. 5300 was filed on October 17, 1986 (H. Rep. 99-1012), and was passed by the Senate and the House also on October 17. Although H.R. 5300 was signed before H.R. 3838, the H.R. 5300 provision was intended to prevail since it was considered and passed by the House and the Senate subsequent to passage of H.R. 3838.⁴

In addition, H.R. 5300 includes a provision (sec. 8071) relating to a truck leasing transitional rule included in the Senate amendment to H.R. 3838 (sec. 204(a)), application of at-risk rule to low-income housing credit (sec. 8072 of H.R. 5300 and sec. 252(a) of H.R. 3838), and a transitional rule relating to treatment of certain rural housing under the passive loss rules (sec. 8073 of H.R. 5300 and sec. 502(d) of H.R. 3838).

⁴ See explanation in Title XV. Part. A., footnote 14. A technical correction may be needed so that the statute reflects this intent.

II. GENERAL REASONS FOR THE ACT

Overview

The Tax Reform Act of 1986 (the "Act") represents one of the most comprehensive revisions of the Federal income tax system since its inception. Congress was concerned that many taxpayers found the prior-law tax system unfair and overly complex. Further, Congress believed that a number of features of the prior-law tax system resulted in excessive interference in labor, investment, and consumption decisions of taxpayers.

After extensive review of virtually the entire prior tax statute, Congress concluded that only a thorough reform could assure a fairer, more efficient, and simpler tax system. Congress believed that the Act, establishing the Internal Revenue Code of 1986, will restore the trust of the American people in the income tax system and lead the nation's economy into greater productivity.

The Act makes sweeping changes to the prior-law tax system. First, Congress desired a fairer tax system. Congress questioned the fairness of a tax system that allowed some high-income individuals to pay far lower rates of tax than other, less affluent individuals. The Act provides new limitations on the use of losses from passive investments to shelter other types of income and expands the minimum tax to curtail these tax inequities in the future. The Act also completely removes six million low-income individuals from the income tax roll and provides significant reductions in the tax burden of other working low-income individuals.

Second, Congress desired a more efficient tax system. The prior-law tax system intruded at nearly every level of decision-making by businesses and consumers. The sharp reductions in individual and corporate tax rates provided by the Act and the elimination of many tax preferences will directly remove or lessen tax considerations in labor, investment, and consumption decisions. The Act enables businesses to compete on a more equal basis, and business success will be determined more by serving the changing needs of a dynamic economy and less by relying on subsidies provided by the tax code.

Third, Congress desired a simpler tax system for individuals. Beginning in 1988, the Act establishes two individual income tax rates—15 percent and 28 percent—to replace more than a dozen tax rates in each of the prior-law rate schedules, which extended up to 50 percent. Significant increases in the standard deduction and modifications to certain personal deductions provide further simplicity by greatly reducing the number of taxpayers who will itemize their deductions.

Fairness

A primary objective of Congress was to provide a tax system that ensures that individuals with similar incomes pay similar amounts of tax. The ability of some individuals to reduce their tax liability excessively under prior law eroded the tax base and required tax rates to be higher than otherwise would have been necessary. Congress was concerned that other individuals, unable to take advantage of tax shelters, had lost confidence in the tax system and may have responded by evading their tax liability.

The Act provides a new restriction on the use of passive losses to offset unrelated income. Further, a strengthened minimum tax precludes higher income individuals from substantially eliminating income tax liability through the excessive use of preferences. With the adoption of these restrictions, the elimination of other preferences, and other base-broadening provisions, the Act sharply reduces the top individual tax rate from 50 percent to 28 percent, while leaving the tax burden of the highest income groups essentially unchanged.

Congress believed that as a result of the sharp reductions in tax rates, it was no longer necessary to provide a lower tax rate for capital gains income of individuals. Eliminating the preferential treatment of capital gains income, and thereby eliminating the incentive to recharacterize certain income in order to qualify for capital gains treatment, is expected to eliminate the abuse of this provision and reduce the complexity of the tax system.

The Act retains the most widely utilized itemized deductions, including deductions for home mortgage interest, State and local income taxes, real estate and personal property taxes, charitable contributions, casualty and theft losses, and medical expenses (above an increased floor). Other deductions that benefited a limited number of taxpayers, added complexity to tax filing, or were subject to abuse are restricted by the Act. For example, the Act tightens the requirements for deducting business meals and permits only 80 percent of business meal and entertainment expenses to be deducted. Other deductions available under prior law, such as deductions for attending investment seminars and for "educational" travel costs, have been eliminated. These expenditures differ little from other personal consumption expenditures, which generally are not deductible.

As part of the approach of the Act to reduce tax rates through base-broadening, the Act disallows the itemized deductions for State and local sales taxes and phases out the deduction for personal interest expense for other than a mortgage on a first or second home. Congress also believed that these deductions provided tax benefits for consumption at the expense of savings and resulted in unnecessary complexity.

Certain items of income that are similar to taxable compensation are no longer excluded from taxable income under the Act. For example, the prior-law partial exclusion for unemployment compensation is repealed, and most prizes and awards are includable in income. Also, the Act restricts the prior-law practice of some high-income families taking advantage of the graduated rate structure by transferring investment property to their minor children and

thus sheltering their investment earnings at their children's lower tax rates.

The Act makes numerous changes to increase employee eligibility for pension benefits. The Act expands the rules requiring coverage of a broad group of employees under an employer-maintained retirement plan, reduces from 10 years to five years the maximum time an employee must work for a given employer before becoming vested, and eliminates the ability of employers to offset completely the pension benefits of low-paid workers by the amount of their social security benefits. The Act also reduces the amount of income that can be deferred from taxation using qualified cash or deferred arrangements (sec. 401(k) and 403(b) plans), and provides tighter nondiscrimination tests to ensure that such plans do not disproportionately benefit highly compensated employees.

Congress believed the prior-law tax treatment of individual retirement accounts (IRAs) was unnecessarily generous for individuals who participate in other tax-favored retirement arrangements, and the Act eliminates the deduction for contributions to an IRA for such individuals with income above specified levels. Congress believed that the lower tax rates provided by the Act will themselves stimulate additional work effort and saving, thereby eliminating the need for this deduction for these individuals. The Act permits these individuals, however, to make nondeductible contributions to an IRA and to defer taxes on the earnings of these contributions. To ensure universal availability of tax-favored retirement arrangements, the Act retains the prior-law IRA deduction for individuals unable to participate in other plans.

In addition to ensuring that high-income taxpayers pay their share of the Federal tax burden, the Act provides tax relief to low- and middle-income wage earners. To achieve this goal, the Act substantially increases the standard deduction (the prior-law zero bracket amount) and almost doubles the personal exemption. Together with the greatly expanded earned income credit, these provisions relieve approximately six million low-income individuals from income tax liability and ensure that no families below the poverty level will have Federal income tax liability. The child care credit is preserved to assist working parents with their dependent care expenses.

The elderly and blind also receive tax relief under the Act. Although such individuals will not receive an extra personal exemption as under prior law, an additional standard deduction amount of \$600 is provided for married elderly or blind individuals and of \$750 for single elderly or blind individuals. These extra standard deduction amounts are in addition to the increased standard deduction and personal exemption provided for all taxpayers. The prior-law credit for certain elderly individuals and for individuals who are permanently and totally disabled is retained.

Congress also believed that fairness in the tax system requires that corporate taxpayers pay amounts of tax appropriate for their level of earnings. Congress found it unjustifiable that under prior law some corporations reported large earnings and paid significant dividends to their shareholders, yet paid little or no taxes on that income to the government. Congress designed a strong alternative minimum tax for corporations, with a broad income tax base, to

prevent corporations from significantly reducing or eliminating their tax liability.

The Act makes changes to several accounting rules to provide more accurate matching between the recognition of income and deductions for expenditures related to this income. Large commercial banks will no longer be allowed to take deductions for bad debts before the underlying loan is determined to be wholly or partially worthless. Use of the installment method is restricted, and certain costs of inventory and self-constructed assets are required to be capitalized under the Act. Use of the completed contract method also is limited. Similarly, the Act reduces the deduction for unpaid losses of property and casualty insurance companies to account better for the timing difference between the deduction and payment of losses.

The Act modifies the tax treatment of foreign income. Congress desired to limit the incentives under prior law to move income offshore to avoid tax; accordingly, the Act restricts the ability of firms to use tax havens. The Act also limits the ability of taxpayers to use foreign taxes imposed on one kind of income to offset U.S. tax on unrelated income. The Act further provides for more accurate characterization of income as foreign source (and thus eligible for the foreign tax credit) or U.S. source (and thus ineligible for that credit). Certain provisions of prior law that benefited U.S. exporters paying high foreign taxes were retained, however, so as not to hinder the international competitiveness of U.S. firms.

Together with other changes made by the Act, the aggregate corporate income tax liability is estimated to increase by approximately \$120 billion over fiscal years 1987 through 1991, while the aggregate individual income tax liability is reduced by a similar amount. Even with these changes, the share of total income tax receipts paid by corporations will remain below pre-1980 levels.

Congress also believed that it is important to maintain the trust of honest taxpayers in the tax system by ensuring that other taxpayers cannot illegally evade their tax liability. The Act extends information reporting requirements and provides for increased penalties for failure to report information properly to the Internal Revenue Service and for failure to pay tax.

Efficiency

The Act's most important measures in promoting the efficiency of the economy and in reducing the interference of the tax system in labor, investment, and consumption decisions are the dramatic reductions in personal and corporate tax rates. Lower marginal tax rates stimulate work effort and saving by leaving more of each additional dollar of wage and investment income in the hands of the taxpayer. Further, lower tax rates reduce the value of tax deductions, leading investment and consumption decisions to be made more on the basis of their economic merits and less on the value of tax benefits.

The prior-law tax system contained a number of tax preferences that did not satisfactorily serve the purposes for which they were designed. In the past few years, tax incentives have contributed to the excessive construction of office buildings and record vacancy rates, excess investment in agriculture tax shelters by high-income

investors with little knowledge of farming, and distortions at all levels of business—from financing choices to production decisions.

Congress desired to make the tax treatment of diverse economic activities more even. Neutral taxation promotes the efficient allocation of investment and yields productivity gains without requiring additional saving. The Act repeals the investment tax credit, which discriminated against long-lived investment and was used as a tax shelter device. The incentive for investment provided by the credit instead will be provided by lower tax rates and accelerated depreciation.

The Act retains the prior-law Accelerated Cost Recovery System with some modifications to provide for more neutral depreciation treatment across diverse assets. The depreciation period of certain assets, such as real property and long-lived equipment, is lengthened to reflect more closely the actual useful life of such assets. Congress believed these changes will help provide a more efficient capital cost recovery system.

Tax incentives under prior law favoring mergers and acquisitions also are restricted by the Act. The Act repeals the *General Utilities* doctrine, which allowed capital gains from corporate liquidations to escape tax at the corporate level. The *General Utilities* doctrine created a bias favoring acquisitions as a technique for tax-free realization of corporate gains and at the same time allowing the purchaser of the liquidating corporation's assets a higher basis for purposes of depreciation and depletion. The Act further reduces the incentive for tax-motivated corporate acquisitions by limiting the use of net operating losses obtained through an acquisition to offset income of the acquiring firm.

The Act also adopts reforms affecting the availability of tax-exempt financing. The Act restricts tax-exempt financing for fundamentally private activities and discourages the issuance of tax-exempt bonds which under prior law was motivated in part by the opportunity to gain arbitrage profits.

The Act generally preserves the prior-law treatment of natural resources and retains a number of business incentives that Congress believed to be beneficial to the economy. The incremental research tax credit, which was scheduled to expire at the end of 1985, was extended for three additional years at a 20-percent rate. The benefits of research expenditures to the economy as a whole are frequently greater than the rewards received by those undertaking the risks of research; extending the credit helps ensure that adequate amounts of research are undertaken to enhance productivity. Certain expired business energy tax credits also are temporarily extended by the Act, although at reduced rates.

The Act provides a new tax credit for low-income rental housing to consolidate the uncoordinated subsidies under prior law. The credit is better targeted to low-income individuals than prior-law provisions, and requires that tenants' rents be limited to affordable amounts in relation to their incomes. The Act also preserves rehabilitation tax credits for historic and pre-1936 structures at a reduced rate. The credit has been found to be useful in revitalizing depressed urban areas and in preserving America's architectural past for future generations.

Simplicity

Under prior law, many taxpayers were concerned with the recordkeeping, paperwork, and computations necessitated by tax filing. Many taxpayers felt a need to rely on paid tax preparers in order to calculate accurately their tax liability. The complexity of the tax code was further increased by other taxpayers who, seeking to reduce their tax liability, helped spawn a thriving tax shelter industry which sought to reduce tax liability by making use of special tax provisions and by engaging in sophisticated financial arrangements. The cost to taxpayers of complying with all the requirements of the individual income tax under prior law in terms of the time spent on recordkeeping and tax filing was estimated to equal 5 to 10 percent of the tax actually paid. Thus, simplification of the tax code itself is a form of tax reduction.

The Act reduces the complexity of the tax code for many Americans. The Act provides just two individual tax brackets, and over 80 percent of all individual taxpayers will pay no tax or tax at a marginal rate no higher than 15 percent. As a result of the significant increases in the standard deduction and modifications to certain personal deductions provided by the Act, the number of itemizers is estimated to decline by approximately one-quarter. Taxpayers who will use the standard deduction rather than itemize their deductions will be freed from much of the recordkeeping, paperwork, and computations that were required under prior law.

Other individuals who under prior law devoted a great amount of time and effort to find investments that reduced their tax liability also benefit from tax simplification. Many of these investments would have been unprofitable if not for the paper losses they created. With the significant rate reductions achieved by this Act, many taxpayers will find such investments unnecessary and non-competitive with other less complex and more productive investments.

Some taxpayers who under prior law used various preferences to reduce their tax liability by large amounts may find that the Act does not simplify the tax filing process for them as much as it does for other individuals. In part, the complexity of the tax system for these individuals is needed to measure accurately their income and to ensure that these individuals pay a rate of tax appropriate for their income.

In conclusion, Congress believed that the Tax Reform Act of 1986 provides a fairer, more efficient, and simpler tax system. The changes made by this Act represent a historic reform of the Federal income tax structure. By providing sharply lower tax rates to individuals and corporations, the need for special tax preferences is greatly diminished. The Act eliminates needless interference with economic activity and establishes the framework for a growing and productive economy.

III. GENERAL EXPLANATION OF THE ACT

TITLE I—INDIVIDUAL INCOME TAX PROVISIONS

A. Basic Rate Structure:

Rate Reductions; Increase in Standard Deduction and Personal Exemptions; Repeal of Two-Earner Deduction and Income Averaging (Secs. 101-104, 131, 141, and 151 of the Act and secs. 1, 63, 151, and 221 of the Code) ¹

Prior Law

Tax rate schedules

Filing status classifications

Separate tax rate schedules are provided for the four filing status classifications applicable to individuals—(1) married individuals filing jointly ² and certain surviving spouses; (2) heads of household; (3) single individuals; and (4) married individuals filing separately.

In general, the term head of household means an unmarried individual (other than a surviving spouse) who pays more than one-half the expenses of maintaining a home for himself or herself and for a child or dependent relative who lives with the taxpayer, or who pays more than one-half the expenses, and of the cost of maintaining their household, of his or her dependent parents. An unmarried surviving spouse may use the rate schedule for married individuals filing jointly in computing tax liability for the two years following the year in which his or her spouse died if the surviving spouse maintains a household that includes a dependent child.

Computation of tax liability

Federal income tax liability is calculated by applying the tax rates from the appropriate schedule to the individual's taxable income, and then subtracting any allowable tax credits. Under prior law, taxable income equalled adjusted gross income (gross income less certain exclusions and deductions) minus personal exemptions, and minus itemized deductions to the extent they exceeded the zero bracket amount (ZBA). For 1986, individuals who did

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, secs. 101-03, 131; H.Rep. 99-426, pp. 80-93; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 101-04, 131, and 151; S.Rep. 99-313, pp. 29-42; Senate floor amendment, 132 Cong. Rec. S 7665-73 (June 17, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 1-11 (Conference Report).

² For tax purposes, an individual's marital status for a year generally is determined on the last day of the year. If one spouse dies during the year, the surviving spouse generally is eligible to file a joint return for that year.

not itemize were allowed a deduction for charitable contributions in addition to the ZBA.

The prior-law rate schedules included the zero (tax rate) bracket amount as the first bracket; the ZBA was provided in lieu of a standard deduction. The prior-law rate structure consisted of up to 15 taxable income brackets and tax rates beginning above the ZBA.

1986 tax-rate schedules

The following rate schedule provisions applied for 1986 and reflected an adjustment for 1985 inflation.

Married individuals; surviving spouses.—There were 14 taxable income brackets above the ZBA of \$3,670. The minimum 11-percent rate started at taxable income above \$3,670; the maximum 50-percent rate started at taxable income above \$175,250.

For married individuals filing separate returns, the ZBA was one-half the ZBA on joint returns, and the taxable income bracket amounts began at one-half the amounts for joint returns.

Heads of household.—There were 14 taxable income brackets above the \$2,480 ZBA. The minimum 11-percent tax rate started at taxable income above \$2,480; the maximum 50-percent rate started at taxable income above \$116,870. The tax rates applicable to a head of household were lower than those applicable to other unmarried individuals on taxable income above \$13,920. Thus, a head of household in effect received a portion of the benefits of the lower rates accorded to a married couple filing a joint return.

Single individuals.—There were 15 taxable income brackets above the \$2,480 ZBA for single individuals (other than heads of household or surviving spouses). The minimum 11-percent tax rate started at taxable income above \$2,480; the maximum 50-percent rate started at taxable income above \$88,270.

The bracket dollar amounts described above for 1986 were indexed to reflect an inflation rate of approximately four percent in the preceding fiscal year, i.e., for the 12-month period ending September 30, 1985. For 1987 and later years, prior law would have provided that the dollar figures defining the tax brackets were to be adjusted annually according to annual percentage changes in the consumer price index for the 12-month period ending September 30 of the preceding year.

Standard deduction (zero bracket amount)

Under prior law, the first positive taxable income bracket (i.e., the 11-percent marginal tax rate bracket) began just above the ZBA. The following ZBA amounts applied for 1986 and reflected an adjustment for 1985 inflation.

<i>Filing status</i>	<i>ZBA</i>
Joint returns and surviving spouses.....	\$3,670
Heads of household	2,480
Single individuals.....	2,480
Married individuals filing separately.....	1,835

The ZBA also served under prior law as a floor under the amount of itemized deductions. Itemizers reduced their AGI by their personal exemptions and by the excess of their itemized deductions over the appropriate ZBA, in order to avoid doubling the benefit of the ZBA, and then used the appropriate tax rate schedule or tax table to compute or find their tax liability.

Personal exemption

Exemption amount.—For 1986, the personal exemption amount for an individual, the individual's spouse, and each dependent was \$1,080. Under prior law, one additional personal exemption was provided for an individual who was age 65 or older, and for an individual taxpayer who was blind.

Rules for dependents.—Under prior law, a taxpayer could claim a personal exemption for himself or herself and for each additional dependent—spouse, child, or other individual—whose gross income did not exceed the personal exemption amount. In addition, parents could claim a personal exemption for a dependent child (for whom they provided more than one-half the support) who had income exceeding the personal exemption amount if the dependent child was either under age 19 or a full-time student. The child or other dependent also could claim a full personal exemption on his or her return.

A child eligible to be claimed as a dependent on his or her parents' return could use the ZBA only to offset earned income. Thus, a child with unearned income exceeding the personal exemption amount was required to file a return and pay tax on the excess (reduced by any allowable itemized deductions).

Adjustments for inflation

Under prior law, the dollar amounts defining the tax rate brackets, the ZBA (standard deduction), and the personal exemption amount were adjusted annually for inflation, measured by changes in the Consumer Price Index for all urban consumers (CPI) over the 12-month period ending September 30 of the prior calendar year. If the inflation adjustment was not a multiple of \$10, the increase was rounded (up or down) to the nearest multiple of \$10.

Two-earner deduction

Under prior law, married individuals filing a joint return were allowed a deduction equal to 10 percent of the lesser of the earned income of the lower-earning spouse or \$30,000; the maximum deduction thus was \$3,000.

Income averaging

An eligible individual could elect under prior law to have a lower marginal rate apply to the portion of the current year's taxable income that exceeded 140 percent of the average of his or her taxable income for the prior three years.

Reasons for Change

General objectives

The approach of the Act in broadening the base of the individual income tax allows a considerable reduction in marginal tax rates and in the overall income tax burden on individuals.

The provisions in the Act reducing tax rates for individuals, as well as increasing the standard deduction, the personal exemption, and the earned income credit, were fashioned to achieve three important objectives: (1) to eliminate income tax burdens for families with incomes below the poverty line; (2) to provide an equitable distribution of tax reductions among individuals; and (3) to reduce the marriage penalty sufficiently so that there is no need for an additional deduction for two-earner couples. In addition, the increase in the standard deduction, coupled with changes to the itemized deductions, will reduce the number of individuals who must itemize their deductions, and thus will contribute to a simpler tax system.

Relief for low-income families

A fundamental goal of the Congress was to relieve families with the lowest incomes from Federal income tax liability. Consequently, the Act increases the amounts of both the personal exemption and the standard deduction, as well as the earned income credit, so that the income level at which individuals begin to have tax liability (the tax threshold) will be raised sufficiently to remove six million poverty-level taxpayers from Federal income tax liability. This restores to the tax system an essential element of fairness that has been eroded since the last increase in the personal exemption.

The ZBA and personal exemption had been unchanged from the levels set in the Revenue Act of 1978, until inflation adjustments began in 1985. Notwithstanding these adjustments, inflation had reduced the real value of the standard deduction and personal exemption in setting a threshold level below which income was not taxed. Although the rate reductions in 1981 reduced tax liabilities partly in recognition of the burdens of inflation and social security taxes, those reductions did not provide relief for marginally taxable individuals who would not have been subject to tax liability but for past inflation.

The increase in the personal exemption to \$1,900 in 1987 (\$1,950 and \$2,000 in 1988 and 1989) under the Act—the first statutory increase in the exemption since 1978—contributes both to removing the working poor from the tax rolls and extending relief to other low-income individuals. The personal exemption increase also recognizes the significant costs of raising children. The increases in the standard deduction and personal exemption reduce tax burdens for families (below the phase-out ranges) by raising the tax threshold.

Under the Act, all tax thresholds (the beginning point of income tax liability) are higher than the estimated poverty level for 1988 except for single individuals. In Table I-1 below, the columns showing calculations without taking into account the earned income credit reflect the fact that the tax threshold for heads of household (unmarried individuals who support children or certain dependent relatives) is raised proportionately more than the tax thresholds

for married individuals filing jointly or single individuals. Married individuals receive a larger proportionate increase in the threshold than single individuals, in order to offset the effect of the repeal of the two-earner deduction. With the addition of the earned income credit to the computation, the tax threshold for those eligible for the credit rises even further.

Table I-1.—Income Tax Thresholds in 1988 Under Prior Law and Under the 1986 Act

Filing status	Family size	Including earned income credit		Without earned income credit		Estimated poverty level
		Prior law	1986 Act	Prior law	1986 Act	
Single.....	1	3,760	4,950	3,760	4,950	6,024
Joint.....	2	6,150	8,900	6,150	8,900	7,709
Head of household..	2	8,110	12,416	4,900	8,300	7,709
Joint.....	4	9,783	15,116	8,430	12,800	12,104
Head of household..	4	9,190	14,756	7,180	12,200	12,104

NOTE.—These calculations are based on the following assumptions: (1) inflation is equal to the figures forecast by the Congressional Budget Office in January 1987; (2) families with dependents are eligible for the earned income credit; (3) all income consists of money wages and salaries; and (4) taxpayers are under age 65.

There are two principal reasons why the tax threshold for single persons (other than heads of household) is not above the poverty line. First, any further increases in the standard deduction for single taxpayers beyond those provided by the Act would cause significant marriage penalties for two single individuals who married. Second, because the income of family members (other than spouses) is not combined in computing tax liability, and because the tax rate structure does not recognize economies of sharing household costs with other individuals, the income of single individuals does not represent a good measure of whether or not the living conditions of these individuals are impoverished.

More than two-thirds of all single individuals with income less than \$10,000 are under age 25, according to 1984 census data; these individuals are likely to be receiving significant support from other family members that is not reflected on the tax return. In addition, the census data reflects that the majority of single individuals between ages 25 and 64 live with other individuals; thus, their household costs are shared. Accordingly, within the existing framework of defining the unit of tax liability, the Congress believed that the poverty line is not an accurate guide to the true economic circumstances of the majority of those who file tax returns as single individuals.

Equitable distribution of tax burden

The Congress also believed that it was desirable for the tax reductions provided under the Act to be distributed equitably among

taxpayers. Table I-2 below shows the changes made by the Act in the distribution of the tax burden in 1987 and 1988; this table reflects the effect of major provisions affecting individuals, including the rate reductions, increases in the standard deduction and personal exemption, and changes in itemized deductions.

Table I-2 shows the percentage changes in tax liabilities between prior law and the Act for each of nine income classes. In the aggregate, the Act reduces tax liability of individuals by 2.2 percent in 1987 and by 6.1 percent in 1988.

Table I-2.—Percentage Change in 1987 and 1988 in Income Tax Liability Under the Tax Reform Act of 1986

Income class [thousands of 1986 dollars]	Percentage Change in Income Tax Liability	
	1987	1988
Less than \$10	-57.2	-65.1
\$10 to \$20	-16.7	-22.3
\$20 to \$30	-10.8	-9.8
\$30 to \$40	-9.4	-7.7
\$40 to \$50	-9.8	-9.1
\$50 to \$75	-1.0	-1.8
\$75 to \$100	4.3	-1.2
\$100 to \$200	4.6	-2.2
\$200 and above.....	9.8	-2.4
Total.....	-2.2	-6.1

NOTE.—These figures do not take account of certain provisions affecting individuals. Thus, the total tax reductions are somewhat different from what is indicated in this table.

Table I-3 shows average income tax liability and tax rate by income class for 1988, the first year in which the changes in the tax rates and standard deduction are fully effective. By virtue of restructuring the tax schedules and broadening the tax base for individuals, and reducing corporate tax preferences, the Act produces substantial reductions in individual income tax liabilities.

Table I-3.—Average Income Tax Liability and Tax Rates in 1988 Under Prior Law and Under the Tax Reform Act of 1986

Income class [thousands of 1986 dollars]	Average income tax			Average income tax rate (percent)	
	Prior law	1986 Act	Differ- ence	Prior law	1986 Act
Less than \$10	\$60	\$21	—\$39	1.6	0.5
\$10 to \$20	895	695	—200	5.7	4.4
\$20 to \$30	2,238	2,018	—220	8.3	7.5
\$30 to \$40	3,527	3,254	—273	9.5	8.7
\$40 to \$50	5,335	4,849	—486	11.1	10.1
\$50 to \$75	8,538	8,388	—150	13.3	13.1
\$75 to \$100	14,469	14,293	—176	15.7	15.6
\$100 to \$200	27,965	27,353	—612	19.3	18.9
\$200 and above.....	138,463	135,101	—3,362	22.8	22.3
Average tax liability or tax rate.....	3,176	2,982	—194	11.8	11.1

NOTE.—These figures do not take account of certain provisions affecting individuals. Thus, the total tax reductions are somewhat different from what is indicated in this table.

The income tax liability of individual taxpayers will decline an average of \$194 in 1988, from an average \$3,176 under prior law to an average \$2,982 under the Act, as shown in Table I-3.

Simplification of tax returns

The Congress believed that the tax rate schedules in prior law were too lengthy and complicated. The Act provides a two-rate tax structure (15 and 28 percent), beginning in 1988. Under the Act, more than 80 percent of individuals either will be in the 15-percent bracket or will have no Federal income tax liability.

The prior-law tax rate structure is modified by the Act to make the individual income tax fairer and simpler and to reduce disincentives to economic efficiency and growth. Simplicity in the rate structure is achieved by using only two taxable income brackets. The four filing statuses are retained because they are the fewest classifications that can be implemented to provide fairly and equitably for the diverse characteristics of the taxpaying population.

The two-bracket tax structure replaces the prior-law ZBA with a standard deduction. Under the new structure, individuals determine taxable income by subtracting from adjusted gross income either the standard deduction or the total amount of allowable itemized deductions. Unlike the ZBA, the standard deduction enables the taxpayer to know directly how much income is subject to tax and to understand more clearly that taxable income is the base for determining tax liability.

Further, the difference between the standard deduction for an unmarried head of household and that for a married couple is narrowed by the Act in recognition that the costs of maintaining a household for an unmarried individual and a dependent more

closely resemble the situation of a married couple than that of a single individual without a dependent.

The increases in the standard deduction and modifications to specific deduction provisions simplify the tax system by substantially reducing the number of itemizers. As a result of these changes, about 11 million itemizers will shift to using the standard deduction, a reduction of approximately 30 percent in the number of itemizers relative to prior law.

Marriage penalty

Under the Act, the adjustments of the standard deduction and the rate schedule make it possible to minimize the marriage penalty while repealing the two-earner deduction. As a result, single individuals who marry will retain more of the share of the standard deductions for two single individuals than under prior law.

Table I-4 presents a comparison of the marriage penalty in 1988 as it would be under prior law and as changed under the 1986 Act.

Table I-4.—Marriage Tax Penalty in 1988 for Two-Earner Couple Under Prior Law and Tax Reform Act of 1986

Income of husband	Income of wife				
	\$10,000	\$20,000	\$30,000	\$50,000	\$100,000
<i>\$10,000</i>					
Prior law	\$88	\$63	—\$15	—\$404	—\$2,337
1986 Act.....	150	150	—443	—443	—1,548
<i>\$20,000</i>					
Prior law	63	131	403	613	—885
1986 Act.....	150	158	466	466	—210
<i>\$30,000</i>					
Prior law	—15	403	733	1,310	325
1986 Act.....	—443	466	774	774	529
<i>\$50,000</i>					
Prior law	—404	613	1,310	2,609	2,243
1986 Act.....	—443	466	774	1,284	1,389
<i>\$100,000</i>					
Prior law	—2,337	—885	325	2,243	3,974
1986 Act.....	—1,548	—210	529	1,389	1,494

NOTE.—The marriage bonus or penalty is the difference between the tax liability of a married couple and the sum of the tax liabilities of the two spouses had each been taxed as a single person. Marriage bonuses are negative in the table; marriage penalties are positive. It is assumed that all income is earned, that taxpayers have no dependents, that deductible expenses were 16.7 percent of income under prior law and 14 percent of income under the Act, and that deductible expenses are allocated between spouses in proportion to income. The computations in the table reflect the standard deduction, personal exemption, rate bracket, and prior-law deduction for two-earner married couples.

Elderly and blind taxpayers

The tax burden on elderly or blind taxpayers is eased by the Act apart from the effect of rate reductions. The prior-law income tax credit for certain elderly or disabled individuals is retained.

As discussed above, the Act increases the standard deduction amounts and personal exemptions for all taxpayers. Thus, in 1989, the \$2,000 personal exemption amount for each individual under the Act will be almost equal to the two personal exemption amounts allowed under prior law (\$2,160 for 1986) for an elderly or blind individual. Also, the higher standard deduction amounts under the Act go into effect one year earlier (in 1987) for elderly or blind individuals than for all other taxpayers (in 1988). These increased amounts are further augmented under the Act by an additional standard deduction amount of \$600 for an elderly or blind individual (\$1,200, if both) who is married (or who is a surviving spouse), or of \$750 for an unmarried elderly or blind individual (\$1,500, if both). The higher personal exemptions and standard deduction, plus the additional standard deduction amount, offset the loss of the additional personal exemption under prior law.

Explanation of Provisions

1. Tax rate schedules

The rate structure under the Act consists of two brackets and tax rates—15 and 28 percent—for individuals in each of the four filing status classifications. Reflecting the replacement of the ZBA by the standard deduction, the 15-percent bracket begins at taxable income of zero. (Under the Act, taxable income equals AGI minus personal exemptions and minus either the standard deduction or the total of allowable itemized deductions.) Effective for taxable years beginning on or after January 1, 1988, the rate structure is as follows.

Tax rate	Taxable Income Brackets		
	Married, filing joint returns	Head of household	Single individual
15%	0 to \$29,750	0 to \$23,900	0 to \$17,850
28%	Above \$29,750	Above \$23,900	Above \$17,850

For married individuals filing separate returns, the 28-percent bracket begins at \$14,875, i.e., one-half the taxable income amount for joint returns. The bracket amounts for surviving spouses are the same as those for married individuals filing joint returns.

Beginning in 1989, the taxable income amounts at which the 28-percent rate starts will be adjusted for inflation (as described below). By December 15 of each year, beginning in 1988, the Treasury Department is to prescribe tables reflecting the bracket amounts applicable for the following year as adjusted for inflation.

Rate adjustment

Beginning in 1988, the benefit of the 15-percent bracket is phased out for taxpayers having taxable income exceeding specified levels. The income tax liability of such taxpayers is increased by five percent of their taxable income within specified ranges, until the tax benefit of the 15-percent tax rate has been recaptured.

The rate adjustment occurs between \$71,900 and \$149,250 of taxable income for married individuals filing jointly and surviving spouses; between \$61,650 and \$123,790 of taxable income for heads of household; between \$43,150 and \$89,560 of taxable income for single individuals; and between \$35,950 and \$113,300 of taxable income for married individuals filing separately. These dollar amounts will be adjusted for inflation beginning in 1989.

The maximum amount of the rate adjustment generally equals 13 percent of the maximum amount of taxable income within the 15-percent bracket applicable to the taxpayer (for a married individual filing separately, in order to preclude an incentive for separate filing, it is the 15-percent bracket applicable for married taxpayers filing jointly). Thus, if the maximum rate adjustment applies, the 28-percent rate in effect applies to all of the taxpayer's taxable income, rather than only to the amount of taxable income above the bracket breakpoint.

Transitional rate structure for 1987

For taxable years beginning in 1987, rate schedules with five brackets are provided, as shown in the table below. Neither the rate adjustment (described above) nor the personal exemption phaseout (described below) applies to taxable years beginning in 1987.

Tax rate	Taxable Income Brackets		
	Married, filing joint returns	Head of household	Single individual
11%	0-\$3,000	0-\$2,500	0-\$1,800
15%	3,000-28,000	2,500-23,000	1,800-16,800
28%	28,000-45,000	23,000-38,000	16,800-27,000
35%	45,000-90,000	38,000-80,000	27,000-54,000
38.5%	Over 90,000	Over 80,000	Over 54,000

For married individuals filing separate returns, the taxable income bracket amounts for 1987 begin at one-half the amounts for joint returns. The bracket amounts for surviving spouses are the same as those for married individuals filing joint returns.

2. Standard deduction

Increased deduction.—The Act repeals the zero bracket amount (ZBA) and substitutes a standard deduction of the following amounts, effective beginning in 1988.

<i>Filing status</i>	<i>Standard deduction</i>
Married individuals filing jointly; surviving spouses	\$5,000
Heads of household	4,400
Single individuals.....	3,000
Married individuals filing separately.....	2,500

Beginning in 1989, these increased standard deduction amounts (designated the "basic standard deduction") will be adjusted for inflation.

Elderly or blind individuals.—An additional standard deduction amount of \$600 is allowed for an elderly or a blind individual who is married (whether filing jointly or separately) or is a surviving spouse; the additional amount is \$1,200 for such an individual who is both elderly and blind. An additional standard deduction amount of \$750 is allowed for a head of household who is elderly or blind (\$1,500, if both), or for a single individual (i.e., an unmarried individual other than a surviving spouse or head of household) who is elderly or blind (\$1,500, if both).³

For elderly or blind taxpayers only, the new basic standard deduction amounts (i.e., \$5,000, \$4,400, \$3,000, or \$2,500) and the additional \$600 or \$750 standard deduction amounts are effective beginning in 1987. For example, for married taxpayers both of whom are 65 or older, the standard deduction in 1987 on a joint return will be \$6,200. If only one spouse is 65 or older, or blind, the standard deduction in 1987 on a joint return will be \$5,600. Beginning in 1989, the \$600 and \$750 additional standard deduction amounts will be adjusted for inflation.

Standard deduction for 1987.—For all individual taxpayers other than elderly or blind individuals, the standard deduction amounts for taxable years beginning in 1987 are \$3,760 for married individuals filing jointly and surviving spouses; \$2,540 for heads of household and single individuals; and \$1,880 for married individuals filing separately.

As under prior law, the Internal Revenue Service will continue to prepare tax tables reflecting the tax liability of individuals who use the standard deduction. (The IRS also may prepare tax tables for taxpayers who itemize, but these tables may not incorporate the standard deduction into the tables in the way the ZBA was previously incorporated in the tax tables.) In preparing the tables, the IRS may adjust the size of the intervals between taxable income amounts in the tables to reflect meaningful differences in tax liability.

3. Personal exemption

Exemption amount.—The Act increases the personal exemption for each individual, the individual's spouse, and each eligible dependent to \$1,900 for taxable years beginning during 1987, \$1,950 for taxable years beginning during 1988, and \$2,000 for taxable

³ See text below for computation of standard deduction where an elderly or blind individual is eligible to be claimed as a dependent on the tax return of another taxpayer.

years beginning after December 31, 1988. Beginning in 1990, the \$2,000 personal exemption amount will be adjusted for inflation. The Act also repeals the additional exemption for an elderly or blind individual, beginning in 1987. (As described above, the Act provides an additional standard deduction amount for an elderly or blind individual, beginning in 1987; also, the generally applicable increased standard deduction amounts apply for elderly or blind individuals beginning in 1987.)

Phaseout.—Beginning in 1988, the benefit of the personal exemption is phased out for taxpayers having taxable income exceeding specified levels. The income tax liability of such taxpayers is increased by five percent of taxable income within certain ranges.

This reduction in the personal exemption benefit starts at the taxable income level at which the benefit of the 15-percent rate is totally phased out (see “Rate adjustment,” above). For example, in the case of married individuals filing joint returns, in 1988 the personal exemption phaseout begins at taxable income of \$149,250.

The benefit of each personal exemption amount is phased out over an income range of \$10,920 in 1988 and \$11,200 in 1989. The phaseout occurs serially. For example, the phaseout of the benefit of the second personal exemption on a joint return does not begin until the phaseout of the first has been completed. Thus, in the case of married individuals filing jointly who have two children, in 1988 the benefit of the four personal exemptions on the joint return would phase out over an income range of \$43,680 (four times \$10,920) and would be phased out completely at taxable income of \$192,930; in 1989, the benefit of each exemption would phase out over an income range of \$44,800 (four times \$11,200).

Rules for certain dependents.—The Act provides that an individual for whom a personal exemption deduction is allowable on another taxpayer’s return is not entitled to any personal exemption amount on his or her own return. For example, if married individuals may claim a personal exemption deduction for their child, the child may not claim any personal exemption on his or her return.

Under prior law, the ZBA could be used by such a dependent taxpayer only to offset earned income. The Act provides that in the case of an individual for whom a personal exemption deduction is allowable on another taxpayer’s return, the individual’s basic standard deduction is limited to the greater of (a) \$500 (to be adjusted for inflation beginning in 1989) or (b) the individual’s earned income. The preceding limitation is intended to apply only with respect to the basic standard deduction, and not with respect to the additional standard deduction amount allowable to an elderly or blind individual.⁴ For example, in 1987 an unmarried elderly individual (other than a surviving spouse) who may be claimed as a dependent on her son’s tax return may first utilize the basic standard deduction (\$3,000) to offset the greater of (1) earned income or (2) nonearned income up to \$500. In addition, the individual could apply the additional standard deduction amount (\$750) against any remaining income not offset by the basic standard deduction (pur-

⁴ A technical correction may be needed to reflect this intent.

suant to the rule stated in the preceding sentence), whether earned or nonearned income.

Under the Act, an individual who is eligible to be claimed as a dependent on another's tax return must file a Federal income tax return only if he or she either (1) has total gross income in excess of the standard deduction (including, in the case of an elderly or blind individual, the additional standard deduction amount) or (2) has nonearned income in excess of \$500 plus, in the case of an elderly or blind individual, the additional standard deduction amount. For example, an elderly individual who may be claimed as a dependent on her daughter's tax return must file a return for 1987 only if the elderly individual either (1) has total gross income exceeding \$3,750 or (2) has nonearned income exceeding \$1,250.⁵

These rules for dependents are effective for taxable years beginning on or after January 1, 1987.

4. Adjustments for inflation

The new rate structure will be adjusted for inflation (i.e., indexed) beginning in 1989, to reflect changes in the Consumer Price Index for all-urban consumers (CPI) between the 12-month period ending on August 31, 1987 and the following 12-month period. Any inflation adjustment will apply to the breakpoint between the 15-percent and 28-percent brackets, and to the income levels above which the rate adjustment and personal exemption phaseouts apply.

Inflation adjustments will begin in 1989 to the increased standard deduction amounts that generally are effective for 1988, and to the additional standard deduction amount for blind or elderly individuals (which goes into effect in 1987). Inflation adjustments will begin in 1990 to the \$2,000 personal exemption amount that applies for 1989.

Under the Act, inflation adjustments (except to the earned income credit) will be rounded down to the next lowest multiple of \$50.⁶ For example, an inflation rate adjustment of four percent would raise the starting point of the 28-percent bracket for 1989 returns of married individuals filing jointly from \$29,750 to \$30,940; this amount then would be rounded down to \$30,900 for purposes of constructing the indexed rate schedule applicable to 1989.

In subsequent years, the indexing adjustment will reflect the rate of inflation for the cumulative period after the 12-month period ended August 31, 1987, with respect to the rate brackets and the increased standard deduction amounts; and August 31, 1988, with respect to the \$2,000 personal exemption. As a result, while rounding down affects the inflation adjustments made in each year, there is no cumulative effect from rounding on the bracket thresholds and related amounts, since each year's inflation adjustment will be computed to reflect the cumulative rate of inflation from the initial base period. If the CPI currently published by the De-

⁵ A technical correction may be needed to reflect this intent.

⁶ In the case of a married individual filing a separate return, inflation adjustments to the bracket amounts will be rounded down to the nearest multiple of \$25 (except with respect to sec. 63(c)(4)).

partment of Labor is revised, then the revision that is most consistent with the CPI for calendar year 1986 is to be used.

5. Two-earner deduction

The prior-law deduction for two-earner married couples is repealed, effective for taxable years beginning on or after January 1, 1987.

6. Income averaging

The prior-law provisions for income averaging are repealed, effective for taxable years beginning on or after January 1, 1987.

Effective Dates

Rate structure.—The transitional five-bracket tax rate schedules are effective for taxable years beginning in 1987. The two-bracket tax rate schedules and the rate adjustment are effective for taxable years beginning on or after January 1, 1988.

Standard deduction.—For taxable years beginning on or after January 1, 1987, the standard deduction replaces the ZBA. The transitional standard deduction amounts apply for taxable years beginning in 1987. The increased standard deduction amounts generally are effective for taxable years beginning on or after January 1, 1988. For elderly or blind individuals, the increased basic standard deduction amounts and the additional standard deduction amounts are effective for taxable years beginning on or after January 1, 1987.

Personal exemption.—The personal exemption amounts of \$1,900, \$1,950, and \$2,000 apply, respectively, for taxable years beginning during 1987, taxable years beginning during 1988, and taxable years beginning after December 31, 1988. The phase-out of the personal exemption amount applies for taxable years beginning on or after January 1, 1988. The rules disallowing any exemption amount on the return of an individual who is eligible to be claimed as a dependent on another taxpayer's return are effective for taxable years beginning on or after January 1, 1987.

Inflation adjustments.—The change of the date of the 12-month measuring period for inflation adjustments to August 31 and the provision relating to rounding down inflation adjustments to the nearest \$50 are effective for taxable years beginning on or after January 1, 1987.

Two-earner deduction.—The repeal of the prior-law deduction for two-earner married couples is effective for taxable years beginning on or after January 1, 1987.

Income averaging.—The repeal of the prior-law provisions for income averaging is effective for taxable years beginning on or after January 1, 1987.

Revenue Effect

Tax rates

The changes in the income tax rates are estimated to decrease fiscal year budget receipts by \$16,900 million in 1987, \$56,812 mil-

lion in 1988, \$53,725 million in 1989, \$39,039 million in 1990, and \$40,626 million in 1991.⁷

Standard deduction

The increases in the standard deduction amounts are estimated to decrease fiscal year budget receipts by \$1,127 million in 1987, \$6,183 million in 1988, \$8,276 million in 1989, \$8,864 million in 1990, and \$9,493 million in 1991.

Personal exemption

The increase in the personal exemption amount, the repeal of the prior-law additional exemption for the elderly and blind, and the disallowance of a personal exemption for an individual who is eligible to be claimed as a dependent on another taxpayer's return are estimated to decrease fiscal year budget receipts by \$13,414 million in 1987, \$26,298 million in 1988, \$26,530 million in 1989, \$27,678 million in 1990, and \$28,876 million in 1991.

Two-earner deduction

The repeal of the prior-law deduction for two-earner married couples is estimated to increase fiscal year budget receipts by \$1,379 million in 1987, \$6,016 million in 1988, \$6,177 million in 1989, \$6,572 million in 1990, and \$6,995 million in 1991.

Income averaging

The repeal of the prior-law provisions for income averaging is estimated to increase fiscal year budget receipts by \$430 million in 1987, \$1,814 million in 1988, \$1,928 million in 1989, \$2,077 million in 1990, and \$2,239 million in 1991.

⁷ The rate reduction estimate includes the effects relating to capital gains as well as interactions between rate changes and other provisions of the Act.

B. Earned Income Credit (Sec. 111 of the Act and secs. 32 and 3507 of the Code) ⁸

Prior Law

An eligible individual who maintains a home for one or more children is allowed a refundable income tax credit based on the individual's earned income up to a specified dollar amount. The credit is available to married individuals filing a joint return who are entitled to a dependency exemption for a child, a head of household, and a surviving spouse.⁹

Under prior law, the earned income credit generally equalled 11 percent of the first \$5,000 of earned income, for a maximum credit of \$550 (Code sec. 32). The amount of the credit was reduced if the individual's adjusted gross income (AGI) or, if greater, earned income, exceeded \$6,500; no credit was available for individuals with AGI or earned income of \$11,000 or more.

To relieve eligible individuals of the burden of computing the amount of credit to be claimed on their returns, the Internal Revenue Service publishes tables for determining the credit amount. Eligible individuals may receive the benefit of the credit in their paychecks throughout the year by electing to receive advance payments.

Reasons for Change

The earned income credit is intended to provide tax relief to low-income working individuals with children and to improve incentives to work. Periodically since enactment of the credit in 1975, the Congress has increased the maximum amount and the phase-out levels of the credit to offset the effects of inflation and social security tax increases.

The Congress concluded that further increases in the maximum amount and phase-out level of the credit were necessary to offset past inflation and increases in the social security tax. In addition, the Congress believed that an automatic adjustment to the credit to reflect future inflation should be provided, just as it is provided for the personal exemption, the standard deduction, and rate brackets, in order to eliminate the reduction in the real value of the credit caused by inflation.

⁸ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 111; H.Rep. 99-426, pp. 94-95; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 111; S.Rep. 99-313, pp. 43-44; Senate floor amendment, 132 Cong. Rec. S 7969 (June 19, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 12-13 (Conference Report).

⁹ For definitions of head of household and surviving spouse, see Title I., Part A., above.

Explanation of Provisions

The Act increases the rate and base of the earned income credit to 14 percent of the first \$5,714 of an eligible individual's earned income. As a result, the maximum credit is increased to \$800.

The income level at which the credit is completely phased out is raised to \$13,500. Starting in taxable years that begin on or after January 1, 1988, the phase-out range is raised to \$9,000/\$17,000.

Under the Act, the credit is to be adjusted (beginning in 1987) for inflation. The adjustment factor for 1987 equals the increase in the consumer price index (CPI) from August 31, 1984, to August 31, 1986. (Thus, the maximum amount of earned income eligible for the credit beginning in 1987 equals \$5,714 as adjusted for inflation between August 31, 1984 and August 31, 1986.) Subsequent annual increases are to adjust for the effects of additional annual changes in the CPI. These adjustments affect the amount of income to which the credit applies and the lower and upper limits of the phaseout range.

These inflation adjustments to the earned income credit are not subject to the \$50 rounding-down rule otherwise applicable under the Act to inflation adjustments. Instead, as under the generally applicable inflation adjustment rule of prior law, any inflation adjustment relating to the credit that is not a multiple of \$10 will be rounded to the nearest multiple of \$10.

The Act also directs the Treasury Department to include in regulations a requirement that employers notify their employees whose wages are not subject to income tax withholding that they may be eligible for a refundable earned income credit. (The regulations are to prescribe the time and manner for such notification.) However, this notice does not have to be given to employees whose wages are exempt from withholding pursuant to Code section 3402(n). This exemption applies, for example, to many high school or college students who are employed for the summer.

Effective Date

The increases in the credit rate and base and the provisions relating to inflation adjustments are effective for taxable years beginning on or after January 1, 1987.

The increase in the beginning phase-out level to \$9,000 is effective for taxable years beginning on or after January 1, 1988.

Revenue Effect

This provision is estimated to decrease fiscal year budget receipts by \$14 million in 1987, \$309 million in 1988, \$723 million in 1989, \$886 million in 1990, and \$1,077 million in 1991, and to increase fiscal year budget outlays by \$83 million in 1987, \$1,731 million in 1988, \$3,149 million in 1989, \$3,481 million in 1990, and \$3,848 million in 1991. (To the extent that the amount of earned income credit exceeds tax liability and thus is refundable, it is treated as an outlay under budget procedures.)

C. Exclusions from Income

1. Unemployment compensation benefits (sec. 121 of the Act and sec. 85 of the Code) ¹⁰

Prior Law

Prior law provided a limited exclusion from income for unemployment compensation benefits paid pursuant to a Federal or State program (Code sec. 85).

If the sum of the individual's unemployment compensation benefits and adjusted gross income (AGI) did not exceed a defined base amount, then no unemployment compensation benefits were included in gross income. The base amount was \$18,000 in the case of married individuals filing a joint return; \$12,000 in the case of an unmarried individual; and zero in the case of married individuals filing separate returns. If the sum of unemployment compensation benefits and AGI exceeded the base amount, the amount of the benefits included in gross income generally was limited to the lesser of (1) one-half the excess of the sum of such benefits plus AGI over the base amount, or (2) the amount of such benefits received.

Reasons for Change

While all cash wages and similar compensation (such as vacation pay and sick pay) received by an individual generally have been treated as fully includible in gross income under the tax law, unemployment compensation benefits were includible under prior law only if the taxpayer's AGI and benefits exceeded specified levels. The Congress concluded that unemployment compensation benefits, which essentially are wage replacement payments, should be treated for tax purposes in the same manner as wages or other wage-type payments. Thus, repeal of the prior-law partial exclusion contributes to more equal tax treatment of individuals with the same economic income. Also, if wage replacement payments are given more favorable tax treatment than wages, some individuals may be discouraged from returning to work.

Explanation of Provision

Under the Act, all unemployment compensation benefits (whether paid pursuant to a Federal or State law) received after 1986 are includible in gross income.

¹⁰ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 122; H.Rep. 99-426, pp. 98-99; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 121; S.Rep. 99-313, pp. 46-47; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 14 (Conference Report).

Effective Date

The provision is effective for amounts received after December 31, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$230 million in 1987, \$764 million in 1988, \$749 million in 1989, \$723 million in 1990, and \$701 million in 1991.

2. Prizes and awards (sec. 122 of the Act and secs. 74, 102, and 274 of the Code) ¹¹

Prior Law

Under prior and present law, prizes and awards received by an individual (other than scholarships or fellowship grants to the extent excludable under sec. 117) generally are includible in gross income. Treasury regulations provide that such taxable prizes and awards include amounts received from giveaway shows, door prizes, awards in contests of all types, and awards from an employer to an employee in recognition of some achievement in connection with employment.

However, prior-law section 74(b) provided a special exclusion from income for certain prizes and awards that were received in recognition of charitable, religious, scientific, educational, artistic, literary, or civic achievement ("charitable achievement awards"). This exclusion applied only if the recipient (1) had not specifically applied for the prize or award (for example, by entering a contest), and (2) was not required to render substantial services as a condition of receiving it. Treasury regulations stated that the section 74(b) exclusion did not apply to prizes or awards from an employer to an employee in recognition of some achievement in connection with employment.¹²

While section 74 determines the includibility in gross income of prizes and awards, the treatment of other items provided by an employer to an employee could be affected by section 61, defining gross income, and prior-law section 102, under which gifts may be excluded from gross income. Section 61 provides in part that "gross income means all income from whatever source derived," including compensation for services whether in the form of cash, fringe benefits, or similar items. However, under prior law, an item transferred from an employer to an employee, other than a prize or award that was includible under section 74, might be excludable from gross income if it qualified as a gift under section 102.

¹¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 123(b); H.Rep. 99-426, pp. 103-07; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 122; S.Rep. 99-313, pp. 47-54; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 17-19 (Conference Report).

¹² Treas. Reg. sec. 1.74-1(b). But see *Jones v. Comm'r*, 743 F.2d 1429 (9th Cir. 1984), holding that an award from an employer to an employee could qualify for the prior-law section 74(b) exclusion under extraordinary circumstances. The court held that the exclusion applied in the case of a prominent scientist who was rewarded by the National Aeronautics and Space Administration (NASA) for lifetime scientific achievement, only part of which was accomplished while the scientist was employed by NASA. No inference is intended under the Act as to whether the decision in this case was a correct interpretation of section 74(b) as in effect prior to the Act.

The U.S. Supreme Court, in a 1960 case involving payments made "in a context with business overtones," defined excludable gifts as payments made out of "detached and disinterested generosity" and not in return for past or future services or from motives of anticipated benefit (*Comm'r v. Duberstein*, 363 U.S. 278 (1960)). Under this standard, the Court said, transfers made in connection with employment could constitute gifts only in the "extraordinary" instance.¹³

In certain circumstances, if an award to an employee could constitute an excludable gift under prior law, the employer's deduction was subject to limitation under section 274(b). That section expressly defines the term "gift" to mean any amount excludable from gross income under section 102 that is not excludable under another statutory provision.

Section 274(b) generally disallows business deductions for gifts to the extent that the total cost of all gifts of cash, tangible personal property, and other items to the same individual from the taxpayer during the taxable year exceeds \$25. Under an exception to the \$25 limitation provided by prior law, the ceiling on the deduction was \$400 in the case of an excludable gift of an item of tangible personal property awarded to an employee for length of service, safety achievement, or productivity. In addition, the prior-law ceiling on the employer's business gift deduction was \$1,600 for an excludable employee award for such purposes when provided under a qualified award plan, if the average cost of all plan awards in the year did not exceed \$400.

A further rule that may be relevant with respect to a prize or award arises under section 132(e), which provides that de minimis fringe benefits are excludable from income. A de minimis fringe generally is defined as any property or service the value of which is (taking into account the frequency with which similar fringes are provided by the employer to the employer's employees) so small as to make accounting for it unreasonable or administratively impracticable.

Reasons for Change

Charitable achievement awards

A prize or award generally increases an individual's net wealth in the same manner as any other receipt of an equivalent amount that adds to the individual's economic well-being. For example, the receipt of an award of \$10,000 for scientific achievement increases the recipient's net wealth and ability to pay taxes to the same extent as the receipt of \$10,000 in wages, dividends, or as a taxable award; nonetheless, such an award was not treated as income under prior law. Also, as in the case of other exclusions or deductions, the tax benefit of the prior-law section 74(b) exclusion de-

¹³ Under *Duberstein*, the determination of whether property transferred from an employer to an employee (or otherwise transferred in a business context) constituted a gift to the recipient was to be made on a case-by-case basis, by an "objective inquiry" into the facts and circumstances. If the transferor's motive was "the incentive of anticipated benefit," or if the payment was in return for services rendered (whether or not the payor received an economic benefit from the payment), then the payment must be included in income by the recipient.

pending on the recipient's marginal tax rate, and thus generally was greater in the case of higher-income taxpayers.

In light of these considerations, the Congress concluded that prizes and awards generally should be includible in gross income even if received because of achievement in fields such as the arts and sciences. This repeal of the special prior-law exclusion for certain awards was viewed as consistent with the Act's general objectives of fairness and economic neutrality.

In addition, the Congress was concerned about problems of complexity that had arisen as a result of the special prior-law exclusion under section 74(b). The questions of what constituted a qualifying form of achievement, whether an individual had initiated action to enter a contest or proceeding, and whether the conditions of receiving a prize or award involved rendering "substantial" services, had all caused some difficulty in this regard. Finally, in some circumstances the prior-law exclusion could have served as a possible vehicle for the payment of disguised compensation.

At the same time, the Congress recognized that in some instances the recipient of the type of prize or award described in section 74(b) may wish to assign the award to charity, rather than claiming it for personal consumption or use. Accordingly, the Act retains the prior-law exclusion for charitable achievement awards described in section 74(b) but only if the award is transferred by the payor, pursuant to a designation made by the winner of the prize or award, to a governmental unit or to a tax-exempt charitable, educational, religious, etc. organization contributions to which are deductible under section 170(c)(1) or section 170(c)(2), respectively.

Employee awards

An additional reason for change relates to the prior-law tax treatment of employee awards of tangible personal property given by reason of length of service, safety achievement, or productivity. Except for any item that might be able to qualify as a de minimis fringe benefit as defined by section 132(e), such employee awards were not excludable from the employee's gross income, and the deduction of their cost by the employer was not limited under section 274(b), if they could not qualify as gifts because of either the "detached generosity" standard applicable under section 102 or the rule of section 74(a) that prizes and awards generally are includible in income.

The Congress understood that uncertainty had arisen among some taxpayers concerning the proper tax treatment under prior law of an employee award. Such uncertainty could lead some employers to seek to replace amounts of taxable compensation (such as sales bonuses) with "award" programs of tangible personal property. The business and the employee might contend that such awards are not subject to income or social security taxes, but that the employer could still deduct the costs of the awards up to the section 274(b) limitations. In the case of highly compensated employees, who often might not be significantly inconvenienced by the fact that such awards would be made in the form of property rather than cash, an exclusion for transfers of property with respect to regular job performance (such as for productivity) could

serve as a means of providing tax-free compensation. As in the case of other exclusions or deductions, the tax benefit of such an exclusion for transfers to an employee would depend on the recipient's marginal tax rate, and thus generally would be greater for higher-income employees.

Accordingly, the Congress believed that it was desirable to provide express rules with regard to the tax treatment of amounts transferred by or for an employer to or for the benefit of an employee. The Congress concluded that, in general, an award to an employee from his or her employer does not constitute a "gift" comparable to such excludable items as intrafamily holiday gifts, and should be included in the employee's gross income for income tax purposes and in wages for withholding and employment tax purposes.

However, the Congress believed that no serious potential for avoiding taxation on compensation arises from transfers by employers to employees of items of minimal value. Therefore, the Congress wished to clarify that the section 132(e) exclusion for de minimis fringe benefits can apply to employee awards of low value. The Congress also concluded that this exclusion should be viewed as applicable to traditional awards (such as a gold watch) upon retirement after lengthy service for an employer. For example, in the case of an employee who has worked for an employer for 25 years, a retirement gift of a gold watch may qualify for exclusion as a de minimis fringe benefit even though gold watches given throughout the period of employment would not so qualify for exclusion. In that case, the award is not made in recognition of any particular achievement, relates to many years of employment, and does not reflect any expectation of or incentive for the recipient's rendering of future services.

Also, the Congress concluded that, in certain narrowly defined circumstances, it is appropriate to recognize traditional business practices of making awards of tangible personal property for length of service or safety achievement. These traditional practices may involve, for example, awards of items that identify or symbolize the awarding employer or the achievement being recognized, and that do not merely provide an economic benefit to the employee. Such practices were not entirely equivalent, for example, to providing either a bonus in cash or an allowance of a dollar amount toward the purchase of ordinary merchandise. The Congress believed that the double income tax benefit of excludability and deductibility is acceptable for such types of employee achievement awards under rules intended to prevent abuse and limit the scope of the double benefit.

In light of these considerations, the Act restricts the double benefit through dollar limitations, limits the frequency with which length of service awards can be made to the same employee, and limits safety achievement awards to the employer's work force (other than administrators, professionals, etc. whose work ordinarily does not involve significant safety concerns) and to no more than 10 percent of such eligible recipients in one year. In addition, the exclusion applies only if the item of tangible personal property is awarded under conditions and circumstances that do not create a significant likelihood of the payment of disguised compensation.

The Act removes the prior-law uncertainty concerning the tax treatment of some employee awards by making clear that the fair market value of any employee award that does not constitute either a length of service award or a safety achievement award qualifying under the Act or a de minimis fringe benefit described in section 132(e)(1) is includible in gross income for income tax purposes and in wages or compensation for employment tax and withholding purposes. The Congress believed that this general rule of includibility is consistent with the Act's objectives of fairness and economic neutrality.

Explanation of Provisions

Charitable achievement awards

Under the Act, the prior-law limited exclusion under section 74(b) for a prize or award for certain charitable, religious, scientific, educational, artistic, literary, or civic achievement (a "charitable achievement award") is further restricted to apply only if the recipient designates that the award is to be transferred by the payor to a governmental unit or a tax-exempt charitable, educational, religious, etc. organization that is eligible to receive contributions that are deductible under sections 170(c)(1) or 170(c)(2), respectively. If such designation is made and if the charitable achievement award is so transferred to the designated governmental unit or charitable organization by the payor, the award is not included in the winner's gross income, and no charitable deduction is allowed either to the winner or to the payor on account of the transfer to the governmental unit or charitable organization.

For purposes of determining whether a charitable achievement award that is so transferred qualifies as excludable under the Act, the prior-law rules concerning the scope of section 74(b) are retained without change. (Thus, for example, the exclusion is available only if the award winner had not specifically applied for the award, and was not required to render substantial services as a condition of receiving it.) In addition, in order to qualify for the section 74(b) exclusion as modified by the Act, the designation must be made by the taxpayer (the award recipient), and must be carried out by the party making the prize or award, before the taxpayer uses the item that is awarded (e.g., in the case of an award of money, before the taxpayer spends, deposits, invests, or otherwise uses the money).

Disqualifying uses by the taxpayer include such uses of the property with the permission of the taxpayer or by one associated with the taxpayer (e.g., a member of the taxpayer's family). Absent a disqualifying use, however, the taxpayer can make the required designation of the governmental unit or charitable organization (to which the award is to be transferred by the payor) after receipt of the prize or award.

Employee awards

In general

The Act provides an exclusion from gross income (Code sec. 74(c)), subject to certain dollar limitations, for an "employee

achievement award" that satisfies the requirements set forth in the Act. The Act defines an employee achievement award (Code sec. 274(j)) as an item of tangible personal property transferred by an employer to an employee for length of service achievement or for safety achievement,¹⁴ but only if the item (1) is awarded as part of a meaningful presentation, and (2) is awarded under conditions and circumstances that do not create a significant likelihood of the payment of disguised compensation.¹⁵ The exclusion applies only for awards of tangible personal property and is not available for awards of cash, gift certificates, or equivalent items, or for awards of intangible property or real property.

An award for length of service cannot qualify for the exclusion if it is received during the employee's first five years of employment for the employer making the award, or if the employee has received a length of service achievement award (other than an award excludable under sec. 132(e)(1)) from the employer during the year or any of the preceding four years. An award for safety achievement cannot qualify for the exclusion if made to an individual who is not an eligible employee, or if, during the taxable year, employee awards for safety achievement (other than awards excludable under sec. 132(e)(1)) have previously been awarded by the employer to more than 10 percent of the employer's eligible employees. That is, no more than 10 percent of an employer's eligible employees may receive excludable safety achievement awards in any taxable year (even if all the awards are made simultaneously).¹⁶ For this purpose, eligible employees are all employees of the taxpayer other than managers, administrators, clerical workers, and other professional employees.

Deduction limitations

Under section 274 as amended by the Act, an employer's deduction for the cost of all employee achievement awards (both safety and length of service) provided to the same employee during the taxable year generally cannot exceed \$400. In the case of one or more qualified plan awards awarded to the same employee during the taxable year, however, the employer's deduction limitation for all such qualified plan awards (both safety and length of service) is \$1,600. In addition to these separate \$400/\$1,600 limitations, the \$1,600 limitation applies in the aggregate if during the year an employee receives one or more qualified plan awards and also one or more employee achievement awards that are not qualified plan awards; i.e., the \$400 and \$1,600 limitations cannot be added together to allow deductions exceeding \$1,600 in the aggregate for

¹⁴ Thus, an employee award for productivity, or for any other purpose not specified in sec. 274(j), is not excludable under sec. 74(c).

¹⁵ The types of conditions and circumstances that are to be deemed to create a significant likelihood of payment of disguised compensation include, for example, the making of employee awards at the time of annual salary adjustments or as a substitute for a prior program of awarding cash bonuses, or the providing of employee awards in a way that discriminates in favor of highly paid employees.

¹⁶ Accordingly, no exclusion for safety achievement awards is available in the case of an employer with nine or fewer eligible employees.

employee achievement awards made to the same employee in a taxable year.¹⁷

A qualified plan award is defined as an employee achievement award provided under a qualified award plan, i.e., an established, written plan or program of the taxpayer that does not discriminate in favor of highly compensated employees (within the meaning of sec. 414(q)) as to eligibility or benefits. However, an item cannot be treated as a qualified plan award if the average cost per recipient of all employee achievement awards made under all qualified award plans of the employer during the taxable year exceeds \$400. In making this calculation of average cost, qualified plan awards of nominal value are not to be included in the calculation (i.e., are not to be added into the total of award costs under the plan in computing average cost). In the case of a qualified plan award the cost of which exceeds \$1,600, the entire cost of the item is to be added into the total of qualified plan award costs in computing average cost, notwithstanding that only \$1,600 (or less) of such cost is deductible.

Excludable amount

In the case of an employee achievement award the cost of which is deductible in full by the employer under the dollar limitations of section 274 (as amended by the Act),¹⁸ the fair market value of the award is fully excludable from gross income by the employee. For example, assume that an employer makes a length of service achievement award (other than a qualified plan award) to an employee in the form of a crystal bowl, that the employer makes no other length of service awards or safety achievement awards to that employee in the same year, and that the employee has not received a length of service award from the employer during the prior four years. Assume further that the cost of the bowl to the employer is \$375, and that the fair market value of the bowl is \$415. The full fair market value of \$415 is excludable from the employee's gross income for income tax purposes under section 74 as amended by the Act.

However, if any part of the cost of an employee achievement award exceeds the amount allowable as a deduction by an employer because of the dollar limitations of section 274, then the exclusion does not apply to the entire fair market value of the award. In such a case, the employee must include in gross income the greater of (i) an amount equal to the portion of the cost to the employer of the award that is not allowable as a deduction to the employer (but not an amount in excess of the fair market value of the award) or (ii) the amount by which the fair market value of the award exceeds the maximum dollar amount allowable as a deduction to the employer. The remaining portion of the fair market value of the award is not included in the employee's gross income for income tax purposes.

¹⁷ In the case of an employee award provided by a partnership, the deduction limitations of section 274(j) apply to the partnership as well as to each partner. The new employee achievement award exclusion is not available for any award made by a sole proprietorship to the sole proprietor; consequently, the deduction limitations in sec. 274(j) do not apply with respect to such an includible award.

¹⁸ In the case of a tax-exempt employer, the deduction limitation amount is that amount that would be deductible if the employer were not exempt from taxation (sec. 74(c)(3)).

Consider, for example, the case of a safety achievement award to an eligible employee that is not a qualified plan award, and that costs the employer \$500; assume that no other employee achievement awards were made to the same employee during the taxable year, and that safety achievement awards were not awarded during the year to more than 10 percent of eligible employees of the employer. The employer's deduction is limited to \$400. The amount includible in gross income by the employee is the greater of (1) \$100 (the difference between the item's cost and the deduction limitation), or (2) the amount by which the item's fair market value exceeds the deduction limitation. If the fair market value equals, for example, \$475, then \$100 is includible in the employee's income. If the fair market value equals \$600, then \$200 is includible in the employee's income.

Except to the extent that the new section 74(c) exclusion or section 132(e)(1) applies, the fair market value of an employee award (whether or not satisfying the definition of an employee achievement award) is includible in the employee's gross income under section 61, and is not excludable under section 74 (as amended by the Act). Also, the Act amends section 102 to provide explicitly that the section 102 exclusion for gifts does not apply to any amount transferred by or for an employer to, or for the benefit of, an employee. The fair market value of an employee award (or any portion thereof) that is not excludable from gross income must be included by the employer on the employee's Form W-2, as was required under prior law.

Any amount of an employee achievement award that is excludable from gross income under the Act also is excludable from wages or compensation for employment tax (e.g., FICA tax) purposes and is excludable from the social security benefit base.

The Act does not modify Code section 132(e)(1), under which de minimis fringe benefits are excluded from gross income. Thus, an employee award is not includible in income if its fair market value, after taking into account the frequency with which similar benefits are provided by the employer to the employer's employees, is so small as to make accounting for it unreasonable or administratively impracticable. For example, the section 132(e)(1) exclusion would apply with respect to a pin or similar item with a value of \$15 awarded to an employee on joining a business, on completing six months' employment, or on completing a probationary employment period.

As noted above, for purposes of section 274 (as modified by the Act), an employee award that is excludable under section 132(e)(1) is disregarded in applying the rules regarding how frequently an individual may receive an excludable length of service award, or how many employees of an employer may receive an excludable safety achievement award in the same taxable year. Under appropriate circumstances, however, the fact that an employer makes a practice of giving its employees length of service or safety achievement awards that qualify under section 74 and 274 may affect the question of whether other items given to such employees (particularly if given by reason of length of service or safety achievement) qualify as de minimis fringe benefits under section 132(e)(1).

The question of whether it is unreasonable or administratively impracticable (within the meaning of sec. 132(e)(1)) to account for an item may be affected by the existence of a program whereby the taxpayer regularly accounts for other like items and complies with the statutory reporting requirements. Moreover, in some cases the fact that a particular employee receives items having the maximum fair market value consistent, respectively, with the employee achievement award and the de minimis fringe benefit exclusions may suggest that the employer's practice is not de minimis. This is particularly so when employee awards and other items, purportedly within the scope of section 132(e)(1), are provided to the same individual in the same year.

The Congress intended that the exclusion under section 132(e)(1) for a de minimis fringe benefit is to apply, under appropriate circumstances, to traditional retirement gifts presented to an employee on his or her retirement after completing lengthy service, even if the section 74(c) exclusion for length of service awards does not apply because the employee received such an award within the prior four years. In considering whether an item presented upon retirement so qualifies, the duration of the employee's tenure with the employer generally has relevance. For example, in the case of an employee who has worked for an employer for 25 years, a retirement gift of a gold watch may qualify for exclusion as a de minimis fringe benefit even though gold watches given throughout the period of employment would not so qualify for that exclusion.

Effective Date

The provisions relating to the tax treatment of prizes and awards are effective for prizes and awards granted after December 31, 1986.

Revenue Effect

The provisions relating to the tax treatment of prizes and awards are estimated to decrease fiscal year budget receipts by \$21 million in 1987, \$59 million in 1988, \$63 million in 1989, \$66 million in 1990, and \$69 million in 1991.

3. Scholarships and fellowships (sec. 123 of the Act and sec. 117 of the Code) ¹⁹

Prior Law

In general

Prior law generally provided an unlimited exclusion from gross income for (1) amounts received by a degree candidate as a scholarship at an educational institution (described in sec. 170(b)(1)(A)(ii)), or as a fellowship grant, and (2) incidental amounts received by such individual and spent for travel, research, clerical help, or equipment (sec. 117). The term scholarship meant an amount paid or allowed to, or for the benefit of, a student to aid in pursuing

¹⁹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 123; H.Rep. 99-426, pp. 99-103; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 14-17 (Conference Report).

studies; similarly, a fellowship grant was defined as an amount paid or allowed to, or for the benefit of, an individual to aid in pursuing studies or research (Treas. Reg. sec. 1.117-3).

In the case of an individual who was not a candidate for a degree, the prior-law exclusion was available only if the grantor of the scholarship or fellowship was an educational institution or other tax-exempt organization described in section 501(c)(3), a foreign government, certain international organizations, or a Federal, State, or local government agency. The prior-law exclusion for a nondegree candidate in any one year could not exceed \$300 times the number of months in the year for which the recipient received scholarship or fellowship grant amounts, and no further exclusion was allowed after the nondegree candidate had claimed exclusions for a total of 36 months (i.e., a maximum lifetime exclusion of \$10,800). However, this dollar limitation did not apply to that portion of the scholarship or fellowship received by the nondegree candidate for travel, research, clerical help, or equipment.

Under prior and present law, an educational institution is described in section 170(b)(1)(A)(ii) if it normally maintains a regular faculty and curriculum and normally has a regularly enrolled body of pupils or students in attendance at the place where its educational activities are regularly carried on. This definition encompasses primary and secondary schools, colleges and universities, and technical schools, mechanical schools, and similar institutions, but does not include noneducational institutions, on-the-job training, correspondence schools, and so forth (Treas. Reg. secs. 1.117-3(b); 1.151-3(c)). Under prior law, the term candidate for a degree was defined as (1) an undergraduate or graduate student at a college or university who was pursuing studies or conducting research to meet the requirements for an academic or professional degree and (2) a student who received a scholarship for study at a secondary school or other educational institution (Treas. Reg. sec. 1.117-3(e)).

Payments for services

Under prior and present law, amounts paid to an individual to enable him or her to pursue studies or research are not excludable from income if they represent compensation for past, present, or future services, or if the studies or research are primarily for the benefit of the grantor or are under the direction or supervision of the grantor (Treas. Reg. sec. 1.117-4(c)). These regulations have been upheld by the U.S. Supreme Court, which described excludable grants as "relatively disinterested, 'no-strings' educational grants, with no requirement of any substantial quid pro quo from the recipients" (*Bingler v. Johnson*, 394 U.S. 741 (1969)).

In the case of degree candidates, prior law also specifically provided that the exclusion did not apply to any portion of an otherwise qualifying scholarship or fellowship grant that represented payment for teaching, research, or other services in the nature of part-time employment required as a condition of receiving the scholarship or fellowship grant (prior-law sec. 117(b)(1)). However, an exception under prior law provided that such services would not be treated as employment for this purpose if all degree candidates had to perform such services; in that case, the recipient could ex-

clude the portion of the scholarship or fellowship grant representing compensation for such services.

Under another prior-law exception, amounts received by an individual as a grant under a Federal program that would be excludable from gross income as a scholarship or fellowship grant, but for the fact that the recipient must perform future services as a Federal employee, were not includible in gross income if the individual established that the amount was used for qualified tuition and related expenses (prior-law sec. 117(c)).

Tuition reduction plans

Section 117(d) provides that a reduction in tuition provided to an employee of an educational institution is excluded from gross income if (1) the tuition is for education below the graduate level provided by the employer or by another educational institution; (2) the education is provided to a current or retired employee, a spouse or dependent child of either, or to a widow(er) or dependent children of a deceased employee; and (3) certain nondiscrimination requirements are met. P.L. 98-611 provided that, for taxable years beginning after December 31, 1983 and ending on or before December 31, 1985, the section 117(d) exclusion also applied to qualified tuition reduction for graduate-level education provided by an educational institution to a graduate student who was employed by that institution in teaching or research activities (Code sec. 127(c)(8)).

Reasons for Change

By extending the exclusion for scholarships or fellowship grants to cover amounts used by degree candidates for regular living expenses (such as meals and lodging), prior law provided a tax benefit not directly related to educational activities. By contrast, students who are not scholarship recipients must pay for such expenses out of after-tax dollars, just as individuals who are not students must pay for their food and housing costs out of wages or other earnings that are includible in income. The Congress concluded that the exclusion for scholarships should be targeted specifically for the purpose of educational benefits, and should not encompass other items that would otherwise constitute nondeductible personal expenses. The Congress also determined that, in the case of grants to nondegree candidates for travel, research, etc., that would be deductible as ordinary and necessary business expenses, an exclusion for such expenses is not needed, and that an exclusion is not appropriate if the expenses would not be deductible.

In addition, under the Act, the Congress has increased the tax threshold, i.e., the income level at which individuals become subject to tax. Thus, the receipt of a nonexcludable scholarship amount by a student without other significant income will not result in tax liability so long as the individual's total income does not exceed the personal exemption (if available) and either the increased standard deduction under the Act or the taxpayer's itemized deductions. Under the Act, any nonexcludable amount of a scholarship or fellowship grant is treated as earned income, so that such amount can be offset by the recipient's standard deduction

even if the recipient can be claimed as a dependent on his or her parents' return.

Under prior law, controversies arose between taxpayers and the Internal Revenue Service over whether a particular stipend made in an educational setting constituted a scholarship or compensation for services. In particular, numerous court cases have involved resident physicians and graduate teaching fellows who have sought—often notwithstanding substantial case authority to the contrary—to exclude from income payments received for caring for hospitalized patients, for teaching undergraduate college students, or for doing research which inures to the benefit of the grantor.²⁰ The limitation on the section 117 exclusion made by the Act, and the repeal of the special rule relating to degree candidates who must perform services as a condition of receiving a degree, should lessen these problems of complexity, uncertainty of tax treatment, and controversy.

The Congress concluded that the section 117 exclusion should not apply to amounts representing payment for teaching, research, or other services by a student, whether or not required as a condition for receiving a scholarship or tuition reduction, and that this result should apply whether the compensation takes the form of cash, which the student can use to pay tuition, or of a tuition reduction, pursuant to which there is no exchange of cash for payment of tuition. Thus, where cash stipends received by a student who performs services would not be excludable under the Act as a scholarship even if the stipend is used to pay tuition, the Congress believed that the exclusion should not become available merely because the compensation takes the form of a tuition reduction otherwise qualifying under section 117(d). The Congress concluded, consistently with the overall objectives of the Act, that principles of fairness require that all compensation should be given the same tax treatment; that is, some individuals (e.g., students who perform teaching services for universities) should not receive more favorable tax treatment of their compensation than all other individuals who earn wages.

The Congress concluded that it was inappropriate under prior law for recipients of certain Federal grants who were required to perform future services as Federal employees to obtain special tax treatment which was not available to recipients of other types of grants who were required to perform services as a condition of receiving the grants. Thus, under the Act, the general exclusion rule and the limitations apply equally to all grant recipients.

²⁰ As the U.S. Tax Court stated in one case: "Interns and residents have been flooding the courts for years seeking to have their remuneration declared a 'fellowship grant' and hence partially excludable from income. They have advanced such illuminating arguments as they could have earned more elsewhere and they were enjoying a learning experience so therefore what they did receive must have been a grant. They have been almost universally unsuccessful and deservedly so. Why the amounts received by a young doctor just out of school should be treated differently from the amounts received by a young lawyer, engineer, or business school graduate has never been made clear." (*Zonkerman v. Comm'r*, 36 T.C.M. 6, 9 (1977), *aff'd* (4th Cir. 1978))

Explanation of Provisions

In general

Degree candidates.—In the case of a scholarship or fellowship grant received by a degree candidate, an exclusion under section 117 is available only to the extent the individual establishes that, in accordance with the conditions of the grant, the grant was used for (1) tuition and fees required for enrollment or attendance of the student at an educational institution (within the meaning of sec. 170(b)(1)(A)(ii)), and (2) fees, books, supplies, and equipment required for courses of instruction at the educational institution (“course-related expenses”).²¹ This rule applies to all types of scholarship or fellowship grants, whether funded by a governmental agency, college or university, charitable organization, business, or other source, and whether designated as a scholarship or by some other name (e.g., “allowance”).

The exclusion available under the Act for degree candidates is not limited to a scholarship or fellowship grant that by its express terms is required to be used for tuition or course-related expenses. Also, there is no requirement that the student be able to trace the dollars paid for tuition or course-related expenses to the same dollars that previously had been deposited in his or her checking account, for example, from a scholarship grant check. Instead, the amount of an otherwise qualified grant awarded to a degree candidate is excludable (after taking into account the amount of any other grant or grants awarded to the individual that also are eligible for exclusion) up to the aggregate amount incurred by the candidate for tuition and course-related expenses during the period to which the grant applies; any excess amount of the grant is includible in income. No amount of a grant is excludable if the terms of the grant earmark or designate its use for purposes other than tuition or course-related expenses (such as for room or board, or “meal allowances”) or specify that the grant cannot be used for tuition or course-related expenses, even if the amount of such grant is less than the amount payable by the student for tuition or course-related expenses.

For purposes of the section 117 exclusion as modified by the Act, the term candidate for a degree means (1) a student who receives a scholarship for study at a primary or secondary school, (2) an undergraduate or graduate student at a college or university who is pursuing studies or conducting research to meet the requirements for an academic or professional degree, and (3) a student (whether full-time or part-time) who receives a scholarship for study at an educational institution (described in sec. 170(b)(1)(A)(ii)) that (1) provides an educational program that is acceptable for full credit toward a bachelor’s or higher degree, or offers a program of train-

²¹ Two Code provisions applicable to private foundations contain references to scholarship or fellowship grants “subject to the provisions of section 117(a)” (secs. 4941(d)(2)(G)(ii); 4945(g)(1)). The amendments made by the Act to the section 117 exclusion are not intended to treat scholarship or fellowship grants by a private foundation that would not have triggered section 4941 or 4945 excise taxes under prior law as self-dealing acts or taxable expenditures merely because such grants exceed the amount excludable by degree candidates under section 117 as amended by the Act or are made to nondegree candidates (up to the amount excludable under prior law). A technical amendment may be needed so that the statute reflects this intent.

ing to prepare students for gainful employment in a recognized occupation, and (2) is authorized under Federal or State law to provide such a program and is accredited by a nationally recognized accreditation agency.

Nondegree candidates.—The Act repeals the limited prior-law exclusion under section 117 for grants received by nondegree candidates. Thus, no amount of a scholarship or fellowship grant received by an individual who is not a degree candidate is excludable under section 117, whether or not such amount is used for or is less than the recipient's tuition and course-related expenses. This provision does not affect whether the exclusion under section 127 for certain educational assistance benefits may apply to employer-provided educational assistance to nondegree candidates if the requirements of that section are met (see sec. 1162 of the Act, extending the exclusion under Code sec. 127), or whether unreimbursed educational expenses of some nondegree candidates may be allowable to itemizers as trade or business expenses if the requirements of section 162 are met.

Performance of services

The Act repeals the special rule of prior law under which scholarship or fellowship grants received by degree candidates that represented payment for services nonetheless were deemed excludable from income provided that all candidates for the particular degree were required to perform such services. The Act expressly includes in gross income any portion of amounts received as a scholarship or fellowship grant that represent payment for teaching, research, or other services required as a condition of receiving the grant (Code sec. 117(c)).

To prevent circumvention of the rule set forth in section 117(c), that rule is intended to apply not only to cash amounts received, but also to amounts (representing payment for services) by which the tuition of the person who performs services is reduced, whether or not pursuant to a tuition reduction plan described in Code section 117(d). The Act therefore explicitly provides that neither the section 117(a) exclusion nor the section 117(d) exclusion applies to any portion of the amount received that represents payment for teaching, research, or other services by the student required as a condition of receiving the scholarship or tuition reduction. If an amount representing reasonable compensation (whether paid in cash or as tuition reduction) for services performed by an employee is included in the employee's gross income and wages, then any additional amount of scholarship award or tuition reduction remains eligible for the section 117 exclusion as modified by the Act.

As noted, employees who perform required services for which they include in income reasonable compensation continue to be eligible to exclude amounts of tuition reduction. In addition, section 1162 of the Act extends the availability of the tuition reduction exclusion for certain graduate students an additional two taxable years beyond its previously scheduled expiration for taxable years beginning after December 31, 1985, as part of the extension of Code section 127 under the Act.

The Act also repeals the special rule under prior law that permitted the exclusion of certain Federal grants as scholarships or

fellowship grants, even though the recipient was required to perform future services as a Federal employee. Thus, any portion of a Federal scholarship or fellowship grant that represents payment for past, present, or future services required to be performed as a condition of the grant is includible in gross income. As a result, services performed as a Federal employee are not entitled to more favorable tax treatment than services performed for other employers.

Treatment of nonexcludable amounts

Under the Act, a child eligible to be claimed as a dependent on the return of his or her parents may use the standard deduction only to offset the greater of \$500 or earned income (see I.A.3., above). Only for purposes of that rule, any amount of a noncompensatory scholarship or fellowship grant that is includible in gross income as a result of the amendments to section 117 made by the Act (including the repeal of any sec. 117 exclusion for nondegree candidates) constitutes earned income.²²

Compliance with new rules

Under the Act, the IRS is not required to exercise its authority to require information reporting by grantors of scholarship or fellowship grants to the grant recipients or the IRS, even though some amounts of such grants may be includible in gross income under section 117(a) as amended by the Act. (Of course, any amount of a grant that constitutes payment for services described in sec. 117(c) is subject to income tax withholding, employment taxes, and reporting requirements applicable to other forms of compensation paid by the payor organization.) The Congress anticipated that the IRS will carefully monitor the extent of compliance by grant recipients with the new rules and will provide for appropriate information reporting if necessary to accomplish compliance.

Effective Date

The modifications made by the provision are effective for taxable years beginning on or after January 1, 1987, except that prior law continues to apply to any scholarship or fellowship granted before August 17, 1986.²³ Under this rule, in the case of a scholarship or fellowship granted after August 16, 1986 and before January 1, 1987, any amount of such scholarship or fellowship grant that is received prior to January 1, 1987 and that is attributable to expenditures incurred prior to January 1, 1987 is subject to the provi-

²² Amounts received as payment for teaching or other services also constitute earned income.

²³ For this purpose, a scholarship or fellowship is to be treated as granted before August 17, 1986 to the extent that the grantor made a firm commitment, in the notice of award made before that date, to provide the recipient with a fixed cash amount or a readily determinable amount. If the scholarship or fellowship is granted for a period exceeding one academic period (e.g., if the grant is made for three semesters), amounts received in subsequent academic periods are to be treated as granted before August 17, 1986 only if (1) the amount awarded for the first academic period is described in the original notice of award as a fixed cash amount or readily determinable amount, (2) the original notice of award contains a firm commitment by the grantor to provide the scholarship or fellowship amount for more than one academic period, and (3) the recipient is not required to reapply to the grantor in order to receive the scholarship or fellowship grant in future academic periods. A requirement that the recipient must file periodic financial statements to show continuing financial need does not constitute a requirement to reapply for the grant.

sions of section 117 as in effect prior to the amendments made by the Act.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$8 million in 1987, \$64 million in 1988, \$130 million in 1989, \$160 million in 1990, and \$164 million in 1991.

D. Deductions for Personal Expenditures

1. Disallowance of itemized deduction for State and local sales taxes (sec. 134 of the Act and sec. 164 of the Code)²⁴

Prior Law

Itemized deduction

Under prior-law section 164, itemizers could deduct four types of State and local taxes even if such taxes had not been incurred either in a trade or business (sec. 162) or in an investment activity (sec. 212)—individual income taxes, real property taxes, personal property taxes, and general sales taxes.

Not all sales taxes imposed by State or local governments were deductible by itemizers under prior law. To be deductible, the sales tax had to be imposed on sales (either of property or of services) at the retail level.²⁵ In addition, to be deductible the sales tax generally had to apply at one rate to a broad range of items. However, deductions were allowed for (1) sales taxes imposed at a lower rate on food, clothing, medical supplies, and motor vehicles, and (2) sales taxes imposed at a higher rate on motor vehicles, but only up to the amount computed using the generally applicable sales tax rate.

As an exception to the general tax principle that a taxpayer has the burden of providing its entitlement to a deduction,²⁶ itemizers were permitted to claim deductions for sales tax amounts derived from IRS-published tables. These tables contained State-by-State estimates of sales tax liability for individuals at different income levels (calculated by including nontaxable receipts as well as adjusted gross income), taking into account the number of individuals in the taxpayer's household.²⁷ Also, taxpayers generally could add to the table amount the actual State and local sales taxes paid on purchases of a boat, airplane, motor vehicle, and certain other large items.

²⁴ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 135; S.Rep. 99-313, pp. 55-57; Senate floor amendment, 132 Cong. Rec. S 7893-98 (June 19, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), p. 20 (Conference Report).

²⁵ This test could be satisfied in the case of a compensating use tax, i.e., a tax on the use, consumption, or storage of an item that would have been subject to a general sales tax if sold in the State or locality imposing the use tax.

²⁶ See, e.g., *Helvering v. Taylor*, 293 U.S. 507, 514 (1935).

²⁷ Local sales taxes also are imposed in various States. An additional amount for local taxes was built into the IRS-published tables for some of these jurisdictions. For other States having local sales taxes, a further computation had to be made after deriving the table amount (e.g., itemizers in one State were allowed to increase the table amount by sales taxes imposed on electricity or gas during certain months of the year).

Capitalization rule

Under prior law, section 164(a) provided (in the last sentence of that subsection) that, in addition to the four types of State, local, and foreign taxes (enumerated in that section) for which itemized deductions were allowed, other State, local, and foreign taxes were deductible if paid or accrued in the taxable year in carrying on a trade or business or an investment-type activity described in section 212. However, a specific provision of the Code (for example, sec. 189 or sec. 263) might require capitalization of certain otherwise deductible taxes.

Reasons for Change

Itemized deduction

The Congress concluded that, as part of the approach of the Act in reducing tax rates through base-broadening, it is appropriate to disallow the itemized deduction for State and local sales taxes. In addition, a number of other considerations supported repeal of this deduction.

Prior law did not permit itemized deductions for various types of State and local sales taxes, such as selective sales taxes on telephone and other utility services, admissions, and sales of alcoholic beverages, tobacco, and gasoline. Also, prior law did not allow consumers any deduction to reflect inclusion, in the selling price of a product, of taxes levied at the wholesale or manufacturer's level. Accordingly, the Congress concluded that extending nondeductibility to all State and local sales taxes improves the consistency of Federal tax policy, by not providing an income tax benefit for any type of consumption subject to sales taxes. Further, to the extent that sales taxes are costs of purchasing consumer products or other items representing voluntary purchases, allowing the deduction was unfair because it favored taxpayers with particular consumption patterns, and was inconsistent with the general rule that costs of personal consumption by individuals are nondeductible.

The Congress did not find persuasive evidence for arguments that eliminating the sales tax deduction could provide unwarranted encouragement for States to shift away from these taxes and could be unfair to States that retain them. On the contrary, it is significant how small a portion of general sales taxes paid by individuals actually were claimed as itemized deductions. Data from 1984 show that less than one-quarter of all such sales taxes levied were claimed as itemized deductions; by contrast, well over one-half of State and local income taxes paid by individuals are claimed as itemized deductions. The Congress believed that the fact that the large majority of sales tax payments were not claimed as itemized deductions under prior law alleviates any effect of repealing the deduction on the regional distribution of Federal income tax burdens or on the willingness of State and local governments to use general sales taxes as revenue sources.

For itemizers who did not rely on the IRS-published tables to estimate their deductible sales taxes, the prior-law deduction for sales taxes involved substantial recordkeeping and computational burdens, since the taxpayer had to determine which sales taxes

were deductible, keep receipts or invoices showing the exact tax paid on each purchase, and calculate the total of all deductible sales taxes paid. Also, allowing State and local sales taxes to be deducted had created legal controversies between taxpayers and the IRS regarding what was a general, as opposed to a specific, sales tax. Thus, repealing the deduction advanced the goal of simplifying the tax system for individuals.

For itemizers who did rely on the IRS tables, the amount of deductions that could be claimed under prior law without challenge from the IRS could vary significantly in particular instances from the amount of general sales taxes actually paid to State and local governments. The tables did not provide accurate estimates for individuals who had either lower or higher levels of consumption than the average, and did not reflect the fact that an individual might purchase items in several States having different general sales tax rates. Accordingly, use of the tables neither accurately measured the amount of disposable income an individual retained after paying general sales taxes, nor accurately provided an appropriate Federal tax benefit to residents of States that impose general sales taxes.

Capitalization rules

The Congress concluded that the tax treatment of sales and other taxes incurred in a business or investment activity (but not expressly enumerated as deductible under sec. 164) should be consistent with the tax treatment of other costs of capital assets. Thus, for example, the amount of sales tax paid by a business on acquisition of depreciable property for use in the business is treated under the Act as part of the cost of the acquired property for depreciation purposes.

Explanation of Provisions

Itemized deduction

The Act repeals the prior-law itemized deduction for State and local sales taxes under section 164.

Capitalization rule

The Act adds a limitation to the effect of the provision (under prior law, set forth as the last sentence of sec. 164(a)) with respect to deductibility of State and local, or foreign, taxes incurred in a trade or business or in a section 212 activity. This new limitation does not affect deductibility of the six types of taxes listed in the first sentence of section 164(a): (1) State and local, and foreign, real property taxes; (2) State and local personal property taxes; (3) State and local, and foreign, income, war profits, and excess profits taxes; (4) the windfall profit tax (sec. 4986); (5) the environmental tax (sec. 59A); and (6) the generation-skipping transfer tax imposed on income distributions. (The deductibility or capitalization of these enumerated categories of taxes may be modified by provisions in Title VIII of the Act.)

Under the Act, if a State, local, or foreign tax (other than one of the enumerated categories) paid or accrued in carrying on a trade or business or a section 212 activity is paid or accrued by the tax-

payer in connection with the acquisition or disposition of property, the tax shall be treated, respectively, as a part of the cost of the acquired property or as a reduction in the amount realized on the disposition. This limitation does not apply to such a tax if not incurred by a taxpayer in connection with the acquisition or disposition of property; e.g., sales taxes on restaurant meals that are paid by the taxpayer as part of a deductible business meal are deductible (subject to the business meal reduction rule described in I.E., below).

Effective Date

The provisions are effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provisions are estimated to increase fiscal year budget receipts by \$968 million in 1987, \$5,197 million in 1988, \$4,708 million in 1989, \$4,907 million in 1990, and \$5,131 million in 1991.

2. Increased floor for itemized deduction for medical expenses (sec. 133 of the Act and sec. 213 of the Code)²⁸

Prior Law

In general

Individuals who itemize deductions may deduct amounts paid during the taxable year (if not reimbursed by insurance or otherwise) for medical care of the taxpayer and of the taxpayer's spouse and dependents, to the extent that the total of such expenses exceeds a floor (sec. 213). Under prior law, the floor was five percent of the taxpayer's adjusted gross income.

Medical care expenses eligible for the deduction are amounts paid by the taxpayer for (1) health insurance (including employee contributions to employer health plans); (2) diagnosis, cure, mitigation, treatment, or prevention of disease or for the purpose of affecting any structure or function of the body; (3) transportation primarily for and essential to medical care; and (4) lodging while away from home primarily for and essential to medical care, subject to certain limitations. The cost of medicine or a drug qualifies as a medical care expense only if it is a prescription drug or is insulin.

Capital expenditures

Treasury regulations provide that the total cost of an unreimbursed capital expenditure may be deductible in the year of acquisition as a medical expense if its primary purpose is the medical care of the taxpayer, the taxpayer's spouse, or the taxpayer's dependent (Reg. sec. 1.213-1(e)(1)(iii)). Qualified capital expenditures may include eyeglasses or contact lenses, hearing aids, motorized chairs, crutches, and artificial teeth and limbs. The cost of a mova-

²⁸ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 134; S.Rep. 99-313, pp. 57-60; Senate floor amendment, 132 Cong. Rec. S 7665-73 (June 17, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 21-22 (Conference Report).

ble air conditioner may qualify if purchased for the use of a sick person.

In addition, the regulations provide that the cost of a permanent improvement to property that ordinarily would not have a medical purpose (such as central air conditioning or an elevator) may be deductible as a medical expense if the expenditure is directly related to prescribed medical care, but only for any portion of the cost that exceeds the increased value of the property attributable to the improvement. Related operating and maintenance costs also may be deducted provided that the medical reason for the capital expenditure continues to exist.

Under these rules, the Internal Revenue Service has treated as medical expenses the cost of hand controls and other special equipment installed in a car to permit its use by a physically handicapped individual, including a mechanical device to lift the individual into the car (Rev. Rul. 66-80, 1966-1 C.B. 57). Also, the IRS has ruled that the additional costs of designing an automobile to accommodate wheelchair passengers constitute medical expenses, including the costs of adding ramps for entry and exit, rear doors that open wide, floor locks to hold the wheelchairs in place, and a raised roof giving the required headroom (Rev. Rul. 70-606, 1970-2 C.B. 66). Similarly, specialized equipment used with a telephone by an individual with a hearing disability has been held deductible as a medical expense, since the equipment was acquired primarily to mitigate the taxpayer's condition of deafness (Rev. Rul. 71-48, 1971-1 C.B. 99).

The IRS also has ruled that capital expenditures to accommodate a residence to a handicapped individual may be deductible as medical expenses (Rev. Rul. 70-395, 1970-2 C.B. 65). In that ruling, the taxpayer was handicapped with arthritis and a severe heart condition; as a result, he could not climb stairs or get into or out of a bathtub. On the advice of his doctor, he had bathroom plumbing fixtures, including a shower stall, installed on the first floor of a two-story house he rented. The lessor (an unrelated party) did not assume any of the costs of acquiring or installing the special plumbing fixtures and did not reduce the rent; the entire costs were paid by the taxpayer. The IRS concluded that the primary purpose of the acquisition and installment of the plumbing fixtures was for medical care, and hence that such expenses were deductible as medical expenses.

Reasons for Change

Floor under deduction

The Congress concluded that, as part of the approach of the Act in reducing tax rates through base-broadening, it was appropriate to increase the floor under the itemized deduction for medical expenses. A floor under this deduction has long been imposed in recognition that medical expenses essentially are personal expenses and thus, like food, clothing, and other expenditures of living and other consumption expenditures, generally should not be deductible in measuring taxable income.

In raising the deduction floor to 7.5 percent of the taxpayer's adjusted gross income, the Act retains the benefit of deductibility

where an individual incurs extraordinary medical expenses—for example, as a result of major surgery, severe chronic disease, or catastrophic illness—that are not reimbursed through health insurance or Medicare. Thus, the Act continues deductibility if the unreimbursed expenses for a year are so great that they absorb a substantial portion of the taxpayer's income and hence substantially affect the taxpayer's ability to pay taxes. The Congress also believed that the higher floor, by reducing the number of returns claiming the deduction, will alleviate complexity associated with the deduction, including substantiation and audit verification problems and numerous definitional issues.

Capital expenditures

The Congress also concluded that it is desirable to clarify that certain capital expenditures incurred to accommodate a personal residence to the needs of a handicapped taxpayer, such as construction of entrance ramps or widening of doorways to allow use of wheelchairs, qualify as medical expenses eligible for the deduction. The Congress believed that this clarification was consistent with Federal policies that seek to enable handicapped individuals to live independently and productively in their homes and communities, thereby avoiding unnecessary institutionalization.

Explanation of Provision

Floor under deduction

The Act increases the floor under the itemized medical expense deduction from five to 7.5 percent of the taxpayer's adjusted gross income.

Capital expenditures

The Congress clarified that capital expenditures eligible for the medical expense deduction include certain expenses of removing structural barriers in the taxpayer's personal residence for the purpose of accommodating a physical handicap of the taxpayer (or the taxpayer's spouse or dependent). These costs are expenses paid by the taxpayer during the year, if not compensated for by insurance or otherwise, for (1) constructing entrance or exit ramps to the residence; (2) widening doorways at entrances or exits to the residence; (3) widening or otherwise modifying hallways and interior doorways to accommodate wheelchairs; (4) installing railings, support bars, or other modifications to bathrooms to accommodate handicapped individuals; (5) lowering of or other modifications to kitchen cabinets and equipment to accommodate access by handicapped individuals; and (6) adjustment of electrical outlets and fixtures. (The enumeration of these specific types of expenditures is not intended to preclude the Treasury Department from identifying in regulations or rulings similar expenditures for accommodating personal residences for physically handicapped individuals that would be eligible for deductibility as medical expenses.)

The Congress believed that the six categories of expenditures listed above do not add to the fair market value of a personal residence and hence intended that such expenditures are to count in

full as eligible for the medical expense deduction in the year paid by the taxpayer.

Effective Date

The provision (increasing the deduction floor) is effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$186 million in 1987, \$1,223 million in 1988, \$1,141 million in 1989, \$1,276 million in 1990, and \$1,427 million in 1991.

3. Repeal of deduction for certain adoption expenses (sec. 135 of the Act and sec. 222 of the Code) ²⁹

Prior Law

Prior law (sec. 222) provided an itemized deduction for up to \$1,500 of expenses incurred by an individual in the legal adoption of a child with special needs. (This deduction became effective in 1981.) Deductible expenses included reasonable and necessary adoption fees, court costs, and attorney fees.

A child with special needs meant a child with respect to whom adoption assistance payments could be made under section 473 of the Social Security Act. In general, this meant a child who (1) the State had determined cannot or should not be returned to the home of the natural parents, and (2) could not reasonably be expected to be adopted unless adoption assistance was provided, on account of a specific factor or condition (such as ethnic background, age, membership in a minority or sibling group, medical condition, or physical, mental, or emotional handicap).

Reasons for Change

The Congress believed that Federal benefits for families adopting children with special needs more appropriately should be provided through an expenditure program, rather than through an itemized deduction. The deduction provided relatively greater benefits to higher-income taxpayers, who presumably have relatively less need for Federal assistance, and no benefits to nonitemizers or to individuals whose income is so low that they had no tax liability. Also, the Congress believed that the agencies with responsibility and expertise in this area should have direct budgetary control over the assistance provided to families who adopt children with special needs.

Explanation of Provision

The Act repeals the prior-law itemized deduction for certain adoption expenses. Also, section 1711 of the Act amends the adoption assistance program in Title IV-E of the Social Security Act to

²⁹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 134; H. Rep. 99-426, p. 113; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 22-23 (Conference Report).

provide matching funds as an administrative expense for adoption expenses for any child with special needs who has been placed for adoption in accordance with applicable State and local law (see explanation in Part XVII.D.5., below).

Effective Date

The provision repealing the prior-law itemized adoption expense deduction is effective for taxable years beginning on or after January 1, 1987.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$1 million in 1987, \$5 million in 1988, and \$6 million annually in 1989-91.

4. Deductibility of mortgage interest and taxes allocable to tax-free allowances for ministers and military personnel (sec. 144 of the Act and sec. 265(a) of the Code) ³⁰

Prior Law

Code section 265(a) disallows deductions for expenses allocable to tax-exempt income, such as expenses incurred in earning income on tax-exempt investments. In addition, that provision has been applied in certain cases where the use of tax-exempt income is sufficiently related to the generation of a deduction to warrant disallowance of that deduction.

Section 107 provides that gross income does not include (1) the rental value of a home furnished to a minister as part of compensation, or (2) the rental allowance paid to a minister as part of compensation, to the extent the allowance is used to rent or provide a home. In January 1983, the Internal Revenue Service ruled that prior-law section 265 precluded a minister from taking deductions for mortgage interest and real estate taxes on a residence to the extent that such expenditures are allocable to a tax-free housing allowance received by the minister (Rev. Rul. 83-3, 1983-1 C.B. 72). This ruling revoked a 1962 ruling which had taken a contrary position. In its 1983 ruling, the IRS stated that where a taxpayer incurs expenses for purposes for which tax-exempt income was received, permitting a full deduction for such expenses would lead to a double benefit not allowed under section 265 as interpreted by the courts.

The 1983 ruling generally was made applicable beginning July 1, 1983. However, for a minister who owned and occupied a home before January 3, 1983 (or had a contract to purchase a home before that date), the deduction disallowance rule was delayed by the IRS until January 1, 1985, with respect to such home (IRS Ann. 83-100). This transitional rule effective date was extended through 1985 by section 1052 of the Deficit Reduction Act of 1984 (P.L. 98-

³⁰ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 144; H.Rep. 99-426, pp. 135-36; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 144; S.Rep. 99-313, pp. 60-61; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 23 (Conference Report).

369) and through 1986 by administrative action of the IRS (Rev. Rul. 85-96, 1985-29 I.R.B. 7).

In July 1985, the IRS announced that it had not "concluded its consideration of the question of whether members of the uniformed services are entitled, under current law, to take deductions on their income tax returns for home mortgage interest and property taxes to the extent they receive tax-free housing allowances from the Federal Government" (IRS Ann. 85-104). The IRS also stated that "any determination on the issue that would adversely affect members of the uniformed services will not be applied to home mortgage interest and property taxes paid before 1987."

For purposes of this rule, the IRS stated, the uniformed services include all branches of the armed forces, the National Oceanic and Atmospheric Administration, and the Public Health Service. Eligible members of such services, the IRS announcement stated, are entitled to receive tax-free housing and subsistence allowances if they do not reside on a Federal base (see Treas. Reg. sec. 1.61-2(b)).

Reasons for Change

The Congress concluded that it was appropriate to continue the long-standing tax treatment with respect to deductions for mortgage interest and real property taxes claimed by ministers and military personnel who receive tax-free housing allowances. In determining the level of regular military compensation, the Federal Government has assumed that such treatment would be continued.

Explanation of Provision

Under the Act, Code section 265 shall not disallow otherwise allowable deductions for interest paid on a mortgage on, or real property taxes paid on, the home of the taxpayer in the case of (1) a minister, on account of a parsonage allowance that is excludable from gross income under section 107, or (2) a member of a military service, on account of a subsistence, quarters, or other military housing allowance under Federal law (Code sec. 265(a)(6)). The term military service means the Army, Navy, Air Force, Marine Corps, Coast Guard, National Oceanic and Atmospheric Administration, and Public Health Service.

Effective Date

The provision applies for taxable years beginning before, on, or after December 31, 1986. The Act does not allow taxpayers to reopen any taxable years closed by the statute of limitations to claim refunds based on the provision.

Revenue Effect

The provision is estimated to reduce fiscal year budget receipts by less than \$5 million annually.

E. Expenses for Business or Investment

1. Limitations on deductions for meals, travel, and entertainment (sec. 142 of the Act and secs. 162, 170, 212, and 274 of the Code)³¹

Prior Law

Overview

In general, deductions are allowable for ordinary and necessary expenditures paid or incurred in carrying on a trade or business or for the production or collection of income (Code secs. 162, 212). Travel expenses incurred while away from home in the pursuit of a trade or business, including amounts expended for meals and lodging (other than amounts that are lavish or extravagant under the circumstances), generally qualify for the deduction (sec. 162(a)(2)).³²

The taxpayer bears the burden of proving both the eligibility of an expenditure as a deduction and also the amount of any such eligible expenditure.³³ In addition, certain limitations and special substantiation requirements apply to travel and entertainment deductions (sec. 274). Taxpayers are subject to penalties if any part of an underpayment of tax (e.g., because of improperly claimed deductions) is due to negligence or intentional disregard of rules or regulations (sec. 6653(a)) or due to fraud (sec. 6653(b)).

No deduction is allowed for personal, family, or living expenses (sec. 262). For example, the costs of commuting to and from work are nondeductible personal expenses.³⁴ However, a special deduction is allowed for a limited amount of moving expenses (including certain travel and meal expenses) incurred by a taxpayer in connection with changing job locations or starting a new job, if certain requirements are met (sec. 217).

The Code provides that no deduction is allowed for a payment that is illegal under any Federal law or State law (but only if such State law is generally enforced) that subjects the payor to a criminal penalty or the loss of a license or privilege to engage in a trade or business. For example, if paying more than the face value for a ticket ("scalping") is illegal under an enforced State law, this rule disallows any otherwise available deduction of such payments as business entertainment expenses.

³¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 142; H.Rep. 99-426, pp. 115-130; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 142; S.Rep. 99-313, pp. 62-85; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 24-32 (Conference Report).

³² See Part E.2., below, for rules relating to the deductibility of business expenses incurred by employees.

³³ See, e.g., *Interstate Transit Lines v. Comm'r*, 319 U.S. 590, 593 (1943); *Comm'r v. Heininger*, 320 U.S. 467 (1943).

³⁴ *Fausner v. Comm'r*, 413 U.S. 838 (1973).

Entertainment activities

In general

In general, expenditures relating to activities generally considered to constitute entertainment, amusement, or recreation are deductible only if the taxpayer establishes that (1) the item was directly related to the active conduct of the taxpayer's business or (2), in the case of an item directly preceding or following a substantial and bona fide business discussion, the item was associated with the active conduct of the taxpayer's business (sec. 274(a)). The "directly related" and "associated with" requirements are intended to require a more proximate relation between the entertainment expense and the taxpayer's business than would be required under the "ordinary and necessary" requirement applicable to all business expenses (including business entertainment expenses).

These special requirements apply (subject, under prior law, to ten statutory exceptions discussed in greater detail below) to entertainment expenses such as expenses incurred at nightclubs, cocktail lounges, theaters, country clubs, golf and athletic clubs, and sporting events, and on hunting, fishing, or vacation trips or yachts, as well as to expenses of food or beverages, lodging not used for business purposes, or the personal use of employer-provided automobiles. If either statutory requirement is met or an exception applies, entertainment expenses of the taxpayer as well as entertainment expenses of the taxpayer's business guests (such as present or potential customers or clients, legal or business advisors, suppliers, etc.) are deductible, assuming all generally applicable requirements for business deductions are satisfied.

"Directly related" requirement

The Treasury regulations under section 274 provide several alternative tests for satisfying the "directly related" requirement. These tests generally are designed to require the taxpayer to show a clear business purpose for the expenditure and a reasonable expectation of business benefits to be derived from the expenditure. For example, under the "active business discussion" test, the taxpayer must have actively engaged in a business meeting during the entertainment period for the purpose of business benefit and must have had more than a general expectation of deriving some income or other business benefit (other than merely goodwill) at some indefinite future time.

The regulations presume that the "active business discussion" test is not met if the entertainment occurred under circumstances where there was little or no possibility of engaging in business. For example, the test is presumed not to have been met if there were substantial distractions, e.g., because the entertainment took place at a nightclub or a cocktail party, or if the taxpayer met with a group at a vacation resort that included nonbusiness-related individuals.

Even if the "active business discussion" test is not met, entertainment expenses are deemed "directly related" to business and hence satisfy the special section 274 limitation if incurred in a "clear business setting" directly in furtherance of the taxpayer's business. For example, the "clear business setting" test is met for

expenses of entertainment taking place in a hospitality room at a convention, where business goodwill may be generated through the display of business products, or if civic leaders are entertained at the opening of a new hotel or theatrical production, provided that the clear purpose is to obtain business publicity. However, because of distracting circumstances, entertainment is presumed not to have occurred in a clear business setting in the case of a meeting or discussion taking place at a nightclub, theater, or sporting event, or during a cocktail party.

"Associated with" requirement

The second category of deductible entertainment expenditures under the regulations are expenses associated with the taxpayer's business that are incurred directly preceding or following a substantial and bona fide business discussion. This requirement generally permits the deduction of entertainment costs intended to encourage goodwill, provided that the taxpayer establishes a clear business purpose for the expenditure, assuming all generally applicable requirements for business deductions are satisfied.

The "associated with" requirement has not been viewed as requiring that business actually be transacted or discussed during the entertainment, that the discussion and entertainment take place on the same day, that the discussion last for any specified period, or that more time be devoted to business than to entertainment. Thus, if a taxpayer conducts negotiations with a group of business associates and that evening entertains them and their spouses at a restaurant, theater, concert, or sporting event, the entertainment expenses generally are considered deductible as "associated with" the active conduct of the taxpayer's business, even though the purpose of the entertainment is merely to promote goodwill. Entertainment taking place between business sessions or during evening hours at a convention is treated under the regulations as directly preceding or following a business discussion.

Entertainment facilities

The section 274 rules were amended by the Revenue Act of 1978 to disallow any deduction (or the investment tax credit) for the cost of entertainment facilities, subject to certain specific statutory exceptions. This general disallowance rule applies to property such as "skyboxes" in sports arenas, tennis courts, bowling alleys, yachts, swimming pools, hunting lodges, fishing camps, and vacation resorts.

Dues or fees paid to a social, athletic, or sporting club are deductible provided that more than half the taxpayer's use of the club is in furtherance of the taxpayer's trade or business and the item was directly related to the active conduct of such trade or business (sec. 274(a)(2)). The expenses of box seats and season tickets to theaters and sporting events have not been disallowed as expenses related to entertainment facilities. Instead, such costs were deductible under prior law if they met the requirements applied to entertainment activities and the general requirements for deducting business expenses.

Exceptions for certain entertainment activities

In general

Prior law included ten statutory exceptions to the general section 274 rules that an entertainment, recreation, or amusement activity expenditure must satisfy either the "directly related" or "associated with" requirement, and that entertainment facility costs are not deductible. If an exception applied, the entertainment expenditure was deductible if it constituted an ordinary and necessary business expense and if any applicable section 274(d) substantiation requirements were satisfied.

The prior-law exceptions were for (1) business meals (discussed below), (2) food and beverages furnished to employees on the taxpayer's business premises, (3) entertainment expenses treated by the employer and employee as compensation to the employee (and so reported on the employer's return and on Form W-2 furnished to the employee), (4) expenses paid by the taxpayer under a reimbursement or other expense allowance arrangement in connection with the performance of services, (5) expenses for recreational, social, or similar facilities or activities for the benefit of employees generally, (6) entertainment expenses directly related to bona fide meetings of a taxpayer's employees, stockholders, or directors, (7) entertainment expenses directly related to and necessary to attendance at a business meeting or convention of a tax-exempt trade association, (8) expenditures for entertainment (or a related facility) made available by the taxpayer to the general public, (9) expenses for entertainment sold by the taxpayer to the public, and (10) expenses includible in the income of persons who are not employees.

The regulations under section 274 provide that entertainment expenditures are not deductible to the extent they are lavish or extravagant. Under prior law, the Internal Revenue Service indicated that it would not interpret this provision to disallow deductions merely because entertainment expenses exceed a fixed dollar amount, are incurred at expensive restaurants, hotels, nightclubs, or resorts, or involve first-class accommodations or services (see Rev. Rul. 63-144, 1963-2 C.B. 129).

Meals

Under prior law, expenses for food and beverages were deductible, without regard to the "directly related" or "associated with" requirement generally applicable to entertainment expenses, if the meal or drinks took place in an atmosphere conducive to business discussion. There was no requirement under prior law that business actually be discussed before, during, or after the meal.

Travel expenses

Away from home travel

Traveling expenses incurred by the taxpayer while "away from home" in the conduct of a trade or business (e.g., where the taxpayer travels to another city for business reasons and stays there overnight) generally are deductible if the ordinary and necessary standard for business deductions is met (sec. 162(a)(2)). Personal living expenses such as food and lodging incurred during the trip may be

deductible under this rule. However, travel deductions for amounts expended for meals and lodging are not allowable if such amounts are "lavish and extravagant under the circumstances" (sec. 162(a)(2)). In addition, deductions for any traveling expenses must be substantiated pursuant to section 274(d).

If, while away from home, a taxpayer engages in both business and personal activities, traveling expenses to and from such destination are deductible only if the trip is related primarily to the taxpayer's trade or business. If the trip is primarily personal in nature, the traveling expenses to and from the destination are not deductible; however, any expenses while at the destination that are properly allocable to the taxpayer's trade or business are deductible. The determination of whether a trip is related primarily to the taxpayer's trade or business or is primarily personal in nature depends on the facts and circumstances in each case. An important factor in determining whether the trip is primarily personal is the amount of time during the period of the trip that is spent on personal activities compared to the amount of time spent on activities directly relating to the taxpayer's trade or business (Treas. Reg. sec. 1.162-2(b)).

Deductions for conventions held on cruise ships are limited to \$2,000 per taxpayer per year, and are wholly disallowed unless the cruise ship is registered in the United States and stops only at ports of call in this country (including United States possessions) (sec. 274(b)(2)). Also, special rules apply in the case of travel outside the United States that lasts for more than one week (sec. 274(c)).

Traveling costs as deductible education expenses

Traveling expenses may be deductible as business expenses if the travel (1) maintains or improves existing employment skills or is required by the taxpayer's employer or by applicable rules or regulations, and (2) is directly related to the taxpayer's duties in his or her employment or trade or business. Under prior law, some individuals claimed deductions for travel expenses on the ground that the travel itself served educational purposes.

Traveling costs as deductible charitable contributions

A taxpayer may deduct, as charitable donations, unreimbursed out-of-pocket expenses incurred incident to the rendition of services provided by the taxpayer to a charitable organization (Treas. Reg. sec. 1.170A-1(g)). This rule applies to out-of-pocket transportation expenses, and reasonable expenditures for meals and lodging away from home, if necessarily incurred in performing donated services. (No charitable deduction is allowable for the value of the contributed services.) Under prior law, in some instances taxpayers claimed charitable deductions for travel expenses where the travel involved a significant element of personal pleasure, recreation, or vacation.

General substantiation requirements

As a general rule, deductions for travel, entertainment, and certain gift expenses are subject to stricter substantiation requirements than most other business deductions (sec. 274(d)). These stricter rules were enacted because the Congress recognized that

"in many instances deductions are obtained by disguising personal expenses as business expenses." ^{34a}

Under the section 274 rules, the taxpayer must substantiate by adequate records, or sufficient evidence corroborating the taxpayer's statement, (1) the amount of the expense or item subject to section 274(d); (2) the time and place of the travel, entertainment, amusement, recreation, or use of the facility or property, or the date and description of the gift; (3) the business purpose of the expense or other item; and (4) the business relationship to the taxpayer of persons entertained, using the facility or property, or receiving the gift. These substantiation rules apply to: (1) traveling expenses (including meals and lodging while away from home); (2) expenditures with respect to entertainment, amusement, or recreation activities or facilities; and (3) business gifts. In addition, the Tax Reform Act of 1984 (P.L. 98-369) made additional property subject to the section 274(d) rules, including automobiles used for local travel; these additional categories of expense became subject to the section 274(d) substantiation requirements on January 1, 1986.

To meet the adequate records standard, documentary evidence (such as a receipt or paid bill) is required for any expenditure of \$25 or more (except certain transportation charges). The Congress has emphasized that no deductions for expenditures subject to substantiation under section 274(d) are allowable pursuant to the *Cohan* approximation rule. ^{34b}

Reasons for Change

In general

Since the 1960's the Congress has sought to address various aspects of deductions for meals, entertainment, and travel expenses that the Congress and the public have viewed as unfairly benefiting those taxpayers who are able to take advantage of the tax benefit of deductibility. In his 1961 Tax Message, President Kennedy reported that "too many firms and individuals have devised means of deducting too many personal living expenses as business expenses, thereby charging a large part of their cost to the Federal Government." He stated: "This is a matter of national concern, affecting not only our public revenues, our sense of fairness, and our respect for the tax system, but our moral and business practices as well."

After careful review during consideration of the Act, the Congress concluded that these concerns were not addressed adequately by prior law. In general, prior law required some heightened showing of a business purpose for travel and entertainment costs, as well as stricter substantiation requirements than those applying generally to all business deductions; this approach is retained under the Act. However, the prior-law approach failed to address a basic issue inherent in allowing deductions for many travel and entertainment expenditures—the fact that, even if reported accurately and having some connection with the taxpayer's business, such

^{34a} H. Rpt. No. 87-1447, 87th Cong., 2d Sess. (1962), at 19.

^{34b} See, e.g., H. Rept. 99-67, 99th Cong., 1st Sess. 8-9 (1985) (Conference Report on P.L. 99-44).

expenditures also convey substantial personal benefits to the recipients.

The Congress believed that prior law, by not focusing sufficiently on the personal-consumption element of deductible meal and entertainment expenses, unfairly permitted taxpayers who could arrange business settings for personal consumption to receive, in effect, a Federal tax subsidy for such consumption that was not available to other taxpayers. The taxpayers who benefit from deductibility tend to have relatively high incomes, and in some cases the consumption may bear only a loose relationship to business necessity. For example, when executives have dinner at an expensive restaurant following business discussions and then deduct the cost of the meal, the fact that there may be some bona fide business connection does not alter the imbalance between the treatment of those persons, who have effectively transferred a portion of the cost of their meal to the Federal Government, and other individuals, who cannot deduct the cost of their meals.

The significance of this imbalance is heightened by the fact that business travel and entertainment often may be more lavish than comparable activities in a nonbusiness setting. For example, meals at expensive restaurants and the most desirable tickets at sports events and the theatre are purchased to a significant degree by taxpayers who claim business deductions for these expenses. This disparity is highly visible, and has contributed to public perceptions that the tax system under prior law was unfair. Polls indicated that the public identified the full deductibility of normal personal expenses such as meals and entertainment tickets to be one of the most significant elements of disrespect for and dissatisfaction with the tax system.

In light of these considerations, the Act generally reduces to 80 percent the amount of otherwise allowable deductions for business meals, including meals while on a business trip away from home, meals furnished on an employer's premises to its employees, and meal expense at a business luncheon club or a convention, and business entertainment expenses, including sports and theatre tickets and club dues. This reduction rule reflects the fact that all meals and entertainment inherently involve an element of personal living expenses, but still allows an 80-percent deduction where such expenses also have an identifiable business relationship. The Act also tightens the requirements for establishing a bona fide business reason for claiming food and beverage expenses as deductions. The Act includes specified exceptions to the general percentage reduction rule.

In certain respects, more liberal deduction rules were provided under prior law with respect to business meals than other entertainment expenses, both as to the underlying legal requirements for deductibility and as to substantiation requirements. The Congress concluded that more uniform deduction rules should apply; thus, deductions for meals are subject to the same business-connection requirement as applies for deducting other entertainment expenses.

Skybox rentals

Taxpayers generally cannot claim deductions or credits for the cost of entertainment facilities, including private luxury boxes ("skyboxes") at sports arenas. However, under prior law a taxpayer could circumvent this rule by leasing a skybox instead of purchasing it. Accordingly, the Act disallows deductions for all costs of leasing a skybox if the skybox is leased for more than one event during a taxable year; this disallowance rule is phased-in for taxable years beginning in 1987 and 1988.

Excess ticket costs

Under prior law, some taxpayers claimed entertainment expense deductions for ticket purchases in an amount that exceeded the face value of the tickets. For example, a taxpayer may pay an amount in excess of the face price to a "scalper" or ticket agent. The Congress concluded that deductions for ticket costs in excess of the face value amount generally should not be allowed. However, this limitation does not apply to ticket expenses for sports events meeting certain requirements under the Act relating to charitable fundraising.

Luxury water travel

The Congress concluded that prior law could allow excessive deductions for business travel undertaken by luxury water travel (e.g., by cruise ship). Taxpayers who engage in luxury water travel ostensibly for business purposes may have chosen this means of travel for personal enjoyment over other reasonable alternatives that may better serve business purposes by being faster and less expensive. Also, the costs of luxury water travel may include elements of entertainment and meals (not separately charged) that are not present in other transportation. Accordingly, the Act generally places per diem dollar limitations on deductions for luxury water transportation.

Travel as a form of education

The Congress was concerned about deductions claimed under prior law for travel as a form of education. The Congress concluded that any business purpose served by traveling for general educational purposes, in the absence of a specific need such as engaging in research which can only be performed at a particular facility, is at most indirect and insubstantial. By contrast, allowing deductions for travel as a form of education could provide substantial personal benefits by permitting some individuals in particular professions to deduct the cost of a vacation, while most individuals must pay for vacation trips out of after-tax dollars, no matter how educationally stimulating the travel may be. Accordingly, the Act disallows deductions for travel that can be claimed only on the ground that the travel itself is educational, but permits deductions for travel that is a necessary adjunct to engaging in an activity that gives rise to a business deduction relating to education.

Charitable deductions for travel expenses

The Congress also was concerned about charitable deductions claimed by some persons for expenses of travel away from home to visit places that customarily are visited as vacation sites or resorts. Prior to the Act, there had been a proliferation of widely publicized programs advertising that individuals could travel to appealing locations and claim charitable deductions for their travel and living costs, on the ground that the taxpayers were performing services assisting the charities. In many cases, however, the value of the services performed appeared to be minimal compared to the amount deducted, the amount of time spent during the day on activities benefiting the charitable organization was relatively small compared to the amount of time during the day available for recreation and sightseeing activities, or the activities performed were similar to activities that many individuals perform while on vacations paid for out of after-tax dollars.

Accordingly, the Congress concluded that charitable deductions for travel expenses away from home should be denied where the travel involves a significant element of personal pleasure, recreation, or vacation; this same rule applies for travel expenses claimed as medical deductions. However, deductions for such expenses as the out-of-pocket expenditures incurred by a troop leader on a youth group camping trip remain allowable.

Expenses for nonbusiness conventions

The Congress was concerned about deductions claimed under prior law for travel and other costs of attending conventions or other meetings that relate to financial or tax planning of investors, rather than to a trade or business of the taxpayer. For example, individuals claimed deductions for attending seminars about investments in securities or tax shelters. In many cases, these seminars were held in locations (including some that were overseas) that were attractive for vacation purposes, and were structured so as to permit extensive leisure activities on the part of attendees.

Since investment purposes do not relate to the taxpayer's means of earning a livelihood (which usually involves the conduct of a trade or business), the Congress concluded that these abuses, along with the personal consumption issue that arises with respect to any deduction for personal living expenses, justify denial of any deduction for the costs of attending a nonbusiness seminar or similar meeting that does not relate to a trade or business of the taxpayer. However, this disallowance rule does not apply to expenses incurred by a taxpayer in attending a convention, seminar, sales meeting, or similar meeting relating to the trade or business of the taxpayer that are deductible under section 162.

Explanation of Provisions

a. Percentage reduction for meal and entertainment expenses

In general

Under the Act, any amount otherwise allowable as a deduction under chapter 1 of the Code (secs. 1-1399) for any expenses for food or beverages, or for any item with respect to an entertainment,

amusement, or recreation activity³⁵ or facility used in connection with such activity, is reduced by 20 percent (new Code sec. 274(n)).³⁶ Thus, if a taxpayer spends \$100 for a business meal or an entertainment expense that, but for this rule, would be fully deductible, the amount of the allowable deduction is \$80.

This reduction rule applies, for example, to food or beverage costs incurred in the course of travel away from home (whether eating alone or with others), in entertaining business customers at the taxpayer's place of business or a restaurant, or in attending a business convention or reception, business meeting, or business luncheon at a luncheon club. Similarly, the cost of a meal furnished by an employer to employees on the employer's premises is subject to the reduction rule, whether or not the value of the meal is excludable from the employee's gross income under section 119. As another example, meal expenses that are allowable (within certain limitations) as moving expenses deductible under section 217 are subject to the reduction rule. However, as discussed below, the Act provides certain exceptions to the percentage reduction rule.

In determining the amount of any otherwise allowable deduction that is subject to reduction under this rule, expenses for taxes and tips relating to a meal or entertainment activity are included. For example, in the case of a business meal for which the taxpayer pays \$50, plus \$4 in tax and \$10 in tips, the amount of the deduction cannot exceed \$51.20 (80 percent of \$64). Expenses such as cover charges for admission to a night club, the amount paid for a room which the taxpayer rents for a dinner or cocktail party, or the amount paid for parking at a sports arena in order to attend an entertainment event there, likewise are deductible (if otherwise allowable) only to the extent of 80 percent under the rule. However, an otherwise allowable deduction for the cost of transportation to and from a business meal (e.g., cab fare to a restaurant) is not reduced pursuant to the rule.

The percentage reduction rule is applied only after determining the amount of the otherwise allowable deduction under section 162 (or section 212) and under other provisions of section 274. Meal and entertainment expenses first are limited to the extent (if any) required pursuant to other applicable rules set forth in sections 162, 212, or section 274, and then are reduced by 20 percent.³⁷

For example, if a meal costs \$100, but, under section 162(a)(2) or new section 274(k)(1), \$40 of that amount is disallowed as lavish and extravagant, then the remaining \$60 is reduced by 20 percent, leaving a deduction of \$48. Similarly, when a taxpayer buys a ticket to an entertainment event for more than the ticket's face

³⁵ For purposes of this rule, an entertainment activity is defined in accordance with sec. 274(a)(1)(A), i.e., as an activity that is of a type generally considered to constitute entertainment, amusement, or recreation. Thus, for example, the percentage reduction rule applies to any amount of social or athletic club dues or fees that otherwise are allowable as business deductions under sec. 274(a)(2).

³⁶ If a tax-exempt organization incurs otherwise deductible meal or entertainment expenses in conducting an unrelated trade or business, the percentage reduction rule applies in computing the organization's unrelated business taxable income (secs. 511-514).

³⁷ However, if meal or entertainment costs incurred in the course of luxury water travel are separately stated, the percentage reduction rule is applied prior to application of the limitation on luxury water travel expenses in new sec. 274(m), as discussed below.

value, the deduction cannot exceed 80 percent of the face value of the ticket.

Following application of the percentage reduction rules as described above, the deductibility of an expense next is subject to the new two-percent floor under the total of unreimbursed employee business expenses and other miscellaneous itemized deductions (see Part I.E.2., below), if applicable to such expense, and then to any deduction limitation that is specifically expressed in dollars.³⁸ For example, assume that a self-employed individual incurs meal expenses that constitute moving expenses under section 217, subject to the dollar limitation (generally, \$3,000) on deductibility of moving expenses contained in section 217(b)(3), or that an employee incurs such unreimbursed expenses. The taxpayer must first reduce the amount of such meal expenses by 20 percent; the dollar limitation in section 217(b)(3) then applies to the total of such meal expenses (as so reduced) and other types of allowable moving expenses. As discussed below, moving expenses are not subject to the new two-percent floor under miscellaneous itemized deductions.

The effect of the percentage reduction rule cannot be avoided by reason of the absence of separate charges for, payments for, or allocations as between meal and entertainment expenses subject to the rule, and business expenses that are deductible in full. For example, assume that a hotel charges \$200 per night for a room, that it provides dinner and breakfast free of any separately stated charge, and that the amount properly allocable to the meals (or the right to the meals) is \$50. Of the taxpayer's \$200 payment to the hotel, assuming all other requirements for a business deduction are met, only \$190 (\$150 for the room, plus 80 percent of the \$50 allocable to the meals)³⁹ is deductible. Similarly, if a business provides its employees with a fixed per diem amount to cover lodging and meal expenses incurred in business travel, an allocation on a reasonable basis must be made between the meal expenses and the lodging or other expenses, and the percentage reduction rule applies to the amount so allocated to meal expenses.

Exceptions to percentage reduction rule

The Act provides certain exceptions to the applicability of the percentage reduction rule.

First, the cost of a meal or of an entertainment activity is fully deductible if the full value thereof is treated as compensation to the recipient. Thus, if an employee is the recipient of meals or entertainment provided by his or her employer, the employer's expenses are not subject to the percentage reduction rule if the employer treats such expenses as compensation to the employee on the employer's tax return and as wages for income tax withholding purposes. Similarly, if the recipient is an independent contractor who has rendered services to the taxpayer, the taxpayer's expenses

³⁸ Likewise, the percentage reduction rule applies prior to the deduction limitations on luxury water travel (in the case of separately stated meal and entertainment expenses). See discussion below of the exception to the percentage reduction rule for qualified banquet meetings in 1987 and 1988.

³⁹ The Congress anticipated that the Treasury Department will provide additional guidance regarding when allocation is necessary and how the amounts properly allocable to meals and entertainment are to be determined.

are not subject to the percentage reduction rule if the expenses are includible in the recipient's gross income as compensation (or as a prize or award under sec. 74) and the taxpayer includes such expenses on Form 1099 or other applicable information return issued to the recipient (unless the taxpayer is not required to do so because the aggregate amount paid to the recipient is less than \$600).

Second, in the case of an employee who is reimbursed for expenses of a meal or of entertainment incurred in performing services for his or her employer, the percentage reduction rule does not apply to the reimbursed employee; instead, the percentage reduction rule applies to the employer making the reimbursement. This exception may apply, for example, in the case of a salesperson who pays for a lunch with a customer at which a sales contract is discussed and then is reimbursed under a reimbursement or other expense allowance arrangement with his or her employer; in that case, the person making the reimbursement can deduct only 80 percent of the reimbursement.⁴⁰ Similarly, a nonemployee service provider (such as an accounting firm) that provides the required substantiation (pursuant to sec. 274(d)) and is reimbursed by the service-recipient for meal and entertainment expenses incurred on the latter's behalf is not subject to the percentage reduction rule; instead, the service-recipient can deduct only 80 percent of the reimbursement.

Third, the percentage reduction rule does not apply in the case of certain traditional recreational expenses incurred by an employer primarily for the benefit of its employees (other than certain highly compensated, etc. employees). For example, this exception may apply in the case of an employer's deduction for meal and entertainment costs of a year-end holiday party or a summer picnic for all company employees and their spouses.

Fourth, the percentage reduction rule does not apply to an expense for food or beverages if the full value thereof is excludable from the recipient's gross income under Code section 132(e) as a de minimis fringe benefit. For example, a transfer for business purposes of a packaged food or beverage item (e.g., a holiday turkey or ham, fruitcake, or bottle of wine) is not subject to the percentage reduction rule if the section 132(e) de minimis fringe benefit exclusion applies. Similarly, the percentage-reduction rule does not apply to the cost of an employer-provided meal that is excludable from the employee's gross income as a de minimis fringe benefit under section 132(e)(2), relating to certain eating facilities where revenue derived from the facility normally equals or exceeds the direct operating costs of the facility and where access to the facility is available to employees on a nondiscriminatory basis. This exception does not apply to employer-provided meals that are excludable from the employee's gross income only pursuant to section 119, or to any entertainment expenses (whether or not excludable under sec. 132(e)).

Fifth, the reduction rule does not apply in the case of meal or entertainment expenses, such as samples and promotional activities, that are made available by the taxpayer to the general public.

⁴⁰ The employer may deduct the full reimbursed amount if the employer treats such amount as compensation to the employee under the first exception described above.

For example, if the owner of a hardware store advertises that tickets to a sports event will be provided to the first 50 people who visit the store on a particular date, or who purchase an item from the store during a sale, then the full amount of the face value of the tickets is deductible by the owner. Similarly, a wine merchant who permits members of the public who are potential customers to sample wine of the type that the merchant is offering for sale may deduct in full the cost of wine used as a sample, along with reasonable costs that are associated with the winetasting (e.g., food that is provided with the wine to demonstrate the suitability of the wine for particular types of meals.)

Sixth, expenses for attendance at a sports event, to the extent otherwise allowable as a business deduction, are not subject to the percentage reduction rule if the event meets certain requirements related to charitable fundraising. In order for such costs to be subject to the percentage reduction rule under this exception, the event must (1) be organized for the primary purpose of benefiting a tax-exempt charitable organization (described in sec. 501(c)(3)), (2) contribute 100 percent of the net proceeds to the charity, and (3) use volunteers for substantially all work performed in carrying out the event. This rule applies to the cost of a ticket package, i.e., the amount paid both for seating at the event, and for related services such as parking, use of entertainment areas, contestant positions, and meals furnished at and as part of the event.

For example, a golf tournament that donates all of the net proceeds from the event to charity is eligible to qualify under this exception. Such a tournament would not fail to qualify solely because it offered prize money to golfers who participated, or used paid concessionaires or security personnel. However, it is intended that tickets to college or high school football or basketball games or other similar scholastic events will not qualify under the exception. Such games generally do not satisfy the requirement that substantially all work be performed by volunteers, if the institution (or parties acting on its behalf) pays individuals to perform such services as coaching or recruiting.

Seventh, the cost of providing meals or entertainment is fully deductible to the extent that it is sold by the taxpayer in a bona fide transaction for an adequate and full consideration in money or money's worth. For example, a restaurant or dinner theater may deduct the full amount of its ordinary and necessary expenses in providing meals or entertainment to paying customers. Similarly, assume that an employer, not otherwise in the restaurant or catering business, provides meals on the premises to its employees for which the employer can establish that it charges arm's length, fair market value prices. Since in such circumstances the employees are paying adequate and full consideration, the value of the meals does not constitute compensation includible in gross income, even if the section 132(e) exclusion does not apply. For purposes of the above exception to the percentage reduction rule, the employer in these particular circumstances is treated, in effect, like a restaurant, and can deduct in full the cost of providing the meals.

However, a taxpayer cannot avoid the percentage reduction rule, where otherwise applicable, by reason of providing meals on the taxpayer's business premises. By way of illustration, assume that,

in the above example, when an employee takes a customer of the employer to lunch on the premises, the employee's or the customer's meals, or both, are provided by the employer free of charge. Under these circumstances, only 80 percent of the cost of providing the free meals is deductible by the employer. If the employee actually paid for the cost of the meals and was not reimbursed by the employer, the percentage reduction rule would apply to the employee.

A restaurant or catering firm may deduct 100 percent (rather than 80 percent) of its costs for food and beverage items, purchased in connection with preparing and providing meals to its paying customers, that are consumed at work by employees of the restaurant or caterer. However, this rule applies only to employees who work in the employer's restaurant or catering business.

Eighth, expenses incurred in calendar year 1987 or calendar year 1988 for food or beverages that are provided as an integral part of a qualified banquet meeting are not subject to the percentage reduction rule if charges for the meal are not separately stated from other meeting expenses.⁴¹ In the case of expenses incurred on or after January 1, 1989, the 80-percent reduction rule will apply to qualified banquet meeting meals in the same manner as to other business meals.

For purposes of this two-year exception, the term banquet meeting means a convention, seminar, annual meeting, or similar business program that includes the meal. The exception applies only if more than 50 percent of the participants at the banquet meeting are away from home (within the meaning of sec. 162(a)(2)), i.e., can deduct travel expenses under the "overnight" rule; (2) at least 40 persons attend the banquet meeting; and (3) the meal event is part of the banquet meeting and includes a speaker.⁴² If a business program or other banquet meeting includes (for example) three meals, but there is a speaker only at one of the meals, only the one meal at which there is a speaker is eligible for the banquet meeting exception to the percentage reduction rule.

b. Additional requirements relating to meals

The Act also makes certain changes in the legal and substantiation requirements applicable to deductions for business meals; these changes apply independently of and prior to the percentage reduction rule (where applicable).

First, under the Act, deductions for meal expenses are subject to the same business-connection requirement as applied to deductions for other entertainment expenses under prior law (and continues to

⁴¹ Thus, this exception to the percentage reduction rule does not apply if a charge is made to persons consuming the meal for an amount for the meal separate from the charge for the program of which the meal is an integral part, or if program attendees who do not have the meal are refunded a separate amount for not having the meal. However, the exception does not become inapplicable merely because the hotel, caterer, or other business that is unrelated to the taxpayer and that provides the food or beverages may state to the taxpayer as program sponsor a separate amount that represents the food and beverage charges to the taxpayer, which amount the taxpayer then may factor into the total fee for the program that includes the meal.

⁴² In order to qualify for this exception to the percentage reduction rule, it is not necessary that the speaker be paid an honorarium for speaking at the meal. This exception can apply to meals served at an employee training facility if the requirements (such as a bona fide speaker) for the exception are met.

apply under present law).⁴³ Accordingly, an expense for food or beverages is not deductible unless (in addition to generally applicable deduction requirements) the taxpayer (1) establishes that the item was directly related to the active conduct of the taxpayer's trade or business, or, in the case of an item directly preceding or following a substantial and bona fide business discussion (including business meetings at a convention or otherwise), that the item was associated with the active conduct of the taxpayer's trade or business, and (2) substantiates the deduction as required by section 274(d) and Treas. Reg. sec. 1.274-5(b)(4).

Under this requirement, a business meal expense generally is not deductible unless there is a substantial and bona fide business discussion during, directly preceding, or directly following the meal. However, the absence of a business discussion does not preclude satisfying the "directly related" or "associated with" requirement in the case of an individual who is away from home in the pursuit of a trade or business and who has a meal alone or with persons, such as family members, who are not business-connected, and a deduction is claimed only for the meal of such individual, or in the case of a meal expense allowable as a moving expense.

For purposes of deducting food or beverage expenses, the business discussion requirement is deemed not to have been met if neither the taxpayer nor any employee of the taxpayer is present when the food or beverages are provided. Thus, for example, if the taxpayer reserves a table at a business dinner but neither the taxpayer nor an employee of the taxpayer attends the dinner, no deduction is allowed for the taxpayer's expenditures. Similarly, if one party to a contract negotiation buys dinner for other parties involved in the negotiations, but does not attend the dinner, the deduction is denied even if the other parties engage in a business discussion.⁴⁴

For purposes of this rule, an independent contractor who renders significant services to the taxpayer (other than attending meals on the taxpayer's behalf, or providing services relating to meals) is treated as an employee, if he or she attends the meal in connection with such performance of services. Thus, for example, an attorney who was retained by a taxpayer to represent the taxpayer in a particular legal proceeding is to be treated as an employee of the taxpayer, for purposes of this rule, if the attorney represented the taxpayer at a business meal at which the legal proceeding was discussed.

The requirement for deductibility that the taxpayer must be present at the meal does not apply where an individual traveling away from home on business has a meal alone or with persons, such as family members, who are not business-connected, and a deduction is claimed only for the meal of such individual. Also, the taxpayer-presence requirement is subject to the same exceptions as apply under the Act to the percentage reduction rule.

⁴³ Thus, the statutory exceptions to the business-connection requirement that apply in the case of other entertainment expenses also apply in the case of business meal expenses.

⁴⁴ However, the requirement that the taxpayer be present does not apply in the case of a transfer for business purposes of a packaged food or beverage item, such as a holiday turkey, ham, fruitcake, or bottle of wine.

Second, the Act explicitly provides, apart from the prior-law and present-law statutory rule (sec. 162(a)(2)) disallowing deductions for certain lavish and extravagant travel expenses (including meals), that no deduction is allowed for any food or beverage expense unless the expense is not lavish or extravagant under the circumstances (new sec. 274(k)(1)(A)). This additional provision reflects the intent of the Congress that this standard is to be enforced by the Internal Revenue Service and the courts.

This disallowance rule applies whether or not the expense is incurred while the taxpayer is away from home, and whether the taxpayer incurs the expense alone or with others. Since the percentage reduction is applied only after determining the otherwise allowable deduction under sections 162, 212, and 274, if a taxpayer incurs otherwise deductible business lunch expenses of (for example) \$80 for himself and if \$30 of that amount is not allowable as lavish or extravagant, the remaining \$50 is then reduced by 20 percent, leaving a deduction of \$40. This new disallowance rule (but not the sec. 162(a)(2) disallowance rule) is subject to the same exceptions as apply under the Act to the percentage reduction rule (e.g., where the full value of the food or beverages is treated as compensation to the recipient).

The rules of the Act reflect concerns of the Congress about deductions claimed under prior law for meals that did not clearly serve business purposes or were not adequately substantiated. Since the Act provides that deductions for meals are subject to the same business-connection requirement as applies under prior and present law for other entertainment expenses, the substantiation requirements for such entertainment expenses (e.g., in Treas. Reg. sec. 1.274-5(b)(4) with respect to the directly related or associated with requirement for deductibility) also apply to all meal expenses. In addition, the Treasury is instructed to adopt stricter substantiation requirements for business meals, except that the prior-law rule relating to certain expenditures of less than \$25 is to be retained.

Under the Act, as under prior law, the Internal Revenue Service and the courts are not to apply the *Cohan* approximation rule to allow deductibility of any food or beverage expense, other entertainment expense, or other expenditure subject to substantiation pursuant to section 274(d) if the expenditure is not substantiated in accordance with section 274(d) and the regulations thereunder.

c. Deductions for tickets limited to face value

Under the Act, a deduction (if otherwise allowable) for the cost of a ticket for an entertainment activity is limited (prior to application of the percentage reduction rule) to the face value of the ticket. The face value of a ticket includes any amount of Federal, State, or local ticket tax on the ticket. Under this rule, a payment to a "scalper" for a ticket is not deductible (even if not disallowed as an illegal payment) to the extent that the amount paid exceeds the face value of the ticket. Similarly, a payment to a ticket agency or broker for a ticket is not deductible to the extent it exceeds the face value of the ticket.

However, the face value limitation does not apply to an expense that is excepted under the Act from the percentage reduction rule

because it relates to a sports event that meets certain requirements related to charitable fundraising (see description above).

d. Disallowance of deductions for certain "skybox" rentals

The Act generally disallows any deductions relating to rental or similar payments for use of a "skybox" if the skybox is used by the taxpayer (or related party) for more than one event during a taxable year. The term "skybox" means any private luxury box or other facility at a sports arena that is separated from other seating, and is available at a higher price (counting all applicable expenses, e.g., rental of the facility, as well as separate charges for food and seating) than the price generally applicable to other seating.

The disallowance rule applies if the taxpayer (or a related party, including one engaged in a reciprocal rental arrangement with the taxpayer) rents a skybox at the same sports arena for more than one event. For purposes of this rule, a single game or other performance counts as one event. Thus, for example, a taxpayer who rents a skybox for two World Series games in the same stadium is treated as renting a skybox for two events. The deductibility of a single-event rental is determined under the rules generally applicable to entertainment activities, including the percentage reduction rule.

In determining whether a taxpayer has rented a skybox for more than one event, all skybox rentals by the taxpayer in the same arena, along with any related rentals, are considered together. For example, rentals of different skyboxes in the same stadium, or rentals by the same taxpayer pursuant to separate rental agreements, constitute related rentals. In addition, rentals by related parties are considered related rentals. For example, this rule applies where members of the same family, corporations or other entities with common ownership, or taxpayers who have made a reciprocal arrangement involving sharing skyboxes, respectively lease skyboxes for different events.

If the disallowance rule applies (i.e., if the taxpayer rents a skybox for more than one event), the amount allowable as a deduction with respect to such events (including the first such rental) cannot exceed the face value of luxury box seat tickets generally held for sale to the public multiplied by the number of seats in the luxury box (subject, however, to further reduction under the percentage reduction rule). In addition, if expenses for food and beverages incurred by the taxpayer are separately stated, such expenses also may be deducted, subject to the rules generally applicable to business meal expenses, including the business-connection requirement, the prohibition on deducting lavish and extravagant expenses, the requirement of taxpayer presence, and the percentage reduction rule.

For example, in a stadium where box seats (other than in luxury boxes) are sold for between \$8 and \$12, a taxpayer who rents a skybox for three events (and meets generally applicable deduction rules) may treat the deductible amount for the three events as equal to \$12 multiplied by the number of seats in the luxury box, multiplied by three. This method applies whether or not the luxury box is occupied fully during the event, and without regard to

whether amounts paid for the luxury box nominally constitute payments for the seats or rentals for the luxury box.

However, in determining the amount charged for nonluxury box seats, only prices charged for a genuine category of such seats are taken into account. Consider, for example, the case of a sports arena that, in order to increase the deductions allowable with respect to skyboxes, reserved a small group of seats for which it charged \$50 even though those seats were not significantly better than the seats that it offered for \$12. In such a case, the \$50 price would be disregarded as not bona fide. Similarly, the skybox disallowance rule cannot be circumvented by charging inflated amounts for food and beverages provided in the skybox.

Under the Act, the skybox deduction disallowance rule is phased in. Under the phase-in provision, amounts disallowed for taxable years beginning in 1987 and 1988 are, respectively, one-third and two-thirds of the amounts that otherwise would be disallowed under the skybox provision if the provision were fully effective in those years. Assume, for example, that a calendar-year taxpayer rents a stadium skybox with 10 seats for eight events during 1987 at a total cost of \$15,000 (with no additional separate charge for tickets), that the face value of a nonluxury box seat (determined as stated above) is \$12, that all seats are occupied by business customers of the taxpayer and the taxpayer is present at each event, and that the total cost otherwise would be allowable as a business deduction. Under the Act as in effect following the phase-in, the taxpayer could deduct 80 percent of the face value ticket amounts (i.e., 80 percent of \$960). For 1987, only one-third of the nonticket amount (\$15,000 less \$960) is disallowed, pursuant to the phase-in; i.e., \$4,680 is disallowed. Thus, the taxpayer could deduct 80 percent of \$9,360 (\$14,040 less \$4,680), or \$7,488, plus 80 percent of the ticket amount, or \$768. The total 1987 deduction for ticket and nonticket amounts would be \$8,256.

For taxable years beginning after 1989, the Act generally disallows deductions for any costs of rental or other use of a skybox at a sports arena if the taxpayer (or a related party) uses the skybox for more than one event.

e. Travel as a form of education

Under the Act, no deduction is allowed for expenses for travel as a form of education. This rule applies when a travel deduction otherwise would be allowable only on the ground that the travel itself constitutes a form of education. Thus, for example, this provision disallows deductions for transportation or other travel expenses (including meals and lodging) incurred by a teacher of French who travels to and in France in order to maintain general familiarity with the French language and culture.

This disallowance rule does not apply to otherwise allowable deductions claimed with respect to travel that is a necessary adjunct to engaging in an activity that gives rise to a business deduction relating to education. For example, this disallowance rule does not apply where a scholar of French literature travels to Paris in order to do specific library research that cannot be done elsewhere, or to take courses that are offered only at the Sorbonne, in circum-

stances such that the nontravel research or course costs are deductible.

f. Charitable deductions for travel expenses

The Act places limitations on charitable deductions for the cost of travel away from home, effective for taxable years beginning after December 31, 1986.⁴⁵ Under this rule (sec. 170(k)), no charitable deduction is allowed for transportation and other travel expenses (including costs for meals and lodging) incurred in performing services away from home for a charitable organization unless there is no significant element of personal pleasure, recreation, or vacation in the travel away from home. The same limitation applies under prior and present law with respect to medical deductions for lodging costs away from home (sec. 213(d)(2)(B)).

This rule applies only with respect to expenses relating to travel by a taxpayer or by a person associated with the taxpayer (e.g., a family member). The rule does not apply to the extent that the taxpayer pays for travel by third parties who are participants in the charitable activity. For example, this disallowance rule does not apply to travel expenditures personally incurred by a troop leader for a tax-exempt youth group who takes children (unrelated to the taxpayer) belonging to the group on a camping trip. Similarly, the disallowance rule does not apply where an officer of a local branch of a national charitable organization travels to another city for the organization's annual meeting and spends the day attending meetings, even if the individual's evening is free for sightseeing or entertainment activities. However, the disallowance rule applies in the case of any reciprocal arrangement (e.g., when two unrelated taxpayers pay each other's travel expenses, or members of a group contribute to a fund that pays for all of their travel expenses).

The disallowance rule applies whether the travel expenses are paid directly by the taxpayer, or indirectly through reimbursement by the charitable organization. For this purpose, any arrangement whereby a taxpayer makes a payment to a charitable organization and the organization pays for his or her travel expenses is treated as a reimbursement.

In determining whether travel away from home involves a significant element of personal pleasure, recreation, or vacation, the fact that a taxpayer enjoys providing services to the charitable organization will not lead to denial of the deduction. For example, a troop leader for a tax-exempt youth group who takes children belonging to the group on a camping trip may qualify for a charitable deduction with respect to his or her own travel expenses if he or she is on duty in a genuine and substantial sense throughout the trip, even if he or she enjoys the trip or enjoys supervising children. By contrast, a taxpayer who only has nominal duties relating to the performance of services for the charity, who for significant portions of the trip is not required to render services, or who performs activities similar to activities that many individuals perform while on

⁴⁵ A taxpayer cannot circumvent this effective date by "setting aside" amounts, or paying amounts, prior to January 1, 1987, to a fund or account that is to be used to finance travel costs after December 31, 1986 that would be nondeductible expenditures under the Act.

vacations paid out of after-tax dollars, is not allowed any charitable deduction for travel costs.

The disallowance rule in the Act has no effect on deductions other than charitable deductions that may be claimed with respect to travel on behalf of a charitable organization. For example, the rule does not affect the eligibility for deduction under section 162 of an employee business expense incurred by an employee of a charitable organization.

g. Expenses for nonbusiness conventions, etc.

Under the Act, no deduction is allowed for expenses related to attending a convention, seminar, or similar meeting unless such expenses qualify under section 162 as ordinary and necessary expenses of carrying on a trade or business of the taxpayer. Thus, the Act disallows deductions for expenses of attending a convention, etc. where the expenses, but for the provision in the Act, would be deductible under section 212 (relating to expenses of producing income) rather than section 162.

The disallowed expenses to which the provision relates typically include such items as travel to the site of such a convention, registration or other fees for attending the convention, and personal living expenses, such as meals, lodging, and local travel, that are incurred while attending the convention or other meeting. This disallowance rule does not apply to expenses incurred by a taxpayer in attending a convention, seminar, sales meeting, or similar meeting relating to the trade or business of the taxpayer that are deductible under section 162.

In adopting this provision, the Congress also was concerned that some taxpayers may be claiming deductions under section 162 for travel and other costs of attending a convention, seminar, or similar meeting ("convention") at which each convention participant is furnished individually with video tapes of lectures, etc. on topics related to the taxpayer's trade or business, to be viewed at the convenience of the participant, and at which no other significant business-related activities occur during the time allotted for the convention. In such situations, the taxpayer does not participate in activities normally conducted at a business-related convention, such as participating in meetings, discussions, workshops, lectures, or exhibits held during the day, and simply views the tapes at his or her own convenience. Because permitting deductions for travel, meal, or entertainment costs associated with such minimal business-related activities would allow taxpayers to treat expenditures that essentially are for vacation, recreation, or other personal purpose as business expenses, the Congress clarified that no deduction is allowable under section 162 for travel or related costs (such as meals, lodging, or local transportation) of attending such a convention.

This clarification does not disallow deductions for the travel and other costs of attending a convention that involves activities otherwise deductible under present law which are related to the taxpayer's trade or business merely because the convention utilizes video-taped or televised materials where the participants must attend a convention session in person to view the video-taped materials, assuming that the generally applicable requirements for deducting

expenses of attending a convention are satisfied.⁴⁶ Under those requirements, traveling expenses to and from the convention destination are deductible only if the trip is related primarily to the taxpayer's trade or business. If the trip is primarily personal in nature, deductions are allowable only for expenses (if any) incurred while at the destination that are properly allocable to the taxpayer's trade or business.

The determination of whether a trip is related primarily to the taxpayer's trade or business, rather than being primarily personal in nature, depends on the facts and circumstances in each case. An important factor in determining whether the trip is primarily personal is the amount of time during the period of the trip that is spent on personal activities compared to the amount of time spent on activities directly relating to the taxpayer's trade or business (Treas. Reg. sec. 1.162-2(b)).

By way of illustration, assume that a four-day convention is held at a resort or vacation location, that the convention sessions (whether or not utilizing video-taped materials) are scheduled solely for two hours each evening, and that the taxpayer does not engage in any nonconvention business activities during the day. In such a case, a taxpayer could not deduct any away-from-home expenses (travel, lodging, or meals) incurred on his or her trip because the travel is not related primarily to the taxpayer's trade or business, but could deduct any expenses properly allocable to the convention sessions, subject to the rule described above relating to furnished video-taped materials.

h. Luxury water travel

The Act places limitations on the amount of any otherwise allowable deduction for costs of travel by ocean liner, cruise ship, or other form of luxury water transportation. This rule applies, for example, in the case of a taxpayer who has business reasons for traveling from New York City to London and who travels by ocean liner.

Under the Act, the deduction allowable in the case of luxury water travel cannot exceed twice the highest amount generally allowable with respect to a day of travel to employees of the executive branch of the Federal Government while away from home but serving in the United States, multiplied by the number of days the taxpayer was engaged in luxury water travel. For example, if during a particular taxable year the highest applicable Federal per diem amount is \$126 for travel in the United States, a taxpayer's deduction for a six-day trip cannot exceed \$1,512 (\$252 per day times six days). The applicable per diem amount generally is the highest travel amount applying for an area in the conterminous United States; however, any limited special exception to this amount (e.g., a higher limit that applied only to high-ranking executive personnel) would be disregarded.

If the portion of the expenses of luxury water travel that are for meals or entertainment are separately stated, the amounts so sepa-

⁴⁶ Also, this clarification does not disallow deductions for costs, other than travel, meal, or entertainment expenses, of renting or using business-related video-taped materials that are deductible trade or business expenses under section 162.

rately stated are reduced by 20 percent, under the percentage reduction rule, prior to application of this per diem limitation. However, in the absence of separately stated meal or entertainment charges, taxpayers are not required to allocate a portion of the total amount charged for luxury water travel to meals or entertainment unless the amounts to be allocated are clearly identifiable. This special rule, applicable only in the case of luxury water travel, applies in light of the fact that the Act imposes a flat dollar limitation on deductibility of all travel—for transportation, lodging, and meals—incurred in luxury water transportation.

The per diem limitation for luxury water travel does not apply in the case of any expense allocable to a convention, seminar, or other meeting that is held on any cruise ship. Thus, the per diem limitation does not alter the application of the rule (sec. 274(h)(2)) under which deductions for conventions held aboard cruise ships are wholly denied or, in certain special cases, allowed to the extent not in excess of \$2,000 per individual. Under the Act, the statutory exceptions to the business meal percentage reduction rule (described above) are also exceptions to the per diem rule with respect to luxury water travel.

Effective Date

The provisions are effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provisions are estimated to increase fiscal year budget receipts by \$1,180 million in 1987, \$2,068 million in 1988, \$2,397 million in 1989, \$2,787 million in 1990, and \$3,070 million in 1991.

2. Floor on deductibility of miscellaneous itemized deductions; modifications to certain employee business expense deductions (sec. 132 of the Act and sec. 62 and new sec. 67 of the Code) ⁴⁷

Prior Law

In general

The list of itemized deductions on Schedule A of Form 1040 includes a category labeled miscellaneous deductions, following the listings for medical expenses, charitable donations, interest, taxes, and casualty and theft losses. Under prior law, this category generally included four types of deductions: (1) certain employee business expenses (sec. 162); (2) expenses of producing income (sec. 212); (3) expenses related to filing tax returns (sec. 212); and (4) expenses of adopting children with special needs (sec. 222).

Employee business expenses

An employee business expense is a cost incurred by an employee in the course of performing his or her job. Examples of such costs

⁴⁷ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 132; H. Rep. 99-426, pp. 108-111; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 132-33; S. Rep. 99-313, pp. 77-80; and H. Rep. 99-841, Vol. II (September 18, 1986) pp. 32-34 (Conference Report).

include an employee's expenditures for subscriptions to professional journals or continuing education courses, union or professional dues, costs of professional uniforms, costs of looking for new employment, and expenses allowable for business use of the employee's home. Ordinary and necessary employee business expenses generally are deductible.

Employee business expenses generally can be claimed only as itemized deductions. However, under prior law four types of employee business expenses were deductible above-the-line in calculating adjusted gross income, and thus were directly available to non-itemizers: (1) certain expenses paid by an employee and reimbursed under an arrangement with the employer; (2) employee travel expenses incurred while away from home; (3) employee transportation expenses incurred while on business; and (4) business expenses of employees who are outside salespersons (sec. 62(2)).⁴⁸ In addition, the section 217 moving expense deduction was allowable above-the-line to employees or self-employed individuals.

Certain deductions for employee business expenses also are subject to specific limitations or restrictions. For example, a taxpayer's business use of his or her home (whether or not the taxpayer is in the business of being an employee) does not give rise to a deduction for the business portion of expenses related to operating the home (e.g., depreciation and repairs) unless the taxpayer uses a part of the home regularly and exclusively as the principal place of business or as a place of business used by patients, clients, or customers (sec. 280A).⁴⁹ Educational expenses are deductible only if the education (1) is required by the employer, by law, or by regulations, or (2) maintains or improves skills required to perform the taxpayer's present occupation.⁵⁰ Costs of looking for new employment are deductible only if they relate to employment in the taxpayer's present occupation. Also, special substantiation requirements must be met in order to deduct certain employee expenses, such as traveling expenses (sec. 274(d)).

Investment expenses

In general, expenses of producing income other than rental or royalty income are treated as itemized deductions if the related activity does not constitute a trade or business. (Trade or business expenses and expenses of producing rental or royalty income are deductible above-the-line.) Among the types of investment expenses that may be eligible, in particular circumstances, for deduction are investment counsel and trust administration fees, subscriptions to investment advisory publications, and attorneys' fees incurred in collecting income.

⁴⁸ For this purpose, the term outside salesperson meant an individual who solicits business as a full-time salesperson for his or her employer away from the employer's place of business. The term outside salesperson did not include a taxpayer whose principal activities consist of service and delivery, such as a bread driver-salesperson. However, an outside salesperson could perform incidental inside activities at the employer's place of business, such as writing up and transmitting orders and spending short periods at the employer's place of business to make and receive telephone calls (Treas. Reg. sec. 1.62-1(h)).

⁴⁹ See secs. 143(b) and 143(c) of the Act, amending the rules relating to home office deductions.

⁵⁰ See sec. 142 of the Act, disallowing deductions for travel as a form of education.

Other miscellaneous itemized deductions

Tax counsel and assistance fees, as well as appraisal fees paid to determine the amount of a casualty loss or a charitable contribution of property, may be claimed as itemized deductions (sec. 212(3)).

Expenses incurred with respect to a hobby—i.e., an activity that may generate some gross income but that the taxpayer conducts for personal recreational reasons, rather than with the goal of earning a profit—are deductible as itemized deductions to the extent such expenses would be deductible regardless of profit motivation (e.g., certain interest and taxes) or to the extent of income from the hobby.⁵¹ Gambling losses are deductible as itemized deductions to the extent of gambling gains.

Reasons for Change

The Congress concluded that the prior-law treatment of employee business expenses, investment expenses, and other miscellaneous itemized deductions fostered significant complexity, and that some of these expenses have characteristics of voluntary personal expenditures. For taxpayers who anticipated claiming such itemized deductions, prior law effectively required extensive record-keeping with regard to what commonly are small expenditures. Moreover, the fact that small amounts typically were involved presented significant administrative and enforcement problems for the Internal Revenue Service. These problems were exacerbated by the fact that taxpayers frequently made errors of law regarding what types of expenditures were properly allowable under prior law as miscellaneous itemized deductions.⁵²

Since many taxpayers incur some expenses that are allowable as miscellaneous itemized deductions, but these expenses commonly are small in amount, the Congress concluded that the complexity created by prior law was undesirable. At the same time, the Congress concluded that taxpayers with unusually large employee business or investment expenses should be permitted an itemized deduction reflecting that fact. Similarly, in the case of medical expenses and casualty losses, a floor is provided (under prior and present law) to limit those deductions to unusual expenditures that may significantly affect the individual's disposable income.

Accordingly, the Congress concluded that the imposition of a two-percent floor on miscellaneous itemized deductions constituted a desirable simplification of the tax law. This floor will relieve taxpayers of the burden of recordkeeping unless they expect to incur expenditures in excess of the floor. Also, the percentage floor will relieve the Internal Revenue Service of the burden of auditing deductions for such expenditures when not significant in aggregate amount.

⁵¹ See sec. 143(a) of the Act, amending the rules relating to hobby losses.

⁵² Common taxpayer errors have included disregarding the restrictions on home office deductions, and on the types of education expenses that are deductible; claiming a deduction for safe deposit expenses even if used only to store personal belongings; and deducting the cost of subscriptions to widely read publications outlining business information without a sufficient business or investment purpose.

The use of a deduction floor also takes into account that some miscellaneous expenses are sufficiently personal in nature that they would be incurred apart from any business or investment activities of the taxpayer. For example, membership dues paid to professional associations may serve both business purposes and also have voluntary and personal aspects; similarly, subscriptions to publications may help taxpayers in conducting a profession and also may convey personal and recreational benefits. Taxpayers presumably would rent safe deposit boxes to hold personal belongings such as jewelry even if the cost, to the extent related to investment assets such as stock certificates, were not deductible.

The Congress also concluded that the distinction under prior law between employee business expenses (other than reimbursements) that were allowable above-the-line, and such expenses that were allowable only as itemized deductions, was not supportable in most instances. The reason for allowing these expenses as deductions (i.e., the fact that they may constitute costs of earning income) and the reasons for imposing a percentage floor apply equally to both types of expenses. However, the Congress concluded that it would not be appropriate to apply the new percentage floor to the moving expense deduction (which is subject to separate dollar limitations under sec. 217) or to the new deduction for certain impairment-related work expenses of handicapped individuals (which applies only in limited circumstances).

Explanation of Provisions

Under the Act, all employee business expenses, other than reimbursed expenses described in section 62(a)(2)(A) and the new deduction for certain performing artists, are allowed only as itemized deductions. Thus, under the Act, unreimbursed employee travel expenses incurred away from home, employee transportation expenses incurred while on business, business expenses of employees who are outside salespersons, and employee moving expenses no longer are deductible above-the-line in calculating adjusted gross income. Also, the section 217 moving expense deduction is allowable to a self-employed individual only as an itemized deduction.

The Act also provides that, subject to certain exceptions, the total of all the taxpayer's miscellaneous itemized deductions, including employee business expenses that are not deductible above-the-line, are subject under the Act to a floor of two percent of the taxpayer's adjusted gross income. Thus, for example, if an itemizer with AGI of \$30,000 incurs miscellaneous itemized deductions totaling \$757, the allowable amount of such deductions is \$157.

However, the two-percent floor does not apply to the following miscellaneous itemized deductions, if otherwise allowable: impairment-related work expenses for handicapped employees (new Code sec. 67(d));⁵³ moving expenses (sec. 217); the estate tax in the case of income in respect to a decedent (sec. 691(c)); certain adjustments where a taxpayer restores amounts held under a claim of right

⁵³ The term "impairment-related work expenses" means expenses of a handicapped individual (as defined in sec. 190(b)(3)) for attendant care services at the individual's place of employment that are necessary for such individual to be able to work, provided such expenses are otherwise deductible under sec. 162.

(sec. 1341); amortizable bond premium (sec. 171); certain costs of cooperative housing corporations (sec. 216); deductions allowable in connection with personal property used in a short sale; certain terminated annuity payments (new Code sec. 72(b)(3)); and gambling losses to the extent of gambling winnings (sec. 165(d)). In addition, it is intended that the two-percent floor is not applicable to deductions allowable to estates or trusts under sections 642(c), 651, and 661.⁵⁴

The Act did not modify the above-the-line deduction under section 62(a)(2)(A) for certain reimbursed expenses (allowable under secs. 161-196 of the Code) paid or incurred by the taxpayer, in connection with performing services as an employee, under a reimbursement or other expense allowance arrangement with his or her employer. Thus, the Act did not alter the prior-law rules⁵⁵ relating to an employee who incurs expenses solely for the benefit of the employer and who is reimbursed for those expenses under an arrangement with the employer (regardless of whether the employer or a third party for whom the employee performs a benefit as an employee of the employer actually provides the reimbursement).⁵⁶ These rules provide that such an employee need not report on the employee's tax return either the expenses or the reimbursement (to the extent the reimbursement does not exceed the expenses). The Congress intended that this nonreporting rule is to be continued.

If the employee has a reimbursement or other expense allowance arrangement with his or her employer, but under the arrangement the full amount of such expenses is not reimbursed, the unreimbursed portion paid by the employee is allowable only to the extent (if any) otherwise allowable as an itemized deduction (e.g., after taking into account the percentage reduction rule for meals and entertainment expenses, if applicable to the expense), and subject to the two-percent floor provided by the Act.⁵⁷

⁵⁴ A technical correction may be necessary so that the statute reflects this intent. Such a correction was included in the version of H. Con. Res. 395 that passed the Senate in the 99th Congress.

⁵⁵ See Treas. Reg. secs. 1.162-17(b), 1.274-5T(f), and 1.274-5(e). For rules relating to reporting and substantiation of certain reimbursements of persons other than employees, see Reg. secs. 1.274-5T(h) and 1.274-5(g).

⁵⁶ The Congress intended that the Treasury make explicit in these regulations that these reimbursements by third parties are to be treated as expenses described in sec. 62(a)(2)(A).

⁵⁷ Under the Act, it is intended that the Treasury Department issue regulations or other guidance coordinating the treatment of employee business expenses and the provisions in sec. 162(h), relating to travel expenses away from home of State legislators. Under the intended rules, any excess of the allowable amount as determined under sec. 162(h) over the amount actually reimbursed to the legislator electing that provision would be allocated between meals and other travel expenses in accordance with the ratio of meals and other travel expenses under the Federal per diem reimbursement rules for travel in the United States. The reimbursed amount would be deductible pursuant to sec. 62(a)(2)(A), and 80 percent of the amount allocated to meals would be deductible by itemizers as an employee business expense (subject to the new two-percent floor under miscellaneous itemized deductions).

As described in the text above, the two-percent floor applies after application of the percentage reduction rule and prior to any deduction limitation that is specifically expressed in dollars. For example, with regard to away-from-home expenses of Members of Congress, the two-percent floor applies prior to application of the statutory \$3,000 limitation (sec. 162(a)). In addition, if a Member has expenses subject to the \$3,000 limitation and other miscellaneous itemized deductions, the amounts disallowed by the two-percent floor are disallowed proportionately. For example, assume that a Member with adjusted gross income of \$100,000 has \$5,000 of away-from-home expenses (qualifying for the deduction, disregarding application of the \$3,000 limit and the two-percent floor, but after application of the 80-percent rule for meal and entertainment expenses) and \$5,000 of other miscellaneous itemized deductions, for a total of \$10,000 of potential deductions subject to the two-percent floor. Application of the two-percent floor would limit

Pursuant to Treasury regulations, the two-percent floor is to apply with respect to indirect deductions through pass-through entities (including mutual funds) other than estates, nongrantor trusts, cooperatives, and REITs (sec. 67(c)). The floor also applies with respect to indirect deductions through grantor trusts, partnerships, and S corporations by virtue of grantor trust and pass-through rules.

In the case of an estate or trust, the Act provides that adjusted gross income is to be computed in the same manner as in the case of an individual, except that the deductions for costs that are paid or incurred in connection with the administration of the estate or trust and that would not have been incurred if the property were not held in such trust or estate are treated as allowable in arriving at adjusted gross income and hence are not subject to the floor. The regulations to be prescribed by the Treasury Department relating to application of the floor with respect to indirect deductions through certain pass-through entities are to include such reporting requirements as may be necessary to effectuate this provision.

Under the Act, an actor or other individual who performs services in the performing arts (a "performing artist") is allowed a new above-the-line deduction for his or her employee business expenses (allowable under sec. 162) during a year if the performing artist for that year (1) had more than one employer (excluding any nominal employer)⁵⁸ in the performing arts, (2) incurred allowable section 162 expenses as an employee in connection with such services in the performing arts in an amount exceeding 10 percent of the individual's gross income from such services, and (3) did not have adjusted gross income, as determined before deducting such expenses, exceeding \$16,000. In general, if the performing artist is married at the close of the taxable year, this deduction is available only if the taxpayer and his or her spouse file a joint return for the year, and only if the combined adjusted gross income of the taxpayer and his or her spouse (as determined before deducting such expenses) shown on the return does not exceed \$16,000. (Code sec. 62(b)).

Effective Date

The provisions apply to taxable years beginning after December 31, 1986.

Revenue Effect

The provisions are estimated to increase fiscal year budget receipts by \$694 million in 1987, \$4,630 million in 1988, \$4,716 million in 1989, \$5,039 million in 1990, and \$5,383 million in 1991.

these deductions to \$8,000, and the amount disallowed because of the two-percent floor would be disallowed proportionately. Thus, after application of the two-percent floor, the Member could deduct \$4,000 of the away-from-home expenses and \$4,000 of the miscellaneous itemized deductions. The former amount (i.e., the away-from-home expenses) is further limited to \$3,000 because of the special limitation on deducting Member's expenses. Thus, the Member could deduct a total of \$7,000 of miscellaneous itemized deductions. See 132 Cong. Rec. H8357 (daily ed. Sept. 25, 1986) (statement of Mr. Rostenkowski).

⁵⁸ The Code provides that an employer is treated as nominal if the amount received by the individual for his or her services as an employee in the performing arts for such employer during the taxable year is less than \$200.

3. Changes in treatment of hobby losses (sec. 143(a) of the Act and sec. 183 of the Code) ⁵⁹

Prior Law

Expenses arising from hobbies (i.e., activities not engaged in for profit) are allowed only as itemized deductions. Except for expenses that are deductible without reference to whether they are incurred in an activity designed to produce income (e.g., certain residential mortgage interest and real property taxes), hobby expenses are deductible only to the extent not exceeding the amount of hobby income for the year (Code sec. 183). These rules apply, for example, to activities such as horse breeding, farming, and researching a restaurant or travel guide, if the taxpayer's motivations are recreational rather than profit-oriented.

A facts and circumstances test generally applies to determine whether a particular activity constitutes a hobby. However, statutory rules provided under prior law that if the gross income from an activity exceeded the deductions attributable thereto for two or more out of five consecutive years (seven consecutive years in the case of an activity which consisted in major part of the breeding, training, showing, or racing of horses), then the activity was presumed to be engaged in for profit rather than as a hobby. The presumption that an activity was not a hobby if it was profitable in two out of five consecutive years (or seven consecutive years, for certain horse activities) could be overcome by the Internal Revenue Service under the general facts and circumstances test.

Reasons for Change

The Congress was concerned that the statutory presumption under prior law regarding whether an activity was being engaged in for profit may have unduly benefited some taxpayers who engaged in activities as hobbies, but who could structure their earnings and expenses so as to realize a profit in at least two out of five consecutive years. For example, the prior-law presumption could apply even if the taxpayer realized a substantial net loss over five years that reflected a willingness to incur losses as the cost of personal recreation, rather than unexpected business difficulties. Even though the Internal Revenue Service could overcome the statutory presumption, some abuse nonetheless could arise, in light of the subjective nature of a general facts and circumstances test. However, in the case of horse breeding, training, showing, and racing activities, the Congress concluded that the prior-law rules should continue to apply.

Explanation of Provision

Under the Act, for activities other than those consisting in major part of horse breeding, training, showing, or racing, the statutory presumption of being engaged in for profit applies only if the activ-

⁵⁹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 143; H.Rep. 99-426; pp. 130-32; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 143(a); S. Rep. 99-313, pp. 80-81; and H. Rep. 99-841, Vol. II (September 18, 1986) pp. 35-36 (Conference Report).

ity is profitable in three out of five consecutive years. As under prior law, this presumption can be overcome by the Internal Revenue Service under the general facts and circumstances test.

As in the case of other expenses that under prior and present law are deductible as miscellaneous itemized deductions, deductions for hobby expenses—other than costs that are deductible without reference to whether they are incurred in an activity designed to produce income (such as certain taxes)—are subject to the two-percent floor under section 132 of the Act.

Effective Date

The provision is effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provision relating to the statutory presumption is estimated to increase fiscal year budget receipts by a negligible amount.

4. Changes in restrictions on deductions for business use of home (secs. 143(b) and (c) of the Act and sec. 280A of the Code) ⁶⁰

Prior Law

In general

A taxpayer's business use of his or her home may give rise to a deduction for the business portion of expenses related to operating the home (e.g., depreciation and repairs). However, deductions are allowed only with respect to a part of the home that is used exclusively and regularly either as the principal place of business for a trade or business of the taxpayer or as a place of business used to meet or deal with patients, clients, or customers in the normal course of the taxpayer's trade or business, or if the part of the home used for business purposes constitutes a separate structure not attached to the dwelling unit (Code sec. 280A). In the case of an employee, a further requirement for a deduction is that the business use of the home must be for the convenience of the employer (sec. 280A(c)(1)).

For an employee, any deductions for depreciation or operating expenses of a home allowable under these rules generally must be claimed as itemized deductions. If an employee receives employer reimbursements for home office costs and includes the reimbursements in gross income, the home office expenses generally are reported on Form 2106 and are deductible "above-the-line" as an adjustment to gross income; under prior law, an employee who constituted an "outside" salesperson similarly deducted such amounts above-the-line. Self-employed individuals claim any allowable deductions for home office expenses above-the-line on Schedule C of Form 1040.

⁶⁰ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 143(c); H. Rep. 99-426, pp. 132-35; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 143; S. Rep. 99-313, pp. 81-85; and H. Rep. 99-841, Vol. II (September 18, 1986) p. 35 (Conference Report).

Rental use of home

The general business-use requirements described above do not apply in the case of rental use of a part of the home (e.g., when the taxpayer rents a room to a lodger). In a recent Tax Court case interpreting prior law (*Feldman v. Comm'r*, 84 T.C. 1 (1985), *aff'd*, 791 F.2d 781 (9th Cir. 1986)), this rental exception was applied, and the general requirements for the deduction held inapplicable, where an employer nominally rented a portion of the employee's home used by the employee in performing services for the employer. The court permitted the taxpayer to deduct home office expenses without requiring regular and exclusive use of the home either as the taxpayer's principal place of business or as a place to meet or deal with patients, clients, or customers, notwithstanding the court's finding that the rental was not an arm's length arrangement and was made for more than the fair rental value of the space that nominally was rented.

Limitations on deduction

Deductions for home office costs that are allowed solely because there is a qualifying business use of the home are limited to the amount of the taxpayer's gross income derived from the business use of the home during the taxable year. Costs in excess of the limitation cannot be carried over and used as deductions in other taxable years. This limitation has no effect on deductions (such as certain home mortgage interest and real property taxes) that are allowable in the absence of business use.

The Internal Revenue Service has issued proposed regulations defining gross income derived from the business use of the home as gross income from the business activity in the unit reduced by expenditures required for the activity but not allocable to the use of the unit itself, such as expenditures for supplies and compensation paid to other persons.⁶¹ However, in *Scott v. Comm'r*, 84 T.C. 683 (1985), the Tax Court rejected this interpretation of prior law, holding that gross income from the use of the home means gross income from the business activity itself, i.e., not reduced by any outside expenditures required for the activity.

Under the Tax Court's interpretation, deductions for business use of one's home could be used to create or increase a net loss from the activity and thus, in effect, to offset income from unrelated activities. For example, assume that a taxpayer derived gross income of \$1,000 from an activity, and incurred expenses of \$1,500 that related to the activity but that did not relate to use of the home (e.g., expenses for supplies, secretaries, and messengers). Under the Tax Court's interpretation of prior law, the taxpayer would be permitted to deduct up to \$1,000 in home office costs that are not otherwise deductible (e.g., rent or depreciation), despite the fact that there was no net income from the activity.

Reasons for Change

The provision of the Act placing a two-percent floor under miscellaneous itemized deductions (see Part I.E.2., above) partially alle-

⁶¹ Proposed Treas. Reg. sec. 1.280A-2(i)(2)(iii), 48 Fed. Reg. 33325 (July 21, 1983).

viates concerns of the Congress about the rules governing home office deductions claimed by employees. However, to the extent home office expenses remain deductible by self-employed persons or to some extent by employees, the Congress concluded that the following modifications to the deductibility of such expenses are desirable.

Requirements for deduction

The Congress concluded that taxpayers should not be able to circumvent the limitations on home office deductions by arranging for their employers to rent portions of their homes. The allowance of such arrangements would significantly narrow the applicability of section 280A and could encourage tax avoidance of the sort that section was intended to prevent.

Section 280A was enacted because of concerns that some taxpayers were converting nondeductible personal and living expenses into deductible business expenses simply because they found it convenient to perform some work at home.⁶² The Congress recognized that in some instances a legitimate cost resulting from business use of a home could conceivably be disallowed under the restrictions of section 280A; however, any such instances would be difficult to identify and define.

Further, the Congress believed that allowing deductions for use of a taxpayer's residence inherently involves the potential for abuse. In enacting section 280A, the Congress had concluded that absent limitations, taxpayers could claim home office deductions even when no marginal cost of maintaining the home was incurred by the taxpayer as a result of the business use. Thus, the Congress had concluded that home office deductions should be disallowed in the absence of specified circumstances indicating a compelling reason for business use of the home, and in any event should not be permitted to offset taxable income derived from unrelated activities.

Under the interpretation of prior-law section 280A applied by the Tax Court in the *Feldman* decision, the Congress concluded the statute would fail to achieve its intended purpose. Allowing employees to use lease arrangements with employers as a method of circumventing the restrictions on home office deductions might encourage some taxpayers to arrange sham transactions whereby a portion of salary is paid in the form of rent. Moreover, it is questionable whether lease transactions between an employer and employee are generally negotiated at arm's length, particularly if such a transaction could provide added tax deductions to the employee at no additional cost to the employer. Accordingly, the Congress concluded that no home office deductions should be allowable (except for expenses such as certain home mortgage interest and real property taxes that are deductible absent business use) if the employee rents a portion of his or her home to the employer.

⁶² See Joint Committee on Taxation, *General Explanation of the Tax Reform Act of 1976* (JCS-33-76), at 139.

Limitations on deduction

In general.—The *Scott* decision would permit taxpayers to use home office deductions to create or increase a net loss from the business activity, and thus to offset unrelated income. The Congress believed that a home office deduction to which section 280A applies should not be used to reduce taxable income from the activity to less than zero. In adopting the provisions of the Act, the Congress reemphasized that section 280A was enacted because of concerns about allowing deductions for items which have a substantial personal component relating to the home, which most taxpayers cannot deduct, and which frequently do not reflect the incurring of significantly increased costs as a result of the business activity, and that the provision should be interpreted to carry out its objectives.

Carryover.—The Congress concluded that the application of section 280A under prior law might be unduly harsh in one respect. Deductions that are disallowed because they exceed the statutory limitation (i.e., the amount of income from the business activity) cannot be carried forward to subsequent taxable years and claimed to the extent of subsequent income from the home office activity. However, since the purpose of this limitation is to deny the use of home office deductions to offset unrelated income, the Congress concluded that deduction carryforwards should be allowed, subject to the general limitation that the home office deductions in any year cannot create or increase a net loss from the business activity.

Explanation of Provisions

Requirements for deduction

The Act provides that no home office deduction is allowable by reason of business use where an employee leases a portion of his or her home to the employer.⁶³ For this purpose, an individual who is an independent contractor is treated as an employee, and the party for whom such individual is performing services is treated as an employer. In the case of a lease that is subject to this rule, no home office deductions are allowed except to the extent that they would be allowable in the absence of any business use (e.g., certain home mortgage interest expense and real property taxes).

Limitations on deduction

In general.—The Act limits the amount of a home office deduction (other than expenses that are deductible without regard to business use, such as certain home mortgage interest expense and real property taxes) to the taxpayer's gross income from the activity, reduced by all other deductible expenses attributable to the activity but not allocable to the use of the unit itself. Thus, home office deductions are not allowed to the extent that they create or increase a net loss from the business activity to which they relate.

Carryover.—The Act provides a carryforward for those home office deductions that are disallowed solely due to the income limitation on the amount of an otherwise allowable home office deduc-

⁶³ Also, payments to an employee from his or her employer that constitute wages are not exempted from withholding requirements and employment taxes merely because the employer and employee label such payments as "rent" under a "rental" or "lease" agreement.

tion. Deductions that meet the general requirements of section 280A but that are disallowed solely because of the income limitation may be carried forward to subsequent taxable years, subject to the continuing application of the income limitation to prevent the use of such deductions to create or increase a net loss in any year from the business activity.

Effective Date

The provision is effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by a negligible amount.

F. Repeal of Political Contributions Tax Credit (Sec. 112 of the Act and sec. 24 of the Code) ⁶⁴

Prior Law

Individual taxpayers could claim a nonrefundable income tax credit equal to one-half the amount of their contributions during the year to political candidates and certain political campaign organizations (Code sec. 24). The maximum allowable credit was \$50 for an individual and \$100 for a married couple filing a joint return.

Reasons for Change

The Congress concluded that, as part of the approach of the Act to reduce tax rates through base-broadening, it was appropriate to repeal the political contributions tax credit. The Congress also understood that data compiled by the Internal Revenue Service suggest that a significant percentage of persons claiming the credit have sufficiently high incomes to make contributions in after-tax dollars, without the benefit of the credit. Also, the credit provided no incentive for individuals with no income tax liability for the year. The small credit amount allowable per return under the dollar limitations made verification costly in relation to the tax liability at issue.

Explanation of Provision

The Act repeals the credit for political contributions.

Effective Date

The provision is effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$327 million in 1988, \$341 million in 1989, \$354 million in 1990, and \$368 million in 1991.

⁶⁴ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 112; H. Rep. 99-426, pp. 95-96; House floor amendment, 131 Cong. Rec. H 12731 (Dec. 17, 1985); H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 112; S. Rep. 99-313, p. 86; and H. Rep. 99-841, Vol. II (September 18, 1986) p. 37 (Conference Report).

TITLE II—CAPITAL COST PROVISIONS

A. Depreciation; Regular Investment Tax Credit; and Finance Leases (Secs. 201, 202, 203, 204, 211, 212, and 213 of the Act and secs. 38, 46, 57, 168, 178, 179, 280F, 312(k), 467, 1245, 1250, and new sec. 49 of the Code)¹

Prior Law

Accelerated depreciation

Overview

The Economic Recovery Tax Act of 1981 ("ERTA") enacted the Accelerated Cost Recovery System ("ACRS") for tangible depreciable property placed in service after 1980. Under ACRS, the cost or other basis of eligible property (without reduction for salvage value) was recovered using an accelerated method of depreciation over a predetermined recovery period. Before ACRS was enacted, an asset's cost (less salvage value) was recovered over its estimated useful life. The pre-ACRS rules remain in effect for property placed in service by a taxpayer before 1981, and for property not eligible for ACRS.

Under ACRS, the allowable recovery deduction in each taxable year was determined by applying a statutory percentage to the property's original cost (adjusted, as described below, for investment tax credit allowed).

Personal property

The statutory percentages for personal property were based on the 150-percent declining balance method for the early recovery years, switching to the straight-line method at a time to maximize the recovery allowance. Alternatively, taxpayers could elect to use the straight-line method over the applicable ACRS recovery period (or over a longer recovery period) with respect to one or more classes of ACRS property placed in service during a taxable year (sec. 168(b)(3)(A)). Under a "half-year" convention, the statutory tables and straight-line alternatives provided a half-year recovery allowance for the first recovery year, whether the property was placed in service early or late in the year. No recovery allowance was allowed in the taxable year in which a taxpayer disposed of an asset.

The cost of eligible personal property was recovered over a three-year, five-year, 10-year, or 15-year recovery period, depending on the recovery class of the property.

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, secs. 201-211; H.Rep. 99-426, pp. 137-190; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 201-213; S.Rep. 99-313, pp. 87-117; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 38-66 (Conference Report).

The classification of personal property under ACRS generally was based on the Asset Depreciation Range ("ADR") system of the law in effect before 1981. Under the ADR system, a present class life ("midpoint") was provided for all assets used in the same activity, other than certain assets with common characteristics (e.g., automobiles). Property with an ADR midpoint life of four years or less (such as automobiles, light general purpose trucks, certain special tools, and over-the-road tractor units), racehorses more than two years old when placed in service, other horses more than 12 years old when placed in service, and property used in connection with research and experimentation were included in the three-year class. The 10-year class included long-lived public utility property with an ADR midpoint life from 18.5 to 25 years, certain burners and boilers, and railroad tank cars. Longer-lived public utility property having an ADR midpoint life over 25 years was in the 15-year class. Personal property not included in any other class was assigned to the five-year class.

Taxpayers were required to reduce the basis of assets by 50 percent of the amount of regular or energy investment tax credits allowed with respect to personal property (and the reduced basis was used to compute recovery deductions). With respect to the regular investment tax credit, a taxpayer could elect a 2-percentage point reduction in the credit in lieu of the half-basis adjustment.

Real property

The statutory percentages for real property were based on the 175-percent declining balance method (200-percent for low-income housing described in prior law section 1250(a)(1)(B)(i)-(iv)), switching to the straight-line method at a time to maximize the deduction. For the year of acquisition and disposition of real property, the recovery allowances were based on the number of months during those years that the property was in service. Under a "mid-month" convention, real property (other than low-income housing) placed in service or disposed of by a taxpayer at any time during a month was treated as having been placed in service or disposed of in the middle of the month.

For real property placed in service after May 8, 1985, the cost was recovered over a 19-year recovery period (15 years for low-income housing), although longer recovery periods could be elected.

Generally, low-income housing included projects eligible for various Federal, State, and local housing programs and projects where 85 percent of the tenants are eligible for, but do not necessarily receive, subsidies under Section 8 of the Housing Act of 1937.

Component cost recovery was not permitted under ACRS. Thus, the same recovery period and method had to be used for a building as a whole, including all structural components. A substantial improvement (generally, one that is made over a two-year period at a cost that is at least 25 percent of a building's unadjusted basis) was treated as a separate building, the cost of which was separately recovered when the improvement was placed in service.

If the 15-percent or 20-percent investment tax credit for rehabilitation expenditures was allowed, the basis of real property was reduced by the amount of credit earned (and the reduced basis was used to compute recovery deductions). The basis of real property

was reduced by 50 percent of the 25-percent credit allowed for the rehabilitation of a certified historic structure. In addition, if a credit for rehabilitation expenditures was allowed, the straight-line method of cost recovery had to be used with respect to the rehabilitation expenditures.

Recapture

With certain limited exceptions, gain from the disposition of depreciable property was "recaptured" as ordinary income to the extent of previously allowed ACRS deductions (sec. 1245). For residential real property that was held for more than one year, gain was treated as ordinary income only to the extent the depreciation deductions allowed under the prescribed accelerated method exceeded the deductions that would have been allowed under the straight-line method (prior law sec. 1250(b)(1)). In addition, recapture for qualified low-income housing was phased out after such property had been held for a prescribed number of months, at the rate of one percentage point per month (prior law sec. 1250(a)(1)(B)). For nonresidential real property held for more than one year, there was no recapture if the taxpayer elected to recover the property's cost using the straight-line method over the applicable ACRS recovery periods (prior law sec. 1245(a)(5)(C)). If accelerated depreciation was claimed with respect to nonresidential real property, the full amount of the depreciation deductions previously taken (to the extent of gain) was recaptured.

Application of different depreciation methods for certain purposes

In general, ACRS recovery allowances were reduced for property that is (1) used predominantly outside the United States ("foreign-use property"), (2) leased to a tax-exempt entity, including a foreign person—unless more than 50 percent of the gross income derived from the property was subject to U.S. tax—"tax-exempt use property"), or (3) financed with industrial development bonds the interest on which is exempt from taxation.

Different depreciation methods were also used for purposes of computing earnings and profits of a domestic corporation and applying the minimum tax provisions.

Foreign-use property

The rationale for reducing ACRS deductions for foreign-use property is that the investment incentive is intended to encourage capital investment in the United States and should not be available to property used predominantly outside the United States.

The recovery period for foreign-use personal property was equal to the asset's ADR midpoint life (12 years for property without a midpoint life), and the 200-percent declining balance method could be used. The recovery period for foreign-use real property was 35 years, and the 150-percent declining balance method could be used. A taxpayer could elect to use the straight-line method over the applicable recovery period or certain longer periods.

Communications satellites, as defined in section 48(a)(2)(B), were excluded from the definition of foreign-use property. Other spacecraft (and interests therein) were not specifically excluded from the definition of foreign-use property.

Tax-exempt use property

The policy underlying the restriction on tax-exempt use property is to provide tax-reducing incentives only to those who are subject to income tax, and to deny them to tax-exempt entities, including foreign entities.

Depreciation deductions for tax-exempt use property were computed using the straight-line method and disregarding salvage value. The cost of tax-exempt use personal property was generally recovered over the longer of the asset's ADR midpoint life (12 years if the property had no ADR midpoint life) or 125 percent of the lease term. The recovery period for qualified technological property subject to these rules was five years. The recovery period for tax-exempt use real property was the longer of 40 years or 125 percent of the lease term. A taxpayer could elect to recover the cost of tax-exempt use property over an optional extended recovery period. The rules for tax-exempt use property overrode the rules relating to foreign-use property.

Property financed with industrial development bonds

Except in the case of property placed in service in connection with projects for residential rental property, the cost of property that was financed with tax-exempt industrial development bonds was recovered using the straight-line method over either the applicable ACRS recovery period or an optional extended recovery period.

Computation of earnings and profits

If an accelerated depreciation method were used for purposes of computing earnings and profits, the acceleration of depreciation deductions would reduce a corporation's earnings and profits, and thereby facilitate the distribution of tax-free dividends. For this reason, domestic corporations were required to compute earnings and profits using the straight-line method over recovery periods that were longer than the standard ACRS recovery periods.

The extended recovery periods used to compute earnings and profits were: (1) five years for three-year property, (2) 12 years for five-year property, (3) 25 years for 10-year property, (4) 35 years for 15-year public utility property, and (5) 40 years for 19-year real property and low-income housing.

Minimum taxes

The minimum tax provisions are designed to prevent taxpayers with substantial economic income from avoiding tax liability by using certain exclusions, deductions, and credits (referred to as "items of tax preference"). In applicable cases, the excess of ACRS deductions over depreciation deductions that would have been allowed had the taxpayer used the straight-line method over a prescribed recovery period were treated as items of tax preference. For purposes of this rule, the prescribed recovery periods were: (1) five years for three-year property, (2) eight years for five-year property, (3) 15 years for 10-year property, (4) 22 years for 15-year public utility property, (5) 15 years for low-income housing, and (6) 19 years for real property other than low-income housing. These rules ap-

plied to personal property subject to a lease and 19-year real property and low-income housing (prior law sec. 57(a)(12)). Further, personal property subject to a lease was not taken into account for corporations other than personal holding companies (as defined in sec. 542).

Luxury automobiles and mixed-use property

ACRS deductions were subject to fixed limitations for automobiles and reduced for certain property (including automobiles) used for both personal and business purposes (prior law sec. 280F). For luxury automobiles, depreciation deductions were limited to \$3,200 for the first year in the recovery period, and \$4,800 for each succeeding year. For mixed-use property used 50 percent or more for personal purposes, capital costs—to the extent of business use—were recovered using the straight-line method of depreciation over the same recovery periods that were used for purposes of computing the earnings and profits of a domestic corporation. ACRS was available for mixed-use property used more than 50 percent for business purposes, but only with respect to the portion of the property's basis attributable to business use.

Mass asset vintage accounts

In general, taxpayers computed depreciation deductions, as well as gain or loss on disposition, on an asset-by-asset basis. A taxpayer could elect to establish mass asset vintage accounts for assets in the same recovery class and placed in service in the same taxable year. Under proposed Treasury regulations, the definition of mass assets eligible for this treatment was limited to assets (1) each of which is minor in value relative to the total value of such assets, (2) that are numerous in quantity, (3) that are usually accounted for only on a total dollar or quantity basis, and (4) with respect to which separate identification is impractical (Prop. Treas. reg. sec. 1.168-2(h)(2)).

Lessee-leasehold improvements

In general, if a lessee made improvements to property, the lessee was entitled to recover the cost of the improvement over the shorter of the ACRS recovery period applicable to the property or the portion of the term of the lease remaining on the date the property was acquired. If the remaining lease term was shorter than the recovery period, the cost was amortized over the remaining term of the lease. For purposes of these rules, under prior law section 178, if the remaining term of a lease was less than 60 percent of the improvement's ACRS recovery period, the term of a lease was treated as including any period for which the lease could be renewed pursuant to an option exercisable by the lessee, unless the lessee established that it was more probable that the lease would not be renewed. In any case, a renewal period had to be taken into account if there was a reasonable certainty the lease would be renewed. Section 178 also provided rules relating to the amortization of lease acquisition costs.

Public utility property

In general

In general, a regulatory commission allows a public utility to charge customers rates that are sufficient to recover the utility's cost of service. A public utility's cost of service includes its annual operating expense and the capital expense allocable to a year. The capital expense that can be passed through to customers consists of an annual depreciation charge for equipment and also a rate of return on the capital invested in the equipment and other property (which capital is referred to as the "rate base").

ACRS distinguished between long-lived public utility equipment and other equipment. Further, as described below, public utilities were required to use a "normalization" method of accounting for ACRS deductions.

Definition of public utility property.—In general, public utility property was defined as property used predominantly in the trade or business of furnishing or selling:

- (1) electrical energy, water, or sewage disposal services,
 - (2) gas or steam through a local distribution system,
 - (3) telephone services,
 - (4) other communication services if furnished or sold by the Communications Satellite Corporation for purposes authorized by the Communications Satellite Act of 1962 (47 U.C.C. sec. 701), or
 - (5) transportation of gas or steam by pipeline,
- if the rates are established or approved by certain regulatory bodies.

Normalization accounting

A public utility could use ACRS only if a "normalization" method of accounting was used for purposes of establishing the utility's cost of service and reflecting operating results in its regulated books of account. Normalization required that (1) a utility's tax expense for ratemaking purposes be computed as if the depreciation deduction were computed in the same manner as the ratemaking allowance for depreciation (which is generally based on the straight-line method over relatively long useful lives), (2) the deferred taxes (i.e., the difference between the actual tax expense computed using ACRS and that computed for ratemaking purposes) be reflected in a reserve (and thus be available for capital investment), and (3) the regulatory commission not exclude from the rate base an amount that is greater than the amount of the reserve for the period used in determining the tax expense as part of the utility's cost of service (see Treas. reg. sec. 1.167(l)-1, which interprets a similar provision of pre-ACRS law).

Normalization prevented the immediate lowering of rates charged to customers as a result of the cost savings from ACRS. Rather, current tax reductions were flowed through to customers over the period of tax deferral.

Expensing of up to \$5,000 of personal property

A taxpayer (other than a trust or estate) could elect to deduct the cost of up to \$5,000 of qualifying personal property in the year the property was placed in service, in lieu of recovering the cost

under ACRS (prior law sec. 179). In general, qualifying property had to be acquired by purchase for use in a trade or business, and eligible for the investment tax credit (although no investment credit was allowed for the portion of the cost expensed under this rule). The \$5,000 limit was scheduled to increase to \$7,500 for taxable years beginning in 1988 and 1989, and to \$10,000 for years beginning after 1989.

If expensed property was converted to nonbusiness use within two years of the time the property was placed in service, the difference between the amount expensed and the ACRS deductions that would have been allowed for the period of business use was recaptured as ordinary income.

Anti-churning rules

Under rules enacted as part of ACRS, taxpayers were prevented from bringing property placed in service before January 1, 1981 under ACRS by certain post effective date transactions (referred to as "churning transactions"). In general, churning transactions include those in which either the owner or user of property before January 1, 1981 (or a related party) is the owner or user immediately after the transaction. Taxpayers subject to the anti-churning rules compute depreciation under the law in effect before 1981.

Regular investment tax credit

General rule

A credit against income tax liability was allowed for up to 10 percent of a taxpayer's investment in certain tangible depreciable property (generally, not including buildings or their structural components) (secs. 38 and 46). The amount of the regular investment credit was based on the ACRS recovery class to which the property was assigned. The 10-percent credit was allowed for eligible property in the five-year, 10-year, or 15-year public utility property class. Three-year ACRS property was eligible for a six-percent regular credit (even if the taxpayer elected to use a longer recovery period). The maximum amount of a taxpayer's investment in used property that was eligible for the regular investment credit was \$125,000 per year; the limitation on used property was scheduled to increase to \$150,000 for taxable years beginning after 1987.

Generally, the investment credit was claimed for the taxable year in which qualifying property was placed in service. In cases where property was constructed over a period of two or more years, an election was provided under which the credit could be claimed on the basis of qualified progress expenditures ("QPEs") made during the period of construction before the property was completed and placed in service. Investment credits claimed on QPEs were subject to recapture if the property failed to qualify for the investment credit when placed in service.

The amount of income tax liability that could be reduced by investment tax credits in any year was limited to \$25,000 plus 85 percent of the liability in excess of \$25,000 (sec. 38(c)). Unused credits for a taxable year could be carried back to each of the three preceding taxable years and then carried forward to each of the 15 following taxable years (sec. 39).

Public utility property

Public utility property was eligible for the regular investment credit only if the tax benefits of the credit were normalized in setting rates charged by the utility to customers and in reflecting operating results in regulated books of account (sec. 46(f)). The investment credit was denied for public utility property if the regulatory commission's treatment of the credit resulted in benefits being flowed through to customers more rapidly than under either (1) the ratable flow-through method or (2) the rate base reduction method.

Under the ratable flow-through method (sec. 46(f)(2)), utilities passed through to customers a pro rata portion of the credit during each year of the useful life of the asset. The regulatory commission could not require that the utility reduce its rate base by the amount of the credit. Therefore, even though the credit itself was flowed through to customers over the life of the asset, the utility's shareholders were allowed to earn a return on that amount of the cost of the equipment which had, in effect, been supplied by the Federal government through the regular investment credit.

Under the rate base reduction method (sec. 46(f)(1)), the utility's rate base was reduced by the amount of the credit, so the shareholders were prevented from earning a return on that part of the cost of the equipment which was paid for by the credit. Under this method, the regulatory commission could not require that the utility flow through to customers any part of the credit itself, or allow the utility to charge customers for the depreciation expense on the entire cost of the equipment, including the part paid for by the investment credit.

Finance leases

Overview

The law contains rules to determine who owns an item of property for tax purposes when the property is subject to an agreement that the parties characterize as a lease. Such rules are important because the owner of the property is entitled to claim tax benefits including cost recovery deductions and investment tax credits with respect to the property. These rules attempt to distinguish between true leases, in which the lessor owns the property for tax purposes, and conditional sales or financing arrangements, in which the user of the property owns the property for tax purposes. These rules generally are not written in the Internal Revenue Code. Instead they evolved over the years through a series of court cases and revenue rulings and revenue procedures issued by the Internal Revenue Service. Essentially, the law is that the economic substance of a transaction, not its form, determines who is the owner of property for tax purposes. Thus, if a transaction is, in substance, simply a financing arrangement, it is treated that way for tax purposes, regardless of how the parties choose to characterize it. Under these rules, lease transactions cannot be used solely for the purpose of transferring tax benefits; they have to have nontax economic substance.

Finance lease provisions

The Tax Equity and Fiscal Responsibility Act of 1982 provided rules (finance lease rules) that liberalized the leasing rules with respect to certain property. Under the finance leasing rules, the fact that (1) the lessee had an option to purchase the property at a fixed price of 10 percent or more of its original cost to the lessor, or (2) the property could be used only by the lessee (referred to as "limited use property"), could not be taken into account in determining whether the agreement was a lease.

A qualified agreement under the finance lease rules had to be a lease determined without taking into account the fact that it contained a 10-percent fixed price purchase option or that the property was limited use property. Thus, the transaction had to have economic substance independent of tax benefits. The lessor had to reasonably expect to derive a profit independent of tax benefits. In addition, the transaction, without taking into account the fact the agreement contains a fixed price purchase option or that the property is limited use property, could not otherwise be considered a financing arrangement or conditional sale.

The finance lease rules were to have been generally effective for agreements entered into after December 31, 1983, with three temporary restrictions intended to limit the tax benefits of finance leasing in 1984 and 1985. First, no more than 40 percent of property placed in service by a lessee during any calendar year beginning before 1986 was to qualify for finance lease treatment. Second, a lessor could not have used finance lease rules to reduce its tax liability for any taxable year by more than 50 percent. This 50-percent lessor cap was to apply to property placed in service on or before September 30, 1985. Third, the investment tax credit for property subject to a finance lease and placed in service on or before September 30, 1985, was only allowable ratably over 5 years, rather than entirely in the year the property was placed in service.

Notwithstanding these general rules, finance leasing was to be available for up to \$150,000 per calendar year of a lessee's farm property for agreements entered into after July 1, 1982, and before 1984. Furthermore, the 40-percent lessee cap, 50-percent lessor cap, and 5-year spread of the investment credit did not apply to this amount of farm property.

The Tax Reform Act of 1984, however, postponed the effective date of the finance lease rules to generally apply to agreements entered into after December 31, 1987, and extended the three restrictions. Thus, the 40-percent lessee cap was extended to property placed in service by a lessee during any calendar year beginning before 1990; the 50-percent lessor cap was extended through September 30, 1989; and the 5-year spread of the investment credit for property subject to a finance lease was extended to property placed in service on or before September 30, 1989.

The Tax Reform Act of 1984 provided transitional rules which exempted property from the 4-year postponement if, before March 7, 1984, (1) a binding contract to acquire or construct the property was entered into by or for the lessee, (2) the property was acquired by the lessee, or (3) construction of the property was begun by or for the lessee. In addition, the Act exempted from the 4-year post-

ponement property that is placed in service before 1988 and is (1) a qualified lessee's automotive manufacturing property (limited to an aggregate of \$150 million of cost basis per lessee) or (2) property that was part of a coal-fired cogeneration facility for which certification and construction permit applications were filed on specified dates. The special rules relating to the availability of finance leasing for up to \$150,000 per calendar year of a lessee's farm property were extended to cover agreements entered into before 1988.

Reasons for Change

ACRS provides a small number of depreciation classes and relatively short recovery periods. The Congress chose to maintain this structure, while adopting improvements. For example, the Congress believed ACRS could be made more neutral by increasing the recovery period for certain long-lived equipment, and by extending the recovery period of real property. Another modification approved by the Congress provides equal recovery periods for the long-lived assets of regulated and nonregulated utilities. Under prior law, nonregulated utilities received more favorable depreciation treatment, which may have resulted in an unfair competitive advantage where they provided essentially the same services as regulated utilities.

The Congress concluded that some further acceleration in the rate of recovery of depreciation deductions should be provided to compensate partly for the repeal of the investment tax credit. The Act increases the rate of acceleration from 150-percent declining balance to 200-percent declining balance for property in the 3-year, 5-year, 7-year, and 10-year classes. Together with the large tax rate reductions, investment incentives will remain high and the nation's savings can be utilized more efficiently. An efficient capital cost recovery system is essential to maintaining U.S. economic growth. As the world economies become increasingly competitive, it is most important that investment in our capital stock be determined by market forces rather than by tax considerations.

Under prior law, the tax benefits of the combination of the investment tax credit and accelerated depreciation were more generous for some equipment than if the full cost of the investment were deducted immediately—a result more generous than exempting all earnings on the investment from taxation. At the same time, assets not qualifying for the investment credit and accelerated depreciation bore much higher effective tax rates. The output attainable from our capital resources was reduced because too much investment occurred in tax-favored sectors and too little investment occurred in sectors that were more productive but which were tax-disadvantaged. The nation's output can be increased simply by a reallocation of investment, without requiring additional saving.

The Congress concluded that the surest way of encouraging the efficient allocation of all resources and the greatest possible economic growth was by reducing statutory tax rates. A large reduction in the top corporate tax rate was achieved by repealing the investment tax credit without reducing the corporate tax revenues collected. One distorting tax provision was replaced by lower tax rates that provide benefits to all investment. A neutral tax system

allows the economy to most quickly adapt to changing economic needs.

Explanation of Provisions

1. Depreciation

Overview

The Act modifies ACRS for property placed in service after December 31, 1986, except for property covered by transition rules. The cost of property placed in service after July 31, 1986, and before January 1, 1987, which is not transition-rule property, may, at the election of the taxpayer on an asset-by-asset basis, be covered under the modified rules.

The Act provides more accelerated depreciation for the revised three-year, five-year and 10-year classes, reclassifies certain assets according to their present class life (or "ADR midpoints"), and creates a seven-year class, a 20-year class, a 27.5-year class, and a 31.5-year class. The Act prescribes depreciation methods for each ACRS class (in lieu of providing statutory tables). Eligible personal property and certain real property are assigned among the three-year class, five-year class, seven-year class, 10-year class, 15-year class, or 20-year class.

The depreciation method applicable to property included in the three-year, five-year, seven-year, and 10-year classes is the double declining balance method, switching to the straight-line method at a time to maximize the depreciation allowance. For property in the 15-year and 20-year class, the applicable depreciation method is the 150-percent declining balance method, switching to the straight-line method at a time to maximize the depreciation allowance. The cost of section 1250 real property generally is recovered over 27.5 years for residential rental property and 31.5 years for nonresidential property, using the straight-line method.

Under the Act, if a lessee makes improvements to leased property, the cost of the leasehold improvement is recovered under the same rules that apply to an owner of property.

General rules

The Act reclassifies certain assets based on midpoint lives under the ADR system, as in effect on January 1, 1986 (Rev. Proc. 83-35, 1983-1 C.B. 745). Certain ADR classifications are made on the basis of regulated accounts (e.g., ADR class 49.14, regarding electric utility transmission and distribution plants). Under the Act, if an asset is described in a particular ADR class, it is assigned to an ACRS class without regard to whether the taxpayer who owns the asset is subject to regulation (e.g., for property described in ADR class 49.14, without regard to whether the taxpayer is a public utility or an unregulated company). As under prior law, the salvage value of property is treated as zero; thus, the entire cost or other basis of eligible property is recovered under the Act.

Eligible property

Property eligible for modified ACRS generally includes tangible depreciable property (both real and personal), whether new or

used, placed in service after December 31, 1986. Eligible property does not include (1) property that the taxpayer properly elects to depreciate under the unit-of-production method or any other method not expressed in terms of years (other than the "retirement replacement betterment" method or similar method), (2) any property used by a public utility (within the meaning of section 167(l)(3)(A)) if the taxpayer does not use a normalization method of accounting, (3) any motion picture film or video tape, (4) any sound recording described in section 280(c)(2), or (5) any property subject to ACRS as in effect before enactment of the Act or pre-ACRS depreciation rules (by application of an effective date or transitional rule or the anti-churning rule). As under present law, intangible property may be amortizable under section 167.

The legislative history clarifies that under present law cargo containers have an ADR midpoint of six years and this present class life shall be used in applying the provisions of the Act.²

As under prior law, property that the taxpayer properly elects to depreciate under the unit-of-production method or any other method not expressed in terms of years (other than the retirement-replacement-betterment method or similar method), will be so depreciated. For example, depreciation is allowable with respect to landfills on a unit basis (without regard to whether the space for dumping waste was excavated by the taxpayer), to the extent capital costs are properly allocable to the space to be filled with waste rather than to the underlying land.

Normalization requirements for public utility property

The Act continues the rule that public utility property is eligible for ACRS only if the tax benefits of ACRS are normalized in setting rates charged by utilities to customers and in reflecting operating results in regulated books of account. In addition to requiring the normalization of ACRS deductions, the Act provides for the normalization of excess deferred tax reserves resulting from the reduction of corporate income tax rates (with respect to prior depreciation or recovery allowances taken on assets placed in service before 1987).

If an excess deferred tax reserve is reduced more rapidly or to a greater extent than such reserve would be reduced under the average rate assumption method, the taxpayer will not be treated as using a normalization method of accounting with respect to any of its assets. Thus, if the excess deferred tax reserve is not normalized, the taxpayer must compute its depreciation allowances using the depreciation method, useful life determination, averaging convention, and salvage value limitation used for purposes of setting rates and reflecting operating results in regulated books of account.

The excess deferred tax reserve is the reserve for deferred taxes computed under prior law over what the reserve for deferred taxes would be if the tax rate in effect under the Act had been in effect for all prior periods. The average rate assumption method is the method which reduces the excess deferred tax reserve over the remaining regulatory lives of the property that gave rise to the re-

² H. Rep. 99-841, Vol. II (September 18, 1986), p. 40.

serve for deferred taxes. Under this method, the excess deferred tax reserve is reduced as the timing differences (i.e., differences between tax depreciation and regulatory depreciation with respect to each asset or group of assets in the case of vintage accounts) reverse over the life of the asset. The reversal of timing differences generally occurs when the amount of the tax depreciation taken with respect to an asset is less than the amount of the regulatory depreciation taken with respect to the asset. The excess deferred tax reserve is multiplied by a formula that is designed to insure that the excess is reduced to zero at the end of the regulatory life of the asset that generated the reserve.

The Congress did not intend that the provisions apply retroactively to any excess deferred tax reserve generated from previous reductions in corporate tax rates; such excess deferred tax reserves will continue to be treated under prior law.

Classification of assets and recovery periods

For purposes of assigning assets to ACRS classes (and applying the alternative depreciation system, described below), the Act prescribes ADR midpoint lives for the following assets: (1) Semiconductor manufacturing equipment (described in ADR class 36.0), 5 years; (2) computer-based telephone central office switching equipment and related equipment (described in ADR class 48.12) the functions of which are those of a computer or peripheral equipment (as defined in section 168(i)(2)(B)) in their capacity as telephone central office equipment, 9.5 years; (3) Railroad track, 10 years; (4) Single-purpose agricultural and horticultural structures within the meaning of sec. 48(p) (described in ADR class 01.3), 15 years; (5) Telephone distribution plant (e.g., telephone fiber optic cable) (described in ADR class 48.14) and comparable equipment, 24 years (comparable equipment means equipment used by non-telephone companies for two-way exchange of voice and data communications (equivalent of telephone communications)—comparable equipment does not include cable television equipment used primarily for one-way communication); (6) Municipal waste-water treatment plant, 24 years; and (7) Municipal sewers, 50 years.

Personal property

Three-year class.—The Act retains the three-year class for property with an ADR midpoint of four years or less, but excludes automobiles, light general purpose trucks, and property used in connection with research and experimentation. Property used in connection with research and experimentation is included in the five-year class described below.

Five-year class.—The Act modifies the five-year class to include property with ADR midpoint lives of more than four but less than ten years, and adding automobiles, light trucks, qualified technological equipment, computer-based telephone central office switching equipment, research and experimentation property, and geothermal, ocean thermal, solar, and wind energy properties, and biomass properties described in section 48(l) that are used in connection with qualifying small power production facilities.

Telephone central office switching equipment and related equipment (described in ADR class 48.12) is computer-based only if its

functions are those of a computer or peripheral equipment (as defined in section 168(i)(2)(B)) in its capacity as telephone central office switching equipment. The identical qualities of this computer-based equipment and computers are the basis for placing the computer-based equipment in the five-year class along with computers (rather than excluding such property because of its 18-year ADR midpoint life). Telephone central office switching equipment does not include private branch exchange (PBX) equipment.

Seven-year class.—The Act creates a new class for assets with ADR midpoints of at least 10 years but less than 16 years, and adding single-purpose agricultural or horticultural structures and property with no ADR midpoint that is not classified elsewhere.

Ten-year class.—The Act modifies the ten-year class to include only property with ADR midpoints of at least 16 years but less than 20 years.

15-year class.—Under the Act, the 15-year class includes property with ADR midpoints of at least 20 years and less than 25 years, and adding municipal wastewater treatment plants, and telephone distribution plant and comparable equipment used for the two-way exchange of voice and data communications.

20-year class.—The Act creates a 20-year class for property with ADR midpoints of 25 years and more, other than section 1250 real property with an ADR midpoint of 27.5 years and more, and adding municipal sewers.

Depreciation methods.—The cost of property in the three-year, five-year, seven-year, or ten-year class is recovered using the 200-percent declining balance method, switching to the straight-line method at a time to maximize the deduction.

The cost of property included in the 15-year or 20-year class is recovered using the 150-percent declining balance method, switching to the straight-line method at a time to maximize the deduction.

Real property

The Act provides different recovery periods for residential rental property and nonresidential real property.

Residential rental property.—Residential rental property is defined as a building or structure (including manufactured homes that are residential rental property, elevators, and escalators) with respect to which 80 percent or more of the gross rental income is rental income from dwelling units. The term “dwelling unit” is defined as a house or apartment used to provide living accommodations, but does not include a unit in a hotel, motel, inn, or other establishment more than one-half of the units in which are used on a transient basis. If any portion of a building or structure is occupied by the taxpayer, the gross rental income from such property shall include the rental value of the portion so occupied.

The cost of residential rental property is recovered using the straight-line method of depreciation, and a recovery period of 27.5 years.

Nonresidential real property.—Nonresidential real property is defined as section 1250 class property that either has no ADR midpoint or has an ADR midpoint of 27.5 years or more, and that is not residential rental property (including elevators and escalators).

The cost of nonresidential real property is recovered using the straight-line method of depreciation and a recovery period of 31.5 years.

Optional depreciation method

The Act repeals the provision that permitted taxpayers to elect use of the straight-line method over an optional recovery period. The election to use the straight-line method over the applicable ACRS recovery period is retained. Further, a taxpayer is permitted to elect use of an alternative depreciation system based on ADR midpoints (described below) for property that is otherwise eligible for ACRS.³

Changes in classification

The Secretary, through an office established in the Treasury Department is authorized to monitor and analyze actual experience with all tangible depreciable assets, to prescribe a new class life for any property or class of property (other than real property) when appropriate, and to prescribe a class life for any property that does not have a class life. If the Secretary prescribes a new class life for property, such life will be used in determining the classification of the property. The prescription of a new class life for property will not change the ACRS class structure, but will affect the ACRS class in which the property falls. Any classification or reclassification would be prospective.

Any class life prescribed under the Secretary's authority must reflect the anticipated useful life, and the anticipated decline in value over time, of an asset to the industry or other group. Useful life means the economic life span of property over all users combined and not, as under prior law, the typical period over which a taxpayer holds the property. Evidence indicative of the useful life of property, which the Secretary is expected to take into account in prescribing a class life, includes the depreciation practices followed by taxpayers for book purposes with respect to the property, and useful lives experienced by taxpayers, according to their reports. It further includes independent evidence of minimal useful life—the terms for which new property is leased, used under a service contract, or financed—and independent evidence of the decline in value of an asset over time, such as is afforded by resale price data. If resale price data is used to prescribe class lives, such resale price data should be adjusted downward to remove the effects of historical inflation. This adjustment provides a larger measure of depreciation than in the absence of such an adjustment. Class lives using this data would be determined such that the present value of straight-line depreciation deductions over the class life, discounted at an appropriate real rate of interest, is equal to the present value of what the estimated decline in value of the asset would be in the absence of inflation.

Initial studies are expected to concentrate on property that now has no ADR midpoint. Additionally, clothing held for rental and

³ In addition, the Congress intended taxpayers to have an election to use the 150-percent declining balance method, switching to the straight-line method, over ADR midpoints, permitted for purposes of the minimum tax.

scientific instruments (especially those used in connection with a computer) should be studied to determine whether a change in class life is appropriate.

Certain other assets specifically assigned a recovery period (including horses in the three-year class, qualified technological equipment, computer-based central office switching equipment, research and experimentation property, certain renewable energy and biomass properties, semiconductor manufacturing equipment, railroad track, single-purpose agricultural or horticultural structures, telephone distribution plant and comparable equipment, municipal wastewater treatment plants, and municipal sewers) may not be assigned a longer class life by the Treasury Department if placed in service before January 1, 1992. Additionally, automobiles and light trucks may not be reclassified by the Treasury Department during this five-year period. Such property placed in service after December 31, 1991, and before July 1, 1992, may be prescribed a different class life if the Secretary has notified the Committee on Ways and Means of the House of Representatives and the Committee on Finance of the Senate of the proposed change at least 6 months before the date on which such change is to take effect.

Averaging conventions

The following averaging conventions apply to depreciation computations made under both ACRS (as modified by the Act) and the new alternative depreciation system (described below). The recovery period begins on the date property is placed in service under the applicable convention.

Half-year convention

In general, a half-year convention applies under which all property placed in service or disposed of during a taxable year is treated as placed in service or disposed of at the midpoint of such year. As a result, a half-year of depreciation is allowed for the first year property is placed in service, regardless of when the property is placed in service during the year, and a half-year of depreciation is allowed for the year in which property is disposed of or is otherwise retired from service. No depreciation is allowed in the case of property acquired and disposed of in the same year. In the case of a taxable year less than 12 months, property is treated as being in service for half the number of months in such taxable year.

To illustrate the application of the half-year convention, assume that a taxpayer places in service a \$100 asset that is assigned to the five-year class. ACRS deductions, beginning with the first taxable year and ending with the sixth year, are \$20, \$32, \$19.20, \$11.52, \$11.52, and \$5.76. If the asset were disposed of in year two, the ACRS deduction for that year would be \$16.

Mid-month convention

In the case of both residential rental property and nonresidential real property, a mid-month convention applies. Under the mid-month convention, the depreciation allowance for the first year property is placed in service is based on the number of months the property was in service, and property placed in service at any time during a month is treated as having been placed in service in the

middle of the month. Further, property disposed of by a taxpayer at any time during a month is treated as having been disposed of in the middle of the month.

Special rule where substantial property placed in service during last three months of year

A mid-quarter convention is applied to all property if more than 40 percent of all depreciable property placed in service by a taxpayer during a taxable year is placed in service during the last three months of the taxable year. The mid-quarter convention treats all property placed in service during any quarter of a taxable year as placed in service on the midpoint of such quarter.

Where property is placed in service by a partnership, the 40-percent test generally will be applied at the partnership level, except in the case of partnerships that are formed or availed of to avoid the mid-quarter convention.

Where the taxpayer is a member of an affiliated group (within the meaning of sec. 1504),⁴ all such members are treated as one taxpayer for purposes of the 40-percent determination. The required determination is made by reference to the parent corporation's taxable year. Further, it was intended that transfers of property between members of the same affiliated group filing a consolidated return be disregarded for purposes of the 40-percent determination.

For example, using the mid-quarter convention, a \$100 asset in the five-year class eligible for the 200-percent declining balance method that is placed in service during the first quarter of a taxable year would receive deductions beginning in taxable year 1 and ending in taxable year 6 of \$35, \$26, \$15.60, \$11.01, \$11.01, and \$1.38.

For taxable years straddling January 1, 1987, in which property is placed in service subject both to prior-law ACRS and to the Act, the 40-percent determination is made with respect to all such property. The mid-quarter convention, however, applies only to property subject to the Act.

Alternative depreciation system

In general

In general, an alternative depreciation system is provided for property that (1) is used predominantly outside the United States ("foreign-use" property), (2) is leased to or otherwise used by a tax-exempt entity, including a foreign person unless more than 50 percent of the gross income derived from the property by such person is subject to U.S. tax ("tax-exempt use" property), (3) is financed directly or indirectly by an obligation the interest on which is exempt from taxation under section 103(a), to the extent of such financing ("tax-exempt bond financed" property), (4) is imported from a foreign country with respect to which an Executive Order is in effect because the country maintains trade restrictions or engages in other discriminatory acts, or (5) with respect to which an

⁴ The Congress intended the determination (of whether a corporation is a member of an affiliated group) to be made by reference to section 1504(b) (which excludes certain corporations).

election to decelerate depreciation deductions is made. In these cases, depreciation allowances are computed under the alternative depreciation system, which provides for straight-line recovery (without regard to salvage value) and use of the applicable averaging conventions described above.

The recovery period under the alternative system generally is equal to the property's ADR midpoint life (12 years for personal property with no ADR midpoint life, and 40 years for real property—including real property that is section 1245 property with no ADR midpoint). In the case of property for which an ADR midpoint is prescribed by the Act, the prescribed midpoint is used as the recovery period under the alternative depreciation system. In addition, qualified technological equipment (as defined under the rules for tax-exempt use property), automobiles, and light purpose trucks are treated as having a recovery period of five years.

The alternative depreciation system is used for purposes of computing the earnings and profits of a corporation, as well as for purposes of computing the portion of depreciation allowances treated as an item of tax preference under the alternative minimum tax applicable to corporations and individuals. The Act also modifies the treatment of depreciation deductions for luxury automobiles and mixed-use property.

Foreign-use property

As under prior law, foreign-use property generally is defined as property that is used outside the United States more than half of a taxable year. In addition to retaining the exceptions to this general rule that were applicable under prior law, the Act provides a new exception for any satellite or other space craft (or any interest therein) held by a U.S. person if such property is launched from within the United States.

Tax-exempt use property

The Act retains the rules for tax-exempt use property, including the rules that (1) increase the recovery period used for purposes of computing depreciation to a period not less than 125 percent of the lease term, if this period would be longer than the depreciation period otherwise applicable to the property, and (2) treat qualified technological equipment with a lease term that exceeds five years as having a recovery period of five years.

For purposes of determining whether property is tax-exempt use property, in the case of a corporation the stock of which is publicly traded on an established securities market, the test of whether 50 percent or more (in value) of the stock of such corporation is held by tax-exempt entities is made by reference to tax-exempt entities that hold 5 percent or more (in value) of the stock in such corporation.

Tax-exempt bond financed property

The Act modifies the definition of tax-exempt bond financed property to include any property to the extent financed "directly or indirectly" by an obligation the interest on which is exempt from tax under section 103(a). Only the portion of the cost of property that is attributable to tax-exempt financing is recovered using this

method. If only a part of a facility is financed with tax-exempt bonds, the tax-exempt bond financed portion will be allocated to the portion of the property that is first placed in service. An exception is provided to recover the cost of low-income housing financed with tax-exempt bonds over 27.5 years.

Minimum tax

For purposes of the depreciation preference under the minimum tax, the cost of property other than section 1250 real property (unless it is real property with an ADR midpoint of less than 27.5 years) is recovered using the 150-percent declining balance method, switching to the straight-line method. The cost of section 1250 real property and other property for which the straight-line method is either required or elected to be used for regular tax purposes is recovered using the straight-line method for minimum tax purposes.

Luxury automobiles and mixed-used property

The Act conforms the fixed limitations applicable to automobiles so that the price range of affected cars is unchanged. The new limitations are: \$2,560 for the first recovery year, \$4,100 for the second recovery year; \$2,450 for the third recovery year; and \$1,475 for each succeeding taxable year in the recovery period. In addition, the Act clarifies that the fixed limitations apply to all deductions claimed for depreciation of automobiles, not just ACRS deductions.

For mixed-use property that is used 50 percent or more for personal purposes, depreciation deductions are computed under the alternative depreciation system.

Certain imported property

The Act authorizes the President to provide by Executive Order for the application of the alternative depreciation system to certain property that is imported from a country maintaining trade restrictions or engaging in discriminatory acts. For purposes of this provision, the term imported property means any property that is completed outside the United States, or less than 50 percent of the basis of which is attributable to value added within the United States. In applying this test, the term "United States" is treated as including the Commonwealth of Puerto Rico and the possessions of the United States.

The Act authorizes reduced depreciation for property that is imported from a foreign country that (1) maintains non-tariff trade restrictions that substantially burden U.S. commerce in a manner inconsistent with provisions of trade agreements, including variable import fees, or (2) engages in discriminatory or other acts or policies unjustifiably restricting U.S. commerce (including tolerance of international cartels). If the President determines that a country is engaging in the proscribed actions noted above, he or she may provide for the application of alternative depreciation to any article or class of articles manufactured or produced in such foreign country for such period as may be provided by Executive Order.

In general, the terms of the provision relating to certain imported property are substantially identical to those of section 48(a)(7) relating to the investment tax credit.

Election to use alternative depreciation system

A taxpayer may irrevocably elect to apply the alternative system to any class of property for any taxable year. If the election is made, the alternative system applies to all property in the ACRS class placed in service during the taxable year. For residential rental property and nonresidential real property, this election may be made on a property-by-property basis. The election to use the alternative system is in addition to the irrevocable election to recover costs using the straight-line method over the ACRS recovery period (described above).

General asset accounts

The Act continues the Secretary's regulatory authority to permit a taxpayer to maintain one or more mass asset accounts for any property in the same ACRS class and placed in service in the same year. As under prior law, unless otherwise provided in regulations, the full amount of the proceeds realized on disposition of property from a mass asset account are to be treated as ordinary income (without reduction for the basis of the asset). As a corollary, no reduction is to be made in the depreciable basis remaining in the account. The limitations on the ability to establish mass asset accounts under prior law, as proposed in Treasury regulations, resulted, in part, from a concern about the mechanics of recapturing investment tax credits on dispositions of property from an account. To facilitate the application of the recapture rules without requiring that individual assets be identified, the proposed regulations provide mortality dispersion tables that cannot be applied easily to diverse assets. In view of the repeal of the investment tax credit, the primary reason for restricting a taxpayer's ability to establish vintage accounts is set aside. Accordingly, the Act contemplates that the definition of assets eligible for inclusion in mass asset accounts will be expanded to include diverse assets.

Lessee leasehold improvements

The cost of leasehold improvements made by a lessee is to be recovered under the rules applicable to other taxpayers, without regard to the lease term. On termination of the lease, the lessee who does not retain the improvements is to compute gain or loss by reference to the adjusted basis of the improvement at that time.

In light of the treatment of a lessee's capital costs, the only future relevance of section 178 will be in determining the amortization period for lease acquisition costs. Accordingly, Act makes conforming changes to section 178. Under revised section 178, the term of a lease is determined by including all renewal options as well as any other period for which the parties reasonably expect the lease to be renewed.

Treatment of certain transferees

A special rule applies after the transfer of any property in a non-recognition transaction described in section 332, 351, 361, 371(a), 374(a), 721, or 731 (other than the case of a termination of a partnership under 708(b)(1)(B)). In any such case, the transferee is treated as the transferor for purposes of computing the deprecia-

tion deduction with respect to so much of the basis in the hands of the transferee as does not exceed the adjusted basis in the hands of the transferor. Thus, the transferee of property in one of the transactions described above “steps into the shoes” of the transferor to the extent the property’s basis is not increased as the result of the transaction.⁵ The Congress intended the special rule to apply to any transaction between members of the same affiliated group during any taxable year for which a consolidated return is made by such group. To the extent the transferee’s basis exceeds the property’s basis in the hands of the transferor (e.g., because the transferor recognized gain in the transaction), the transferee depreciates the excess under the general ACRS rules.

Additions or improvements to property

The Act preserves the prohibition against use of the component method of depreciation. The recovery period for any addition or improvement to real or personal property begins on the later of (1) the date on which the addition or improvement is placed in service, or (2) the date on which the property with respect to which such addition or improvement is made is placed in service. Any ACRS deduction for an addition or improvement to a property is to be computed in the same manner as the deduction for the underlying property would be if such property were placed in service at the same time as such addition or improvement. Thus, for example, the cost of a post-effective date improvement to a building that constitutes nonresidential real property is recovered over 31.5 years using the straight-line method (i.e., the same recovery period and method that would apply to the building if it were placed in service after the effective date, unless a transitional rule applies to such improvement).

Expensing in lieu of cost recovery

The Act continues the provision under which a taxpayer (other than a trust or estate) can elect to treat the cost of qualifying property as an expense that is not chargeable to capital account, with four modifications. The costs for which the election is made are allowed as a deduction for the taxable year in which the qualifying property is placed in service.

Under the first modification, the dollar limitation on the amount that can be expensed is \$10,000 a year (\$5,000 in the case of a married individual filing a separate return).

The second modification limits the amount eligible to be expensed for any taxable year in which the aggregate cost of qualifying property placed in service during such taxable year exceeds \$200,000. For every dollar of investment in excess of \$200,000, the \$10,000 ceiling is reduced by \$1.

The third modification limits the amount eligible to be expensed to the taxable income derived from an active trade or business. For purposes of this rule, taxable income from the conduct of an active trade or business is computed without regard to the cost of the expensed property.

⁵ The Congress intended this rule to apply to transfers of property that was subject to section 168 as in effect before the amendments made by the Act in the hands of the transferor.

Costs that are disallowed as a result of the limitation based on taxable income are carried forward to the succeeding taxable year (and added to the amount eligible to be expensed under this provision for that year).

Under the fourth modification, if property is converted to nonbusiness use at any time before the end of the recovery period, the difference between the amount expensed and the ACRS deductions that would have been allowed for the period of business use is recaptured as ordinary income.

Disposition of assets and recapture

As under prior law, if a taxpayer uses ACRS to recover the costs of tangible property (other than residential rental property and nonresidential real property), all gain on the disposition of such property is recaptured as ordinary income to the extent of previously allowed depreciation deductions. For purposes of this rule, any deduction allowed under section 179 (relating to the expensing of up to \$10,000 of the cost of qualifying property), 190 (relating to the expensing of the costs of removing certain architectural and transportation barriers), or 193 (relating to tertiary injectant expenses) is treated as a depreciation deduction.

There is no recapture of previously allowed depreciation deductions in the case of residential rental property and nonresidential real property.

2. Regular investment tax credit

The Act repeals the regular investment tax credit.

3. Finance leases

The Act repeals the finance lease rules.

Effective Dates

In general

The provisions that modify ACRS apply to all property placed in service after December 31, 1986. The provision that repeals the regular investment tax credit is effective for property placed in service after December 31, 1985. Repeal of the finance lease rules is effective for property placed in service after December 31, 1986. The Act also provides an election to apply the modified ACRS to certain property that is placed in service after July 31, 1986; such an election would disqualify property under the investment tax credit transitional rules. All elections made under section 168 of the Code, as amended, are irrevocable and must be made on the first tax return for the taxable year in which the property is placed in service.

Transitional rules

The Act provides certain exceptions to the general effective dates, in the case of property constructed, reconstructed, or acquired pursuant to a written contract that was binding as of March 1, 1986, (December 31, 1985, for purposes of the investment tax credit) or in other transitional situations discussed below. Except in the case of qualified solid waste disposal facilities and certain satel-

lites (described below), the application of the transitional rules is conditioned on property being placed in service by a prescribed date in the future. In addition, special rules are provided for investment credits claimed on transitional property, for tax-exempt bond financed property, and for the finance lease rules.

Taxpayers may have difficulty in identifying under their accounting systems whether a particular item placed in service on or after January 1, 1987, (1986, for the investment tax credit) was acquired pursuant to a contract that was binding before March 2, 1986, (January 1, 1986, for the investment tax credit) or meets the rule for self-constructed property. The problem arises where a taxpayer regularly enters into contracts for (or manufactures itself) large stocks of identical or similar items of property to be placed in service as needed. The taxpayer's accounting system may not identify the date on which the contract for an item's acquisition was entered into (or the date on which manufacture commenced). In such a situation, a taxpayer is to assume that the first items placed in service after December 31, 1986, (1985, for the investment tax credit) were those they had under a binding contract on that date. A similar rule is to apply to self-constructed property.

Except as otherwise provided, for purposes of the depreciation transitional rules, the rules described below do not apply to any property unless the property has an ADR midpoint of seven years or more and is placed in service before the applicable date, determined according to the following: (1) for property with an ADR midpoint less than 20 years (other than computer-based telephone central office switching equipment), January 1, 1989, and (2) for property with an ADR midpoint of 20 years or more, residential rental property, and nonresidential real property, January 1, 1991.

For purposes of the investment tax credit transitional rules, the applicable placed-in-service dates are: (1) for property with an ADR midpoint less than five years, July 1, 1986, (2) for property with an ADR midpoint of at least five but less than seven years and including computer-based telephone central office switching equipment, January 1, 1987, (3) for property with an ADR midpoint of at least seven but less than 20 years (other than computer-based telephone central office switching equipment), January 1, 1989, and (4) for property with an ADR midpoint of 20 years or more, January 1, 1991.

For purposes of a placed-in-service requirement, if any transitional rule substitutes an applicable date for a project, then the substitute date is used. Further, all property included in a taxpayer-specific transitional rule under section 204(a) of the Act is treated as having an ADR midpoint of 20 years; thus, all such property qualifies for the placed-in-service window that closes on December 31, 1990. Similarly, property that is incorporated into an equipped building or plant facility need not independently satisfy the placed-in-service requirements. Instead, such property would qualify for transition relief as part of the equipped building or plant facility—as long as the equipped building or plant facility is placed in service by the applicable date prescribed for the building or facility.

For purposes of the general effective dates, if at least 80 percent of a target corporation's stock is acquired on or before December 31, 1986, (December 31, 1985, for purposes of the investment tax

credit) and the acquiring corporation makes a section 338 election to treat the stock purchase as an asset purchase after the relevant date, then the deemed new target corporation is treated as having purchased the assets before the general effective date.

As under prior law, property that is leased to a tax-exempt entity and was not "tax-exempt use property" within the meaning of Section 168(j) of the Code (as in effect immediately prior to the enactment of the Act) because of the application of a transitional rule contained in Section 31(g) of the Tax Reform Act of 1984 will not become "tax-exempt use property" within the meaning of Section 168(h) (as amended by the Act) merely by reason of a transfer of the property subject to the lease so long as the lessee does not change, but only to the extent the transfer would have received similar protection under the 1984 Act.

Anti-churning rules

The Act expands the scope of the prior law anti-churning rules to prevent taxpayers from bringing certain property placed in service after December 31, 1980, under the modified ACRS. The expanded anti-churning rules apply to all ACRS property, other than residential rental property and nonresidential real property, where the result would be to qualify such property for more generous depreciation than would be available under prior law. In determining whether property would qualify for more generous depreciation, the Congress intended that taxpayers compare ACRS deductions for the first taxable year (whether a short year or a full year), assuming a half-year convention. The Act retains the anti-churning rules applicable to property that was originally placed in service before January 1, 1981.⁶

Regarding the applicable depreciation regime if the anti-churning rules apply, for property that was originally placed in service before January 1, 1981, the Congress intended the pre-1981 depreciation rules to apply. For property originally placed in service after December 31, 1980, the Congress intended ACRS—before amendment by the Act—to apply. Further, the anti-churning rules are intended to apply to property placed in service after July 31, 1986, but before January 1, 1987, with respect to which an election is made to apply the modified ACRS.

Binding contracts

The amendments made by the Act do not apply to property that is constructed, reconstructed, or acquired by a taxpayer pursuant to a written contract that was binding as of March 1, 1986 (December 31, 1985, for investment tax credits), and at all times thereafter. If a taxpayer transfers his rights in any such property under construction or such contract to another taxpayer, the Act does not apply to the property in the hands of the transferee, as long as the property was not placed in service by the transferor before the

⁶ The anti-churning rules are not implicated by the conversion of property from personal use to business use; however, the Congress did not intend such property to qualify for more generous prior-law depreciation upon conversion to business use. For example, a taxpayer who acquired a residence for personal use before January 1, 1987, and converted the residence to business use after that date, will depreciate the property under the amendments made by the Act if prior-law depreciation would be more generous.

transfer by the transferor. For purposes of this rule, if by reason of sales or exchanges of interests in a partnership, there is a deemed termination and reconstitution of a partnership under section 708(b)(1)(B), the partnership is to be treated as having transferred its rights in the property under construction or the contract to the new partnership.

The general binding contract rule applies only to contracts in which the construction, reconstruction, erection, or acquisition of property is itself the subject matter of the contract.

A contract is binding only if it is enforceable under State law against the taxpayer, and does not limit damages to a specified amount (e.g., by use of a liquidated damages provisions). A contractual provision that limits damages to an amount equal to at least five percent of the total contract price is not treated as limiting damages.

For purposes of the general binding contract rule, a contract under which the taxpayer is granted an option to acquire property is not to be treated as a binding contract to acquire the underlying property. In contrast, a contract under which the taxpayer grants an irrevocable put (i.e., an option to sell) to another taxpayer is treated as a binding contract, as the grantor of such an option does not have the ability to unilaterally rescind the commitment. In general, a contract is binding even if subject to a condition, as long as the condition is not within the control of either party or a predecessor (except in the limited circumstances described below). A contract that was binding as of March 1, 1986 (or December 31, 1985, in the case of the investment tax credit) will not be considered binding at all times thereafter if it is substantially modified after that date.

A binding contract to acquire a component part of a larger property will not be treated as a binding contract to acquire the larger property under the general rule for binding contracts. For example, if a written binding contract to acquire an aircraft engine was entered into before March 2, 1986, there would be a binding contract to acquire only the engine, not the entire aircraft.

Design changes to a binding contract to construct a project that are made for reasons of technical or economic efficiencies of operation and that cause an insignificant increase in the original price will not constitute substantial modifications of the contract so as to affect the status of the project under the binding contract rule. In addition, a supplementary contract that stands on its own and is not protected by the binding contract rule, for example, to build an addition to a project protected by the binding contract rule, will not adversely affect the status of the portion of the project subject to a separate binding contract.

The general binding contract rule does not apply to supply agreements with manufacturers, where such contracts fail to specify the amount or design specifications of property to be purchased; such contracts are not to be treated as binding contracts until purchase orders are actually placed. A purchase order for a specific number of properties, based on the pricing provisions of the supply agreement, will be treated as a binding contract.

Self-constructed property

The Act is inapplicable to property that is constructed or reconstructed by the taxpayer, if (1) the lesser of \$1 million or five percent of the cost of the property was incurred or committed, (i.e., required to be incurred pursuant to a written binding contract in effect) as of March 1, 1986 (December 31, 1985, for purposes of the investment tax credit) and (2) the construction or reconstruction began by that date. For purposes of this rule, a taxpayer who serves as the engineer and general contractor of a project is to be treated as constructing the property. For purposes of this rule, the construction of property is considered to begin when physical work of a significant nature starts. Construction of a facility or equipment is not considered as begun if work has started on minor parts or components. Physical work does not include preliminary activities such as planning or designing, securing financing, exploring, researching, or developing.

For purposes of the rule for self-constructed property, in the context of a building, the term "property" includes only the building shell, its structural components, and the normal and customary components that are purchased from others and installed without significant modification (e.g., light fixtures) (see the discussion below, relating to equipped buildings, for the treatment of machinery and equipment to be used in the completed building).

Example.—Prior to January 1, 1986, an aircraft manufacturer entered into binding contracts with third parties for the construction of aircraft subassemblies to be included by the manufacturer in the construction of the completed aircraft. The cost to the aircraft manufacturer of these subassemblies is approximately \$300,000, which together with the costs of other components of the aircraft which the manufacturer had incurred or was required to incur pursuant to a written binding contract on December 31, 1985, exceeds 5 percent of the cost of the aircraft. These subassemblies were designed for this model of aircraft, were specifically ordered for the aircraft and are essential to its operation, and include wing trailing edges, ailerons and tabs, and rudders and tabs. The subcontractors commenced physical construction of these subcomponents prior to January 1, 1986. Prior to the date the aircraft is placed in service, the manufacturer will transfer it to its wholly-owned subsidiary that is included in the same consolidated tax return as the manufacturer.

The aircraft qualifies for the investment tax credit under the transitional rule for self-constructed property. Construction of the aircraft would be considered to have begun by the aircraft manufacturer when the subcontractors commenced physical construction of the subassemblies on behalf of the manufacturer pursuant to the binding written contract.⁷

Equipped buildings

Where construction of an equipped building began on or before March 1, 1986 (December 31, 1985, for purposes of the investment

⁷ Floor Statement by Senator Packwood, Cong. Rec. S 13955-56 (September 27, 1986); Floor Statement by Mr. Rostenkowski, Cong. Rec. H 8360 (September 25, 1986).

tax credit), pursuant to a written specific plan, and more than one-half the cost of the equipped building (including any machinery and equipment for it) was incurred or committed before March 2, 1986 (January 1, 1986, for the investment tax credit) the entire equipped building project and incidental appurtenances are excepted from the Act's application.⁸ This rule is not limited to manufacturing facilities. Where the costs incurred or committed before March 2, 1986 (January 1, 1986, for the investment tax credit) do not equal more than half the cost of the equipped building, each item of machinery and equipment and the building is treated separately for purposes of determining whether the item qualifies for transitional relief.

Under the equipped building rule, the Act will not apply to equipment and machinery to be used in the completed building, and also incidental machinery, equipment, and structures adjacent to the building (referred to here as appurtenances) which are necessary to the planned use of the building, where the following conditions are met:

(1) The construction (or reconstruction or erection) or acquisition of the building, machinery, and equipment was pursuant to a specific written plan of a taxpayer in existence on March 1, 1986 (December 31, 1985, for the investment tax credit); and

(2) More than 50 percent of the adjusted basis of the building and the equipment and machinery to be used in it (as contemplated by the written plan) was attributable to property the cost of which was incurred or committed by March 1, 1986 (December 31, 1985, for the investment tax credit), and construction commenced on or before March 1, 1986 (December 31, 1985, for the investment tax credit).

The written plan for an equipped building may be modified to a minor extent after March 1, 1986 (December 31, 1985, for the investment tax credit) and the property involved may still come under this rule; however, there cannot be substantial modification in the plan if the equipped building rule is to apply. The plan referred to must be a definite and specific plan of the taxpayer that is available in written form as evidence of the taxpayer's intentions.

The equipped building rule can be illustrated by an example where the taxpayer has a plan providing for the construction of a \$100,000 building with \$80,000 of machinery and equipment to be placed in the building and used for a specified manufacturing process. In addition, there may be other structures or equipment, here called appurtenances, which are incidental to the operations carried on in the building, that are not themselves located in the building. Assume that the incidental appurtenances have further costs of \$30,000. These appurtenances might include, for example, an adjacent railroad siding, a dynamo or water tower used in connection with the manufacturing process, or other incidental structures or machinery and equipment necessary to the planned use of

⁸ For example, if property with a class life of less than 7 years is incorporated into an equipped building, then such property would not independently need to satisfy the placed-in-service requirements. Instead, such property would qualify for transition relief as part of the equipped building—as long as the equipped building is placed in service by the prescribed date.

the building. Of course, appurtenances, as used here, do not include a plant needed to supply materials to be processed or used in the building under construction. In this case, if construction of the building is under a binding contract and property but no equipment had been ordered, and the appurtenances had not been constructed or placed under binding order, the equipped building rule would apply. This is true because the building cost represents more than 50 percent of the total \$180,000. As a result, the machinery and equipment, even though not under binding contract, is eligible for the rule. In this connection, it should be noted that the additional cost of appurtenances, \$30,000, is not taken into account for purposes of determining whether the 50-percent test is met. Nevertheless, the Act would not apply to these appurtenances since the 50-percent test is met as to the equipped building.

Plant facilities

The Act also provides a plant facility rule that is comparable to the equipped building rule (described above), for cases where the facility is not housed in a building. For purposes of this rule, the term "plant facility" means a facility that does not include any building (or of which buildings constitute an insignificant portion), and that is a self-contained single operating unit or processing operation—located on a single site—identifiable as a single unitary project as of March 1, 1986.

If pursuant to a written specific plan of a taxpayer in existence as of March 1, 1986 (December 31, 1985, for the investment tax credit), the taxpayer constructed, reconstructed, or erected a plant facility, the construction, reconstruction, or erection commenced as of March 1, 1986 (December 31, 1985, for the investment tax credit), and the 50-percent test is met, then the conference agreement will not apply to property that makes up the facility. For this purpose, construction, etc., of a plant facility is not considered to have begun until it has commenced at the site of the plant facility. (This latter rule does not apply if the facility is not to be located on land and, therefore, where the initial work on the facility must begin elsewhere.) In this case, as in the case of the commencement of construction of a building, construction begins only when actual work at the site commences; for example, when work begins on the excavation for footings, etc., or pouring the pads for the facility, or the driving of foundation pilings into the ground. Preliminary work, such as clearing a site, test drilling to determine soil condition, or excavation to change the contour of the land (as distinguished from excavation for footings), does not constitute the beginning of construction, reconstruction or erection.

The application of the plant facility rule is clarified where the original construction of a power plant is pursuant to a written specific plan of a taxpayer in existence as of March 1, 1986 (December 31, 1985, in the case of the investment tax credit), and both the original construction and more than one-half of the total cost of the property to be used at the power plant has been incurred or committed by such date. The plant facility rule will apply to the power plant even though the type of fuel to be utilized at the plant may have changed subsequent to the original plan and other changes may be made to accommodate the change in the fuel source, as

long as more than one-half of the total cost of the plant, including all conversion costs, were incurred or committed by March 1, 1986. The plant facility rule also will apply to the plant in the hands of a transferee, upon its transfer prior to the time that construction is completed and before it is placed in service.

Special rules for sale-leasebacks within three months

Property is treated as meeting the requirements of a transitional or general effective date rule if (1) the property is placed in service by a taxpayer who acquired the property from a person in whose hands the property would qualify under a transitional or general effective date rule, (2) the property is leased back by the taxpayer to such person, and (3) the leaseback occurs within three months after such property was originally placed in service, but no later than the applicable date. The special rule for sale-leasebacks is intended to apply to any property that qualifies for transitional relief under the Act or that was originally placed in service by the lessee under the sale-leaseback before the general effective date. This rule would apply where a taxpayer acquires property from a manufacturer, places the property in service by leasing it to the ultimate user, and subsequently engages in a sale-leaseback within three months after the property was originally placed in service under the initial lease.

In the case of a facility that would otherwise qualify for transitional relief as an equipped building (described above), if a portion of such equipped building is sold and leased back in accordance with the requirements of the special rule for sale-leasebacks, both the leased and retained portions will continue to qualify for transitional relief as an equipped building.

Special rules for tax-exempt bond financed property

The provision restricting ACRS deductions for property financed with tax-exempt bonds applies to property placed in service after December 31, 1986, to the extent such property is financed (directly or indirectly) by the proceeds of bonds issued after March 1, 1986. The revised restrictions on ACRS deductions do not apply to facilities placed in service after December 31, 1986, if—

(1) the original use of the facilities commences with the taxpayer and the construction (including reconstruction or rehabilitation) commenced before March 2, 1986, and was completed after that date;

(2) a binding contract to incur significant expenditures for the construction (including reconstruction or rehabilitation) of the property financed with the bonds was entered into before March 2, 1986, was binding at all times thereafter, and some or all of the expenditures were incurred after March 1, 1986; or

(3) the facility was acquired after March 1, 1986, pursuant to a binding contract entered into before March 2, 1986, and that is binding at all times after March 1, 1986.

For purposes of this restriction, the determination of whether a binding contract to incur significant expenditures existed before March 2, 1986, is made in the same manner as under the rules governing the redefinition of industrial development bonds.

The restrictions on ACRS deductions for bond-financed property do not apply to property placed in service after December 31, 1986, to the extent that the property is financed with tax-exempt bonds issued before March 2, 1986. ACRS deductions for such property may be determined, however, under the rules generally provided by the Act. For purposes of this exception, a refunding issue issued after March 1, 1986, generally is treated as a new issue and the taxpayer must use the alternative depreciation method provided by the Act for costs that are unrecovered on the date of the refunding issue.

In cases where a change of recovery method is required because of a refunding issue, only the remaining unrecovered cost of the property is required to be recovered using the alternative depreciation system provided by the Act. Therefore, no retroactive adjustments to ACRS deductions previously claimed are required when a pre-March 2, 1986, bond issue is refunded where no significant expenditures are made with respect to the facility after December 31, 1986.

Contract with persons other than a person who will construct or supply the property

The Act provides transitional relief for certain situations where written binding contracts require the construction or acquisition of property, but the contract is not between the person who will own the property and the person who will construct or supply the property. This rule applies to written service or supply contracts and agreements to lease entered into before March 2, 1986 (January 1, 1986, in the case of the investment tax credit). An example of a case to which this rule would apply would be lease agreements under which a grantor trust is obligated to provide property under a finance lease (to the extent continued under the bill). This rule applies to cable television franchise agreements embodied in whole or in part in municipal ordinances or similar enactments before March 2, 1986 (January 1, 1986, for the investment tax credit).

This transitional rule is applicable only where the specifications and amount of the property are readily ascertainable from the terms of the contract, or from related documents. A supply or service contract or agreement to lease must satisfy the requirements of a binding contract (discussed above). A change in the method or amount of compensation for services under the contract, without more, will not be considered a substantial modification of the contract if, taken as a whole, the change does not affect the scope or function of the project. This rule does not provide transitional relief to property in addition to that covered under a contract described above, which additional property is included in the same project but does not otherwise qualify for transitional relief.

As a further example, where a taxpayer before January 1, 1986 entered into a written binding contract to construct a wastewater treatment facility and to provide wastewater treatment services, the subsequent amendment of the contract to (1) extend the date for completion of construction by a short period (e.g., three months), (2) provide for a letter of credit or other financial protection against defaults of the service provider, (3) add a pledge of net revenue and a sewer use rate covenant by the service recipient, (4)

cause the service recipient's options to purchase the facility to comply with "service contract" definitional requirements of the Internal Revenue Code, (5) merely clarify rights and remedies in the event of performance defaults, and (6) treat the obligations of the taxpayer to accept and treat wastewater as separate obligations (and treat similarly the obligation of the service recipient to pay for such services) would not in the aggregate constitute a "substantial modification," if the taxpayer's obligations to provide wastewater treatment services and to construct or acquire the facility are not affected thereby.

Development agreements relating to large-scale multi-use urban projects

The Act does not apply to property that is included in a "qualified urban renovation project." The term qualified urban renovation project includes certain projects that satisfy the following requirements as of March 1, 1986 (December 31, 1985, for the investment tax credit): the project is described in the Act and (1) was publicly announced by a political subdivision, for the renovation of an urban area in its jurisdiction, (2) was either the subject of an agreement for development or a lease between such political subdivision and the primary developer of the project, or was undertaken pursuant to the political subdivision's grant of development rights to a primary developer-purchaser; or (3) was identified as a single unitary project in the internal financing plans of the primary developer, and (4) is not substantially modified at any time after March 1, 1986 (December 31, 1985, for the investment tax credit).

Federal Energy Regulatory Commission application or action

The requirements of the general binding contract rule will be treated as satisfied with respect to a project if, on or before March 1, 1986 (for purposes of depreciation and the investment tax credit), the Federal Energy Regulatory Commission ("FERC") licensed the project or certified the project as a "qualifying facility" for purposes of the Public Utility Regulatory Policies Act of 1978 ("PURPA"). A project that a developer has simply put FERC on notice as a qualifying facility is not *certified* as a qualifying facility.

This rule will not apply if a FERC license or certification is substantially amended after March 1, 1986. On the other hand, minor modifications will not affect the application of this rule (e.g., technical changes in the description of a project, extension of the deadline for placing property in operation, changes in equipment or in the configuration of equipment).

FERC does not distinguish between an application to amend an existing certificate and one to have a project recertified and responds in both cases by "recertifying" the project. The Congress intends that substance should control over form, and property will remain transitional property if no substantial change occurs. Similarly, a mere change in status from a "qualifying small power production facility" to a "qualifying cogeneration facility," under PURPA, without more, would not affect application of the transitional rule. The following paragraph provides guidance about how the "substance over form" rule applies in typical cases.

The requirements of the transitional rule for FERC Certification will not be violated under the following circumstances: (1) after FERC certification, the introduction of efficiencies results in a reduction of the project cost and an increase in net electricity output, and the FERC certificate is amended to reflect the higher electricity output, (2) a project was originally certified as three separate facilities, but the taxpayer determines that it is more efficient to have a single powerhouse, and the FERC certification is amended to have the facilities combined under a single certificate.

The Act also provides transitional relief for hydroelectric projects of less than 80 megawatts if an application for a permit, exemption, or license was filed with FERC before March 2, 1986 (for purposes of depreciation and the investment tax credit).

Qualified solid waste disposal facilities

The Act does not apply to a qualified solid waste disposal facility if, before March 2, 1986 (for purposes of depreciation and the investment tax credit) (1) there is a written binding contract between a service recipient and a service provider, providing for the operation of such facility and the payment for services to be provided by the facility, or (2) a service recipient, governmental unit, or any entity related to such an entity made a financial commitment of at least \$200,000 to the financing or construction of the facility.

For purposes of this rule, a qualified solid waste disposal facility is a facility (including any portion of the facility used for power generation or resource recovery) that provides solid waste disposal services for residents of part or all of one or more governmental units, if substantially all of the solid waste processed at such facility is collected from the general public. This rule does not apply to replacement property. For example, assume a taxpayer/service provider enters into a long-term service contract before January 1, 1986, and a facility is initially placed in service after that date. Assume that the taxpayer finds it necessary to replace the facility 20 years later, pursuant to its obligation to provide continuing services under the pre-1987 service contract. The special rule will apply only to the first facility necessary to fulfill the taxpayer's obligations under the service contract.

For purposes of this provision, a contract is to be considered as binding notwithstanding the fact that the obligations of the parties are conditioned on factors such as the receipt of permits, satisfactory construction or performance of the facility, or the availability of acceptable financing. A change in the method or amount of compensation for services under the contract will not be considered a substantial modification of the contract if, taken as a whole, the change does not materially affect the scope or function of the project.

A service recipient or governmental unit or a related party is to be treated as having made a financial commitment of at least \$200,000 for the financing or construction of a facility if one or more entities have issued bonds or other obligations aggregating more than 10 percent of the anticipated capital cost of such facility, the proceeds of which are identified as being for such facility or for a group of facilities that include the facility, and if the proceeds of such bonds or other obligations to be applied to the development or

financing of such facility are at least \$200,000 in the aggregate. Alternatively, the test would be satisfied if one or more entities have expended in the aggregate at least \$200,000 of their funds, or utilized or committed at least \$200,000 of their assets, toward the development or financing of such facility (e.g., for the cost of feasibility studies and consultant fees). If a governmental entity acquires a site for a facility by purchase, option to purchase,⁹ purchase contract, condemnation, or entering into an exchange of land, it shall be considered to have made a financial commitment equal to the fair market value of such site for purposes of this rule. For purposes of this provision, entities are related if they are described in section 168(h)(4)(A)(i).

Other exceptions

The Act also provides other special transitional rules of limited application.

Property treated under prior tax Acts.—The Act does not apply to (1) those mass commuting vehicles exempted from the application of the tax-exempt leasing rules under DEFRA, (2) a qualified lessee's automotive manufacturing property that was exempted from deferral of the finance lease rules,¹⁰ (3) a qualified lessee's farm property that was exempted from deferral of the finance lease rules, or (4) property described in section 216(b)(3) of TEFRA. Property that qualifies under one of these provisions is also intended to be excepted from the 35-percent reduction of the investment credit and the full-basis adjustment (described below).¹¹

Master plans.—Under the special rule for master plans for integrated projects, (1) in the case of multi-step plans described in sec. 204(a)(5)(E) of the Act, the rule will include executive approval of a plan or executive authorization of expenditures under the plan before March 2, 1986, and (2) in the case of single-step plans described in sec. 204(a)(5)(E) of the Act, the rule will include project-specific designs for which expenditures were authorized, incurred or committed before March 2, 1986.

A master plan for a project will be considered to exist on March 1, 1986 if the general nature and scope of the project was described in a written document or documents in existence on March 1, 1986, or was otherwise clearly identifiable on that date. Each of the projects described in this rule had a master plan in existence on March 1, 1986, and the existence of such a plan is not intended to be a separate requirement for transitional relief for property comprising these projects.

⁹ In the case of an option to purchase, the governmental entity will be treated as having made a financial commitment only if an amount is paid for the option and such consideration is forfeitable.

¹⁰ Property that qualified for exemption from deferral of the finance lease rules under the general transition rule included in section 12(c)(1) of the 1984 Act (by virtue of a binding contract entered into before March 7, 1984) falls within the general binding contract rule in section 203(b)(1) of the Act. Thus, the finance lease rules would continue to apply to this property if the property is placed in service by the applicable date.

¹¹ See Floor Statement by Mr. Rostenkowski, Cong. Rec. E3393 (October 2, 1986). Technical corrections are recommended to clarify this result, as well as the intent to conform the reference to section 209(d)(1)(B) of TEFRA (relating to finance leases of farm equipment) in section 204(b) to the reference in 204(a)(4) (to include the reference to further amendments made by the Tax Reform Act of 1984).

Satellites.—The Act provides transitional relief (including exceptions to the placed-in-service requirements) for certain satellites. Solely for purposes of the special rule for satellites, a binding contract for the construction or acquisition of two satellites by a joint venture shall be sufficient if such contract was in existence on July 2, 1986, and is for the construction or acquisition of the same satellites that were the subject of a contract to acquire or construct in effect on January 28, 1986, to which one of the joint venturers (or one of its affiliates) was a party.

The satellite transition rule was drafted with the understanding that in many instances launch agreements were executed years in advance of launch and that substitution of satellites in such agreements was, and is, a common practice within the industry. The Congress intended to recognize the possibility of alternative launch agreements. For example, NASA launch manifests revisions, made pursuant to an Executive Order of the President, were announced on October 3, 1986, and necessitated such alternative launch agreements. Under the satellite transition rule, it is not necessary that the agreement in existence on January 28, 1986, be the same agreement under which launch actually occurs.

Commercial passenger airliners.—The Act extends the placed-in-service window for one year (through 1989) for commercial passenger airliners described in ADR class 45.0.

Special rules applicable to the regular investment credit

Full basis adjustment

A taxpayer is required to reduce the basis of property that qualifies for transition relief ("transition property") by the full amount of investment credits earned with respect to the transition property (after application of the phased-in 35-percent reduction, described below).¹² The full-basis adjustment requirement also applies to credits claimed on qualified progress expenditures made after December 31, 1985. Further, the full-basis adjustment requirement applies to all depreciable property, regardless of whether such property is eligible for ACRS. The lower basis will be used to compute depreciation deductions, as well as gain or loss on disposition of property.¹³

Reduction of ITC carryforwards and credits claimed under transitional rules

These rules apply only to the portion of an investment credit attributable to the regular percentage (other than the portion thereof attributable to qualified timber property). Thus, for example, 100

¹² Under a literal interpretation of the statute, a full basis adjustment is required with respect to the energy percentage (as modified by section 421(a) of the Act), but only where the underlying asset also constitutes "transition property" within the meaning of new section 49. Congress did not intend this result; the full-basis adjustment rule only applies to the portion of an investment credit attributable to the regular percentage. Cf. Section 421(b) of the Act (which explicitly incorporates the full-basis adjustment rule for application to certain energy credits allowed under the affirmative commitment provisions).

¹³ The Congress intended that if a credit for which a full basis adjustment was required (1) is recaptured, there will be an upward basis adjustment of 100 percent of the recapture amount, or (2) expires at the end of the carryover period, a deduction will be allowed for 100 percent of the unused credit.

percent of ITC carryovers may continue to be allowed for funding of an investment tax credit employee stock ownership plan.

Under the Act, the investment tax credit allowable for carryovers and transition property is reduced by 35 percent.¹⁴ The reduction in the investment tax credit is phased in with the corporate rate reduction to provide an approximately equal deduction equivalent value of the credit. The 35-percent reduction is fully effective for taxable years beginning on or after July 1, 1987. Taxpayers having a taxable year that straddles July 1, 1987, will be subject to a partial reduction that reflects the reduction for the portion of their year after that date. For example, for a taxpayer using the calendar year as a taxable year, the reduction for 1987 is 17.5 percent. For taxable years that straddle July 1, 1987, the Congress intended that the amount added to carryforwards (under new section 49(c)(4)(B)(ii)) bear the same ratio to the carryforwards from the taxable year (before inclusion of the additional amount) as the reduction of the credit under new section 49(c)(3) bears to the sum of the current year credit for the taxable year and the carryforwards to the taxable year, less the reduction of the credit under new section 49(c)(3). Further, new section 49(c)(3) should be taken into account in applying new section 49(c)(4)(A) (providing that the amount of the reduction shall not be allowed as a credit for any taxable year).

Thus, a taxpayer utilizing the investment tax credit in any year receives approximately the same deduction equivalent value of the investment tax credit. Combined with the full basis adjustment, these provisions ensure that taxpayers placing property in service in the same taxable year are treated similarly.

Example.—Assume a taxpayer places transition property in service on January 1, 1987, generating a \$100 regular investment tax credit. In the first instance, the credit is reduced by 17.5 percent to \$82.50. Because of the application of the 75% limitation on general business tax credits, assume further that only \$60 of the credit is used in 1987. Thus, \$22.50 is carried forward to 1988. Further, an additional amount equal to \$4.77 (determined as described above) is carried forward to 1988. The entire \$27.27 (\$22.50 + \$4.77) is then reduced by 35 percent.

The amount by which the credit is reduced will not be allowed as a credit for any other taxable year. For purposes of determining the extent to which an investment credit determined under section 46 is used in a taxable year, the regular investment credit is assumed to be used first. This rule is inapplicable to credits that a taxpayer elects to carryback 15 years under the special rules described below.

As described above, a full basis adjustment is required with respect to the reduced amount of the investment tax credit arising in the year property is placed in service. Thus, for transition property placed in service after 1987 and eligible for a 6.5 percent invest-

¹⁴ The Congress intended to apply the phased-in 35-percent reduction to investment tax credits used in a taxable year beginning after December 31, 1986, irrespective of when the property with respect to which the credit is claimed was placed in service, or whether the credit was carried forward pursuant to sections 38 and 39, or some other section (e.g., section 465 or prior law section 168(i)).

ment tax credit, the basis reduction would be with respect to the 6.5 percent credit, not the unreduced 10-percent credit.

The phased-in 35-percent reduction is to be applied to the investment tax credit before application of the general 75-percent limitation. Further, the amount of investment tax credit carryovers subject to reduction shall first be adjusted to reflect credits that were recaptured.

Section 48(d) election

A taxpayer in whose hands property qualifies for transitional relief can make an election under section 48(d) to pass the credit claimed to a lessee. In applying section 48(d)(5), which coordinates the section 48(d) election with the section 48(q) basis adjustment, Congress intended the income inclusion to equal 100 percent of the credit allowed to the lessee.^{15a}

Estimated tax payments

The repeal of the regular investment tax credit for property placed in service after December 31, 1985, presents an issue about the manner in which estimated tax payments should be calculated for payment due dates occurring before the date of enactment of this Act. In general, for example, a corporation calculates estimated tax by determining its expected regular tax liability, less any allowable tax credits. Any underpayment of estimated corporate tax generally results in the imposition of penalties.

The Act provides a general provision that waives estimated tax penalties for underpayments that are attributable to changes in the law that increase tax liabilities from the beginning of 1986 (sec. 1543 of the Act).^{15b} Individual taxpayers have until April 15, 1987, and corporations until March 15, 1987 (the final filing dates for calendar years returns) to pay 1986 income tax liabilities without incurring additions to tax due to underpayments.

Elective 15-year carryback for certain taxpayers

Certain companies can elect a 15-year carryback of 50 percent of investment tax credit carryforwards in existence as of the beginning of a taxpayer's first taxable year beginning after December 31, 1985. The amount carried back is treated as a payment against the tax imposed by chapter 1 of the Internal Revenue Code, made on the last day prescribed by law (without regard to extensions) for filing a return of tax under chapter 1 of the Code for the first taxable year beginning on or after January 1, 1987. The amount carried back would reduce tax liability for the first taxable year beginning after December 31, 1986; to the extent the amount carried back exceeds the tax liability for such year, any excess could be claimed as a refund under generally applicable rules. Carryforwards taken into account under the carryback rule are not taken into account under section 38 for any other taxable year. Generally, taxpayers eligible to elect the 15-year carryback are domestic

^{15a} A technical correction may be necessary so that the statute reflects this intent.

^{15b} It should be noted that the Statement of Managers for the depreciation provisions (on page II-64) is incorrect in stating that taxpayers have only 30 days after the date of enactment to avoid penalties for underpayments. See floor statement by Mr. Rostenkowski, 132 Cong. Rec. H.8359 (September 25, 1986).

corporations whose raw steel production in the United States during 1983 exceeded 1.5 million tons. A similar election is available to qualified farmers, except a \$750 limitation applies.

The amount claimed as a payment against the tax for the first taxable year beginning on or after January 1, 1987 cannot exceed the taxpayer's net tax liability. The net tax liability is the amount of tax liability for all taxable years during the carryback period (not including minimum tax liability), reduced by the sum of credits allowable (other than the credit under section 34 relating to certain fuel taxes). The carryback period is the period that (1) begins with the taxpayer's 15th taxable year preceding the first taxable year from which there is a credit included in the taxpayer's existing carryforward (in no event can such period begin before the first taxable year ending after December 31, 1961), and (2) ends with the corporation's last taxable year beginning before January 1, 1986.

Normalization requirement for public utility property

If the tax benefits of previously allowed investment tax credits on public utility property are not normalized, then certain investment tax credits will be recaptured. In general, the amount recaptured is the greater of (1) all investment tax credits for open taxable years of the taxpayer or (2) unamortized credits of the taxpayer or credits not previously restored to rate base (whether or not for open years), whichever is applicable. If such credits have not been utilized and are being carried forward, the carryforward amount is reduced in lieu of recapture. These rules apply to violations of the relevant normalization requirements occurring in taxable years ending after December 31, 1985. Similar principles apply to the failure to normalize the tax benefits of previously allowed employee stock ownership plan credits.

General treatment of QPEs

Neither the repeal of the regular investment credit nor the phased-in 35-percent reduction of credits affects QPEs claimed with respect to the portion of the basis of any progress expenditure property attributable to progress expenditures for periods before January 1, 1986. The fact that the property on which QPEs are claimed is placed in service after 1985 is immaterial. Carryovers of credits attributable to QPEs are subject to the general rules providing for a reduction in carryforwards. If a taxpayer elected to take a reduced rate of credit on a QPE basis in lieu of the 50-percent basis adjustment of prior law, the portion of basis attributable to such QPEs, claimed for periods before 1986, will not be reduced and such election will not apply to any other portion of such basis. After December 31, 1985, QPEs cannot be claimed unless it is reasonable to expect that the property will be placed in service before the applicable date. The determination of whether it is reasonable to expect that the placement-in-service requirement will be met is to be made on a year-by-year basis, beginning with the first taxable year that includes January 1, 1986. For any taxable year in which reasonable expectations change, no QPEs will be allowed, and previously claimed post-1985 QPEs will be recaptured. Further, if the property is not placed in service on or before the last applicable

date, post-1985 QPEs will be recaptured in the taxable year that includes such date.

Special rules for television and motion picture films

Special transitional rules apply to television and motion picture films for purposes of the investment credit (but not depreciation). For purposes of the general binding contract rule, (1) construction is treated as including production, (2) in accordance with industry practice, written contemporaneous evidence of a binding contract is treated as a written binding contract, and (3) in the case of any television film, a license agreement or agreement for production services between a television network and a producer (including written evidence of such an agreement as provided in (2) above) is treated as a binding contract to produce property. For these purposes, license agreement options are binding contracts as to the optionor (non-exercising party) but not as to the optionee (exercising party).¹⁶ In addition, a special rule is provided for certain films produced pursuant to a permanent financing arrangement described by the bill. For purposes of the placed-in-service requirement, films and sound recordings are treated as having ADR midpoints of 12 years.

Finance leases

The finance lease rules continue to apply to any transaction permitted by reason of section 12(c)(2) of DEFRA or section 209(d)(1)(B) of TEFRA.

Revenue Effect

The provisions are estimated to increase fiscal year budget receipts by \$18,879 million in 1987, \$21,413 in 1988, \$30,501 million in 1989, \$37,692 million in 1990, and \$46,802 million in 1991.

¹⁶ For example, television films produced by a film producer pursuant to a license agreement with a television network (including cable) that was in writing and binding on December 31, 1985, or produced in-house by a television network using production services provided pursuant to an agreement for production services between the network and a producer that was in writing and binding on that date, will be eligible for credit if placed in service before January 1, 1989. (In accordance with industry practice, written contemporaneous evidence of a binding contract is treated as a written binding contract.) Television films not the subject of a contract binding on December 31, 1985, that are placed in service after December 31, 1985, but before January 1, 1989, are eligible for credit only if the lesser of \$1 million or 5 percent of the cost of producing such films was incurred or committed by December 31, 1985, and production began by that date.

B. Limitation on General Business Credit

Prior Law

The general business tax credit earned by a taxpayer could be used to reduce up to \$25,000 of tax liability, plus 85 percent of tax liability in excess of \$25,000.

Explanation of Provision

The Act reduces the 85-percent limitation on the general business credit to 75 percent.

Effective Date

The provision is effective for taxable years that begin after December 31, 1985.

Revenue Effect

The effect of this provision is included in the estimate for the corporate minimum tax.

C. Research and Development

1. Tax credit for increasing research expenditures; university basic research credit (sec. 231 of the Act and sec. 30 of the Code)¹⁷

Prior Law

Expensing deduction

Under prior and present law, a taxpayer may elect to deduct currently the amount of research or experimental expenditures incurred in connection with its trade or business (sec. 174), notwithstanding the general rule that business expenditures to develop or create an asset that has a useful life extending beyond the taxable year must be capitalized. (Alternatively, the taxpayer may elect to treat these expenditures as deferred expenses and deduct them over a period of not less than 60 months on a straight-line basis.) This provision was enacted in the 1954 Code in order to eliminate the need to distinguish research from business expenses for deduction purposes, and to encourage taxpayers to carry on research and experimentation activities.¹⁸

The Code does not specifically define "research or experimental expenditures" eligible for the section 174 deduction election, except to exclude certain costs. Treasury regulations (sec. 1.174-2(a)) define "research or experimental expenditures" to mean "research and development costs in the experimental or laboratory sense." The regulations provide that this includes generally "all such costs incident to the development of an experimental or pilot model, a plant process, a product, a formula, an invention, or similar property, and the improvement of already existing property of the type mentioned." Other research or development costs—i.e., research or development costs not "in the experimental or laboratory sense"—do not qualify under section 174.

The section 174 election does not apply to expenditures for the acquisition or improvement of depreciable property, or land, to be used in connection with research.¹⁹ Thus, for example, the total

¹⁷ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 231; H.Rep. 99-426, pp. 176-85; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1301; S.Rep. 99-313, pp. 693-702; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 68-76 (Conference Report).

¹⁸ H. Rpt. No. 1337, 83d Cong., 2d Sess. at 28 (1954); S. Rpt. 1622, 83d Cong., 2d Sess. at 33 (1954); *Snow v. Comm'r*, 416 U.S. 500 (1974) (citing Congressional intent to encourage research by both "oncoming" and "ongoing" businesses); *Green v. Comm'r*, 83 T.C. 667 (1984) (intent of sec. 174 was to encourage "up-and-coming" small businesses to engage in research, not to allow passive investor entities to obtain current deductions).

¹⁹ The statute also excludes expenditures to ascertain the existence, location, extent, or quality of mineral deposits, including oil and gas, from eligibility for section 174 elections (sec. 174(d)). However, expenses of developing new and innovative methods of extracting minerals from the ground may be eligible for sec. 174 elections (Rev. Rul. 74-67, 1974-1 C.B. 63). Certain expenses for development of a mine or other natural deposit (other than an oil or gas well) may be deductible under sec. 616.

cost of a research building or of equipment used for research cannot be deducted currently under section 174 in the year of acquisition. However, the amount of depreciation (cost recovery) allowance for a year with respect to depreciable property used for research may be deducted in that year under sections 167 and 168.

The present regulations further provide that qualifying research expenditures do not include expenditures "such as those for the ordinary testing or inspection of materials or products for quality control or those for efficiency surveys, management studies, consumer surveys, advertising, or promotions." Also, the section 174 election cannot be applied to costs of acquiring another person's patent, model, production, or process or to research expenditures incurred in connection with literary, historical, or similar projects (Reg. sec. 1.174-2(a)).

Incremental tax credit

Under a provision enacted in the Economic Recovery Tax Act of 1981, a taxpayer could claim a nonrefundable 25-percent income tax credit for certain research expenditures paid or incurred in carrying on an existing trade or business.²⁰ The credit applied only to the extent that the taxpayer's qualified research expenditures for the taxable year exceeded the average amount of the taxpayer's yearly qualified research expenditures in the specified base period (generally, the preceding three taxable years). Under prior law, the credit was not available for expenses paid or incurred after December 31, 1985.

Research expenditures eligible for the incremental credit under prior law consisted of (1) in-house expenditures by the taxpayer for research wages and supplies used in research, plus certain amounts paid for research use of laboratory equipment, computers, or other personal property; (2) 65 percent of amounts paid by the taxpayer for contract research conducted on the taxpayer's behalf; and (3) in the case of a corporate taxpayer, 65 percent of the taxpayer's expenditures (including grants or contributions) pursuant to a written research agreement for basic research to be performed by universities or certain scientific research organizations.

The prior-law credit provision adopted the definition of research used for purposes of the section 174 expensing provision, but subject to three exclusions: (1) expenditures for research which is conducted outside the United States; (2) research in the social sciences or humanities; and (3) research to the extent that it is funded by any grant, contract, or otherwise by another person (or any governmental entity).

Under prior and present law, the credit is available for incremental qualified research expenditures for the taxable year whether or not the taxpayer has elected under section 174 to deduct currently research expenditures. The amount of any section 174 deduction to which the taxpayer is entitled is not reduced by the amount of any credit allowed for qualified research expenditures.

²⁰ As enacted in the 1981 Act, the credit was set forth in section 44F of the Code. The Deficit Reduction Act of 1984 renumbered the credit provision as Code section 30. The Tax Reform Act of 1986 renumbered the credit, as amended, as section 41 of the Code.

Under prior law, the incremental research credit was not subject to the general limitation on use of business credits (85 percent of tax liability over \$25,000).

Reasons for Change

Three-year extension; reduction in rate of credit.—When the incremental research credit was enacted in 1981, the Congress expressed serious concern about the then substantial relative decline in total U.S. expenditures for research and experimentation. The purpose of enacting the credit was to encourage business firms to perform the research necessary to increase the innovative qualities and efficiency of the U.S. economy. An expiration date for the credit was deemed desirable in order to enable the Congress to evaluate the operation of the credit, and to determine whether it should be extended and, if so, what modifications would be necessary to make the credit more effective.

The Congress concluded that an additional three-year extension of the credit is desirable in order to obtain more complete and comprehensive information to evaluate whether the credit should be further extended or modified. In the context of the base broadening and rate reduction provisions of the Act, and the continued allowance of full expensing of research expenditures, the credit rate is reduced to 20 percent.

Eligibility of certain computer-use costs.—Under prior law, expenditures for renting research equipment were eligible for the credit, but depreciation allowances for purchased research equipment were not. The Congress believed that such inconsistent treatment should not be continued, and that the taxpayer's investment decision to purchase or lease should not be skewed by availability of the credit. The Act makes such rental costs, etc. ineligible for the credit, except for certain payments by the taxpayer to another person for the use of computer time in research. Continued eligibility for the latter payments is intended to benefit small businesses that cannot afford to purchase or lease their own computers for research purposes, and hence is intended to apply where the taxpayer is not the principal user of the computer.

Research definition for credit purposes.—After reviewing available information and testimony on the actual use of the credit to date, the Congress concluded that the statutory credit provision should set forth an express definition of qualified research expenses for purposes of the credit. The Congress believed that the definition has been applied too broadly in practice, and some taxpayers have claimed the credit for virtually any expenses relating to product development. According to early data on the credit reported by the Treasury Department, research by these taxpayers often does not involve any of the attributes of technological innovation.

Accordingly, the Act targets the credit to research undertaken for the purpose of discovering information that is technological in nature and when applied is intended to be useful in developing a new or improved business component for sale or use in carrying on the taxpayer's trade or business. In addition, research is eligible for the extended credit only when substantially all the activities un-

dertaken in developing or improving the business component constitute elements of a process of experimentation relating to functional aspects of the business component. The Act provides exclusions from the credit for certain research or nonresearch activities, and limits allowance of the credit for the costs of developing certain internal-use computer software to such software meeting a high threshold of innovation.

University basic research.—The Congress believed it is desirable to provide increased tax incentives for corporate cash expenditures for university basic research where such expenditures do not merely represent a switching of donations from general university giving and where certain other maintenance-of-effort levels are exceeded. By contrast to other types of research or product development, where expected commercial returns attract private investment, basic research typically does not produce sufficiently immediate commercial applications to make investment in such research self-supporting. Because basic research typically involves greater risks of not achieving a commercially viable result, larger-term projects, and larger capital costs than ordinary product development, the Federal Government traditionally has played a lead role in funding basic research, principally through grants to universities and other nonprofit scientific research organizations. In addition, the research credit as modified by the Act provides increased tax incentives for corporate funding of university basic research to the extent that such expenditures reflect a significant commitment by the taxpayer to basic research.

Credit use limitation.—The Congress concluded that the general limitation on use of business credits (under the Act, 75 percent of tax liability over \$25,000) should apply to the research credit.

Explanation of Provisions

Three-year extension; reduction in rate of incremental credit

The Act extends the incremental research tax credit for three additional years, i.e., for qualified research expenditures paid or incurred through December 31, 1988, at a credit rate of 20 percent.

Eligibility of certain computer-use costs

The Act generally repeals the prior-law provision treating amounts paid by the taxpayer to another person for the right to use personal property in qualified research as generally eligible for the credit. However, the Act provides that, under regulations to be prescribed by the Treasury Department, amounts paid or incurred by the taxpayer to another person for the right to use computer time in the conduct of qualified research are eligible for the incremental credit. This provision is intended to benefit smaller businesses that cannot afford to purchase or lease their own computers for research purposes, and hence is intended to apply where the taxpayer is not the principal user of the computer. Consistent with the prior-law limitations on credit-eligibility of research equipment rental costs, such computer-use payments are not eligible for the credit to the extent that the taxpayer (or a person with which the taxpayer must aggregate expenditures in computing the credit) re-

ceives or accrues any amount from any other person for computer use.

In computing the incremental research credit for a taxable year beginning after December 31, 1985 (when rental costs will not be eligible for the credit), a taxpayer may exclude from the base-period amount with respect to such year any rental costs, etc. (other than for computer-use costs of a type remaining eligible for the credit in post-1985 years) that were allowable as qualified research expenses under section 30(b)(2)(A)(iii) (as then in effect) in a base-period year.²¹

Definition of research for credit purposes

In general

The Act targets the credit to research undertaken for the purpose of discovering information that is technological in nature and the application of which is intended to be useful in developing a new or improved business component for sale or use in carrying on the taxpayer's trade or business. In addition, research is eligible for the extended credit only where substantially all the activities undertaken in developing or improving the business component constitute elements of a process of experimentation relating to functional aspects of the business component. The Act provides exclusions from the credit for certain research or nonresearch activities. The costs of developing certain internal-use software are eligible for the credit only if specified requirements are met.

No inference is intended from the provisions of the Act defining research eligible for the credit as to the scope of the term "research or experimental" for purposes of the section 174 expensing deduction.

Research

As under prior law, the Act limits research expenditures eligible for the incremental credit to "research or experimental expenditures" eligible for expensing under section 174. Thus, for example, the credit is not available for (1) expenditures other than "research and development costs in the experimental or laboratory sense," (2) expenditures "such as those for the ordinary testing or inspection of materials or products for quality control or those for efficiency surveys, management studies, consumer surveys, advertising, or promotions," (3) costs of acquiring another person's patent, model, production, or process, or (4) research expenditures incurred in connection with literary, historical, or similar projects (Treas. Reg. sec. 1.174-2(a)).²² The term research includes basic research.

Under the Act, research satisfying the section 174 expensing definition is eligible for the credit only if the research is undertaken for the purpose of discovering information (a) that is technological in nature, and also (b) the application of which is intended to be

²¹ Except pursuant to the rule stated in the text for the exclusion of certain rental costs from base-period expenditures, the Act does not authorize modifications to base-period computations for taxable years beginning prior to 1986 (see text below under "Effective Date").

²² As noted above, sec. 174 also excludes from eligibility for expensing (1) expenditures for the acquisition or improvement of depreciable property, or land, to be used in connection with research, and (2) expenditures to ascertain the existence, location, extent, or quality of mineral deposits, including oil and gas.

useful in the development of a new or improved business component of the taxpayer. In addition, such research is eligible for the credit only if substantially all of the activities of the research constitute elements of a process of experimentation for a functional purpose. The Act also expressly sets forth exclusions from eligibility for the credit for certain research activities that might otherwise qualify and for certain nonresearch activities.

Technological nature

The determination of whether the research is undertaken for the purpose of discovering information that is technological in nature depends on whether the process of experimentation utilized in the research fundamentally relies on principles of the physical or biological sciences, engineering, or computer science²³—in which case the information is deemed technological in nature—or on other principles, such as those of economics—in which case the information is not to be treated as technological in nature. For example, information relating to financial services or similar products (such as new types of variable annuities or legal forms) or advertising does not qualify as technological in nature.

Process of experimentation

The term process of experimentation means a process involving the evaluation of more than one alternative designed to achieve a result where the means of achieving that result is uncertain at the start. This may involve developing one or more hypotheses, testing and analyzing those hypotheses (through, for example, modeling or simulation), and refining or discarding the hypotheses as part of a sequential design process to develop the overall component.

Thus, for example, costs of developing a new or improved business component are not eligible for the credit if the method of reaching the desired objective (the new or improved product characteristic) is readily discernible and applicable as of the beginning of the research activities, so that true experimentation in the scientific or laboratory sense would not have to be undertaken to develop, test, and choose among viable alternatives. On the other hand, costs of experiments undertaken by chemists or physicians in developing and testing a new drug are eligible for the credit because the researchers are engaged in scientific experimentation. Similarly, engineers who design a new computer system, or who design improved or new integrated circuits for use in computer or other electronic products, are engaged in qualified research because the design of those items is uncertain at the outset and can only be determined through a process of experimentation relating to specific design hypotheses and decisions as described above.

Functional purposes

Under the Act, research is treated as conducted for a functional purpose only if it relates to a new or improved function, perform-

²³ Research does not rely on the principles of computer science merely because a computer is employed. Research may be treated as undertaken to discover information that is technological in nature, however, if the research is intended to expand or refine existing principles of computer science.

ance, or reliability or quality. Activities to assure achievement of the intended function, performance, etc. of the business component undertaken after the beginning of commercial production of the component are not eligible for the credit. The Act also provides that research relating to style, taste, cosmetic, or seasonal design factors shall in no event be treated as conducted for a functional purpose and hence is not eligible for the credit.

Application of tests

The term business component means a product, process, computer software, technique, formula, or invention that is to be held for sale, lease, or license, or is to be used by the taxpayer in a trade or business of a taxpayer. If the requirements described above for credit eligibility are not met with respect to a product, etc. but are met with respect to one or more elements thereof, the term business component means the most significant set of elements of such product, etc. with respect to which all requirements are met.

Thus, the requirements for credit eligibility are applied first at the level of the entire product, etc. to be offered for sale, etc. by the taxpayer. If all aspects of such requirements are not met at that level, the test applies at the most significant subset of elements of the product, etc. This shrinking back of the product is to continue until either a subset of elements of the product that satisfies the requirements is reached, or the most basic element of the product is reached and such element fails to satisfy the test. Treasury regulations may prescribe rules for applying these rules where a research activity relates to more than one business component.

A plant process, machinery, or technique for commercial production of a business component is treated as a different component than the product being produced. Thus, research relating to the development of a new or improved production process is not eligible for the credit unless the definition of qualified research is met separately with respect to such production process research, without taking into account research relating to the development of the product.

Internal-use computer software

Under a specific rule in the Act, research with respect to computer software that is developed by (or for the benefit of) the taxpayer primarily for the taxpayer's own internal use is eligible for the credit only if the software is used in (1) qualified research (other than the development of the internal-use software itself) undertaken by the taxpayer, or (2) a production process that meets the requirements for the credit (e.g., where the taxpayer is developing both robotics and software for the robotics to be used in a manufacturing process, and the taxpayer's research costs of developing the robotics are eligible for the credit). Any other research activities with respect to internal-use software are ineligible for the credit except to the extent provided in Treasury regulations. Accordingly, the costs of developing computer software are not eligible for the credit where the software is used internally, for example, in general and administrative functions (such as payroll, bookkeeping, or personnel management) or in providing noncomputer

services (such as accounting, consulting, or banking services), except to the extent permitted by Treasury regulations.

The Congress intended and expected that these regulations will make the costs of new or improved internal-use software eligible for the credit only if the taxpayer can establish, in addition to satisfying the general requirements for credit eligibility, (1) that the software is innovative (as where the software results in a reduction in cost, or improvement in speed, that is substantial and economically significant); (2) that the software development involves significant economic risk (as where the taxpayer commits substantial resources to the development and also there is substantial uncertainty, because of technical risk, that such resources would be recovered within a reasonable period); and (3) that the software is not commercially available for use by the taxpayer (as where the software cannot be purchased, leased, or licensed and used for the intended purpose without modifications that would satisfy the first two requirements just stated). The Congress intended that these regulations are to apply as of the effective date of the new specific statutory rule relating to internal-use software; i.e., internal-use computer software costs that qualify under the three-part test set forth in this paragraph are eligible for the research credit even if incurred prior to issuance of such final regulations.

The specific rule in the Act relating to internal-use computer software is not intended to apply to the development costs of a new or improved package of software and hardware developed together by the taxpayer as a single product, of which the software is an integral part, that is used directly by the taxpayer in providing technological services in its trade or business to customers. For example, the specific rule would not apply where a taxpayer develops together a new or improved high technology medical or industrial instrument containing software that processes and displays data received by the instrument, or where a telecommunications company develops a package of new or improved switching equipment plus software to operate the switches. In these cases, eligibility for the incremental research tax credit is to be determined by examining the combined hardware-software product as a single product, and thus the specific rule applicable to internal-use computer software would not apply to the combined hardware-software product.

In the case of computer software costs incurred in taxable years before the effective date for the new specific statutory rule, the eligibility of such costs for the research credit is to be determined in the same manner as the eligibility of hardware product costs. The Congress expected and was assured by the Treasury Department that guidance to this effect would be promulgated on an expedited basis.

Excluded activities

The Act specifies that expenditures incurred in certain research, research-related, or nonresearch activities are excluded from eligibility for the credit, without reference to the requirements described above relating to technological information, process of experimentation, and functional purposes.

Post-production research activities.—The Act provides that any research with respect to a business component conducted after the

beginning of commercial production of the component does not constitute qualified research eligible for the credit. Thus, no expenditures relating to a business component are eligible for the credit after the component has been developed to the point where it either meets the basic functional and economic requirements of the taxpayer for such component or is ready for commercial sale or use.²⁴ For example, the credit is not available for such expenditures as the costs of preproduction planning for a finished business component, tooling-up for production, trial production runs, trouble-shooting involving detecting faults in production equipment or processes, accumulation of data relating to production processes, and the cost of debugging product flaws.

By way of further illustration, the credit is not available for costs of additional clinical testing of a pharmaceutical product after the product is made commercially available to the general public. However, the clinical testing in the United States of a product prior to production for sale in this country, or clinical testing seeking to establish new functional uses, characteristics, indications, combinations, dosages, or delivery forms as improvements to an existing product, is eligible for the credit. Thus, research (e.g., body chemistry research) undertaken on a product approved for one specified indication to determine its effectiveness and safety for other potential indications is eligible for the credit. Similarly, testing a drug currently used to treat hypertension for a new anti-cancer application, and testing an antibiotic in combination with a steroid to determine its therapeutic value as a potential new anti-inflammatory drug, are eligible for the credit.

Adaptation.—The Act provides that research related to the adaptation of an existing business component to a particular customer's requirement or need is not eligible for the credit. Thus, for example, the costs of modifying an existing computer software item for a particular customer are not eligible for the credit. However, the mere fact that a business component is intended for a specific customer does not disqualify otherwise qualified research costs of the item (assuming that the research is not funded by the customer).

Surveys, studies, certain other costs.—The Act provides that the credit is not available for the costs of efficiency surveys; activities (including studies) related to management functions or techniques; market research, market testing, or market development (including advertising or promotions); routine data collections; or routine or ordinary testing or inspection of materials or business components for quality control. Management functions and techniques include such items as preparation of financial data and analysis, development of employee training programs and management organization

²⁴ The exclusion from credit-eligibility for activities with respect to a business component after the beginning of commercial production of the component does not preclude the costs of improvements in an existing product from eligibility for the credit. Thus, for example, the expenses of an automobile manufacturer in developing, through a process of experimentation, a more efficient and reliable diesel fuel injector are eligible for the incremental research tax credit even though the research expenses are incurred during or after production by the manufacturer of automobile engines containing the existing (unimproved) diesel fuel injector. However, the costs of any activities of the automobile manufacturer with respect to the improved diesel fuel injector after the beginning of commercial production of the improved diesel fuel injector are not eligible for the research credit.

plans, and management-based changes in production processes (such as rearranging work stations on an assembly line).

Duplication.—The Act provides that the credit does not apply to research related to the reproduction of an existing business component (in whole or in part) of another person from a physical examination of the component itself or from plans, blueprints, detailed specifications, or publicly available information with respect to such component. While such “reverse engineering” activities thus are not eligible for the credit, the exclusion for duplication does not apply merely because the taxpayer examines a competitor’s product in developing its own component through a process of otherwise qualified experimentation requiring the testing of viable alternatives and based on the knowledge gained from such tests.

Additional exclusions.—As under prior law, the Act excludes from eligibility for the credit expenditures for research (1) that is conducted outside the United States; (2) in the social sciences (including economics, business management, and behavioral sciences), arts, or humanities; or (3) to the extent funded by any person (or governmental entity) other than the taxpayer, whether by grant, contract, or otherwise.

Effect on section 174 definition

No inference is intended from the rules in the Act defining research for purposes of the incremental credit as to the scope of the term “research or experimental” for purposes of the section 174 expensing deduction.

University basic research credit

In general

Under prior law, research expenditures entering into the computation of the incremental research credit included 65 percent of a corporation’s expenditures (including grants or contributions) pursuant to a written research agreement for basic research to be performed by universities or certain scientific research organizations. Under the Act, a 20-percent tax credit applies to the *excess* of (1) 100 percent of corporate cash payments for university basic research *over* (2) the sum of (a) the greater of two fixed research floors plus (b) an amount reflecting any decrease in nonresearch giving to universities by the corporation as compared to such giving during a fixed base period, as adjusted for inflation.²⁵

Qualifying payments

For purposes of the credit, qualifying basic research payments are cash payments paid during the taxable year pursuant to a written agreement between the taxpayer corporation²⁶ and a university or certain other qualified organizations for basic research to be performed by the qualified organization (or by universities receiv-

²⁵ The Act provides a single research credit (Code sec. 41), consisting of a 20-percent incremental component and a 20-percent university basic research component. For convenience, this explanation generally refers to these components as the incremental research credit and the university basic research credit.

²⁶ For this purpose, the term corporation does not include S corporations (sec. 1361(a)), personal holding companies (sec. 542), or service organizations (sec. 414(m)(3)).

ing funds through certain initial recipient qualified organizations). Such corporate payments for university basic research are deemed to satisfy the trade or business test for the research credit, whether or not the basic research is in the same field as an existing trade or business of the corporation.

Under the Act, qualifying basic research payments include both grants or contributions for basic research by the corporate taxpayer that constitute charitable contributions under section 170, and also contract payments for basic research to be performed by the qualified organization on behalf of the corporation. Such payments are not eligible for a credit unless and until actually paid by the corporation to a qualified organization. Thus, an accrual-basis corporation may not treat amounts incurred, but not actually paid during the taxable year, for university basic research as eligible for the credit in that year.

Under the Act, only cash payments may qualify as a basic research payment. No amount (basis or value) on account of contributions or transfers of property is eligible for either the incremental credit or the basic research credit, whether or not such property constitutes scientific equipment eligible for an augmented charitable deduction under section 170(e)(4).

As under prior law, the term basic research is defined in the Act as any original investigation for the advancement of scientific knowledge not having a specific commercial objective. However, expenditures for basic research in the social sciences (including economics, business management, and behavioral sciences), arts, or humanities and basic research conducted outside the United States are excluded from eligibility for the credit.

Qualified organizations

To be eligible for a credit, the corporate payments must be for basic research to be conducted by a qualified organization. For this purpose, the term qualified organization generally includes colleges or universities, tax-exempt scientific research organizations, and certain tax-exempt conduit or grant organizations, as specified in the Act.

The first category of qualified organizations consists of educational institutions that both are described in Code section 170(b)(1)(A)(ii) and constitute institutions of higher education within the meaning of section 3304(f).²⁷ The second category consists of tax-exempt organizations that (1) are organized and operated primarily to conduct scientific research, (2) are described in section 501(c)(3) (relating to exclusively charitable, educational, scientific, etc., organizations), and (3) are not private foundations. Also,

²⁷ An educational organization is described in sec. 170(b)(1)(A)(ii) "if its primary function is the presentation of formal instruction and it normally maintains a regular faculty and curriculum and normally has a regularly enrolled body of pupils or students in attendance at the place where its educational activities are regularly carried on." The term includes public or private colleges and universities (Treas. Reg. sec. 1.170A-9(b)(1)).

Sec. 3304(f) defines "institution of higher education" as an educational institution which (1) admits as regular students only individuals having a certificate of graduation from a high school, or the recognized equivalent of such a certificate; (2) is legally authorized to provide a program of education beyond high school; (3) provides an educational program for it which awards a bachelor's or higher degree, or provides a program which is acceptable for full credit toward such a degree, or offers a program of training to prepare students for gainful employment in a recognized occupation; and (4) is a public or other nonprofit institution.

certain tax-exempt grant funds that qualified under prior law continue to qualify under the Act.

In addition, the Act treats as a qualified organization any tax-exempt organization that is organized and operated primarily to promote scientific research by colleges or universities pursuant to written research agreements, that expends on a current basis substantially all its funds (or substantially all the basic research payments received by it) through grants to or contracts with colleges and universities for basic research, and that is either (a) described in section 501(c)(3) and is not a private foundation or (b) described in section 501(c)(6) (trade associations).

Computation rules for revised basic research credit

Under the Act, the university basic research credit applies to the *excess* of (1) 100 percent of corporate cash payments for university basic research *over* (2) the sum of the minimum basic research amount plus the maintenance-of-effort amount.

The minimum basic research amount is the *greater* of two fixed floors—

(a) the average of all credit-eligible basic research expenditures under Code section 30(e)(1) (as in effect during the base period) for the three taxable years immediately preceding the taxpayer's first taxable year beginning after December 31, 1983; or

(b) one percent of the average of the sum of all in-house research expenses, contract research expenses, and credit-eligible basic research expenditures under Code section 30(e)(1) (as in effect during the base period) for each of the three taxable years immediately preceding the taxpayer's first taxable year beginning after December 31, 1983.

In the case of a corporation that was not in existence for at least one full taxable year during this fixed base period, the Act provides that the minimum basic research amount for the base period shall not be less than 50 percent of the basic research payments for the current taxable year. If the corporation was in existence for one full taxable year or two full taxable years during such base period, the fixed floor is to be computed with respect to such year or years.

The maintenance-of-effort amount means, with respect to the taxpayer's current taxable year, the *excess* of the average of the nondesignated university donations paid by the taxpayer during the three taxable years immediately preceding the taxpayer's first taxable year beginning after December 31, 1983, as adjusted under the Act to reflect inflation, *over* the amount of nondesignated university donations paid by the taxpayer in the current taxable year. The term nondesignated university donation means all amounts paid by the taxpayer to all colleges or universities for which a charitable deduction was allowable (under sec. 170) and that were not taken into account in computing the research credit.

Any amount of credit-eligible basic research payments to which the revised university basic research credit applies does not enter into the computation of the incremental credit. Any remaining amount of credit-eligible basic research payments—i.e., the amount to which the revised credit does not apply because it does not exceed the qualified organization base period amount—is treated as contract research expenses, for purposes of section 41(a)(1), in com-

puting the taxpayer's incremental credit (and in subsequent years enters into the base period amounts for purposes of computing the incremental credit).

Credit limitations

The Act makes the research credit subject to the general business credit limitation (Code sec. 38), as amended by the Act (i.e., 75 percent of tax liability over \$25,000).

Effective Date

The extension of the credit is effective for taxable years ending after December 31, 1985. Under the Act, the credit will not apply to amounts paid or incurred after December 31, 1988.²⁸

The modifications to the credit made by the Act are effective for taxable years beginning after December 31, 1985, except that the modifications relating to the university basic research credit are effective for taxable years beginning after December 31, 1986. In computing the research credit for taxable years beginning after December 31, 1985, base-period expenditures for taxable years beginning before January 1, 1986 are to be determined under the prior-law credit definition of qualified research that was applicable in such base-period years and are not to be redetermined under the definition of qualified research in the Act.²⁹

Revenue Effect

The provision is estimated to decrease fiscal year budget receipts by \$1,429 million in 1987, \$1,183 million in 1988, \$833 million in 1989, \$429 million in 1990, and \$259 million in 1991.

2. Augmented charitable deduction for certain donations of scientific equipment (sec. 231(f) of the Act and sec. 170(e)(4) of the Code)³⁰

Prior Law

Under prior and present law, the amount of charitable deduction otherwise allowable for donated property generally must be reduced by the amount of any ordinary gain that the taxpayer would have realized had the property been sold for its fair market value at the date of the contribution (Code sec. 170(e)). Under a special rule, corporations are allowed an augmented charitable deduction for certain donations of newly manufactured scientific equipment to a college or university for research use in the physical or biological sciences (sec. 170(e)(4)).

²⁸ The Act provides that in the case of any taxable year which begins before January 1, 1989, and ends after December 31, 1988, any amount for any base period with respect to such taxable year shall be the amount which bears the same ratio to such amount for such base period as the number of days in such taxable year before January 1, 1989, bears to the total number of days in such taxable year.

²⁹ Base-period expenditures for such years may be redetermined to exclude certain rental costs (see text accompanying note 21 above).

³⁰ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 231(f); H.Rep. 99-426, p. 185; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 76-77 (Conference Report).

Reasons for Change

The Congress believed that the prior-law provision concerning certain charitable donations of newly manufactured scientific equipment to universities for research use should be extended to include such donations to tax-exempt scientific research organizations.

Explanation of Provision

Under the Act, the category of eligible donees under section 170(e)(4) is expanded to include organizations described in Code section 41(e)(6)(B), i.e., tax-exempt organizations that (1) are organized and operated primarily to conduct scientific research, (2) are described in section 501(c)(3) (relating to exclusively charitable, educational, scientific, etc., organizations), and (3) are not private foundations.

Effective Date

The provision is effective for taxable years beginning after December 31, 1985.

Revenue Effect

The revenue effect of this provision is included with the revenue effect for item 1 above.

3. Tax credit for orphan drug clinical testing (sec. 232 of the Act and sec. 28 of the Code)³¹

Prior Law

A 50-percent, nonrefundable tax credit is allowed for a taxpayer's qualified clinical testing expenses paid or incurred in the testing of certain drugs (generally referred to as "orphan drugs") for rare diseases or conditions (Code sec. 28). Prior law defined a rare disease or condition is one that occurs so infrequently in the United States that there is no reasonable expectation that businesses could recoup the costs of developing a drug for it from U.S. sales of the drug. These rare diseases and conditions include Huntington's disease, myoclonus, ALS (Lou Gehrig's disease), Tourette's syndrome, and Duchenne's dystrophy (a form of muscular dystrophy).

Under prior law, the orphan drug credit would not have been available for amounts paid or incurred after December 31, 1987.

Reasons for Change

The Congress decided to extend the orphan drug credit for three additional years, to be consistent with the longer authorization period for research grants for development of vaccines or drugs to treat rare diseases.

³¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 283; H.Rep. 99-426, p. 230; Senate floor amendment, 132 Cong. Rec. S 7793 (June 18, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), p. 77 (Conference Report).

Explanation of Provision

The Act extends the orphan drug credit for three additional years (i.e., through December 31, 1990).³²

Effective Date

The provision is effective on the date of enactment (October 22, 1986).

Revenue Effect

The provision is estimated to decrease fiscal year budget receipts by \$7 million in 1988, \$15 million in 1989, \$15 million in 1990, and \$8 million in 1991.

³² See also sec. 1879(b) of the Act, making certain changes to the definition of rare disease or condition in Code sec. 28(d)(1).

D. Rapid Amortization Provisions

1. Trademark and trade name expenditures (sec. 241 of the Act and sec 177 of the Code)³³

Prior Law

Prior law permitted taxpayers to elect to amortize over a period of at least 60 months expenditures for the acquisition, protection, expansion, registration, or defense of a trademark or trade name, other than an expenditure which was part of the consideration for an existing trademark or trade name.

Reason for Change

The special amortization provision for trademark and trade name expenditures was enacted in 1956, in part because of a perception that certain large companies whose in-house legal staff handled trademark and trade name matters were able in some cases to deduct compensation with respect to these matters, because of difficulties of identification, while smaller companies that retained outside counsel were required to capitalize such expenses.³⁴ However, in reconsidering this provision, Congress did not believe that the possibility that some taxpayers may fail accurately to compute nondeductible expenses was a justification for permitting rapid amortization. Furthermore, to the extent such mischaracterization occurs, a five-year amortization provision only partially alleviates any unfairness. There is no basis for a presumption that a trademark or trade name will decline in value, or that investment in trademarks and trade names produces special social benefits that market forces might inadequately reflect. Congress believed that a tax incentive for trademark or trade name expenditures is therefore inappropriate.

Explanation of Provision

The Act repeals the election. Trademark and trade name expenditures must be capitalized and recovered on a disposition of the asset. No amortization or depreciation is allowed with respect to such expenditures.

Effective Date

The provision is generally effective for expenditures paid or incurred after December 31, 1986.

³³ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 221; H.Rep. 99-426, pp. 171-172; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 634; S.Rep. 99-313, pp. 256-257; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 78 (Conference Report).

³⁴ See, S. Rep. 1941, 84th Cong. 2d Sess., pp. 8-9 (1956).

However, prior law applies to expenditures incurred: (1) pursuant to a written contract that was binding as of March 1, 1986; or (2) with respect to development, protection, expansion, registration or defense of trademarks or trade names commenced as of March 1, 1986, if the lesser of \$1 million or 5 percent of cost has been incurred or committed by that date, provided in each case the trademark or trade name is placed in service before January 1, 1988.

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$4 million in 1987, \$13 million in 1988, \$25 million in 1989, \$41 million in 1990, and \$58 million in 1991.

2. Qualified railroad grading and tunnel bores (sec. 242 of the Act and sec. 185 of the Code)³⁵

Prior Law

Under prior law, domestic railroad common carriers could elect to amortize the cost of qualified railroad grading and tunnel bores over a 50 year period. "Qualified railroad grading and tunnel bores" included all land improvements (including tunneling) necessary to provide, construct, reconstruct, alter, protect, improve, replace, or restore a roadbed of right-of-way for railroad track.

Reason for Change

The special amortization provision for railroad grading and tunnel bore expenditures were enacted in 1969 to encourage investment in light of uncertainties about the useful life of such property. The scope of the provision was extended in 1976, to cover expenditures for pre-1969 property. However, Congress believed that continuation of the benefit is inconsistent with tax reform.

Explanation of Provision

The election is repealed. No amortization or depreciation deduction for railroad grading and tunnel bores will be allowed.

In addition, special ACRS treatment is provided for a particular railroad disaster and involuntary conversion treatment of insurance proceeds in that case is specified.

The repeal of the election generally applies to expenses paid or incurred on or after January 1, 1987. However, prior law continues to apply to expenditures incurred: (1) pursuant to a written contract that was binding as of March 1, 1986; or (2) with respect to construction, reconstruction, alteration, improvement, replacement or restoration commenced as of March 1, 1986, if the lesser of \$1 million or 5 percent of cost has been incurred or committed by that date, provided in each case the improvements are placed in service before January 1, 1988.

³⁵ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 224; H.Rep. 99-426, pp. 174-5; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 202(g); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 79-80 (Conference Report).

Revenue Effect

This provision is estimated to decrease fiscal year budget receipts by less than \$5 million in each of the years 1987 through 1991.

3. Bus operating authorities; freight forwarders (sec. 243 of the Act and section 266 of the Economic Recovery Tax Act of 1981)³⁶

Prior Law

Prior to enactment of the Bus Regulatory Reform Act of 1982, intercity bus operators were required to obtain an operating authority from the Interstate Commerce Commission (ICC) before providing service on a particular route. Because the ICC issued only a limited number of bus operating authorities, persons wishing to enter a route often purchased an existing bus company with the desired operating authority, paying substantial amounts for these operating authorities. Thus, the value of bus operating rights constituted a substantial part of a bus operator's assets and a source of loan collateral.

The 1982 statute greatly eased entry into the intercity bus industry. Because of this, the value of bus operating authorities diminished significantly, to the point where they are now essentially worthless.

A deduction is allowed for any loss incurred in a trade or business during the taxable year, if the loss is not compensated for by insurance or otherwise (Code sec 165(a)). In general, the amount of the deduction equals the adjusted basis of the property giving rise to the loss (sec. 165(b)). Treasury regulations provide that, to be deductible, a loss must be evidenced by a closed and completed transaction (i.e., must be "realized"), and must be fixed by an identifiable event (Treas. Reg. sec. 1.165-1(b)).

As a general rule, no deduction is allowed for a decline in value of property absent a sale, abandonment, or other disposition. Thus, for a loss to be allowed as a deduction, generally the business must be discontinued or the property must be abandoned (Treas. Reg. sec. 1.165-2)). Further, if the property is a capital asset and is sold or exchanged at a loss, the deduction of the resulting capital loss is subject to limitations (secs. 1212, 1211, and 165(f)).

The courts have denied a loss deduction where the value of an operating permit or license decreased as the result of legislation expanding the number of licenses or permits that could be issued. In the view of several courts,³⁷ the diminution in the value of a license or permit would not constitute an event giving rise to a deductible loss if the license or permit continues to have value as a right to carry on a business.

³⁶ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 635; S.Rep. 99-313, pp. 257-9; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 80 (Conference Report).

³⁷ See, e.g., *Consolidated Freight Lines, Inc. v. Comm'r*, 37 B.T.A. 576 (1938), *aff'd*, 101 F.2d 813 (9th Cir.), *cert. denied*, 308 U.S. 562 (1939) (denial of loss deduction attributable to loss of monopoly due to State deregulation of the interstate motor carrier industry); *Monroe W. Beatty*, 46 T.C. 835 (1966) (no deduction allowed for diminution in value of liquor license resulting from change in State law limiting grant of such licenses).

Reasons for Change

The owners of bus operating authorities face a situation similar to that faced by owners of trucking company operating authorities after enactment of the Motor Carrier Act of 1980. That statute deregulated the trucking industry; as a result, motor carrier operating authorities lost significant value. In the Economic Recovery Tax Act of 1981, the Congress enacted a provision allowing trucking companies an ordinary deduction ratably over five years for loss in value of motor carrier operating authorities (sec. 166 of the 1981 Act).

Explanation of Provision

The Act allows an ordinary deduction ratably over a 60-month period for taxpayers who held one or more bus operating authorities on November 19, 1982 (the date of enactment of the Bus Regulatory Reform Act of 1982). The amount of the deduction is the aggregate adjusted bases of all bus operating authorities that were held by the taxpayer on November 19, 1982, or acquired after that date under a contract that was binding on that date.

The Act provides a similar rule for surface freight forwarders that were deregulated pursuant to the Surface Freight Forwarder Deregulation Act of 1986.

The 60-month period for bus operating authorities begins on November 1, 1982, or, at the taxpayer's election, the first month of the taxpayer's first taxable year beginning after that date. The Act requires that adjustments be made to the bases of authorities to reflect amounts allowable as deductions under the Act.

Under regulations to be prescribed by the Treasury, a taxpayer (whether corporate or noncorporate) holding an eligible bus operating authority would be able to elect to allocate to the authority a portion of the cost to the taxpayer of stock in an acquired corporation (unless an election under section 338 is in effect). The election would be available if the bus operating authority was held (directly or indirectly) by the taxpayer at the time its stock was acquired. In such a case, a portion of the stock basis would be allocated to the authority only if the corporate or noncorporate taxpayer would have been able to make such an allocation had the authority been distributed in a liquidation to which prior-law section 334(b)(2) applied. The election would be available only if the stock was acquired on or before November 19, 1982 (or pursuant to a binding contract in effect on such date).

Effective Date

The provision for bus operating authorities is effective retroactively for taxable years ending after November 18, 1982. The Act extends the period of limitations for filing claims for refund or credit of any overpayment of tax resulting from this provision, if such claim is presented on or before the date that is one year after the date of enactment of the Act. In such a case, a claim for refund or credit may be made or allowed if filed on or before the date that is eighteen months after such date.

Revenue Effect

The provision is estimated to reduce fiscal year budget receipts by \$20 million in 1987.

4. Removal of architectural and transportation barriers to the handicapped and elderly (sec. 244 of the Act and sec. 190 of the Code)³⁸

Prior Law

Prior law allowed electing taxpayers to deduct currently up to \$35,000 of qualifying capital expenditures for the removal of architectural and transportation barriers to the handicapped and elderly. This rule applied to expenses paid or incurred in order to make more accessible to and usable by the handicapped and elderly any facility or public transportation vehicle owned or leased by the taxpayer for use in a trade or business. The election was not available in taxable years beginning after December 31, 1985.

Reasons for Change

Congress believed it desirable to continue to encourage the removal of architectural and transportation barriers to the handicapped and elderly, inasmuch as the social benefits of such expenditures may not be fully taken into account in private calculations of benefits and costs.

Explanation of Provision

The Act reinstates on a permanent basis, effective for expenses incurred in taxable years beginning after 1985, the provision that allows the expensing of up to \$35,000 of costs incurred in the removal of architectural and transportation barriers to the handicapped and elderly.

Effective Date

The provision, effective on October 22, 1986 (date of enactment of the Act) applies to expenses incurred in taxable years beginning after 1985.

Revenue Effect

The provision is estimated to decrease fiscal year budget receipts by \$26 million in 1987, \$18 million in 1988, \$19 million in 1989, \$20 million in 1990, and \$21 million in 1991.

³⁸ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 225; H.Rep. 99-426, p. 175; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1707; S.Rep. 99-313, p. 882; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 81 (Conference Report).

E. Real Estate Provisions

1. Tax credit for rehabilitation expenditures (sec. 251 of the Act and secs. 46(b), 48(g), and 48(q) of the Code)³⁹

Prior Law

A three-tier investment tax credit was provided for qualified rehabilitation expenditures. The credit was 15 percent for nonresidential buildings at least 30 years old, 20 percent for nonresidential buildings at least 40 years old, and 25 percent for certified historic structures (including residential buildings). A certified historic structure was defined as a building (and its structural components) that is listed in the National Register of Historic Places, or is located in a registered historic district and certified by the Secretary of the Interior as being of historic significance to the district.

The rehabilitation credit was available only if the taxpayer elected to use the straight-line method of cost recovery with respect to the rehabilitation expenditures. If the 15- or 20-percent investment credit was allowed for qualified rehabilitation expenditures, the basis of the property was reduced by the amount of credit earned (and the reduced basis was used to compute cost recovery deductions) (sec. 48(q)(1) and (3)). The basis was reduced by 50 percent of the 25-percent credit allowed for the rehabilitation of certified historic structures.

Qualified rehabilitation expenditures were eligible for the credit only if incurred in connection with a substantial rehabilitation that satisfied an external-walls requirement. The test of substantial rehabilitation generally was met if the qualified expenditures during a 24-month measuring period exceeded the greater of the adjusted basis of the building as of the first day of the 24-month period, or \$5,000. (In phased rehabilitations, the 24-month measuring period was extended to 60 months.)

The external-walls requirement provided generally that at least 75 percent of the existing external walls of the building had to be retained in place as external walls in the rehabilitation process. An alternative test provided that the external-walls requirement was met if (1) at least 75 percent of the external walls were retained in place as either internal or external walls, (2) at least 50 percent of such walls were retained in place as external walls, and (3) at least 75 percent of the building's internal structural framework was retained in place.

In the case of rehabilitations of certified historic structures, certain additional rules applied. In particular, the Secretary of the In-

³⁹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 232; H. Rep. 99-426, pp. 185-190; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1412; S.Rep. 99-313, pp. 752-756; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 82-83 (Conference Report).

terior had to certify that the rehabilitation was consistent with the historic character of the building or the historic district in which the building was located. In fulfilling this statutory mandate, the Secretary of the Interior's Standards for Rehabilitation were applied. See 36 CFR Part 67.7 (March 12, 1984).

Qualified rehabilitation expenditures generally included any amounts properly chargeable to capital account of a building in connection with a rehabilitation, but did not include the following:

- (1) the cost of acquiring a building or an interest in a building (such as a leasehold interest);
- (2) the cost of facilities related to a building (such as a parking lot); and
- (3) the cost of enlarging an existing building.

Lessees were entitled to the credit for qualified expenditures incurred by the lessee if, on the date the rehabilitation was completed, the remaining lease term (without regard to renewal periods) was at least as long as the applicable recovery period (generally 19 years; 15 years in the case of low-income housing). Under regulations prescribed by the Secretary of the Treasury, the substantial rehabilitation test for a lessee was generally applied by comparing the lessee's qualified rehabilitation expenditures to the lessor's adjusted basis in the building (i.e., the lessee stepped into the shoes of the lessor).

The rehabilitation credit was subject to recapture if the rehabilitated building was disposed of or otherwise ceased to be qualified investment credit property with respect to the taxpayer during the five years following the date the property was placed in service. If the Department of the Interior decertified a rehabilitation of a certified historic structure during the recapture period, the property ceased to be qualified investment credit property.

Reasons for Change

In 1981, the Congress restructured and increased the tax credit for rehabilitation expenditures. The Congress was concerned that the tax incentives provided to investments in new structures (e.g., accelerated cost recovery) would have the undesirable effect of reducing the relative attractiveness of the prior-law incentives to rehabilitate and modernize older structures, and might lead investors to neglect older structures and relocate their businesses.

The Congress concluded that the incentives granted to rehabilitations in 1981 remain justified. Such incentives are needed because the social and aesthetic values of rehabilitating and preserving older structures are not necessarily taken into account in investors' profit projections. A tax incentive is needed because market forces might otherwise channel investments away from such projects because of the extra costs of undertaking rehabilitations of older or historic buildings.

The Congress also sought to focus the credit particularly on historic and certain older buildings, to insure that the credits accomplish their intended objectives of preserving such historic and older buildings. In addition, the Congress was concerned that the existing credit percentages would be too high in the context of the lower overall rates provided in the Act. For example, the 25-percent

credit under prior law offset tax on 50 cents of income for every \$1 of rehabilitation expenditures made by an individual taxpayer in the top 50-percent bracket. A credit of 14 percent would accomplish the same offset to income with a top bracket of 28 percent. Similarly reduced credits would reproduce the same offsets to income as the current 15-percent and 20-percent rehabilitation credits.

Explanation of Provision

Two-tier credit

The Act replaces the existing three-tier rehabilitation credit with a two-tier credit for qualified rehabilitation expenditures. The credit percentage is 20 percent for rehabilitations of certified historic structures and 10 percent for rehabilitations of buildings (other than certified historic structures) originally placed in service before 1936.

Retention of certain rules

As under prior law, the 10-percent credit for the rehabilitation of buildings that are not certified historic structures is limited to non-residential buildings, but the 20-percent credit for rehabilitation of historic buildings is available for both residential and nonresidential buildings.

The prior law provisions that determine whether rehabilitation expenditures qualify for the credit were generally retained. In general, no changes were made regarding the substantial rehabilitation test, the specific types of expenditures that do not qualify for the credit, the provisions applicable to certified historic structures and tax-exempt use property, or the recapture rules.

No expenditure will be eligible for credit unless the taxpayer recovers the costs of the rehabilitation using the straight-line method of depreciation. Further, expenditures incurred by a lessee will not qualify for the credit unless the remaining lease term, on the date the rehabilitation is completed, is at least as long as the recovery period under ACRS (generally 27.5 years for residential real property or 31.5 years for nonresidential real property).

External-walls requirement

The external-walls requirement was significantly modified. The provision that requires 75 percent of the existing external walls to be retained in place as external walls was deleted and replaced by the alternative test provided by prior law that requires the retention in place of (1) at least 75 percent of the existing external walls (including at least 50 percent as external walls) as well as (2) at least 75 percent of the building's internal structural framework. Thus, unlike the situation that could occur under prior law, a building that is completely gutted cannot qualify for the rehabilitation credit under the Act. In general, a building's internal structural framework includes all load-bearing internal walls and any other internal structural supports, including the columns, girders, beams, trusses, spandrels, and all other members that are essential to the stability of the building.

Because the Secretary of the Interior's Standards for Rehabilitation insure that certified historic structures are properly rehabili-

tated, the external-walls requirement for such buildings was deleted to provide the Secretary of the Interior with appropriate flexibility. Rehabilitations eligible for the 20-percent credit must continue to be true rehabilitations, however, and not substantially new construction. Therefore, the Secretary of the Interior is expected to continue generally to deny certification to rehabilitations if less than 75 percent of the external walls are retained in place.

Basis reduction

The Act deletes the limited exception that required a basis reduction for only 50 percent of the credit in the case of certified historic structures. Thus, a full basis adjustment is required for both the ten-percent and 20-percent rehabilitation credits.

Effective Date

The modifications to the rehabilitation credit are generally applicable to property placed in service after December 31, 1986.

A general transitional rule provides that the modifications to the rehabilitation credit (other than certain reductions in the credit percentage—see below) will not apply to property placed in service before January 1, 1994, if the property is placed in service (as rehabilitation property) as part of either a rehabilitation completed pursuant to a written contract that was binding (under applicable state law) on March 1, 1986. This rule also applies to a rehabilitation with respect to property (including any leasehold interest) that was acquired before March 2, 1986, or was acquired on or after such date pursuant to a written contract that was binding on March 1, 1986, if (1) parts 1 (if necessary) and 2 of the Historic Preservation Certification Application were filed with the Department of the Interior (or its designee) before March 2, 1986, or (2) the lesser of \$1,000,000 or five percent of the cost of the rehabilitation (including only qualified rehabilitation expenditures) is incurred before March 2, 1986, or is required to be incurred pursuant to a written contract that was binding on March 1, 1986.⁴⁰

If a taxpayer transfers his rights in property under rehabilitation or under a binding contract to another taxpayer, the modifications do not apply to the property in the hands of the transferee, as long as the property was not placed in service before the transfer by the transferor. For purposes of this rule, if by reason of sales or exchanges of interests in a partnership, there is a deemed termination and reconstitution of a partnership under section 708(b)(1)(B), the partnership is to be treated as having transferred its rights in the property under rehabilitation or the binding contract to the new partnership.

If property that qualifies under a transitional rule is placed in service after December 31, 1986, the applicable credit percentages are reduced from 15 to ten, and 20 to 13, respectively. The credit percentage is not reduced for property that qualifies for the 25-percent credit.⁴¹

⁴⁰ A technical correction may be necessary to clarify that—under this rule—the rehabilitation need not be completed pursuant to a written contract that was binding on March 1, 1986.

⁴¹ Similarly, property that qualifies for the 25-percent credit under a transitional rule is not subject to the full basis adjustment requirement. A technical correction may be needed to accomplish this result.

Property that qualifies for transitional relief from the amendments relating to the rehabilitation tax credit is also excepted from the depreciation changes made by section 201 of the Act.

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$43 million in 1987, \$165 million in 1988, \$581 million in 1989, \$1,371 million in 1990, and \$1,779 million in 1991.

2. Tax credit for low-income rental housing (sec. 252 of the Act and sec. 42 of the Code)¹

Prior Law

No low-income rental housing tax credit was provided under prior law, but other tax incentives for low-income housing were available. These tax incentives consisted principally of special accelerated depreciation, five-year amortization of rehabilitation expenses, expensing of construction period interest and taxes, and tax-exempt bond financing for multifamily residential rental property.

Reasons for Change

Congress was concerned that the tax preferences for low-income rental housing available under prior law were not effective in providing affordable housing for low-income individuals. Congress believed a more efficient mechanism for encouraging the production of low-income rental housing could be provided through the low-income rental housing tax credit.

The primary tax preferences provided for low-income housing under prior law were tax-exempt bond financing, accelerated cost recovery deductions, five-year amortization of rehabilitation expenditures, and special deductions for construction period interest and taxes. These preferences operated in an uncoordinated manner, resulted in subsidies unrelated to the number of low-income individuals served, and failed to guarantee that affordable housing would be provided to the most needy low-income individuals.

A major shortcoming of the prior-law tax subsidies was that, beyond a minimum threshold requirement of low-income housing units that were required to be served, the degree of subsidy was not directly linked to the number of units serving low-income persons. As a result, there was no incentive to provide low-income units beyond the minimum required. Under the tax credit, however, the amount of the low-income housing tax credit which an owner may receive is directly related to the number of rental units made available to low-income individuals. By providing tax credits which are based on the number of units serving low-income persons, an incen-

¹ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1413; S.Rep. 99-313, pp. 757-768; Senate floor amendment, 132 Cong. Rec. S8146-8158 (June 23, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 85-103 (Conference Report).

tive exists to provide a greater number of housing units for more low-income individuals.

Another weakness of the Federal tax subsidies available under prior law was that they were not targeted to persons of truly low-income. For example, a study by the General Accounting Office² (GAO) of tax-exempt bond financed residential rental projects found that above-average income renters could qualify under prior law as "low" or "moderate" income for two reasons. First, persons with incomes as high as 80 percent of area median income were eligible to occupy units reserved for low- and moderate-income tenants. This income ceiling was relatively high, particularly when compared with the median income of renters. Second, the Treasury Department did not require household incomes to be adjusted for family size until after 1985. Congress believed that the low-income housing tax credit (as well as tax-exempt bond financing for low-income housing, discussed in Title XIII) should be provided only for households with incomes not exceeding 50 percent or 60 percent of area median income. Congress further believed that these income limits should be adjusted for family size. These provisions better target affordable housing to those persons most in need of assistance.

Another shortcoming of the tax subsidies under prior law was that none limited the rents that could be charged to low-income individuals. The same GAO study found, for example, that while 96 percent of individuals with incomes over 80 percent of area median income (the prior-law ceiling on "low" or "moderate" income) paid rents of less than 30 percent of their income, only 37 percent of individuals with incomes below 80 percent of area median paid rents of less than 30 percent of their income. The low-income housing tax credit limits the rent that may be charged to a low-income tenant, and therefore ensures that the subsidized housing is affordable to low-income individuals. In return for providing housing at reduced rents, owners of rental housing receive a tax credit designed to compensate them for the rent reduction.

Congress believed that the low-income housing tax credit (and tax-exempt bonds, as retargeted) will more effectively serve both low-income individuals and owners willing to provide affordable low-income housing than the multiple, uncoordinated tax preferences for low-income housing under prior law.

Explanation of Provisions

Overview

The Act provides a tax credit that may be claimed by owners of residential rental property used for low-income housing. The credit is claimed annually, generally for a period of ten years. New construction and rehabilitation expenditures for low-income housing projects placed in service in 1987 are eligible for a maximum nine percent credit, paid annually for ten years. The acquisition cost of existing projects and the cost of newly constructed projects receiv-

² United States General Accounting Office, *Report to the Chairman, Joint Committee on Taxation, Rental Housing: Costs and Benefits of Financing with Tax-Exempt Bonds* (GAO/RCED-86-2), February 1986.

ing other Federal subsidies placed in service in 1987 are eligible for a maximum four percent credit, also paid annually for ten years. For buildings placed in service after 1987, these credit percentages will be adjusted to maintain a present value of 70 percent and 30 percent for the two types of credits.

The credit amount is based on the qualified basis (defined below) of the housing units serving the low-income tenants. Low-income tenants for purposes of the low-income housing tax credit are defined as tenants having incomes equal to or less than either 50 percent or 60 percent of area median income, adjusted for family size. The qualifying income for a particular property depends on the minimum percentage of units that the owner elects to provide for low-income tenants. Rents that may be charged families in units on which a credit is claimed may not exceed 30 percent of the applicable income qualifying as "low", also adjusted for family size.

To qualify for the credit, residential rental property must comply continuously with all requirements of the credit throughout a 15-year compliance period. A credit allocation from the appropriate State or local credit authority must be received by the owner of property eligible for the low-income housing tax credit, unless the property is substantially financed with the proceeds of tax-exempt bonds subject to the new private activity bond volume limitation. These provisions are further explained in the following sections.

Credit amount and credit period

The Act provides two separate credit amounts: (1) a 70-percent present value credit for qualified new construction and rehabilitation expenditures (in excess of specified minimum amounts per unit) that are not federally subsidized and (2) a 30-percent present value credit for other qualifying expenditures. Expenditures qualifying for the 30-percent present value credit consist of the cost of acquisition of an existing building (including certain rehabilitation expenditures which are incurred in connection with acquisition and which do not exceed prescribed minimum amounts), and federally subsidized new construction or rehabilitation expenditures.

A taxpayer's credit amount in any taxable year is computed by applying the appropriate credit percentage to the appropriate qualified basis amount in such year, as defined below.³ Except as described below, both credits are claimed annually over a 10-year period.

The credit period is the 10-year period beginning with the taxable year in which the building is placed in service or, at the election of the taxpayer, the succeeding taxable year. The credit may not be claimed for a taxable year in which the building is not in compliance with all requirements of the credit.

³ Congress understood that in certain cases low-income rental housing tax credit projects would be owned indirectly through partnerships. Congress intended that Treasury Department regulations will include rules treating partnerships as if they were taxpayers where appropriate to carry out the objectives of the tax credit. Congress intended, for example, that the partnership be treated as the taxpayer for purposes of determining whether a building is new (sec. 42(i)(4)). Where a partner's interest changes during a taxable year, it is intended that each partner's distributive share of the tax credit be determined under general partnership allocation rules (see sec. 706), i.e., by the use of a method prescribed in Treasury Department regulations that takes into account the varying interests of the partners in the partnership during such taxable year.

Credit percentage

For buildings placed in service in 1987, the credit percentages are 9 percent annually over 10 years for the 70-percent present value credit, and 4 percent annually over 10 years for the 30-percent present value credit.

For buildings placed in service after 1987, these credit percentages are to be adjusted monthly by the Treasury Department to reflect the present values of 70 percent and 30 percent at the time the building is placed in service. Treasury's monthly adjustments of the credit percentages are to be determined on a discounted after-tax basis, based on the average of the annual applicable Federal rates (AFR) for mid-term and long-term obligations for the month the building is placed in service. The after-tax interest rate is to be computed as the product of (1) the average AFR and (2) .72 (one minus the maximum individual Federal income tax rate). The discounting formula assumes each credit is received on the last day of each year and that the present value is computed as of the last day of the first year. For example, if 72 percent of the average AFR for a given month were 5.85 percent, the 70-percent and 30-percent present value credit percentages for buildings placed in service in that month would be 8.92 percent and 3.82 percent. (For the 70-percent present value credit, this is derived as $.0892 = (.70)(.0585)/[1.0585 - 1/(1.0585)^9]$.) In a project consisting of two or more buildings placed in service in different months, a separate credit percentage may apply to each building.⁴

For buildings originally placed in service after 1987, Congress intended that the taxpayer, with the consent of the housing credit agency, may irrevocably elect to use the credit percentage determined using the above method for the month in which the taxpayer receives a binding commitment for a credit allocation from the credit agency or, in the case of a tax-exempt bond financed project for which no allocation is required, the month in which the tax-exempt bonds are issued.⁵

The credit percentage for rehabilitation expenditures (in excess of a prescribed minimum amount) is determined when rehabilitation is completed and the rehabilitated property is placed in service, but no later than the end of the 24-month period for which such expenditures may be aggregated.⁶ These rehabilitation expenditures are treated as a separate new building for purposes of the credit.

The credit percentage for rehabilitation expenditures that are incurred in connection with the acquisition of an existing building (and which do not exceed prescribed minimum amounts) is the same percentage as is used for the acquired building, i.e., the per-

⁴ As discussed below, a credit percentage equal to two-thirds of the credit percentage for the initial qualified basis is applicable to additions to qualified basis.

⁵ A technical amendment may be needed so that the statute reflects this intent and the intent of Congress that such an election would be binding on the taxpayer and all successors in interest.

⁶ Congress intended that the election to determine the credit percentage at the time a binding commitment for a credit allocation is received, described above, also apply in the case of credits attributable to rehabilitation expenditures (in excess of a prescribed minimum amount). A technical amendment may be needed so that the statute reflects this intent.

centage determined when the acquired building is placed in service.

Qualified basis

In general

The qualified basis amounts with respect to which the credit amount is computed are determined as the proportion of eligible basis in a qualified low-income building attributable to the low-income rental units. This proportion is the lesser of (1) the proportion of low-income units to all residential rental units or (2) the proportion of floor space of the low-income units to the floor space of all residential rental units. Generally, in these calculations, low-income units are those units presently occupied by qualifying tenants, whereas residential rental units are all housing units, whether or not presently occupied.

The qualified basis for each building is determined on the last day of each taxable year, beginning in the taxable year in which the building is placed in service or, if the taxpayer elects, the following taxable year.

Special rules for determining qualified basis

The Treasury Department may provide regulations for projects consisting of two or more buildings. Unless prescribed in regulations, the qualified basis of a project consisting of two or more buildings is determined separately for each building. Common facilities in such a project must be allocated in an appropriate manner to all buildings (whether existing or to be constructed) in the project.

The first year the credit is claimed, the allowable credit amount is determined using an averaging convention to reflect the number of months units comprising the qualified basis were occupied by low-income individuals during the year. For example, if half of the low-income units included in qualified basis were first occupied in October and the remaining half were occupied in December, a calendar year taxpayer would adjust the allowable first-year credit to reflect that these units were occupied on average only one-sixth of the year. To the extent there is such a reduction of the credit amount in the first year, an additional credit in the amount of such reduction is available in the eleventh taxable year. (This first-year adjustment does not affect the amount of qualified basis with respect to which the credit is claimed in subsequent years of the 10-year credit period.)

Additions to qualified basis

The qualified basis of a building may be increased subsequent to the initial determination only by reason of an increase in the number of low-income units or in the floor space of the low-income units (as opposed to by reason of increases in the eligible basis). Credits claimed on such additional qualified basis are determined using a credit percentage equal to two-thirds of the applicable credit percentage allowable for the initial qualified basis. As described below under the description of the State credit ceiling, an allocation of credit authority must be received for credits claimed

on additions to qualified basis, in the same manner as for credits claimed on the initial qualified basis. Unlike credits claimed on the initial qualified basis, credits claimed on additions to qualified basis are allowable annually for the portion of the required 15-year compliance period remaining after eligibility for such credits arises, regardless of the year such additional qualified basis is determined. The additional qualified basis is determined by reference to the original adjusted basis (before deductions for depreciation) of the property.

The credit amount on the additional qualified basis is adjusted in the first year such additions are made using an averaging convention to reflect the number of months units comprising the additional qualified basis were occupied by low-income individuals during the year. Any reduction of the credit amount in the first year may not be claimed in a later year. (This first-year adjustment does not affect the amount of additional qualified basis with respect to which the credit is claimed in subsequent years of the compliance period.)

Eligible basis

Eligible basis consists of (1) the cost of new construction, (2) the cost of rehabilitation, or (3) the cost of acquisition of existing buildings acquired by purchase (including the cost of rehabilitation, if any, to such buildings incurred before the close of the first taxable year of the credit period which do not exceed a prescribed minimum amount). Only the adjusted basis of the depreciable property may be included in eligible basis.⁷ The cost of land is not included in adjusted basis.

Generally, the eligible basis of a building is determined at the time the building is placed in service. For this purpose, rehabilitation expenditures (in excess of \$2,000 per unit) are treated as placed in service at the close of the period for which rehabilitation expenditures are aggregated, not to exceed 24 months. In the case of rehabilitation expenditures incurred in connection with the acquisition of an existing building (and which do not exceed a prescribed minimum amount), the capital expenditures incurred through the end of the first year of the credit period may be included in eligible basis.

For purposes of the low-income housing credit, the term residential rental property generally has the same meaning as residential rental property within Code section 142(d).⁸ Thus, residential rental property includes residential rental units, facilities for use by the tenants, and other facilities reasonably required by the project. Eligible basis may include the cost of such facilities and amenities (e.g., stoves, refrigerators, air conditioning units, etc.) only if the included amenities are comparable to the cost of the amenities in the low-income units. Additionally, the allocable cost of tenant facilities, such as swimming pools, other recreational fa-

⁷ The adjusted basis is determined by taking into account the adjustments described in section 1016 (other than paragraphs (2) and (3) of sec. 1016(a), relating to depreciation deductions), including, for example, the basis adjustment provided in section 48(q) for any rehabilitation credits allowed under section 38.

⁸ See, however, the discussion below on single room occupancy housing as property eligible for the low-income housing credit.

cilities, and parking areas, may be included provided there is no separate fee for the use of these facilities and they are made available on a comparable basis to all tenants in the project. (*See generally*, Treas. Reg. sec. 1.103-8(b)(4)(iii).)

Except as described below, costs of the residential rental units in a building which are not low-income units may be included in eligible basis only if such units are not above the average quality standard of the low-income units. Similarly, rehabilitation expenditures may not be included in eligible basis if such expenditures improve any unit in the building beyond comparability with the low-income units. Units are of comparable quality if the construction or acquisition costs are comparable and if such units are provided in a similar proportion for both the low-income and other tenants. Congress intended that, at the election of the taxpayer, the cost of a unit which would otherwise be excluded from eligible basis may be included in eligible basis if (1) the excess cost of such unit over the average cost of the low-income units does not exceed 15 percent of the average cost of the low-income units and (2) the excess cost is excluded from eligible basis.⁹

Residential rental property may qualify for the credit even though a portion of the building in which the residential rental units are located is used for a commercial use. No portion of the cost of such nonresidential rental property included in a project may be included in eligible basis. Congress intended that the costs of such a mixed-use facility be allocated according to any reasonable method that properly reflects the proportionate benefit to be derived, directly or indirectly, by the nonresidential rental property and the residential rental units. (*See, e.g.*, Prop. Treas. Reg. sec. 1.103-8(b)(4)(v).)

Certain rehabilitation expenditures.—The qualified basis attributable to rehabilitation expenditures, unless incurred in connection with the acquisition of an existing building, must equal at least \$2,000 per low-income unit.¹⁰ The \$2,000 minimum is computed as an average based on all qualifying expenditures in the building, rather than on a unit-by-unit determination. Qualified basis is determined in the same fractional manner as for new construction or acquisition costs even if all rehabilitation expenditures are made only to low-income units. Rehabilitation expenditures may be included in eligible basis without a transfer of property. Rehabilitation expenditures may be aggregated only for such expenditures incurred during any 24-month period. Where rehabilitation is limited to a group of units, Treasury may provide regulations treating a group of units as a separate new building.

Where rehabilitation expenditures are paid or incurred by a person (or persons) and the taxpayer acquires the property attributable to such expenditures (or an interest therein) before such property is placed in service, the taxpayer will be treated as having paid or incurred the expenditures (*see* Treas. Reg. sec. 1.167(k)-1(b)(1) and (2)). The portion of the basis of the property not attributable to rehabilitation expenditures may not be included in the eli-

⁹ A technical amendment may be needed so that the statute reflects this intent.

¹⁰ *See, below*, in the case of rehabilitation expenditures incurred in connection with the acquisition of an existing building that do not exceed the \$2,000 per unit minimum.

gible basis relating to the rehabilitated property, but may be includable in the eligible basis relating to acquisition costs, as described below.

Acquisition of existing buildings.—The cost of acquisition of an existing building may be included in eligible basis and any rehabilitation expenditures to such a building incurred before the close of the first year of the credit period may at the election of the taxpayer also be included in eligible basis, without a minimum rehabilitation requirement. These costs may be included in eligible basis, however, only if the building or a substantial improvement (a capital expenditure of 25 percent or more of the adjusted basis of the building to which five-year rapid amortization was elected or to which ACRS applied (as in effect before the enactment of this Act)) to the building has not been previously placed in service within 10 years and if the building (or rehabilitated property within the building) is not subject to the 15-year compliance period.

A building that is transferred in a transfer where the basis of the property in the hands of the new owner is determined in whole or part by the adjusted basis of the previous owner (for example, by a gift of property) is considered not to have been newly placed in service for purposes of the 10-year requirement.¹¹ Further, Congress intended that a building which has been acquired by a governmental unit or certain qualified 501(c)(3) or 501(c)(4) organizations would not be treated as placed in service by that governmental unit or organization for purposes of the 10-year requirement if the acquisition occurs more than 10 years from the date the building or a substantial improvement to the building has last been placed in service.¹² Congress also intended that a building acquired by foreclosure by taxpayers other than a governmental unit or 501(c)(3) organization would not be treated as newly placed in service by that taxpayer for purposes of the 10-year requirement if the foreclosure occurs more than 10 years from the date the building or a substantial improvement to the building has last been placed in service and the property is resold within a short period.¹³ Any other transfer will begin a new 10-year period.

The Treasury Department may waive the 10-year requirement for any building substantially assisted, financed or operated under the HUD section 8, section 221(d)(3), or section 236 programs, or under the Farmers' Home Administration section 515 program when an assignment of the mortgage secured by property in the project to HUD or the Farmers Home Administration otherwise would occur or when a claim against a Federal mortgage insurance fund would occur.

Federal grants and other subsidies.—Eligible basis may not include in any taxable year the amount of any Federal grant, regardless of whether such grant is included in gross income. A Federal grant includes any grant funded in whole or in part by the Federal government, to the extent funded with Federal funds. Examples of grants which may not be included in eligible basis include grants

¹¹ Congress intended that inherited property not be treated as being newly placed in service for purposes of the 10-year requirement. A technical amendment may be needed so that the statute reflects this intent.

¹² A technical amendment may be needed so that the statute reflects this intent.

¹³ A technical amendment may be needed so that the statute reflects this intent.

funded by Community Development Block Grants, Urban Development Action Grants, Rental Rehabilitation Grants, and Housing Development Grants.

If any portion of the eligible basis attributable to new construction or to rehabilitation expenditures is financed with Federal subsidies, the qualified basis is eligible only for the 30-percent present value credit, unless such Federal subsidies are excluded from eligible basis. A Federal subsidy is defined as any obligation the interest on which is exempt from tax under section 103 or a direct or indirect Federal loan, if the interest rate on such loan is less than the applicable Federal rate. A Federal loan under the Farmers' Home Administration section 515 program is an example of such a Federal subsidy, as is a reduced interest rate loan attributable in part to Federal grant funds lent to a building owner.

The determination of whether rehabilitation expenditures are federally subsidized is made without regard to the source of financing for the construction or acquisition of the building to which the rehabilitation expenditures are made. For example, a Federal loan or tax-exempt bond financing that is continued or assumed upon purchase of existing housing is disregarded for purposes of the credit on rehabilitation expenditures. Congress intended that tax-exempt financing or a below market loan to provide construction financing for any building will not be treated as a Federal subsidy if such loan is repaid and any underlying obligation (e.g., tax-exempt bond) is redeemed before the building is placed in service.¹⁴

Minimum set-aside requirement for low-income individuals

In general

A residential rental project providing low-income housing qualifies for the credit only if (1) 20 percent or more of the aggregate residential rental units in the project are occupied by individuals with incomes of 50 percent or less of area median income, as adjusted for family size, or (2) 40 percent or more of the aggregate residential rental units in the project are occupied by individuals with incomes of 60 percent or less of area median income, as adjusted for family size.¹⁵ (This requirement is referred to as the "minimum set-aside" requirement.)

A special set-aside may be elected for projects that satisfy a stricter requirement and that significantly restrict the rents on the low-income units relative to the other residential units in the building (the "deep-rent skewing" set-aside). Projects qualify for this rule only if, as part of the general set-aside requirement, 15 percent or more of all low-income units are occupied by individuals having incomes of 40 percent (rather than 50 percent or 60 percent) or less of area median income, and the average rent charged to tenants in the residential rental units which are not low-income units is at least 300 percent of the average rent charged to low-income tenants for comparable units. Under this special rule, a low-income

¹⁴ A technical amendment may be needed so that the statute reflects this intent.

¹⁵ A special set-aside requirement providing that 25 percent or more of the units are occupied by individuals with incomes of 60 percent or less of area median income is provided for New York City (see sec. 142(d)(6)).

tenant will continue to qualify as such, as long as the tenant's income does not exceed 170 percent of the qualifying income. Additionally, if a project to which this special set-aside requirement applies ceases to comply with the requirement because of increases in existing tenants' incomes, no penalties are imposed if each available low-income unit is rented to tenants having incomes of 40 percent or less of area median income, until the project is again in compliance.¹⁶

All units comprising the minimum set-aside in a project must be suitable for occupancy and used on a nontransient basis, and are subject to the limitation on gross rent charged to residents of set-aside units. (See the discussion of the gross rent limitation, below.)

The owner of each project must irrevocably elect the minimum set-aside requirement (including the deep-rent skewing set-aside described above) at the time the project is placed in service. In the case of a project consisting of a single building, the set-aside requirement must be met within 12 months of the date the building (or rehabilitated property) is placed in service, and complied with continuously thereafter for a period ending 15 years after the first day of the first taxable year in which the credit is claimed.

Special rules apply to projects consisting of multiple buildings placed in service on different dates. Unless prescribed by regulations, the initial building, within 12 months of being placed in service, must meet the set-aside requirement determined only by reference to those units in the initial building. When a second or subsequent building is placed in service, the project must meet the set-aside requirement with respect to the units in all buildings placed-in-service up to that time within 12 months of the date the second or subsequent building is placed in service.¹⁷ The project must comply with this expanded requirement continuously thereafter for a period ending 15 years after the later of (1) the first day of the taxable year in which the expanded requirement is met or (2) if a credit is claimed with respect to the building, the first day of the taxable year in which the credit period begins with such building.¹⁸ Subsequent buildings are subject to separate 15-year compliance periods. After the 15-year period has expired on an initial building, but while other buildings in the same project are still subject to the compliance period, the project must continue to meet the set-aside requirement determined by reference to all buildings in the project or, at the taxpayer's election, all buildings subject to the compliance period.

¹⁶ Congress intended that for projects electing this stricter set-aside requirement the definition of gross rent is that used generally for purposes of the low-income credit. A technical amendment may be needed so that the statute reflects this intent.

¹⁷ Congress intended that if within 12 months of the date a first building is placed in service, (1) the first building does not meet the set-aside requirement with respect to the first building and (2) a second building is placed in service, then the project is a qualified low-income project if the set-aside requirement is satisfied with respect to both buildings within 12 months of the placed-in-service date of the first building. A technical amendment may be needed so that the statute reflects this intent. Congress intended that similar rules apply by Treasury Department regulations in the case of projects with more than two buildings.

¹⁸ Until the expanded requirement is met, the set-aside requirements determined by reference to all previously existing buildings must be continuously satisfied.

Continuous compliance required

The determination of whether a tenant qualifies for purposes of the low-income set-aside is made on a continuing basis, both with regard to the tenant's income and the qualifying area income, rather than only on the date the tenant initially occupies the unit. An increase in a tenant's income may result, therefore, in a unit ceasing to qualify as occupied by a low-income person. However, a qualified low-income tenant is treated as continuing to be such notwithstanding *de minimis* increases in his or her income. Under this rule, a tenant qualifying when initially occupying a rental unit will be treated as continuing to have such an income provided his or her income does not increase to a level more than 40 percent in excess of the maximum qualifying income, adjusted for family size. If the tenant's income increases to a level more than 40 percent above the otherwise applicable ceiling (or if the tenant's family size decreases so that a lower maximum family income applies to the tenant) that tenant is no longer counted in determining whether the project satisfies the set-aside requirement.¹⁹ No penalty is assessed in such an event, however, provided that each residential rental unit that becomes vacant (of comparable or smaller size to the units no longer satisfying the applicable income requirement) is rented to tenants satisfying the qualifying income until the project is again in compliance. (For a discussion of the rules for complying with the set-aside requirements, see the discussion of the compliance period and penalty for noncompliance, below.)

Vacant units, formerly occupied by low-income individuals, may continue to be treated as occupied by a qualified low-income individual for purposes of the set-aside requirement (as well as for determining qualified basis) provided reasonable attempts are made to rent the unit and no other units of comparable or smaller size in the project are rented to nonqualifying individuals (see the section "Compliance period and penalty for noncompliance," below).

In no case is a unit considered to be occupied by low-income individuals if all of the occupants of such unit are students (as determined under sec. 151(c)(4)), no one of whom is entitled to file a joint income tax return.

Adjustments for family size

As stated above, the Act requires that adjustments for family size be made in determining the incomes used to qualify tenants as having low income. In general, these adjustments are the same as the adjustments presently made under section 8 of the United States Housing Act of 1937. Thus, for a project which qualifies by setting aside 20 percent of the units for tenants having incomes of 50 percent or less of area median income, a family of four generally will be treated as meeting this standard if the family has an income of 50 percent or less of the area median income; a family of three having an income of 45 percent or less generally will qualify; a family of two having an income of 40 percent or less generally

¹⁹ In the case of projects electing the deep-rent skewing set-aside, a tenant's income may increase to 70 percent more than the maximum qualifying income.

will qualify; and, a single individual having an income of 35 percent or less generally will qualify.

Congress was aware that, in certain cases, the use of section 8 guidelines may result in qualifying incomes below the amounts reflected by these percentages because of dollar ceilings that are applied under the section 8 program. Income limits may be adjusted by the Treasury Department for areas with unusually low family income or high housing costs relative to family income in a manner consistent with determinations of very low income families and area median gross income under section 8 to reflect the 50-percent and 60-percent income levels.

Gross rent limitation

The gross rent paid by families in units included in qualified basis may not exceed 30 percent of the applicable qualifying income, adjusted for family size. Gross rent includes the cost of any utilities, other than telephone. If any utilities are paid directly by the tenant, the maximum rent that may be paid by the tenant is to be reduced by a utility allowance prescribed by the Treasury Department, after taking into consideration the procedures for making such adjustments under section 8 of the United States Housing Act of 1937.

The gross rent limitation applies only to payments made directly by the tenant. Any rental assistance payments made on behalf of the tenant, such as through section 8 of the United States Housing Act of 1937 or any comparable Federal rental assistance, are not included in gross rent. Congress further intended that any comparable State or local government rental assistance not be included in gross rent.²⁰

Low-income unit

A low-income unit includes any unit in a qualified low-income building if the individuals occupying such unit meet the income limitation elected for the project for purposes of the minimum set-aside requirement and if the unit meets the gross rent requirement, as well as meeting all other requirements applicable to units satisfying the minimum set-aside requirement.

Qualified low-income housing projects and qualified low-income buildings

A qualified low-income building is a building subject to the 15-year compliance period and which is part of a qualified low-income housing project.

A qualified low-income housing project is a project that meets the minimum set-aside requirement and other requirements with respect to the set-aside units at all times that buildings comprising the project are subject to the 15-year compliance period. A qualified low-income housing project includes a qualified low-income building containing residential rental units and other property that is functionally related and subordinate to the function of providing

²⁰ A technical amendment may be needed so that the statute reflects this intent. Such an amendment was included in the versions of H. Con. Res. 395 which passed the House of Representatives and Senate in the 99th Congress.

residential rental units. A project may include multiple buildings having similarly constructed housing units, provided the buildings are located on the same tract of land, are owned by the same person for Federal income tax purposes, and are financed pursuant to a common plan of financing.

Residential rental units must be for use by the general public and all of the units in a project must be used on a nontransient basis. Residential rental units are not for use by the general public, for example, if the units are provided only for members of a social organization or provided by an employer for its employees. Generally, a unit is considered to be used on a nontransient basis if the initial lease term is six months or greater. Additionally, no hospital, nursing home, sanitarium, lifecare facility, retirement home providing significant services other than housing, dormitory, or trailer park may be a qualified low-income project. Factory-made housing which is permanently fixed to real property may be a qualified low-income building (see Treas. Reg. sec. 6a.103A-2(d)(4)(i) on factory-made housing).

Unlike the requirements for units in projects financed with tax-exempt bonds, certain single room occupancy housing used on a nontransient basis may qualify for the credit, even though such housing may provide eating, cooking, and sanitation facilities on a shared basis. An example of housing that may qualify for the credit is a residential hotel used on a nontransient basis that is available to all members of the public.

Compliance period and penalty for noncompliance

Qualified residential rental projects must remain as rental property and must satisfy the minimum set-aside requirement, described above, throughout a prescribed compliance period. Low-income units comprising the qualified basis on which additional credits are based are required to comply continuously with all requirements in the same manner as units satisfying the minimum set-aside requirement. Units in addition to those meeting the minimum set-aside requirement on which a credit is allowable also must continuously comply with this requirement.

The Act defines the compliance period for any building as the period beginning on the first day of the first taxable year of the credit period of such building and ending 15 years from such date. The minimum set-aside requirement must be met, in all cases, within 1 year of the date the building (or rehabilitated property) is placed in service.

Within 90 days of the end of the first taxable year for which the credit is claimed and annually for each taxable year thereafter during the compliance period, the taxpayer must certify to the Secretary that the project has continuously complied throughout the year with the set-aside requirement and report the dollar amount of the qualified basis of the building and the maximum applicable percentage and qualified basis permitted to be taken into account by the housing credit agency. Additionally, the certification must include the date (including the taxable year) in which the building

was placed in service and any other information required by Treasury.²¹

The penalty for any building subject to the 15-year compliance period failing to remain part of a qualified low-income project (due, for example, to noncompliance with the minimum set-aside requirement or the gross rent requirement or other requirements with respect to the units comprising the set-aside) is recapture of the accelerated portion of the credit, with interest, for all prior years.

Generally, any change in ownership by a taxpayer of a building subject to the compliance period is also a recapture event. An exception is provided if the seller posts a bond with the Treasury Department (in an amount prescribed by Treasury) and provided it can reasonably be expected that such building will continue to be operated as a qualified low-income building for the remainder of the compliance period. For partnerships consisting of more than 35 individual taxpayers, at the partnership's election, no change in ownership will be deemed to occur provided within a 12-month period at least 50 percent (in value) of the original ownership is unchanged.²²

In the year of a recapture event, no credit is allowable for the taxpayer subject to recapture. Additionally, the accelerated portion of credits paid in earlier years is recaptured with interest, from the date the recaptured amount was claimed, at the overpayment rate established under section 6621. The accelerated portion of the credit in any year is the amount of credits determined for the year, less the amount which would have been determined for the year if all credits had been allowed ratably over the 15-year compliance period (with no further discounting). Because credits on the initial qualified basis of a building are claimed ratably over a 10-year credit period rather than the 15-year compliance period, the amount of credit recaptured for noncompliance during the first 11 years is one-third of the credit determined for the year, plus interest. In the absence of additions to qualified basis and previous recapture events, the credits are recaptured in the following amounts (in addition to interest): one-third for violations after year 1 and before expiration of year 11; four-fifteenths for violations after year 11 but before expiration of year 12; three-fifteenths for violations after year 12 but before expiration of year 13; two-fifteenths for violations after year 13 but before expiration of year 14; and one-fifteenth for violations after year 14 but before expiration of year 15.

Because credits claimed on additions to qualified basis are paid ratably over the remainder of the compliance period (the credit percentage is two-thirds of the otherwise applicable percentage), there is no accelerated portion of credits attributable to additions to qualified basis and, therefore, no recapture of these amounts.

²¹ Congress intended that the penalty under sec. 6652(j) shall apply for failure to provide such information. A technical amendment may be needed so that the statute reflects this intent.

²² Congress intended that the presence of corporate partners not disqualify the partnership from this special exception provided the partnership is at least 50 percent owned by at least 35 individual taxpayers. A technical amendment may be needed so that the statute reflects this intent.

The penalty for a decrease in the qualified basis of a building, while still remaining part of a qualified low-income project, is recapture of the credits with respect to the accelerated amount claimed for all previous years on the amount of the reduction in qualified basis.

Owners and operators of low-income housing projects on which a credit has been claimed must correct any noncompliance with the set-aside requirement or with a reduction in qualified basis within a reasonable period after the noncompliance is discovered or reasonably should have been discovered. If any noncompliance is corrected within a reasonable period, there is no recapture. Congress did not intend, however, that tenants be evicted to return a project to compliance. Rather, Congress intended that each residential rental unit of comparable or smaller size that becomes vacant while a project is not in compliance must be rented to a tenant having a qualifying income before any units in the project are rented to tenants not so qualifying until the project again is in compliance. In general, therefore, the event that gives rise to the penalty for noncompliance (i.e., recapture or a reduction in the allowable credit) will be rental of a unit to other than a low-income tenant (on other than a temporary basis) during any period when the project does not comply with the set-aside requirement or with the qualified basis amounts on which the credit is computed (or would not qualify as a result of that rental).

An example of how the recapture provisions operate follows:

Example.— Assume credits are claimed for a project based on a qualified basis of 30 percent of the basis of the project being allocable to units occupied by individuals with incomes of 50 percent or less of area median income and, at a later date, a qualified basis of only 25 percent of the basis of the project is allocable to units occupied by individuals with incomes of 50 percent or less of median income due to vacancies filled by tenants with nonqualifying incomes. Because the minimum set-aside requirement is not violated, recapture occurs only on the accelerated portion of the credit amounts allocable to the 5-percent basis of the project no longer eligible for the credit.

If the maximum credit for which a project is eligible increases and subsequently decreases, a last-in, first-out rule is applied in determining which credits are recaptured. For example, consider a building that initially claimed a credit based on a qualified basis of 25 percent of the basis of the building allocable to units occupied by individuals with incomes of 50 percent or less of area median income, and in year 3 began receiving a credit based on an additional 10 percent of the basis of the building (i.e., a total of 35 percent). The credit amount on the additions to qualified basis is computed by reference to two-thirds of the credit percentage. If in year 5 only 30 percent of the basis of the building qualifies, there is no recapture of previous years' credits because there is no accelerated portion of the credit amounts attributable to the 5 percent of the additions to qualified basis claimed since year 3.

Congress intended that there be no recapture for *de minimis* changes in the qualified basis by reason of changes in the floor

space fraction.²³ A reduction in qualified basis by reason of a casualty loss is not a recapture event provided such property is restored by reconstruction or replacement within a reasonable period.

State low-income housing credit authority limitation

Generally, any building eligible for the credit must receive an allocation of credit authority from the State or local credit agency in whose jurisdiction the qualifying low-income housing project is located. (An exception is provided for buildings financed with the proceeds of tax-exempt bonds that received an allocation pursuant to the new private activity bond volume limitation.) The aggregate amount of such credits allocated within the State is limited by the State annual low-income credit authority limitation. In all cases, credit allocations are counted against a State's annual credit authority limitation for the calendar year in which the credits are allocated. Congress intended that credits may be allocated only during the calendar year in which the building or rehabilitated property is placed in service, except in the case of (1) credits claimed on additions to qualified basis and (2) credits allocated in a later year pursuant to an earlier binding commitment made no later than the year in which the building is placed in service.²⁴ Under this latter exception, for example, a building placed in service in 1987 may receive a binding commitment in 1987 to receive a credit allocation of a specified amount in 1989. In 1989 this amount is subtracted from the State credit authority limitation. The credit period and compliance period with respect to the building begin in the taxable year in which the building is placed in service or, by an irrevocable election of the taxpayer, the succeeding taxable year.

An election by the taxpayer to defer the start of the credit period for one year does not affect when the allocation must occur. (See also, the discussion below for credits claimed on additions to qualified basis). The credit amount allocated to a building applies for the year the allocation is made and for all future years of the compliance period.

Allowable credit authority

General rules.—The annual credit authority limitation for each State is equal to \$1.25 for every individual who is a resident of the State (as determined by the most recent estimate of the State's population released by the Bureau of the Census before the beginning of the year to which the limitation applies). For purposes of the credit authority limitation, the District of Columbia and U.S. possessions (e.g., Puerto Rico, the Virgin Islands, Guam, and American Samoa) are treated as States.

Special set-aside for qualified nonprofit organizations.—A portion of each State's credit authority limitation is set aside for exclusive use by qualified nonprofit organizations. This set-aside is equal to \$0.125 per resident of the State. This set-aside amount may not be changed by State action, either legislative or gubernatorial. In ad-

²³ A technical amendment may be needed so that the statute reflects this intent.

²⁴ A technical amendment may be needed so that the statute reflects this intent. Credits allocated pursuant to an earlier binding commitment are counted against the State's annual credit authority limitation in the calendar year of the allocation.

dition to the special set-aside, qualified nonprofit organization projects may be allocated any additional amount of a State's remaining credit authority.

To qualify for allocations from this set-aside, an organization must be a section 501(c)(3) or 501(c)(4) organization, one of the exempt purposes of which includes the fostering of low-income housing, and the qualifying project with respect to which the credits are allocated must be one in which such organization materially participates (within the meaning of the passive loss rule). Among the operations in which the organization must be involved in on a regular, continuous, and substantial basis, in addition to the continuing operation of the project, is the development of the project.

Credits subject to the credit authority limitation

Generally, credits subject to the State credit authority limitation include any credits attributable to expenditures not financed with tax-exempt bonds subject to the new private activity bond volume limitation.

In the case of a building financed with the proceeds of tax-exempt bonds subject to the bond volume limitation (Code sec. 146), if 70 percent or more of the aggregate basis of the building and land on which the building is located is financed with such proceeds, no portion of the credits attributable to such building is subject to the credit authority limitation.

If less than 70 percent of the aggregate basis of the building and land on which the building is located is financed with tax-exempt bonds subject to the bond volume limitation, only credits attributable to those bond-financed expenditures are not subject to the credit authority limitation.

Allocation of credit authority limitation among the State and other qualified governmental units therein

In general.—Each State's credit authority limitation is allocated among the various governmental units within the State pursuant to three alternative procedures.

Under the first procedure, each State's credit authority limitation is allocated in its entirety to the State housing agency until either the governor or the legislature makes a different allocation. If more than one such agency exists, they are treated as one agency. In the absence of a qualified State agency, no allocation may occur until provided by either the governor or the legislature.

Under the second procedure, the governor of each State is provided authority to allocate the State's credit authority limitation among all of the governmental units and other issuing authorities. This authority and any allocation rules established by the governor terminate as of the effective date of any overriding State legislation.

Under the third procedure, the State legislature may enact a law providing for a different allocation than that provided under the first or second procedures. Under this authority, the State legislature may allocate all or any portion of the State limitation to any governmental unit or other issuing authority in the State.

Congress intended that any allocation procedure established by the governor or State legislature give balanced consideration to the low-income housing needs of the entire State.

Congress desired to clarify that gubernatorial proclamations issued before the date of enactment of the Act (October 22, 1986) or State legislation enacted before that date is recognized for purposes of allocating the credit authority limitations, provided that the proclamation or legislation refers to the low-income housing tax credit authority limitation.

Congress further intended that a State be permitted to allocate available credit authority to a local issuer until a specified date during each year (e.g., November 1) at which time the authority, if unused, may revert to the State for reallocation. Similarly, a State statute may provide discretionary authority to a public official (e.g., the governor) to allocate the State's credit authority limitation. Because the credit authority limitation is an annual amount, however, any authority that has not been used for credits issued before the end of the calendar year expires.

Special rule for constitutional home rule subdivisions.—The Act provides a special allocation rule for certain political subdivisions with home rule powers under a State constitution (Illinois). The home rule subdivisions to which the special allocation rule applies are those home rule subdivisions that are granted home rule powers by the beginning of the calendar year in which the credits are issued pursuant to a State constitution that was adopted in 1970 and became effective on July 1, 1971. In that State, a full portion of the State credit authority limitation is allocated to each home rule subdivision based upon the ratio that the population of that home rule subdivision bears to the population of the entire State. As is true of the other credit authority limitation determinations, this allocation is made using the most recent population estimate from the Bureau of the Census released before the beginning of the calendar year to which the credits relate. The amount so allocated to home rule subdivisions may not be altered by the power to provide a different allocation otherwise granted by the Act to the governor or the State legislature. However, a home rule subdivision may agree to a different allocation.

The portion of a State's credit authority limitation not allocated to constitutional home rule subdivisions then is allocated under essentially the same three procedures described in the previous section. Thus, under the first procedure, the remaining State credit authority limitation is allocated to the State housing agency. Under the second and third procedures described above, the governor or the State legislature may allocate the State limitation other than that allocated to home rule subdivisions to any governmental units (including home rule subdivisions).

For purposes of the rules on State action establishing allocation rules for the credit authority limitation, a mayor of a constitutional home rule subdivision is treated as a governor, and a city council is treated as a State legislature.

Constitutional home rule subdivisions are treated as States for purposes of the credit authority limitation set-aside for qualified nonprofit organizations. Pursuant to their general authority to alter credit allocation, described above, these subdivisions may

agree with the State in which they are located to exchange authority to allocate credits for qualified nonprofit organizations for authority to allocate credits for other projects.

Allocation of set-aside amount for qualified nonprofit organizations.—As described above, a portion of each State's credit authority limitation is set aside exclusively for projects of qualified nonprofit organizations. Although the overall amount of credit authority set aside for these credits may not be reduced by any State action, a State may enact a statute determining which credit authorities in the State may allocate these credits and may allocate the entire set-aside amount to those authorities. Similarly, before any legislation, a governor may determine which authorities may allocate credits under the set-aside. The amount of the remaining credit authority limitation allocated to all other authorities must, of course, be adjusted to take into account any reallocation of the set-aside amount.

Determination of credit amount allocation

A building must receive low-income credit authority from the credit agency in whose jurisdiction the qualifying low-income building is located. The credit agency's remaining authority is reduced by the credit percentage multiplied by the amount of qualified basis granted by the credit agency for the building. The credit agency may grant a smaller credit percentage and a smaller qualified basis amount at the time the allocation is made than the maximum percentage and amount that would otherwise be allowed. Congress intended that the credit agencies reduce the maximum available credit percentage when the financing and rental assistance for a project from all sources is sufficient to provide the continuing operation of the qualifying low-income building without the maximum credit.

A credit agency's credit authority is reduced by the maximum amount of credit granted, whether or not the property ultimately is eligible for this maximum amount, and without regard to the averaging convention used in the first year of the credit period.

If a building is granted more credits than would be claimed in the first year of the credit period, without regard to the averaging convention, such amounts are not restored to the credit agency's authority. Such amounts may, however, be used in a later year by the owner of the building to the extent the credit determined with respect to the building is increased as a result of additions to qualified basis (but not beyond the amount allocated by the agency, and without regard to the reduced percentage applicable to such additions). (See also, the discussion on additions to qualified basis, above.)

Example 1.—Assume in calendar year 1987 a newly constructed building is placed in service and that the building's qualified basis, before consideration of the credit authority limitation, is determined to be \$100,000 in that year. The credit agency may allocate any amount of qualified basis to the building, but the taxpayer may treat as his qualified basis only the lesser of (1) the qualified basis of the building, before consideration of the credit authority limitation, or (2) the qualified basis allocated to the building by the credit agency. If the credit agency allocated \$100,000 of qualified

basis and the maximum 9 percent credit percentage to the building, the agency's remaining 1987 credit authority would be reduced by \$9,000.

Example 2.—Assume \$120,000 in qualified basis and a credit percentage of 9 percent were initially authorized by a credit agency in 1987 for a qualified low-income building and that in 1987, the first year of the credit period, the building's qualified basis was \$100,000. The credit agency's remaining 1987 credit authority is reduced by \$10,800. If in year two of the credit period the qualified basis of the building increases by up to \$20,000 due to an increase in the number of low-income units, additional credits may be claimed with respect to this addition to qualified basis without requiring additional credit authority from the credit agency. The credit percentage applicable to the additional qualified basis is two-thirds of the credit percentage applicable to the initial qualified basis. Credits on the additions to qualified basis may be claimed over the remainder of the compliance period.

If the qualified basis of a building is greater than the qualified basis allocated to it by the credit agency, credits may not be claimed on the excess portion unless additional low-income housing credits are allocated to the building by the credit agency. The credit authority of the credit agency is reduced for the calendar year of any such additional allocations.

Generally, no carryover authority for unused credit authority is permitted. A limited exception is provided for buildings placed in service in 1990, if expenditures of 10 percent or more of total project costs are incurred before January 1, 1989. Credit authority for such property may be carried over from the 1989 credit allocation for the credit agency. Congress intended that, for allocations made after 1987, if a building cannot be placed in service in the year for which the allocation was made for reasons beyond the control of the taxpayer, then upon approval by the Treasury Department, the credit allocation will be valid if the building is placed in service in the succeeding year.²⁵

Credit agencies are permitted to enter into binding commitments to allocate future credit authority for years before the sunset date to buildings not yet placed in service by binding contracts or other means.

Should a credit agency issue more credits than its credit authority limitation provides, credits will be denied to those buildings last allocated credits until the credit authority limitation is not exceeded.

Credit administration

Credit agencies allocating credits may not condition allocation of credits to the source of financing for the qualifying low-income building. The Act authorizes the Treasury Department to prescribe regulations that may require credit recipients to pay a reasonable fee to cover administrative expenses of the credit agency. The fact that credits must be allocated on a building-by-building basis does not preclude a credit agency from charging a single fee for process-

²⁵ A technical amendment may be needed so that the statute reflects this intent.

ing credits for a single project with multiple buildings or for multiple projects of a common taxpayer.

Agencies allocating credits must file reports with the Treasury Department containing (1) the maximum applicable percentage and qualified basis of each building, (2) the fees, if any, charged to credit recipients, (3) the aggregate amount of credits issued, and (4) other information required by Treasury. The time and manner of filing such reports and other information required are to be specified by the Treasury Department.

Transferability

A new owner of a building during its 15-year compliance period is eligible to continue to receive the credit as if the new owner were the original owner, using the same qualified basis and credit percentages as used by the original owner. Rehabilitation expenditures on such property may qualify for a credit in the same manner as rehabilitation expenditures on other qualifying property. The accelerated portion of credits claimed in previous years will be recaptured upon a transfer, subject to the election of the original owner to post a bond. All dispositions of ownership interests in buildings are treated as transfers for purposes of recapture, except for a special rule for certain partnerships. (There is no election for the new owner to assume the recapture liability for prior year credits.)

At-risk limitation

Property with respect to which a low-income housing tax credit is claimed is subject to an at-risk limitation similar to the investment tax credit at-risk rules in the case of nonqualified nonrecourse financing. An exception is provided for lenders related to the buyer of the low-income housing property. Another exception provides that the general investment tax credit at-risk rule, limiting the amount of nonrecourse financing to 80 percent of the credit base of the property, does not apply in the case of the low-income housing tax credit.²⁶

A further exception is provided for financing (including seller financing) not in excess of 60 percent of the basis of the property that is lent by 501(c)(3) and 501(c)(4) organizations whose exempt purpose includes fostering low-income housing. Further, if the rate of interest for any financing qualifying for this exception is below the applicable Federal rate at the time the financing is incurred, less 1 percentage point, then the qualified basis to which such financing relates shall be reduced to reflect the present value of the payments of principal and interest, using as the discount rate such applicable Federal rate. The credit is recaptured if the financing provided by such organizations is not repaid with interest by the end of the 15-year credit compliance period.

Coordination with other provisions

The credit is subject to the rules of the general business credit, including the maximum amount of income tax liability that may

²⁶ This exception was enacted in the Omnibus Budget Reconciliation Act of 1986, P.L. 99-509.

be reduced by a general business tax credit in any year. Unused credits for any taxable year may be carried back to each of the 3 preceding taxable years and then carried forward to each of the 15 following taxable years. Congress intended that no credits be carried back to taxable years ending prior to January 1, 1987.²⁷

For purposes of the rules in the Act limiting passive loss deductions, the credit (but not losses) is treated as arising from rental real estate activities in which the taxpayer actively participates. Credits may be used to offset tax on up to \$25,000 of nonpassive income, subject to a phaseout between \$200,000 and \$250,000 of adjusted gross income (disregarding passive losses).

The basis of property for purposes of depreciation is not reduced by the amount of low-income credits claimed.

Effective Date

The credit is effective for buildings placed in service after December 31, 1986, and before January 1, 1991, other than (1) property to which the depreciation rules of prior-law apply or (2) property with respect to which any investor is eligible for passive losses under the special transitional exception contained in section 502 of the Act. Congress further intended that no property to which the provision of prior law allowing five-year amortization of rehabilitation expenditures applies may be included in eligible basis.²⁸ As stated above, all buildings eligible for the credit must be placed in service before January 1, 1991.²⁹ A building placed in service in 1990 is eligible for the credit, however, only if expenditures of 10 percent or more of the reasonably expected cost of the building are incurred before January 1, 1989. Under a special rule, described above, credit authority for such property placed in service in 1990 may be carried over from the 1989 volume allocation for any credit agency.

Revenue Effect

The low-income rental housing tax credit is estimated to reduce fiscal year budget receipts by \$67 million in 1987, \$324 million in 1988, \$705 million in 1989, \$1,011 million in 1990, and \$1,139 million in 1991.

²⁷ A technical amendment may be needed so that the statute reflects this intent.

²⁸ A technical amendment may be needed so that the statute reflects this intent.

²⁹ The Act contains a general rule preventing the allocation of credit authority to buildings placed in service after 1990. Congress intended that tax-exempt bond-financed projects be treated in the same manner as other projects, and are not eligible for the credit if placed in service after 1990. A technical amendment may be needed so that the statute reflects this intent. Such an amendment was included in the versions of H. Con. Res. 395 which passed the House of Representatives and Senate in the 99th Congress.

F. Merchant Marine Capital Construction Fund (Sec. 261 of the Act and new sec. 7518 of the Code)³⁰

Prior Law

The Merchant Marine Act of 1936

The Merchant Marine Act of 1936, as amended, provides federal income tax incentives for U.S. taxpayers who own or lease vessels operated in the foreign or domestic commerce of the United States or in U.S. fisheries; these provisions were not contained in the Internal Revenue Code of 1954.

In general, qualified taxpayers were entitled to deduct from income certain amounts deposited in a capital construction fund pursuant to an agreement with the Secretary of Transportation or, in the case of U.S. fisheries, the Secretary of Commerce. Earnings from the investment or reinvestment of amounts in a capital construction fund were excluded from income.

The tax treatment of a withdrawal from a capital construction fund depended on whether it was "qualified." A nonqualified withdrawal of previously deducted or excluded monies by a taxpayer from a fund generated income to the taxpayer. A qualified withdrawal did not generate income to the taxpayer. A qualified withdrawal was a withdrawal for the acquisition, construction, or reconstruction of a qualified vessel, or for the payment of principal on indebtedness incurred in connection with the acquisition, construction, or reconstruction of such a vessel. A qualified vessel was defined as a vessel (including barges and containers) constructed or reconstructed in the United States, documented under U.S. laws, and which is to be operated in the U.S., foreign, Great Lakes, or noncontiguous domestic trade, or in U.S. fisheries.

A nonqualified withdrawal of previously deducted or excluded monies from a fund generated income to the taxpayer. In addition, interest on the tax liability attributable to a nonqualified withdrawal was payable from the date of deposit.

Capital cost recovery

Because provision was made for the deduction (or exclusion) of certain amounts deposited in a capital construction fund and their tax-free withdrawal in the case of a qualified withdrawal, the amount of funds withdrawn reduced the tax basis of the qualified vessel. This provision was designed to prevent double deductions, which would occur if a taxpayer was permitted to take depreciation deductions for amounts the taxpayer had already deducted from—or never included in—income.

³⁰ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 13; H.Rep. 99-426, pp. 190-195; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 104 (Conference Report).

Investment tax credit

In general, the amount of investment tax credit for eligible property was determined with reference to the basis. A taxpayer could compute the investment tax credit for a qualified vessel (i.e., one that was financed in whole or in part by qualified withdrawals from a capital construction fund) by including at least one-half of qualified withdrawals in basis.

Reasons for Change

The Congress concluded that the provision of tax benefits for U.S. shipping through the Capital Construction Fund mechanism is appropriate. Aid to U.S. shipping industries is necessary to assure an adequate supply of ships in the event of war. The Congress has adhered to a policy of providing tax incentives to the domestic shipping industry for many years, and there was a concern that the elimination of such incentives, coupled with reduced appropriations for maritime construction, could injure the industry.

The incentive under prior law may not have functioned properly as an incentive for U.S. shipbuilding. Consequently, the Congress determined that additional requirements should be imposed to insure that capital construction funds are used for the intended purpose. The Congress was also concerned about the ability of taxpayers to avoid taxation on nonqualified withdrawals by making such withdrawals in years for which there are net operating losses (or other tax attributes that reduce the tax attributable to the withdrawal).

The Congress became aware during its tax reform hearings that Treasury's proposal to terminate the Capital Construction Fund (CCF) could have a serious adverse impact on the financial reporting requirements of CCF holders. The Congress did not intend that the modifications to the CCF program be viewed as requiring any change in the financial statement presentation of income taxes by CCF holders. These taxpayers should be allowed to provide future financial statements necessary for ship financing on a basis consistent with that anticipated at the time these taxpayers entered into CCF agreements with the Federal government.

Explanation of Provision

In general

The Act coordinates the application of the Internal Revenue Code of 1986 with the capital construction fund program of the Merchant Marine Act of 1936, as amended. In addition, new requirements are imposed, relating to (1) the tax treatment of nonqualified withdrawals, (2) certain reports to be made by the Secretaries of Transportation and Commerce to the Secretary of the Treasury, and (3) a time limit on the amount of time monies can remain in a fund without being withdrawn for a qualified purpose.

For purposes of the definition of the term "qualified withdrawals," under new section 7518(e) (sec. 607(f) of the Merchant Marine Act, 1936), the phrase "acquisition, construction, or reconstruction of a qualified vessel" is to be interpreted as including acquisition through either purchase or lease of an agreement vessel for a

period of five years or more. This interpretation parallels the structure of: (1) the scope of eligibility to establish a capital construction fund under section 607(a) of the Merchant Marine Act, 1936 (which permits deposits into a CCF fund by either an owner/lessor or the lessee of an eligible vessel, or both, subject to certain limitations), and (2) the scope of qualified withdrawals for vessel acquisition through either purchase (in the form of a downpayment toward the purchase price) or payment of long-term indebtedness on an agreement vessel. This interpretation is also consistent with current industry acquisition practices reflecting a long-term trend toward vessel acquisition through lease rather than purchase.

Inclusion in Internal Revenue Code

The tax provisions relating to capital construction funds are recodified as part of the Internal Revenue Code of 1986. For purposes of the Internal Revenue Code of 1986, defined terms shall have the meaning given such terms in the Merchant Marine Act of 1936, as amended, as in effect, on the date of enactment of the Act.

Tax treatment of nonqualified withdrawals

The maximum rate of tax (34 percent for corporations and 28 percent for individuals) is to be imposed on nonqualified withdrawals made after December 31, 1986; This penalty is in addition to interest payable from the date the amount withdrawn was reported.

If a taxpayer makes a nonqualified withdrawal out of a capital construction fund, the income tax payable by the taxpayer for the year of withdrawal is generally to be increased by such amount as is necessary to assure that the tax liability with respect to the nonqualified withdrawal is determined by reference to the top marginal tax rates applicable to ordinary income and capital gains. Special rules are provided to limit the application of this provision in cases where the taxpayer derived no tax benefit from depositing the funds.

Departmental reports to Treasury

The Secretary of Transportation and the Secretary of Commerce are required to make annual reports to the Secretary of the Treasury regarding the establishment, maintenance, and termination of capital construction funds. These reports will also include determinations of whether a fundholder has failed to fulfill a substantial obligation under a capital construction fund agreement. Under joint regulations, and after notice and opportunity for hearing, if the Secretary determines that a substantial obligation is not being fulfilled, he or she may treat the entire fund—or any portion thereof—as a nonqualified withdrawal.

25-year limit on deposits

The Act imposes a 25-year limit on the amount of time monies can remain in a fund without being withdrawn for a qualified purpose. This rule applies to all deposits, including those made before the general effective date. The 25-year period begins to run on the later of the date of deposit or January 1, 1987.

Monies that are not withdrawn after a 25-year period are treated as nonqualified withdrawals, according to the following schedule:

for the 26th year, the fundholder would be treated as having withdrawn 20 percent; for the 27th year, 40 percent; for the 28th year, 60 percent; for the 29th year, 80 percent, and for the 30th year, 100 percent. For purposes of this rule, if a taxpayer commits an amount to the construction or acquisition of identified vessels pursuant to a binding contract entered into before the close of a taxable year, the amount so committed is not treated as remaining in the fund.

Effective Date

The provision is effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$3 million in 1987, \$5 million in 1988, \$4 million in 1989, \$4 million in 1990, and \$4 million in 1991.

TITLE III—CAPITAL GAINS AND LOSSES

A. Individual Capital Gains and Losses (Secs. 301 and 302 of the Act and secs. 1(j) and 1202 of the Code) ¹

Prior Law

Individual and other noncorporate taxpayers could deduct from gross income 60 percent of the amount of any net capital gain for the taxable year, i.e., 60 percent of the excess of net long-term capital gain over net short-term capital loss. As a result, the highest tax rate applicable to a noncorporate taxpayer's net capital gain was 20 percent (the 50 percent maximum individual tax rate times the 40 percent of net capital gain included in adjusted gross income).

Capital losses of individuals were deductible in full against capital gains. In addition, a maximum of \$3,000 of capital losses was deductible against ordinary income. However, only 50 percent of net long-term capital losses in excess of net short-term capital gains could be deducted from ordinary income. Excess losses could be carried forward to future years.

Reasons for Change

The Congress believed that as a result of the Act's reduction of individual tax rates on such forms of capital income as business profits, interest, dividends, and short-term capital gains, the need to provide a reduced rate for net capital gain is eliminated. This will result in a tremendous amount of simplification for many taxpayers since their tax will no longer depend upon the characterization of income as ordinary or capital gain. In addition, this will eliminate any requirement that capital assets be held by the taxpayer for any extended period of time in order to obtain favorable treatment. This will result in greater willingness to invest in assets that are freely traded (e.g., stocks) and make investment decisions more neutral.

The Congress believed that the top rate on individual capital gains should not exceed the maximum rates set forth in the Act, and therefore the Act provides that the maximum tax rate on capital gains will not exceed the top individual rate that the Act provides in the event that the top individual rate is increased by a subsequent public law (unless that law specifically increases the capital gains tax).

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 241; H.Rep. 99-426, pp. 196-197; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 401 and 402; S.Rep. 99-313, pp. 169-170; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 105-106 (Conference Report).

Explanation of Provision

The Act repeals the net capital gain deduction for individuals.²

The Act also provides that the tax imposed by section 1 on an individual, estate, or trust cannot exceed the sum of (1) a tax computed at the rates under section 1 on the greater of (a) the taxpayer's taxable income reduced by the amount of net capital gain or (b) the amount of the taxpayer's taxable income which is taxed at a rate below 28 percent; (2) a tax of 28 percent on the amount of the taxpayer's taxable income in excess of the amount determined under (1) above; and (3) any additional tax resulting from the gradual phaseout of the benefits of the 15 percent bracket and the personal exemptions. If for any taxable year beginning after 1987, the highest individual rates (under the tax rate schedules set forth in subsections (a), (b), (c), (d) or (e) of section 1) do not exceed 28 percent, then this limitation will have no application.

The maximum rate on long-term capital gain in 1987 is 28 percent.

Capital losses are allowed in full against capital gain as under prior law. Capital losses are also allowed against up to \$3,000 of ordinary income and the excess of net long-term capital loss over net short-term capital gain is allowed in full for this purpose. As under prior law, capital losses may be carried forward.

The prior statutory structure for capital gains is retained in the Code to facilitate reinstatement of a long-term capital gains rate differential if there is a future tax rate increase.

Effective Date

This provision applies to taxable years beginning after December 31, 1986, regardless of whether the sale or other transaction giving rise to the gain occurred in a prior year. Thus, if long-term capital gain is properly taken into income under the taxpayer's method of accounting in taxable years beginning after December 31, 1986, it is subject to the repeal of the net capital gain deduction. For example, the repeal of the net capital gain deduction applies to long-term capital gains recognized on the installment method in taxable years beginning after December 31, 1986, without regard to when the sale was made. Gains recognized in taxable years beginning after December 31, 1986, with respect to installment sales made before January 1, 1987, are thus subject to the new provisions.

² The Act includes a conforming amendment to Code section 170(e)(1)(B), relating to certain charitable contributions of property. Under prior law, the deduction for contributions by individuals of unrelated-use tangible personal property, or of any appreciated property donated to certain private nonoperating (grant-making) foundations, essentially was limited to the donor's basis in the property plus the excludable amount of any long-term capital gain which would have been realized if the property had been sold. (The deductible amount for such contributions by corporations also is limited.) In conformity to the repeal of the capital gains exclusion for individuals, the Act essentially limits the deductible amount of such contributions by individuals to the donor's basis in the property. (A related change is made to the deductible amount of such contributions by corporations.) No change is made to the reduction rule in section 170(e)(1)(A) for contributions of ordinary-income property or to the exception to the reduction rule in section 170(e)(5) for contributions of qualified appreciated stock to certain private foundations. Under the Act (as under prior law), the amount of charitable deduction allowable to an itemizer for a donation of stock to a public charity equals (for regular tax purposes) the full fair market value of the stock at the time of the donation if the donor has held the stock for the long-term capital gain holding period, or the donor's basis in the stock if the donor has not held the stock for the long-term capital gain holding period (Code section 170(e)).

In the case of a pass-through entity that is not itself liable for tax, the provision applies to gain properly taken into account by the partner or other taxable beneficial owner in such person's taxable years beginning after December 31, 1986. For example, in the case of a calendar year individual partner in a partnership that has a fiscal year ending January 31, 1987, the repeal of the net capital gain deduction would apply to such partner's share of gain resulting from a cash sale by the partnership during the partnership's fiscal year ending January 31, 1987, regardless of whether the sale occurred prior to, or on or after, January 1, 1987. Similarly, the new provision would apply to such partner's share of any gain properly taken into account by the partnership on the installment method during the partnership's fiscal year ending January 31, 1987, regardless of whether the installment sale occurred in an earlier partnership fiscal year.

Long-term capital loss properly taken into account in taxable years beginning after December 31, 1986 is likewise subject to the new provisions. For example, in the case of a calendar year individual taxpayer with no capital gain properly taken into account in 1987, a long-term capital loss carryover from an earlier taxable year is allowed in full as an offset to 1987 ordinary income, up to the \$3,000 limit.

Revenue Effect

The revenue effect of this provision is included with the revenue effect for individual rate changes (title I, Part A).

B. Corporate Capital Gains (Sec. 311 of the Act and sec. 1201 of the Code)³

Prior Law

An alternative tax rate of 28 percent applied to a corporation's net capital gain (the excess of net long-term capital gain over net short-term capital loss) if the tax computed using that rate was lower than the corporation's regular tax (sec. 1201). Corporate capital losses were deductible only against capital gain. Capital losses generally could be carried back 3 years and forward 5 years.

Reasons for Change

Under prior law, large corporations obtained preferential treatment of capital gains income (28 percent alternative rate compared to 46 percent regular rate). The Congress was of the view that corporate capital gain should not be taxed at preferential rates, in light of the overall reduction in rates. Thus, the Act taxes corporate capital gains at the regular corporate tax rates.

Explanation of Provision

The Act makes the alternative tax inapplicable to taxable years for which the new corporate tax rates are fully effective (i.e., taxable years beginning on or after July 1, 1987). Thus, corporate net capital gain for such years is taxed at regular corporate rates (i.e., generally a maximum 34 percent under the Act). In the event that the maximum rate under Code section 11 is increased by a subsequent public law, the Act provides that a 34% alternative rate will be applicable unless such law changes that rate.

For taxable years which include periods prior to the time the new rates are fully effective, the alternative tax rate on gain properly taken into account under the taxpayer's method of accounting after December 31, 1986 is 34 percent. The Act provides that for any taxable year beginning on or after January 1, 1987, and before July 1, 1987, the alternate rate applicable to the net capital gain will be 34 percent. For taxable years beginning in 1986 and ending in 1987, a 28 percent rate will apply to the lesser of: (1) the net capital gain for the taxable year or (2) the net capital gain that is included in income under the taxpayer's method of accounting before January 1, 1987; any remaining net capital gain will be taxed at 34 percent.

The Act does not change the capital loss provisions.

³ For legislative background of the provision, see: H.R. 3838 as reported by the House Committee on Ways and Means on December 7, 1985, secs. 301 and 302; H.Rep. 99-426, pp. 231-233; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 106-107 (Conference Report).

The Act also contains two special rules (applicable to all taxpayers, whether or not corporations) in conjunction with the repeal of the special capital gains rates. First, the Act provides that income from coal and domestic iron ore royalties (under sec. 631(c)) will be eligible for percentage depletion for any taxable year in which the maximum rate of tax on net capital gain is not less than the maximum rate on ordinary income. Second, the Act provides that any election to treat the cutting of timber as a disposition under section 631(a) made for a taxable year beginning before January 1, 1987, may be revoked on a one-time basis by the taxpayer without the permission of the Secretary of the Treasury. Any revocation of an election made in accordance with this provision will not be considered in determining whether a future election under section 631(a) by the taxpayer is allowed. If a taxpayer revokes an election without consent in accordance with this provision, and thereafter makes an election under section 631(a), any future revocations will require the permission of the Secretary of the Treasury.

Effective Date

The provision applies to taxable years beginning after December 31, 1986, regardless of whether the sale or other transaction giving rise to the gain occurred in a prior year. Thus, so long as gain is properly taken into income under the taxpayer's method of accounting in a taxable year beginning after December 31, 1986, it is subject to the provision. A transitional rule described above also applies the provision to taxable years beginning in 1986 and ending in 1987, in the case of gain properly taken into account under the taxpayer's method of accounting on or after January 1, 1987.⁴

The provision applies to long-term capital gains recognized on the installment method in periods subject to the new alternative tax rates, without regard to when the sale was made. Installment sale gains properly taken into account under the installment method after December 31, 1986 are thus subject to the new provisions without regard to whether the sale was made prior to that date or in a prior taxable year.

In the case of a pass-through entity that is not itself liable for tax, the provisions apply to gain properly taken into account by the partner or other taxable beneficial owner after December 31, 1986. For example, a calendar year corporate partner in a partnership that has a fiscal year ending January 31, 1987 would be subject to the new provision, and would have a 34 percent alternative tax rate, with respect to such partner's share of long-term capital gain resulting from a cash sale by the partnership during the partnership's fiscal year ending January 31, 1987, regardless of whether the sale occurred prior to, or on or after, January 1, 1987. Similarly, the new provision would apply to such partner's share of any

⁴ Congress intended the application of the alternative tax to long-term capital gain to depend solely on when gain is properly taken into income under the taxpayer's method of accounting. Thus, for example, the alternative tax rates applicable to a particular item of long-term capital gain under these provisions (28 percent or 34 percent, as the case may be) determines the alternative tax on such gain. However, in determining whether such alternative tax is less than the tax otherwise payable, the otherwise applicable rules of section 15 of the Code shall apply in determining the section 11 rates in the case of a corporate taxpayer whose taxable year includes but does not begin on July 1, 1987. (See Title VI, Part A).

long-term capital gain properly taken into account by the partnership on the installment method during the partnership's fiscal year ending January 31, 1987, regardless of whether the installment sale occurred in an earlier partnership fiscal year.

Revenue Effect

The revenue effect of this provision is included with the revenue effect for the corporate rate changes (Title VI, Part A).

C. Incentive Stock Options (Sec. 321 of the Act and sec. 422A of the Code) ⁵

Prior Law

Under present and prior law, an employee is not taxed on the grant or exercise of an incentive stock option, and the employee is generally taxed at capital gains rates when the stock received on the exercise of the option is sold. No deduction is taken by the employer when the option is granted or exercised.

Under prior law, in order to qualify as an incentive stock option, among other requirements, the options must have been exercisable in the order granted, and the employer could not grant the employee such options to acquire stock with a value of more than \$100,000 (increased by certain carryover amounts) in any one year.

Reasons for Change

The Congress wished to eliminate certain restrictions on incentive stock options so that it will be easier for employers, particularly small and relatively new companies, to use the options as a means of attracting and motivating talented employees.

The rule requiring options to be exercisable only in the order granted can make incentive stock options unavailable to companies which have experienced a decline in stock prices.

The Congress believed that limiting the amount of incentive stock options an employer may grant to an employee in a year unnecessarily restricts the ability of smaller companies to offer a comprehensive compensation package which it may need to offer talented employees if it is to compete with larger, more established corporations for such employees.

Explanation of Provision

The Act repeals the requirement that incentive stock options must be exercisable in the order granted.

The Act also changes the \$100,000 limit to provide that under the terms of the plan the aggregate fair market value (determined at the time the option is granted) of the stock with respect to which incentive stock options are exercisable for the first time by any individual during any calendar year may not exceed \$100,000.

Effective Date

The provision applies to options granted after December 31, 1986.

⁵ For legislative background of the provision, see: H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 411; S.Rep. 99-313, p. 171; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 107 (Conference Report).

Revenue Effect

The provision is estimated to reduce fiscal year budget receipts for 1987 through 1991 by less than \$5 million annually.

D. Tax Straddles (Sec. 331 of the Act and sec. 1092 of the Code) ⁶

Prior Law

In general, if a taxpayer realizes a loss on the disposition of one or more positions in a straddle, the amount of the loss that can be deducted is limited to the excess of the loss over the unrecognized gain (if any) in offsetting positions (sec. 1092). An exception to the loss deferral rule applies to a straddle consisting of stock that is offset by a qualified covered call. For purposes of this exception, a call option is not treated as qualified if gain from the disposition of the underlying stock is included in gross income in a taxable year subsequent to the year in which the option is closed, and the stock is not held for more than 30 days following the date on which the option is closed. This rule is intended to prevent taxpayers from using covered call options to defer tax on income from unrelated transactions (by realizing a loss on the option in one year, and deferring realizing any gain on the related stock until the next year).

Reasons for Change

Under prior law, the exception to the loss deferral rule for qualified covered call options applies even where the straddle is used to defer tax on income from unrelated transactions. Such deferral may occur where gain from closing the option is included in gross income in a taxable year subsequent to the year in which the stock is disposed of at a loss. The Act amends the definition of a qualified covered call to exclude a covered call option in these circumstances.

Explanation of Provision

Under the Act, the qualified covered call exception to the loss deferral rule is denied to a taxpayer who fails to hold a covered call option for 30 days after the related stock is disposed of at a loss, where gain on the option is included in the subsequent year.

Effective Date

The provision applies to positions established after December 31, 1986.

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by less than \$5 million in each of fiscal years 1987 through 1991.

⁶ For legislative background of the provision, see: H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 422; S.Rep. 99-313, pp. 172-173; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 108 (Conference Report).

TITLE IV—AGRICULTURE, NATURAL RESOURCES, AND ENERGY

A. Agriculture Provisions

1. Special expensing provisions: soil and water conservation; clearing land (secs. 401 and 402 of the Act and secs. 175 and 182 of the Code) ¹

Prior Law

Expenditures for soil and water conservation

Under prior (and present) law, a taxpayer may elect to deduct certain expenditures for the purpose of soil or water conservation that would otherwise be added to the taxpayer's basis in the land on which the conservation activities occur (Code section 175). This deduction is limited in any one year to 25 percent of the gross income derived by the taxpayer from farming. Any excess amount is carried forward to succeeding taxable years.

Under prior law, expenditures deductible under section 175 included amounts paid for grading, terracing, and contour furrowing, the construction of drainage ditches, irrigation ditches, dams and ponds, and the planting of wind breaks. Also, assessments levied by a soil or water conservation drainage district were deductible under this provision to the extent those expenditures would have constituted deductible expenditures if paid directly by the taxpayer. The cost of acquiring or constructing depreciable machinery and facilities, however, were not eligible for expensing under this provision. In the case of depreciable items such as irrigation pumps, concrete dams, or concrete ditches, the taxpayer was allowed to recover costs only through cost recovery allowances, and only if the taxpayer owned the asset.

Expenditures for clearing land

Under prior law, a taxpayer engaged in the business of farming could elect to deduct currently amounts paid or incurred during the taxable year to clear land for use in farming (section 182). For any taxable year, this deduction could not exceed the lesser of \$5,000 or 25 percent of the taxable income derived from farming.

Reasons for Change

Congress was concerned that certain Federal income tax provisions might be affecting prudent farming decisions. In particular,

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, secs. 921-922; H. Rep. 99-426, pp. 649-651; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 701-702; S. Rep. 99-313, pp. 264-265; Senate floor amendment, 132 Cong. Rec. S7827 (June 18, 1986); and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 110-111 (Conference Report).

Congress was concerned that these provisions were contributing to an increase in acreage under production, which in turn encouraged the overproduction of agricultural commodities. Congress believed that to the extent possible, the tax code should be neutral with respect to these business decisions. To eliminate tax biases, therefore, Congress determined that certain of the special farming expensing provisions should be repealed or restricted.

Explanation of Provisions

Soil and water conservation expenditures

The Act limits the soil and water conservation expenditures that may be deducted currently to amounts incurred that, in addition to satisfying the requirements of prior law, are consistent with a conservation plan approved by the Soil Conservation Service (SCS) of the Department of Agriculture. If there is no SCS conservation plan for the area in which property to be improved is located, amounts incurred for improvements that are consistent with a plan of a State conservation agency are deemed to satisfy the Federal standards. Finally, the Act provides that expenditures for general earth moving, draining, and/or filling of wetlands, and for preparing land for installation and/or operation of a center pivot irrigation system may not be deducted under this provision.

Expenditures for clearing land

The Act repeals the provision of prior law that allowed expenditures for clearing land in preparation for farming to be deducted in the year paid or incurred. However, expenditures for routine brush clearing and other ordinary maintenance activities relating to property used in farming continue to be deductible currently, to the extent they constitute ordinary and necessary business expenses under sec. 162.

Effective Date

The amendment to the provision relating to soil and water conservation expenditures is effective for expenditures after December 31, 1986. The repeal of the provision relating to land clearing expenses is effective for expenditures after December 31, 1985.

Revenue Effect

These provisions are estimated to increase fiscal year budget receipts by \$50 million in 1987, \$37 million in 1988, \$34 million in 1989, \$33 million in 1990, and \$32 million in 1991.

2. Dispositions of converted wetlands and highly erodible croplands (sec. 403 of the Act and new sec. 1257 of the Code)²

Prior Law

Under prior law, gain realized on the sale or other disposition of a capital asset was subject to tax at preferential rates. The term

² For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 923; H. Rep. 99-426, pp. 651-652; H.R.

capital asset (under both prior and present law) does not include property used in a taxpayer's trade or business that is of a character subject to depreciation (sec. 1221(2)). However, gain from the sale of such property ("section 1231 assets") may be taxed on the same basis as gain from the sale of a capital asset if gains on all sales of section 1231 assets during a taxable year exceed losses on such sales.

If losses from the sale or exchange of section 1231 assets during a taxable year exceed the gains from such sales or exchanges, the net losses are treated as ordinary losses. Ordinary losses are deductible in full for tax purposes, while deductions for capital losses are subject to limitations.

Reasons for Change

Congress was concerned about the environmental impact of the conversion of the nation's wetlands and erodible lands to farming uses, and wished to discourage such conversions.

Explanation of Provision

Under the Act, any gain realized on the disposition of "converted wetland" or "highly erodible cropland" is treated as ordinary income, and any loss realized on the disposition of such property is treated as a long-term capital loss.³ For this purpose, the term "converted wetland" means land that is converted wetland within the meaning of section 1201(4) of the Food Security Act of 1985 (16 U.S.C. 3801(4)), provided such land is held by the person who originally converted the wetland, a person who uses the land for farming at any time following the conversion, or by a person whose adjusted basis in the property is determined by reference to the basis of a person in whose hands the property was converted wetland.⁴ In general, the Food Security Act defines converted wetland as land that has been drained or filled for the purpose of making the production of agricultural commodities possible, if the production would not have been possible but for such action.

The term "highly erodible cropland" means any highly erodible cropland as defined in section 1201(6) of the Food Security Act of 1985 (16 U.S.C. 3801(6)) that is used by the taxpayer at any time for farming purposes other than the grazing of animals. In general, highly erodible cropland is defined as land that (1) is classified by the Department of Agriculture as class IV, VI, VII, or VIII land under its land capability classification system, or (2) that would have an excessive average annual rate of erosion in relation to the soil loss tolerance level, as determined by the Secretary of the Agriculture.

3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 703; S. Rep. 99-313, pp. 266-267; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 111-112 (Conference Report).

³ Since other provisions of the Act (see Title III) eliminated the preferential rates applicable to individual and corporate capital gains, after 1986 the principal effect of this provision on gains is to prevent a taxpayer from offsetting the gains against capital losses.

⁴ Thus, land that has been converted could become eligible for section 1231 treatment in the hands of, for example, a subsequent purchaser or legatee, provided the purchaser or legatee has used the property only for nonfarming purposes.

Effective Date

The provision is effective for dispositions of converted wetland and highly erodible cropland first used for farming after March 1, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by a negligible amount.

3. Prepayments of farming expenses (sec. 404 of the Act and sec. 464 of the Code)⁵

Prior Law

In general

Under prior (and present) law, a taxpayer generally is allowed a deduction in the taxable year which is the proper taxable year under the method of accounting used in computing taxable income (sec. 461). The two most common methods of accounting are the cash receipts and disbursements method and the accrual method. If the taxpayer's method of accounting does not clearly reflect income, however, the computation of taxable income must be made under the method which, in the opinion of the Internal Revenue Service, clearly reflects income (sec. 446(b)). Furthermore, the income tax regulations provide that if an expenditure results in the creation of an asset having a useful life which extends substantially beyond the close of the taxable year, such an expenditure may not be deductible, or may be deductible only in part, for the taxable year in which paid by a taxpayer using the cash receipts and disbursements method of accounting, or in which incurred by a taxpayer using the accrual method of accounting (see Treas. Reg. sec. 1.461-1(a)(1) and (2).)

Prior law was unclear as to the proper timing of a deduction for prepaid expenses other than interest. No specific statutory provision expressly permitted expenses to be deducted in full when paid by a taxpayer using the cash receipts and disbursements method of accounting. Such deductions were prohibited, however, to the extent that they resulted in a material distortion of income.

Generally, the courts examined all the facts and circumstances in a particular case to determine whether allowing a full deduction for the prepayment would result in a material distortion of income. In determining whether an expenditure resulted in the creation of an asset having a useful life extending substantially beyond the end of the taxable year, the court in *Zaninovich v. Commissioner*, 616 F.2d 429 (9th Cir. 1980), adopted a "one-year" rule. Under this rule, prepayments generally could be deducted if they did not provide benefits extending beyond one year. Thus, under this decision, it might be possible for a calendar-year, cash-basis taxpayer making a lease payment attributable to the following year to claim a deduction in the year of the payment.

⁵ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 704; S.Rep. 99-313, pp. 267-270; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 114 (Conference Report).

Certain cash method tax shelters may not deduct expenses before the time when economic performance occurs (e.g., when the goods are delivered or services performed). An exception is provided where economic performance occurs within 90 days of the end of the taxable year (sec. 461(i)(2)).

Special rules applicable to farming syndicates

Under prior law, certain limitations were imposed on deductions in the case of farming syndicates. A farming syndicate could deduct amounts paid for feed, seed, fertilizer, or other similar farm supplies only in the year in which such items were actually used or consumed or, if later, in the year such amounts were otherwise allowable as a deduction. A farming syndicate was defined generally as a partnership or any other enterprise (other than a corporation which was not an S corporation) engaged in farming if (i) interests in the partnership or enterprise were offered for sale in any offering required to be registered with any Federal or State agency or (ii) if more than 35 percent of the losses during any period were allocable to limited partners or limited entrepreneurs (i.e., persons who did not actively participate in the management of the enterprise).

Reasons for Change

Many farming tax shelters had been established to defer taxation of nonfarming income by prepaying farming expenses allocable to the following and subsequent years. Such tax shelters distorted the measurement of taxable incomes of their investors and affected farming operations that were not established for tax reasons. Congress believed that, in order to avoid these distortions, limits should be placed on the deductibility of prepaid expenses of certain farming tax shelters that did not fall within the definition of a farming syndicate.

Congress understood, however, that because of the seasonal nature of farming, numerous everyday business expenses are prepaid. Accordingly, the Act applies the limitations only to the extent that more than 50 percent of the farming expenses (exclusive of prepaid supplies) for the year are prepaid. In addition, in order to assure that farmers with continuous year-round or full-time farming activities are not subject to the limitations, the Act provides exceptions where a farmer has more than 50 percent prepaid expenses because of unusual or extraordinary circumstances. Congress believed that these rules will limit the application of the new restrictions to cases where the abuse is serious. In addition, Congress believed that the new rules will not impose any significant additional accounting burden on farmers.

Explanation of Provision

Under the Act, in the case of farmers eligible to use the cash method of accounting, the deductibility of prepayments for feed, seed, fertilizer, or other farm supplies may be limited in the same manner as prepayments made by a farming syndicate were limited

under prior law.^{5a} In addition, certain costs incurred in producing poultry may be subject to capitalization and amortization under special rules. The limitations apply only to the extent prepayments for supplies (or poultry expenses) exceed 50 percent of the taxpayer's total deductible farming expenses. This excess amount may not be deducted any earlier than the taxable year of actual use or consumption of the supplies to which it relates.

For purposes of the 50-percent test, deductible farm expenses include the operating expenses of the farm, such as ordinary and necessary expenses within the meaning of section 162, interest and taxes paid, depreciation allowances on farm equipment, and other similar expenses.⁶ However, payments for feed, seed, fertilizer, or other supplies are deductible farm expenses only to the extent they are not prepayments, i.e., the supplies are consumed in the year of payment.

The Act provides two exceptions to the provision.⁷ First, the provision does not apply to an eligible farmer—a "farm-related taxpayer"—who fails to satisfy the 50-percent test due to a change in business operations directly attributable to extraordinary circumstances, including government crop diversion programs and circumstances described in Code section 464(d) (supplies on hand at the end of the taxable year due to fire, storm, or other casualty, disease, or drought). Second, the provision does not apply to farm-related taxpayers whose prepaid supplies do not exceed the 50-percent threshold applied by aggregating prepayments and expenses (other than prepayments) for the three preceding taxable years.

A farm-related taxpayer includes (1) any person whose principal residence is on a farm, (2) any person with a principal occupation of farming, and (3) any family member of persons described in (1) or (2). The exceptions apply only to farming activities attributable to the farm on which the residence is located, or to farms included in the "principal occupation" of farming activities.

Congress did not intend that farmers will be required generally to take year-end inventories of prepaid items as a result of this provisions of the Act.

In adopting these limitations, Congress did not intend to modify or supersede the general rule that prepaid expenses are not deductible if that deduction would result in a material distortion of income.

Effective Date

The provision applies to amounts paid or incurred after March 1, 1986, in taxable years beginning after that date.

^{5a} Under the Act, farming syndicates (as defined under secs. 464 of prior law) are now required to use the accrual method of accounting. (See, new sec. 448.)

⁶ Generally these are the expenses reported on Schedule F of the taxpayer's Federal income tax return. Farm expenses do not include costs that must be inventoried or capitalized, e.g., the purchase price of an animal purchased for subsequent resale.

⁷ Prepaid expenses of taxpayers eligible for one of these exceptions may be deducted to the same extent as under prior law, without regard to the 50-percent limitation.

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$14 million in 1987, \$30 million in 1988, \$10 million in 1989, \$11 million in 1990, and \$14 million in 1991.

4. Discharge of indebtedness income for certain farmers (sec. 405 of the Act and secs. 108 and 1017 of the Code)⁸

Prior Law

Under prior and present law, gross income is defined to include income from discharge of indebtedness (sec. 61). If a solvent taxpayer received income from discharge of trade or business indebtedness, prior law provided the taxpayer an election to exclude that income if the taxpayer's basis in depreciable property was reduced (secs. 108 and 1017). If the amount of the discharge of indebtedness income exceeded a solvent taxpayer's available basis, the taxpayer recognized income in an amount of the excess.

Under prior (and present) law, if an insolvent taxpayer receives income from discharge of indebtedness, the income is excluded (to the extent it does not exceed the amount of the taxpayer's insolvency).⁹ The taxpayer's tax attributes must be reduced by the amount of the excluded income. Reduction is required in the following attributes (in the following order): net operating losses and carryovers, general business credit carryovers, capital loss carryovers, basis of property,¹⁰ and foreign tax credit carryovers. An insolvent taxpayer may elect to reduce basis in depreciable property before reducing net operating losses or other attributes.

If the amount of the insolvent taxpayer's discharge of indebtedness income (not in excess of the amount of its insolvency) exceeds its available tax attributes, the excess is disregarded, i.e., is not includible in income.

Reasons for Change

Congress was aware of enacted and pending legislation intended to alleviate the credit crisis in the farming sector, and of potential tax problems that might undermine the effectiveness of this legislation. For example, programs providing Federal guarantees on limited amounts of farm indebtedness in exchange for a lender's agreement to reduce the total amount of a farmer's indebtedness when that farmer had a high debt-to-equity ratio (but was not insolvent) were under consideration. Congress was concerned that such farmers would recognize large amounts of discharge of indebtedness income as a result of these loan write-downs—forcing them to forfeit their farmland rather than participate in programs designed to enable them to continue in farming.

⁸ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 706; S.Rep. 99-313, pp. 271-272; Senate floor amendment, 132 Cong. Rec. S7827 (June 18, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 115-116 (Conference Report).

⁹ The amount of a taxpayer's insolvency is the excess of its liabilities over the fair market value of its assets.

¹⁰ The reduction in basis is limited to the excess of the aggregate bases of the taxpayer's property over the taxpayer's aggregate liabilities immediately after the discharge.

Explanation of Provision

Under the Act, certain solvent taxpayers realizing income from the discharge of certain farming-related indebtedness may reduce tax attributes, including basis in property, under rules similar to those applicable to insolvent taxpayers. The discharged indebtedness must have been incurred directly in connection with the operation of a farming business by a taxpayer who satisfies a gross receipts test.¹¹ The gross receipts test is satisfied if the taxpayer's aggregate gross receipts from farming for the three years preceding the year of the discharge are 50 percent or more of his aggregate gross receipts from all sources for the same period.¹²

If a taxpayer elects to exclude income under this provision, the excluded amount must be applied to reduce tax attributes of the taxpayer in the following order: (1) net operating losses, (2) general business credits, (3) capital loss carryovers, (4) foreign tax credit carryovers, (5) basis in property other than land used or held for use in the trade or business of farming, and (6) basis in land used or held for use in the trade or business of farming.

The amount of the exclusion under this provision may not exceed the aggregate amount of the tax attributes of the taxpayer specified above. Accordingly, income must be recognized to the extent the amount of the discharged indebtedness exceeds his available attributes.¹³

Effective Date

The provision applies to discharge of indebtedness income realized after the April 9, 1986, in taxable years ending after that date.

Revenue Effect

This provision is estimated to decrease fiscal year budget receipts by \$9 million in 1987, \$10 million in 1988, \$8 million in 1989, \$7 million in 1990, and \$5 million in 1991.

¹¹ As under prior law, discharges of nonrecourse "loans" made by the Commodity Credit Corporation in connection with governmental crop price support programs, or other similar transactions that in substance constitute a sale of a farm product, are not within the scope of section 108 and hence are ineligible for relief under this provision.

¹² A technical amendment may be necessary to clarify that this was the intended operation of the gross receipts test.

¹³ A technical amendment may be necessary to conform the Congress' intent that the relief for solvent farmers be as described above.

B. Oil, Gas, Geothermal, and Hard Mineral Properties

1. Intangible drilling costs and mining exploration and development costs (sec. 411 of the Act and secs. 263, 291, 616, and 617 of the Code)¹⁴

Prior Law

Intangible drilling and development costs

General rules

Under prior and present law, intangible drilling and development costs ("IDCs") may either be deducted in the year paid or incurred ("expensed") or else may be capitalized and recovered through depletion or depreciation deductions (as appropriate), at the election of the operator. In general, IDCs include expenditures by the operator incident to and necessary for the drilling and the preparation of wells for the production of oil or gas (or geothermal energy), which are neither for the purchase of tangible property nor part of the acquisition price of an interest in the property. IDCs include amounts paid for labor, fuel, repairs, hauling, supplies, etc., to clear and drain the well site, construct an access road, and do such survey and geological work as is necessary to prepare for actual drilling. Other IDCs are paid or incurred by the property operator for the labor, etc., necessary to construct derricks, tanks, pipelines, and other physical structures necessary to drill the wells and prepare them for production. Finally, IDCs may be paid or accrued to drill, shoot, fracture, and clean the wells. IDCs also include amounts paid or accrued by the property operator for drilling or development work done by contractors under any form of contract.¹⁵

Only persons holding an operating interest in a property are entitled to deduct IDCs. This includes an operating or working interest in any tract or parcel of oil, gas, or geothermal property, either as a fee owner, or under a lease or any other form of contract granting working or operating rights. In general, the operating interest in an oil or gas property must bear the cost of developing and operating the property. The term operating interest does not include royalty interests or similar interests such as production payment rights or net profits interests.

If IDCs are capitalized, a separate election may be made to deduct currently IDCs paid or incurred with respect to nonproduc-

¹⁴ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, secs. 251 and 262; H. Rep. 99-426, pp. 200-204, 213-215; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 715-716; S. Rep. 99-313, pp. 280-282; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 120-125 (Conference Report).

¹⁵ See, Treas. Reg. sec. 1.612-4 (pertaining to oil and gas wells) and sec. 1.612-5 (pertaining to geothermal wells).

tive wells ("dry holes"), in the taxable year in which the dry hole is completed. Thus, a taxpayer has the option of capitalizing IDCs for productive wells while expensing those relating to dry holes.

Treatment of foreign IDCs

Domestic and foreign IDCs generally were subject to the same tax rules under prior law.

Twenty-percent reduction for integrated producers

In the case of a corporation which is an "integrated oil company",¹⁶ the allowable deduction with respect to IDCs that the taxpayer has elected to expense was reduced by 20 percent. The disallowed amount was required to be amortized over a 36-month period, starting with the month in which the costs were paid or incurred. Amounts paid or incurred with respect to non-productive wells (dry hole costs) remain fully deductible when the non-productive well is completed, under prior and present law.

Mining exploration and development costs

General rules

Under prior and present law, taxpayers may elect to expense exploration costs associated with hard mineral deposits (sec. 617). Taxpayers also may expense development costs associated with the preparation of a mine for production (sec. 616).

Mining exploration costs are expenditures for the purpose of ascertaining the existence, location, extent, or quality of any deposit of ore or other depletable mineral, which are paid or incurred by the taxpayer prior to the development of the mine or deposit. When the mine reaches the producing stage, adjusted exploration expenditures (but not development costs) either: (1) are included in income (i.e., recaptured) and recovered through cost depletion; or (2) at the election of the taxpayer, reduce depletion deductions with respect to the property. Adjusted exploration expenditures with respect to a property are expensed exploration costs attributable to the property, reduced by the excess of (a) percentage depletion which would have been allowed but for the deduction for expensed exploration costs,¹⁷ over (b) cost depletion for the corresponding period. Exploration costs also are subject to recapture if the property is disposed of by a taxpayer after expensing these amounts (secs. 617(d)).

Development costs include expenses incurred for the development of a property after the existence of ores or other minerals in commercially marketable quantities has been determined. These costs typically include costs for construction of shafts and tunnels and, in some cases, costs for drilling and testing to obtain additional information for mining operations.

¹⁶ An integrated oil company, for purposes of this provision, is any producer that is not an independent producer (as defined for the purposes of percentage depletion (sec. 613A) and the crude oil windfall profit tax).

¹⁷ Because percentage depletion deductions are limited to 50 percent of net income from the property, deductions which reduce net income (e.g., the deduction for expensed exploration costs) may reduce the value of percentage depletion to the taxpayer.

Treatment of foreign exploration costs

Foreign exploration costs could not be expensed under prior law to the extent that such expensing would cause the cumulative foreign and domestic exploration costs which had been expensed by the taxpayer, in the taxable year and in previous taxable years, to exceed \$400,000. Exploration costs which had been expensed by persons transferring mineral properties to the taxpayer were also taken into account for this purpose.

Twenty-percent reduction for corporations

For corporations, 20 percent of exploration and development costs that the taxpayer had otherwise elected to expense were required to be capitalized and recovered using the schedule for 5-year accelerated cost recovery system ("ACRS") property (sec. 291). For deposits located in the United States, such expenses also qualified for the investment tax credit.

Reasons for Change

Domestic production of oil, gas, and other minerals is currently depressed and subject to serious international competition. Congress believed that the tax incentives provided for IDCs and mining expenses are appropriate only with respect to domestic exploration. Accordingly, the Act requires that IDCs and mining exploration and development costs incurred outside the United States be recovered using 10-year amortization, which is the normative recovery period for excess IDCs and mining exploration and development costs under the minimum tax, or (at the taxpayer's election) as part of the cost depletion basis.

The Act increases the reduction in expensable IDCs of integrated oil companies from 20 to 30 percent, and requires nonexpensed amounts to be recovered over a 5 year period. A similar change is made in the treatment of corporate mining expenses. These changes are consistent with the general philosophy of the Act in reducing corporate tax preferences, and provide consistency in the treatment of oil- and mining-related expenses. Congress believed that increasing the section 291 reduction, rather than (e.g.) denying expensing for specified types of IDCs or mining costs, would reduce the tax preference for these industries without unduly limiting the incentive for any particular production.

Explanation of Provision

Domestic costs.—Under the Act, 30 percent of domestic IDCs of integrated producers are to be amortized ratably over a 60-month period, beginning in the month the costs are paid or incurred (sec. 291). The remaining 70 percent of integrated producer IDCs, together with all domestic IDCs of other taxpayers, are eligible for expensing as under prior law. This provision does not affect the option to deduct dry hole costs in the year the dry hole is completed.

In addition, 30 percent of domestic mining development and exploration costs of corporations are to be amortized ratably over a 60 month period (under sec. 291). The remaining 70 percent, togeth-

er with similar costs of noncorporate taxpayers, are eligible for expensing as under prior law.

Foreign costs.—Under the Act, IDCs and mining exploration and development costs incurred with respect to properties located outside the United States are recovered (1) over a 10-year straight-line amortization schedule, beginning in the year the costs are paid or incurred, or (2) at the taxpayer's election, by adding these costs to the basis for cost depletion.¹⁸ No change is intended in the treatment of property subject to an allowance for depreciation (see Treas. Reg. secs. 1.612-4(b), 1.612-5(b), 1.616-1(b)(2) and 1.617-1(b)(2)).

For purposes of this provision, the United States includes the 50 states, the District of Columbia, and those continental shelf areas which are adjacent to United States territorial waters and over which the United States has exclusive rights with respect to the exploration and exploitation of natural resources (sec. 638(1)).

The section 291 reductions, discussed above, do not apply to costs covered by this provision. The provision does not affect the option to deduct dry well costs in the year the dry well is completed.

Effective Date

These provisions are effective for costs paid or incurred after December 31, 1986. A transitional rule is provided with respect to certain IDCs incurred in connection with North Sea oil, pursuant to a license interest acquired on or before December 31, 1985.

Revenue Effect

The provisions with respect to intangible drilling costs (including foreign and domestic costs) are estimated to increase fiscal year budget receipts by \$70 million in 1987, \$113 million in 1988, \$119 million in 1989, \$114 million in 1990, and \$54 million in 1991.

The provisions with respect to mining exploration and development costs (including foreign and domestic costs) are estimated to increase fiscal year budget receipts by \$23 million in 1987, \$34 million in 1988, \$28 million in 1989, \$24 million in 1990, and \$21 million in 1991.

¹⁸ The prior law rule limiting the expensing of foreign exploration costs where cumulative expensed exploration costs exceed \$400,000 (sec. 617(h) of prior law) remains in effect for costs paid or incurred prior to the effective date.

2. Modification of percentage depletion rules

a. Denial of percentage depletion for lease bonuses and advance royalties (sec. 412(a) of the Act and secs. 613 and 613A of the Code)¹⁹

Prior Law

Depletable costs incurred with respect to an oil, gas, or geothermal property are recovered using cost or percentage depletion, whichever results in the higher deduction for the year in question. Under the cost depletion method, the taxpayer deducts that portion of the adjusted basis of the property which is equal to the ratio of units produced and sold from that property during the taxable year to the number of units as of the taxable year. Under percentage depletion, 15 percent of the taxpayer's gross income from an oil- or gas-producing property is allowed as a deduction in each taxable year. The amount deducted using percentage depletion may not exceed 50 percent of the net income from that property in that year (the "net-income limitation"). Additionally, the deduction for all oil and gas properties may not exceed 65 percent of the taxpayer's overall taxable income.²⁰

The Tax Reduction Act of 1975 repealed the percentage depletion allowance for oil and gas production, except with respect to limited quantities produced by independent producers and royalty owners. Effective January 1, 1984, the percentage depletion rate for oil and gas produced by independent producers and royalty owners declined to a permanent level of 15 percent, and the quantity of oil and gas eligible for percentage depletion was limited to 1,000 barrels per day.

Following the 1975 depletion amendments, disagreement arose whether lease bonuses, advance royalties, and other amounts paid in advance of actual production from an oil or gas property continued to be entitled to percentage depletion. In January, 1984, the Supreme Court held that a bonus or advance royalty paid to a lessor in a year in which no oil or gas is produced was subject to percentage depletion, notwithstanding the 1,000 barrel per day limitation contained in the 1975 legislation (*Commissioner v. Engle*, 464 U.S. 206 (1984)). The Court left open the possibility that the Treasury Department could promulgate regulations giving effect to the 1,000 barrel per day limitation in such cases.

In June, 1984, the IRS announced the manner for determining percentage depletion by recipients of bonuses and advance royal-

¹⁹ For legislative background of the provision, see: H.R. 3838 as reported by the House Committee on Ways and Means on December 7, 1985, sec. 253; H. Rep. 99-426, pp. 204-208; and H. Rep. 99-841, Vol. II (September 18, 1986), p. 122 (Conference Report.)

²⁰ The 65-percent limitation, and the limitations imposed by the 1975 legislation (discussed below), do not apply to geothermal wells.

ties. According to this announcement, a bonus or advance royalty was to be taken into account for depletion purposes in the same year that the payment was includible in income (i.e., generally the year received). Bonus or advance royalty payments were to be converted to barrel-equivalents based on the average price of oil or gas produced from the property during the taxable year (if no oil or gas was produced or sold from the property, based on representative market or field prices), with percentage depletion being allowed only for the equivalent of 1,000 barrels per day of oil production. No percentage depletion allowance was provided for in any year other than the year in which the bonus or advance royalty was includible in income (I.R. Ann. 84-59, IRB 1984-23, June 4, 1984).

Reasons for Change

In retaining percentage depletion for oil and gas properties, Congress wished to provide an incentive only with respect to actual production. Accordingly, Congress decided to specify that no percentage depletion is available for lease bonuses, advance royalties, or other payments that are not directly related to the actual production from a property. This provision reverses the holding in *Commissioner v. Engle, supra*, which required that some form of percentage depletion be allowed for such payments.

Explanation of Provision

The Act provides that percentage depletion is not allowed for lease bonuses, advance royalties, or any other amount payable without regard to actual production from the property. This rule applies to oil, gas, and geothermal properties.

Effective Date

The provision applies to amounts received or accrued after August 16, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$20 million in 1987, \$49 million in 1988, \$45 million in 1989, \$45 million in 1990, and \$45 million in 1991.

- b. Excess percentage depletion for coal and iron ore (sec. 412(b) of the Act and sec. 291 of the Code)²¹**

Prior Law

Prior and present law allow percentage depletion for hard minerals at rates ranging from 5 to 22 percent of gross income from the property. The percentage depletion rate for coal is 10 percent; the rate for iron ore is 15 percent for domestic deposits and 14 percent for deposits located outside the United States. The amount deducted for any mineral may not exceed 50 percent of the net income

²¹ For legislative background of the provision, see: H.R. 3838 as reported by the House Committee on Ways and Means on December 7, 1985, sec. 261; H. Rep. 99-426, pp. 211-213; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 125-126 (Conference Report).

from the property in any taxable year. Percentage depletion is computed without regard to the taxpayer's basis in the property.

Under prior law, for corporations only, the excess of percentage depletion for coal (including lignite) and iron ore over the adjusted basis of the property was reduced by 15 percent (sec. 291).

Reasons for Change

Excess percentage depletion for coal and iron ore was reduced by 15 percent under TEFRA, as part of a general cutback in corporate tax preferences. This reduction remained at 15 percent after 1984, when other section 291 cutbacks were increased to 20 percent. Congress decided to increase this reduction from 15 to 20 percent as part of the general policy of the Act in reducing corporate tax preferences.

Explanation of Provision

The Act increases the reduction in excess coal and iron ore percentage depletion for corporations (under section 291) from 15 to 20 percent.

Effective Date

The provision applies to taxable years beginning after December 31, 1986.

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$11 million in 1987, \$16 million in 1988, \$15 million in 1989, \$16 million in 1990, and \$17 million in 1991.

3. Gain from disposition of interests in oil, gas, geothermal, or other mineral properties (sec. 413 of the Act and secs. 617 and 1254 of the Code)²²

Prior Law

Under prior and present law, recapture rules characterize as ordinary income a portion of gain upon the disposition of assets when certain deductions previously have been allowed with respect to those assets. Under prior law, these recapture rules included the recapture of mining exploration (but not development) costs and intangible drilling costs, in excess of the amounts which would have been deductible as cost depletion if these items had been capitalized (secs. 617(d) and 1254).

Reasons for Change

Congress believed that if an amount has been allowed as an expense, and if upon the disposition of the asset with respect to which the deduction was allowed it is determined that the amount allowed exceeded the actual decline in value of the asset, capital gains treatment generally should be denied. This principle is applied to depreciation of personal property, and also should apply to depletable property.

Explanation of Provision

Under the Act, the prior law rules of section 1254 are expanded to apply not only to intangible drilling costs (IDCs) but also to depletion, to the extent the depletion deduction has reduced the adjusted basis of the property. Thus, upon the disposition of an oil, gas, or geothermal property, the amount of gain, if any, that is treated as ordinary income will include not only excess IDCs, but rather all IDCs and depletion (to the extent depletion has reduced adjusted basis) with respect to the property.²³

The Act also provides the same rules for mining-related costs. Under these rules, all expensed mining exploration and development costs (to the extent not included in income upon reaching the producing stage), as well as depletion to the extent it has reduced adjusted basis, will be subject to recapture upon disposition of mining property.

²² For legislative background of the provision, see: H.R. 3838 as reported by the House Committee on Ways and Means on December 7, 1985, secs. 243 and 262; H. Rep. 99-426, pp. 198-199; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 123-124, 126 (Conference Report).

²³ While generally conforming capital gain tax rates to the tax rates on ordinary income, the Act retains provisions of prior law relating to the capital gain/ordinary income distinction. (See Title III, above.)

Effective Date

The provision applies to property placed in service by the taxpayer after December 31, 1986, except if acquired pursuant to a written contract binding on September 25, 1985, and at all times thereafter.²⁴

Revenue Effect

The revenue effect of this provision is included in the estimates relating to intangible drilling costs and mining exploration and development costs (Part B.1., above).

²⁴ Where a property is placed in service before January 1, 1987, by a corporation and the property is transferred after 1986 to a second corporation filing a consolidated return with the transferor corporation, a subsequent disposition by the second corporation in a year in which the two corporations continue to file a consolidated return will not be subject to the new provision, so long as any additional depletion available to the group by reason of a stepped-up basis results in a corresponding current recognition of ordinary income (e.g., as in a deferred inter-company sale under Treas. Reg. 1.1502-13). The subsequent disposition outside the group will remain subject to the recapture of certain expensed IDCs as provided under prior law.

C. Energy-Related Tax Credits and Other Incentives

1. Business energy tax credits (sec. 421 of the Act and sec. 46(b) of the Code)²⁵

a. Extension of credits

Prior Law

The business energy investment tax credits were enacted in addition to the regular investment tax credit to provide an additional tax credit designated as an incentive to purchase specified property or equipment that would reduce current demand for scarce petroleum resources. Credits for certain energy property expired after 1982. Energy credits were available through 1985 for the following energy property at the following rates: solar—15 percent; geothermal—15 percent; wind—15 percent; ocean thermal—15 percent; biomass—10 percent; and small scale hydroelectric—11 percent.

Reasons for Change

Business energy investment tax credits were enacted in the Energy Tax Act of 1978 and the Crude Oil Windfall Profit Tax Act of 1980 in order to stimulate the development and business application of a broad variety of property which utilized or produced energy sources which were perceived to be alternatives to petroleum, natural gas, and their products. Generally, the methods and sources of producing or utilizing alternative forms of energy were well known but, because of price and other advantages of systems using fossil fuel, they were not experiencing widespread application. The energy tax credits were intended to increase demand for alternate energy sources, thus stimulating technological advances in the production of equipment to produce such fuels and in the design and operating efficiency of the property using a renewable energy source.

Even though the regular and energy investment tax credits generally are repealed as part of the process of broadening the income tax base and increasing the importance of economic and market variables in making investment decisions, Congress believes that it is desirable to retain energy tax credits for certain renewable energy source property in order to maintain an after-tax price differential between renewable and fossil fuel sources. The steep decline in 1986 in petroleum prices has eliminated the incentive to purchase or produce the equipment required to exploit renewable

²⁵ For legislative background of this subtitle, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, secs. 271-275; H.Rep. 99-426, pp. 216-227; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 711-714; S. Rep. 99-313, pp. 274-279; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 128-133 (Conference Report).

fuel sources. Without the offsetting stimulus from the tax credit to use or produce renewable fuels, the experience gained in the production and use of such fuels and the technological competence developed in their production during the past decade will dissipate and will not be readily available if a fossil fuel shortage recurs. The retained credits are extended through 1987 or 1988 at progressively reduced rates to permit renewable energy technologies to phase into the experience of operating in competitive markets.

Explanation of Provision

Congress extended the energy tax credit for solar energy property at 15 percent in 1986, 12 percent in 1987, and 10 percent in 1988.

The energy tax credit for geothermal energy property is extended at 15 percent in 1986 and 10 percent in 1987 and 1988.

Present law is not changed with respect to dual purpose solar or geothermal energy property. Congress, however, noted with respect to this matter that there are administrative issues which the Secretary of the Treasury should resolve under the regulatory authority provided in the Energy Tax Act of 1978 and in subsequent Acts that have provisions relating to energy tax credits.

The energy tax credit for biomass property is extended at 15 percent in 1986 and at 10 percent in 1987.

The energy tax credit for ocean thermal property is extended at 15 percent through 1988.

It was intended that the 50-percent basis adjustment which is required when an energy tax credit is allowed under section 48(q) would continue in effect for the business energy tax credits which are extended under the Act.²⁶

b. Affirmative commitment rules

Prior Law

The expired 10-percent credit for certain alternative energy property continues to be available for long-term projects which meet rules requiring (1) completion of engineering studies and application for all required permits before 1983, (2) binding contracts for 50 percent of special project equipment before 1986, and (3) project completion before 1991.

Reasons for Change

The affirmative commitment rules are specially constructed transition rules to meet long gestation periods required for planning and constructing such projects as elaborate chemical production complexes. In addition, energy tax credits are subject to the same 50-percent basis reduction as is the regular investment tax credit. Therefore, Congress believes that the energy tax credits earned under the affirmative commitment rules should be treated in the same manner as regular investment tax credits for transition property.

²⁶ A technical correction may be needed so that the statute reflects this intent.

Explanation of Provision

The Act provides that energy tax credits earned under the affirmative commitment rules are treated in the same manner as the regular investment tax credit for transition property, i.e., they are available with a basis adjustment of 100 percent of the credit amount. In addition, such transition property also may be subject to a 35-percent reduction of the regular investment credit. (See Title II., item A.2., above, repeal of the regular investment tax credit.)

Effective Date

The Act provides that the extended energy tax credits apply to property placed in service after December 31, 1985.

Modification of the affirmative commitment rules also applies after December 31, 1985.

2. Neat alcohol fuels (sec. 422 of the Act and sec. 404(b) of the Code)²⁷

Prior Law

A 9-cents-per-gallon exemption from the excise tax on special motor fuels is provided through 1992 for neat methanol and ethanol fuels which are not derived from petroleum or natural gas. A 4-1/2 cents exemption is provided if the fuels are derived from natural gas. Neat alcohol fuels are at least 85 percent methanol, ethanol, and other alcohol.

Gasohol, which is a mixture of gasoline and ethanol that contains at least 10 percent ethanol, is eligible for a 6-cents-per-gallon exemption from the excise tax on gasoline. In addition, an income tax credit of 60 cents per gallon of ethanol is allowed for ethanol used for blending with gasoline.

Explanation of Provision

The 9-cents-per-gallon exemption is reduced to 6 cents.

Effective Date

This provision applies to sales or use after December 31, 1986.

3. Taxicab fuels tax exemption (sec. 422 of the Act and sec. 6427(e) of the Code)²⁸

Prior Law

A 4-cents-per-gallon partial exemption from the motor fuels excise taxes (9 cents for gasoline and special motor fuels and 15 cents for diesel fuel) was provided for fuels used in qualifying taxicabs through September 30, 1985. The exemption was effectuated through a credit or refund (without interest). Qualifying taxicabs must meet certain group-ride requirements.

²⁷ See footnote 25 (above), under Business Energy Tax Credits, for legislative background.

²⁸ See footnote 25 (above), under Business Energy Tax Credits, for legislative background.

Reasons for Change

Congress believed that continuation of this credit helps to encourage efficient use of this form of motor transportation.

Explanation of Provision

The 4-cents-per-gallon partial exemption from motor fuels excise taxes for qualified taxicabs is extended through September 30, 1988.

Effective Date

This provision is effective as of October 1, 1985.

Revenue Effect of Items 1-3

The changes in energy tax credits and related energy incentives (items 1, 2 and 3) are estimated to decrease fiscal year budget receipts by \$227 million in 1987 and \$58 million in 1988, and to increase fiscal year budget receipts by \$1 million in 1989, \$13 million in 1990, and \$9 million in 1991.

4. Duty on imported alcohol fuels (sec. 423 of the Act and general headnote 3(a) and item 901.50 of the Appendix of the Tariff Schedules of the United States) ²⁹

Prior Law

A 60-cents-per-gallon duty is imposed through 1992 on alcohol imported into the United States for use as a fuel.

Ethyl alcohol may enter the United States duty-free, if it is imported from a Caribbean Basin Initiative (CBI) country, under the terms of the Caribbean Basin Economic Recovery Act (CBERA).

Reasons for Change

Congress is concerned that the simple distillation process for dehydrating ethyl alcohol does not represent the type of economic activity that will increase employment and productivity in the Caribbean area in the way that was intended in the CBI program. Use of the process, instead, has become a tactic to circumvent the 60-cents-per-gallon duty and to thwart the intent of the U.S. customs laws.

Explanation of Provision

Under the Act, ethyl alcohol (or an ethyl alcohol mixture) may be admitted into the United States duty-free, if it is an indigenous product of a U.S. insular possession or CBI beneficiary country.

Ethyl alcohol (or ethyl alcohol mixture) may be treated as being an indigenous product of an insular possession or beneficiary country only if the ethyl alcohol (or a mixture) has been both dehydrated and produced by a process of full-scale fermentation within that insular possession or beneficiary country. Alternatively, ethyl alcohol (or a mixture) must have been dehydrated within that insular

²⁹ See footnote 25 (above), under Business Energy Tax Credits, for legislative background.

possession or beneficiary country from hydrous ethyl alcohol that includes hydrous ethyl alcohol which is wholly the product or manufacture of any insular possession or beneficiary country and which has a value not less than (1) 30 percent of the value of the ethyl alcohol or mixture, if entered during calendar year 1987, (2) 60 percent of the value of the ethyl alcohol or mixture, if entered during calendar year 1988, and (3) 75 percent of the value of the ethyl alcohol or mixture, if entered after December 31, 1988.

Transitional exemptions are provided during 1987 and 1988 for up to 20 million gallons per year each produced by certain azeotropic distillation facilities: (1) located in a CBI country or insular possession and in operation on January 1, 1986; or (2) the equipment for which was, on January 1, 1986, ready for shipment to and installation in a CBI country. An additional transitional exemption is provided during 1987 to a facility in the Virgin Islands that received authorization prior to May 1, 1986, to operate a full-scale fermentation facility.

In enacting this provision, Congress expresses its disapproval of rulings by the Customs Service that have found the mere dehydration of industrial-grade ethanol into fuel-grade ethanol to constitute a substantial transformation sufficient to qualify the dehydrated ethanol as a product of a CBI country or insular possession and therefore entitled to duty-free treatment. By discouraging such pass-through operations, the conferees seek to encourage meaningful economic investment in CBI countries and insular possessions.

Effective Date

The limitation on duty-free entry of ethyl alcohol that is not an indigenous product of an insular possession or a beneficiary country is effective beginning on January 1, 1987. The two subsequent increases in the indigenous product's minimum value requirement are effective, respectively, on January 1, 1988, and January 1, 1989.

Revenue Effect

The limitation on duty-free entry of ethyl alcohol is estimated to increase fiscal year budget receipts by less than \$5 million each fiscal year.

TITLE V—TAX SHELTERS; INTEREST EXPENSE

A. Limitations on Losses and Credits from Passive Activities (secs. 501 and 502 of the Act and new sec. 469 of the Code)¹

Prior Law

In general, no limitations were placed on the ability of a taxpayer to use deductions from a particular activity to offset income from other activities. Similarly, most tax credits could be used to offset tax attributable to income from any of the taxpayer's activities.

There were some exceptions to this general rule. For example, deductions for capital losses were limited to the extent that there were not offsetting capital gains.² For purposes of the alternative minimum tax applying to individuals, expensed intangible drilling costs could be used to reduce net oil and gas income to zero, but could not offset other income of the taxpayer. Foreign tax credits could be used to reduce tax on foreign source income, but not U.S. source income. Research and development credits could be used by individuals to reduce tax liability attributable to research and development activities, but not taxes attributable to other income of the taxpayer.

In the absence of more broadly applicable limitations on the use of deductions and credits from one activity to reduce tax liability attributable to other activities, taxpayers with substantial sources of positive income could eliminate or sharply reduce tax liability by using deductions and credits from other activities, frequently by investing in tax shelters. Tax shelters commonly offered the opportunity to reduce or avoid tax liability with respect to salary or other positive income, by making available deductions and credits, possibly exceeding real economic costs or losses currently borne by the taxpayer, in excess or in advance of income from the shelters.

Reasons for Change

Congress concluded that it had become increasingly clear that taxpayers were losing faith in the Federal income tax system. This loss of confidence resulted in large part from the interaction of two of the system's principal features: its high marginal rates (in 1986, 50 percent for a single individual with taxable income in excess of \$88,270), and the opportunities it provided for taxpayers to offset

¹ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1401; S.Rep. 99-313, pp. 713-746; Senate floor amendment, 132 Cong. Rec. S8146-8158 (June 23, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 137-150 (Conference Report).

² In the case of an individual, a net capital loss of up to \$3,000 was deductible. Net capital losses of corporations generally were not deductible.

income from one source with tax shelter deductions and credits from another.

The increasing prevalence of tax shelters—even after the highest marginal rate for individuals was reduced in 1981 from 70 percent to 50 percent—was well documented. For example, a Treasury study³ revealed that in 1983, out of 260,000 tax returns reporting “total positive income”⁴ in excess of \$250,000, 11 percent paid taxes equaling 5 percent or less of total positive income, and 21 percent paid taxes equaling 10 percent or less of total positive income. Similarly, in the case of tax returns reporting total positive income in excess of \$1 million, 11 percent paid tax equaling less than 5 percent of total positive income, and 19 percent paid tax equaling less than 10 percent of total positive income.⁵

Congress determined that such patterns gave rise to a number of undesirable consequences, even aside from their effect in reducing Federal tax revenues. Extensive shelter activity contributed to public concerns that the tax system was unfair, and to the belief that tax is paid only by the naive and the unsophisticated. This, in turn, not only undermined compliance, but encouraged further expansion of the tax shelter market, in many cases diverting investment capital from productive activities to those principally or exclusively serving tax avoidance goals.

Congress concluded that the most important sources of support for the Federal income tax system were the average citizens who simply reported their income (typically consisting predominantly of items such as salaries, wages, pensions, interest, and dividends) and paid tax under the general rules. To the extent that these citizens felt that they were bearing a disproportionate burden with regard to the costs of government because of their unwillingness or inability to engage in tax-oriented investment activity, the tax system itself was threatened.

Under these circumstances, Congress determined that decisive action was needed to curb the expansion of tax sheltering and to restore to the tax system the degree of equity that was a necessary precondition to a beneficial and widely desired reduction in rates. So long as tax shelters were permitted to erode the Federal tax base, a low-rate system could provide neither sufficient revenues, nor sufficient progressivity, to satisfy the general public that tax liability bore a fair relationship to the ability to pay. In particular, a provision significantly limiting the use of tax shelter losses was viewed as unavoidable if substantial rate reductions were to be provided to high-income taxpayers without disproportionately reducing the share of total liability under the individual income tax borne by high-income taxpayers as a group.

Congress viewed the question of how to prevent harmful and excessive tax sheltering as not a simple one. One way to address the

³ Treasury Department, “Taxes Paid by High-Income Taxpayers and the Growth of Partnerships,” reprinted in *IRS Statistics of Income Bulletin* (Fall 1985), beginning at page 55.

⁴ Total positive income was defined as the sum of salary, interest, dividends, and income from profitable businesses and investments, as reported on tax returns.

⁵ Other studies similarly reached the conclusion that tax shelters, by flowing through tax benefits to individuals with positive sources of income, permitted some taxpayers with sizeable economic incomes substantially to reduce their tax liabilities. See Joint Committee on Taxation, *Tax Reform Proposals: Tax Shelters and Minimum Tax* (JCS-34-85), August 7, 1985.

problem would have been to eliminate substantially all tax preferences in the Internal Revenue Code. For two reasons, however, this course was determined by Congress to be inappropriate.

First, while the Act reduces or eliminates some tax preference items that Congress decided did not provide social or economic benefits commensurate with their cost, there were many preferences that Congress concluded were socially or economically beneficial. It was determined that certain preferences were particularly beneficial when used primarily to advance the purposes upon which Congress relied in enacting them, rather than to avoid taxation of income from sources unrelated to the preferred activity.

Second, Congress viewed as prohibitively difficult, and perhaps impossible, the task of designing a tax system that measured income perfectly. For example, the statutory allowance for depreciation, even under the normative system used under the Act for alternative minimum tax purposes, reflects broad industry averages, as opposed to providing precise item-by-item measurements. Accordingly, taxpayers with assets that depreciate less rapidly than the average, or that appreciate over time (as may be the case with certain real estate), could engage in tax sheltering even under the minimum tax, in the absence of direct action regarding the tax shelter problem.

Even to the extent that rules for the accurate measurement of income could theoretically be devised, Congress concluded that such rules would involve undue complexity from the perspective of many taxpayers. For example, a system that required all taxpayers to use a theoretically pure accrual method of accounting (e.g., including unrealized appreciation, and allowing only the amount of depreciation actually incurred for each specific asset in each taxable year) would create serious difficulties in both compliance and administration.

However, Congress concluded that when the tax system permits simpler rules to be applied (e.g., generally not taxing unrealized gain, and allowing depreciation based on broad industry averages), opportunities for manipulation are created. Taxpayers may structure transactions specifically to take advantage of the situations in which the simpler rules lead to undermeasurement or deferral of income.

The question of what constituted a tax shelter that should be subject to limitations was viewed as closely related to the question of who Congress intends to benefit when it enacts tax preferences. For example, in providing preferential depreciation for real estate or favorable accounting rules for farming, it was not Congress's primary intent to permit outside investors to avoid tax liability with respect to their salaries by investing in limited partnership syndications. Rather, Congress intended to benefit and provide incentives to taxpayers active in the businesses to which the preferences were directed.

In some cases, the availability of tax preferences to nonparticipating investors was viewed as harmful to the industries that the preferences were intended to benefit. For example, in the case of farming, credits and favorable deductions often encouraged investments by wealthy individuals whose principal or only interest in farming was to receive an investment return, largely in the form of

tax benefits to offset tax on positive sources of income. Since such investors often did not need a positive cash return from farming in order to profit from their investments, they had a substantial competitive advantage in relation to active farmers, who commonly were not in a position to use excess tax benefits to shelter unrelated income. This significantly contributed to the serious economic difficulties being experienced by many active farmers.

The availability of tax benefits to shelter positive sources of income also harmed the economy generally, by providing a non-economic return on capital for certain investments. This encouraged a flow of capital away from activities that provided a higher pre-tax economic return, thus retarding the growth of the sectors of the economy with the greatest potential for expansion.

Congress determined that, in order for tax preferences to function as intended, their benefit should be directed primarily to taxpayers with a substantial and *bona fide* involvement in the activities to which the preferences related. Congress also determined that it was appropriate to encourage nonparticipating investors to invest in particular activities, by permitting the use of preferences to reduce the rate of tax on income from those activities; however, such investors were viewed as not appropriately permitted to use tax benefits to shelter unrelated income.

Congress believed that there were several reasons why it was appropriate to examine the materiality of a taxpayer's participation in an activity in determining the extent to which such taxpayer should be permitted to use tax benefits from the activity. A taxpayer who materially participated in an activity was viewed as more likely than a passive investor to approach the activity with a significant nontax economic profit motive, and to form a sound judgment as to whether the activity had genuine economic significance and value.

A material participation standard identified an important distinction between different types of taxpayer activities. It was thought that, in general, the more passive investor seeks a return on capital invested, including returns in the form of reductions in the taxes owed on unrelated income, rather than an ongoing source of livelihood. A material participation standard reduced the importance, for such investors, of the tax-reduction features of an investment, and thus increased the importance of the economic features in an investor's decision about where to invest his funds.

Moreover, Congress concluded that restricting the use of losses from business activities in which the taxpayer did not materially participate against other sources of positive income (such as salary and portfolio income) would address a fundamental aspect of the tax shelter problem. Instances in which the tax system applies simple rules at the expense of economic accuracy encouraged the structuring of transactions to take advantage of the situations in which such rules gave rise to undermeasurement or deferral of income. Such transactions commonly were marketed to investors who did not intend to participate in the transactions, as devices for sheltering unrelated sources of positive income (e.g., salary and portfolio income). Accordingly, by creating a bar against the use of losses from business activities in which the taxpayer does not materially participate to offset positive income sources such as salary

and portfolio income, Congress believed that it was possible significantly to reduce the tax shelter problem.

Further, in the case of a nonparticipating investor in a business activity, Congress determined that it was appropriate to treat losses of the activity as not realized by the investor prior to disposition of his interest in the activity. The effort to measure, on an annual basis, real economic losses from passive activities gave rise to distortions, particularly due to the nontaxation of unrealized appreciation and the mismatching of tax deductions and related economic income that could occur, especially where debt financing was used heavily. Only when a taxpayer disposes of his interest in an activity was it considered possible to determine whether a loss was sustained over the entire time that he held the interest.

The relationship to an activity of an investor who did not materially participate was viewed as comparable to the relationship of a shareholder to a corporation. So long as the investor retained an interest in the activity, any reduction in the value of such interest not only might be difficult to measure accurately, but would not have been realized by the investor to a greater extent than in the context of a C corporation. In the case of a C corporation, losses and expenses borne by the corporation, and any decline in the value of the corporation's stock, did not give rise to the recognition of any loss on the part of shareholders prior to disposition of their stock.⁶

The distinction that Congress determined should be drawn between activities on the basis of material participation was viewed as unrelated to the question of whether, and to what extent, the taxpayer was at risk with respect to the activities.⁷ In general, the fact that a taxpayer placed a particular amount at risk in an activity did not establish, prior to a disposition of the taxpayer's interest, that the amount invested, or any amount, had as yet been lost. The fact that a taxpayer was potentially liable with respect to future expenses or losses of the activity likewise had no bearing on the question whether any amount had as yet been lost, or otherwise was an appropriate current deduction or credit.

At-risk standards, although important in determining the maximum amount that is subject to being lost, were viewed as not a sufficient basis for determining whether or when net losses from an activity should be deductible against other sources of income, or for determining whether an ultimate economic loss had been realized. Congress concluded that its goal of making tax preferences available principally to active participants in substantial businesses, rather than to investors seeking to shelter unrelated income, was best accomplished by examining material participation, as opposed to the financial stake provided by an investor to purchase tax shelter benefits.

In certain situations, however, Congress concluded that financial risk or other factors, rather than material participation, should be

⁶ Gain of a C corporation, while generally not taxed to the shareholder prior to distribution, is taxed at the entity level upon recognition.

⁷ The at-risk rules of prior law, while important and useful in preventing overvaluation of assets, and in preventing the transfer of tax benefits to taxpayers with no real equity in an activity, were viewed as not addressing the adverse consequences arising specifically from such transfers to nonparticipating investors.

the relevant standard. A situation in which financial risk was viewed as relevant related to the oil and gas industry, which was suffering severe hardship due to the worldwide decline of oil prices. Congress decided that relief for this industry required that tax benefits be provided to attract outside investors and, moreover, that such relief should be provided only with respect to investors who were willing to accept an unlimited and unprotected financial risk proportionate to their ownership interests in the oil and gas activities. Granting tax shelter benefits to investors in oil and gas activities who did not accept unlimited risk, proportionate to their ownership investments in the activities, was viewed as permitting the benefit of this special exception to be diverted unduly to the investors, while providing less benefit to oil and gas activities and threatening the integrity of the entire rule limiting the use of non-participatory business losses.

A further area in which the material participation standard was viewed as not wholly adequate was that of rental activities. Such activities predominantly involve the production of income from capital. For this reason, rental income generally was not subject to the self-employment tax, whether or not the activity constituted a trade or business (sec. 1402(a)(1)). Rental activities generally require less ongoing management activity, in proportion to capital invested, than business activities involving the production or sale of goods and services. Thus, for example, an individual who was employed full-time as a professional could more easily provide all necessary management in his spare time with respect to a rental activity than he could with respect to another type of business activity involving the same capital investment. The extensive use of rental activities for tax shelter purposes under prior law, combined with the reduced level of personal involvement necessary to conduct such activities, made clear that the effectiveness of the basic passive loss provision could be seriously compromised if material participation were sufficient to avoid the limitations in the case of rental activities.

Congress believed that a limited measure of relief, however, was appropriate in the case of certain moderate-income investors in rental real estate, who otherwise might experience cash flow difficulties with respect to investments that in many cases were designed to provide financial security, rather than to shelter a substantial amount of other income.

Additional considerations were viewed as relevant with regard to limited partnerships. In order to maintain limited liability status, a limited partner generally is precluded from materially participating in the business activity of the partnership; in virtually all respects, a limited partner more closely resembles a shareholder in a C corporation than an active business entrepreneur. Moreover, limited partnerships commonly were used as vehicles for marketing tax benefits to investors seeking to shelter unrelated income. In light of the widespread use of limited partnership interests in syndicating tax shelters, Congress determined that losses from limited partnership interests should not be permitted, prior to a taxable disposition, to offset positive income sources such as salary.

Explanation of Provision

1. Overview

The Act provides that deductions from passive trade or business activities, to the extent they exceed income from all such passive activities (exclusive of portfolio income), generally may not be deducted against other income. Similarly, credits from passive activities generally are limited to the tax attributable to the passive activities. Suspended losses and credits are carried forward and treated as deductions and credits from passive activities in the next year. Suspended losses from an activity are allowed in full when the taxpayer disposes of his entire interest in the activity.

The provision applies to individuals, estates, trusts, and personal service corporations. A special rule limits the use of passive activity losses and credits against portfolio income in the case of closely held corporations. Special rules also apply to rental activities. Losses from certain working interests in oil and gas property are not limited by the provision. Losses and credits attributable to a limited partnership interest generally are treated as arising from a passive activity. The provision is effective for taxable years beginning after 1986. For certain pre-enactment interests in passive activities, the provision is phased in, and becomes fully effective for taxable years beginning in 1991 and thereafter. Transitional relief is provided for losses from certain existing low-income housing activities.

Losses and credits from a passive activity (taking into account expenses such as interest attributable to acquiring or carrying an interest in the activity) may be applied against income for the taxable year from other passive activities or against income subsequently generated by any passive activity. Such losses (and credits) generally cannot be applied to shelter other income, such as compensation for services or portfolio income (including interest, dividends, royalties, annuities, and gains from the sale of property held for investment). For this purpose, property held for investment generally does not include an interest in a passive activity.

Salary and portfolio income are separated from passive activity losses and credits because the former generally are positive income sources that do not bear deductible expenses to the same extent as passive investments. Since taxpayers commonly can rely upon salary and portfolio income to be positive (and since, when economically profitable, these items generally yield positive taxable income), they are susceptible to sheltering by means of investments in activities that predictably give rise to tax losses (or credits in excess of the tax attributable to income from such investments). The passive loss provision ensures that salary and portfolio income, along with other non-passive income sources, cannot be offset by tax losses from passive activities until the amount of real economic losses from such activities is determined upon disposition.

Under the provision, suspended losses attributable to passive activities are allowed in full upon a taxable disposition of the taxpay-

er's entire interest in the activity.⁸ The full amount of gain or loss from the activity can then be ascertained. To the extent the taxpayer's basis in the activity has been reduced by suspended deductions, resulting in gain on disposition, the remaining suspended deductions will, in effect, offset such gain. However, the character of any gain or loss (i.e., as ordinary or capital gain or loss) is not affected by this provision.

Passive activity

An activity generally is a passive activity if it involves the conduct of any trade or business, and if the taxpayer does not materially participate in the activity. A taxpayer who is an individual materially participates in an activity only if he is involved in the operations of the activity on a regular, continuous, and substantial basis. Regardless of whether an individual owns an interest in a trade or business activity directly (e.g., as a proprietorship), or owns an interest in an activity conducted at the entity level by a passthrough entity such as a general partnership or S corporation, he must be involved in the operations of the activity on a regular, continuous, and substantial basis, in order to be treated as materially participating.

In the case of a limited partnership interest, special considerations apply. The form of entity most commonly chosen to maximize tax benefits in a tax shelter investment has been the limited partnership. Moreover, since a limited partner generally is precluded from participating in the partnership's business if he is to retain his limited liability status, Congress concluded that it should not be necessary to examine general facts and circumstances regarding material participation in this context. Therefore, under the Act, a limited partnership interest is treated as intrinsically passive (except as provided in regulations).⁹ Portfolio income of a partnership (net of directly allocable expenses and properly allocable interest expense), however, is not treated as passive (see sec. 3, below). A share of partnership income, or a guaranteed payment to a partner (including a limited partner) attributable to the performance of personal services (including past or expected future services) is not to be treated as passive. Losses from trade or business activities that are allocable to a limited partnership interest are not permitted, prior to disposition, to be applied against any income other than income from passive activities.

A passive activity under the Act does not include a working interest in oil or gas property where the taxpayer's form of owner-

⁸ Gain recognized on a transfer of a partial interest in the passive activity, and gain (boot) on a tax-free transfer of an entire or partial interest, are treated as from a passive activity. Gain on such transfers may be offset by losses and credits from passive activities, but such transfers are not treated as dispositions triggering all suspended losses from the activity.

⁹ Such regulatory authority might appropriately address the general situation where an individual holds a limited partnership interest in an activity for which the individual (or spouse) performs personal services, and treatment of net income attributable to the limited partnership interest as income from a passive activity would permit sheltering of the type of positive income meant to be separated from passive losses under the provision. For example, unintended results could arise if net income from an activity were treated as passive where the taxpayer's interest in it is held partly, but not wholly, as a limited partner, and the activity is an integral part of his (or his spouse's) source of livelihood. Thus, the Treasury may provide in regulations that, in appropriate circumstances, a person who is both a general partner and a limited partner in a limited partnership is not treated as passive with respect to the limited partnership interest.

ship does not limit his liability. Thus, an owner of such a working interest in oil or gas property is permitted to deduct otherwise allowable losses attributable to the working interest whether or not he materially participates in the activity being conducted through the working interest.

A passive activity is defined to include any rental activity, whether or not the taxpayer materially participates. However, an activity where substantial services are provided, and payments are for such services rather than principally for the use of property, is not a rental activity. For example, operating a hotel or similar transient lodging, where substantial services are provided and payments are not principally for the use of tangible property, is not a rental activity. An activity as a dealer in real estate also generally is not treated as a rental activity.¹⁰ Long-term rentals or leases of property (e.g., apartments, leased office equipment, or leased cars), on the other hand, generally are considered to be rental activities. Losses from rental activities are allowed against income from other passive activities, but not against other income.

Under the provision, passive activities can include activities generating deductions allowable under section 174 of the Code as research and experimentation expenditures. Thus, if a taxpayer has an interest in an activity with respect to which deductions would be allowed as research and experimentation expenditures, and he does not materially participate in the activity, losses from the activity (including the research and experimentation expenditures) are subject to limitation under the rule.

Passive activities that are not a trade or business.—The Act provides that, to the extent provided in regulations, a passive activity may include an activity conducted for profit (within the meaning of sec. 212), including an activity that is not a trade or business. Congress anticipated that the exercise of this authority would be appropriate in certain situations where activities other than the production of portfolio income are involved. This regulatory authority is meant to cause the passive loss rule to apply with respect to activities that give rise to tax losses that can be used to shelter positive income, but that may not rise to the level of a trade or business.

Interaction with interest deduction limitation.—The Act provides that interest expense allocable to passive activities is treated as a passive activity expense and is not treated as investment interest (see Part C, below). Thus, deductions otherwise allowable for such interest expense are subject to limitation under the passive loss rule, and not under the investment interest limitation. Similarly, income and loss from passive activities generally are not treated as investment income or loss in calculating the amount of the investment interest limitation.¹¹

¹⁰ Under the at-risk rules as extended by the Act to the activity of holding real estate, the holding of real property includes the holding of personal property and the providing of services which are incidental to making real property available as living accommodations. Whether an activity constitutes the holding of real estate for purposes of the at-risk rules is not determinative of whether it constitutes a rental activity under the passive loss rule.

¹¹ However, as described in Part C, below, any passive losses allowed by reason of the phase-in of the passive loss provision reduce net investment income. Passive losses allowed on different grounds (e.g., disposition losses, or losses allowed by reason of the taxpayer's active participation in rental real estate activities) do not so reduce net investment income.

Interest on debt secured by the taxpayer's residence or a second residence is not subject to limitation under the passive loss rule, so long as the interest meets the definition of qualified residence interest under section 163(h) (as amended by the Act; see Part C, below). Thus, if a taxpayer rents out his vacation home (that he has selected as his second residence) and a portion of the mortgage interest (which meets the definition of qualified residence interest) is allocable to rental use of the home which would otherwise be treated as a passive activity, such interest expense is not subject to disallowance under this provision.

Interaction with other Code sections.—The passive loss rule applies to all deductions that are from passive activities, including deductions allowed under sections 162, 163, 164, and 165. For example, deductions for State and local property taxes incurred with respect to passive activities are subject to limitation under the passive loss rule whether such deductions are claimed above-the-line or as itemized deductions under section 164.

Personal service income not treated as from passive activity.—Income received by an individual from the performance of personal services with respect to a passive activity is not treated as income from a passive activity. Thus, for example, in the case of a limited partner who is paid for performing services for the partnership (whether by way of salary, guaranteed payment, or allocation of partnership income), such payments cannot be sheltered by passive losses from the partnership or from any other passive activity.

Rental real estate in which the taxpayer actively participates.—Under the Act, an individual may annually deduct up to \$25,000 of passive activity losses (to the extent they exceed income from passive activities) that are attributable to rental real estate activities in which the taxpayer actively participates. The \$25,000 offset is not available to corporations or trusts or, except in limited circumstances, to estates.¹² A taxpayer is not treated as actively participating in a rental real estate activity if he has an interest that is less than a 10 percent interest in the activity at any time during the year. Absent a sufficient ownership interest, Congress concluded, the taxpayer's management activity is most likely to relate predominantly to the interests of his co-owners, rather than to the management of his own interest; thus, it does not establish that the taxpayer is active in relation to his interest. A taxpayer is not presumed to be actively participating, however, merely by reason of having a 10 percent or greater interest. As discussed below, the active participation requirement is different from the material participation standard, and generally does not require as much personal involvement.

The \$25,000 allowance for losses is phased out ratably as the taxpayer's adjusted gross income (determined without regard to passive activity losses) increases from \$100,000 to \$150,000. Thus, for example, a middle income taxpayer who has invested in a condominium apartment, and whose involvement in the operations nec-

¹² A trust does not qualify for the allowance of up to \$25,000 in losses and (deduction equivalent) credits from a rental real estate activity in which there is active participation, so that individuals cannot circumvent the \$25,000 ceiling, or multiply the number of \$25,000 allowances, simply by transferring various rental real properties to one or more trusts.

essary to rent it and maintain it amounts to active participation, may deduct up to \$25,000 per year of losses from the rental real estate activity.

The \$25,000 allowance for rental real estate applies, in a deduction equivalent sense, to credits attributable to rental real estate activities as well. Under a special rule, the \$25,000 allowance applies to low-income housing and rehabilitation credits regardless of whether the taxpayer claiming the credit actively participates in the low-income housing or rehabilitation activity (including in the case of a limited partner). In addition, the adjusted gross income phaseout range for the \$25,000 allowance for these two credits is \$200,000 to \$250,000, rather than \$100,000 to \$150,000 (as for losses). For purposes of calculating the phase-out of the \$25,000 allowance at adjusted gross income between \$100,000 to \$150,000 (or \$200,000 to \$250,000, in the case of certain credits), adjusted gross income is calculated without regard to IRA contributions and taxable social security benefits.

A single \$25,000 amount (and phaseout thereof) applies on an aggregate basis to credits (including the low-income housing and rehabilitation credits) and to deductions, as opposed to allowing a \$25,000 amount for each. If the total net rental real estate losses and credits (deduction equivalents) exceed the \$25,000 amount allowable against other income, the taxpayer generally must allocate the allowable amount among activities to determine which of the rental real estate losses and credits (including those suspended in prior years) are allowable. This allocation is necessary for purposes of determining the total suspended losses and credits attributable to each activity, because losses are allowable in full upon a disposition of the taxpayer's entire interest in the activity, and a special election applies with respect to credits.

In performing this allocation, losses are treated as allowed before credits. Losses are allowed before credits because credits are considered in the nature of incentives which may not bear a relation to accurate measurement of income or loss from an activity. As between activities, when there are excess losses (or credits), allocation is *pro rata* with respect to the amount of losses (or credits) from each loss activity. Thus, for example, if a taxpayer who qualifies for the full \$25,000 allowance has \$10,000 of losses from one activity and \$40,000 of losses from a second activity, then \$5,000 is treated as allowed from the first activity and \$20,000 is treated as allowed from the second activity.

In order to determine the amount of losses potentially qualifying for the \$25,000 allowance, it is necessary first to net income and loss from all of the taxpayer's rental real estate activities in which he actively participates. If there is a net loss for the year from such activities, net passive income (if any) from other activities is then applied against it, in determining the amount eligible for the \$25,000 allowance.

For example, assume that a taxpayer has \$25,000 of losses from a rental real estate activity in which he actively participates. If he also actively participates in another rental real estate activity, from which he has \$25,000 of gain, resulting in no net loss from rental real estate activities in which he actively participates, then no amount is allowed under the \$25,000 allowance for the year.

This result follows whether or not the taxpayer has net losses from other passive activities for the year.

With respect to active participation, just as with respect to material participation, a change in the nature of the taxpayer's involvement does not trigger the allowance of deductions carried over from prior taxable years. Thus, if a taxpayer begins to actively participate in an activity in which, in prior years, he did not actively participate, the rule allowing up to \$25,000 of losses from rental real estate activities against non-passive income does not apply to losses from the activity carried over from such prior years.¹³ The same rule applies to credits, to the extent that active participation is relevant to their allowability.

Special rule for estates.—In the case of an estate of a taxpayer who, in the taxable year in which he died, owned an interest in a rental real estate activity in which he actively participated, the estate is deemed to actively participate for the two taxable years of the estate following the death of the taxpayer. Thus, the taxpayer's estate may continue to receive the same tax treatment with respect to the rental real estate activity as did the taxpayer in the taxable year of his death. This treatment applies to the taxpayer's estate until the end of the second taxable year of the estate after his death, to facilitate the administration of the estate without requiring the executor or fiduciary to reach decisions with respect to the appropriate disposition of the rental real property within a short period following the taxpayer's death.

Married individuals filing separately.—The amount of the \$25,000 allowance, and the adjusted gross income ranges in which the allowance is phased out (i.e., \$100,000 to \$150,000, except in the case of certain credits where the range is \$200,000 to \$250,000) generally are halved in the case of married individuals filing separate returns. In the case of married individuals filing separately, who, at any time during the taxable year, do not live apart, the amount of the \$25,000 allowance is reduced to zero. Absent such a rule, married taxpayers where one spouse would be eligible for a portion of the \$25,000 amount if they filed separately would have an incentive so to file; Congress concluded that rules that encourage filing separate returns give rise to unnecessary complexity and place an unwarranted burden on the administration of the tax system.

Taxpayers subject to the rule

The passive loss rule applies to individuals, estates and trusts. The rule also applies to personal service corporations without regard to certain limitations in the applicable attribution rules. A corporation is not treated as a personal service corporation for this purpose unless the employee/owners together own more than 10 percent, by value, of the corporation's stock. Congress intended that taxpayers not be able to circumvent the passive loss rule merely by virtue of the form in which they conduct their affairs. Thus, the rule was designed to prevent individuals from being able

¹³ By contrast, losses (or credits) carried over from a year in which the taxpayer did actively participate, but that were not allowed against non-passive income in such year because they exceeded \$25,000 (as reduced by the applicable AGI phaseout), are deductible (or allowable) under the \$25,000 rule in a subsequent year, but only if the taxpayer is actively participating in the activity in such subsequent year.

to shelter income derived from the performance of personal services simply by creating personal service corporations and acquiring tax shelter investments at the corporate level.

It also was not intended that incorporation of an individual's portfolio investments be available as a way to avoid the passive loss rule. For this reason, the passive loss rule, in modified form, applies to all closely held C corporations (other than personal service corporations, which are subject to the general passive loss rule) that are subject to the at-risk rules (generally, where 5 or fewer individuals, directly or indirectly, own more than 50 percent of the stock).¹⁴ Such C corporations may not offset losses or credits from passive activities against portfolio income. Such corporations may, however, offset passive losses and credits against active business income (i.e., trade or business income which is not from a passive activity).

Thus, for example, if a closely held C corporation has \$400,000 of passive losses from a rental activity, \$500,000 of active business income, and \$100,000 of portfolio income, the passive losses may be applied to reduce the active business income to \$100,000, but may not be applied against the portfolio income.¹⁵ In determining whether a corporation materially participates in an activity, and hence whether the activity is a passive activity, the material participation in the corporation's activity of corporate employees and owners is examined. As is generally true under the passive loss rule, losses and credits from a non-passive trade or business activity are not subject to any special limitation.

Affiliated groups.—In the case of affiliated groups of corporations filing consolidated returns, Congress determined that the passive loss limitation should be applied on a consolidated group basis. Thus, for example, it was intended that losses from any passive activity within a consolidated group that is treated as closely held under the rule be permitted to offset net active income, but not portfolio income, of the group. In general, under the rule, an activity may be conducted by several corporations, just as one corporation may be engaged in several activities. Portfolio income is accounted for separately from income or loss from each activity.

In determining whether an activity (other than a rental activity) conducted within the closely held consolidated group is a passive activity, the material participation test was intended to be applied on a consolidated basis. Thus, for example, if one or more individual shareholders holding stock representing more than 50 percent of the common parent's stock materially participate in an activity of any member of the group, the group is considered to materially participate. Similarly, if the requirements of section 465(c)(7)(C) (without regard to clause (iv) thereof) are met with respect to an activity by any member (or several members together), then the group is considered to materially participate in the activity.

¹⁴ Closely held C corporations that also constitute personal service corporations for purposes of the passive loss rule are subject to the rule in full, rather than to the more limited closely held rule.

¹⁵ See colloquy between Senators Johnston and Packwood, 132 Cong. Rec. S13958-9 (September 27, 1986), and statement of Mr. Rostenkowski affirming the colloquy at 132 Cong. Rec. E 3390 (October 2, 1986).

In the case of a personal service corporation which is a member of a consolidated group, similar principles were intended to apply. For example, a corporation may be treated as a personal service corporation for purposes of the rule where the owners who render the requisite services are employees of a subsidiary, rather than of the parent corporation. The Act provides that the definition of a personal service corporation is applied taking into account attribution of ownership of stock as provided in section 269A(b), with certain modifications.

2. Treatment of losses and credits

In general

Losses.—Losses arising from a passive activity generally are deductible only against income from that or another passive activity. Suspended passive activity losses for the year are carried forward indefinitely, but are not carried back, and are allowed in subsequent years against passive activity income. Suspended losses from an activity are allowed in full upon a taxable disposition of the activity, as discussed below.

If any passive losses are not deductible in any given year, the amount of the suspended losses from each passive activity is determined on a pro rata basis. With respect to each activity, the portion of the loss that is suspended, and carried forward, is determined by the ratio of net losses from that activity to the total net losses from all passive activities for the year. This allocation is necessary in order to determine the suspended losses for any particular activity, which are allowed in full upon a disposition.

In the case of the \$25,000 allowance for passive losses from rental real estate activities in which an individual actively participates, a situation could arise in which losses would be allowable for the year under the passive loss rule, but the taxpayer has insufficient (or no) non-passive income against which to apply them. In such a case, the otherwise allowable rental real estate losses are thereupon treated as losses which are not from a passive activity. They may give rise to net operating losses (NOLs) treated as arising in that year, and may be carried forward and back in accordance with the rules applicable to NOLs.

In general, NOL carryovers, like current-year losses other than passive losses, are allowed against any income of the taxpayer.¹⁶ In the case of individuals, estates and trusts, and personal service corporations, however, such nonpassive losses and NOLs are taken into account only after reducing income from passive activities by current and suspended deductions from passive activities (but not below zero). Thus, the application of any prior-year suspended passive losses against current year passive income is taken into account before such NOLs are applied against net passive income. This permits the taxpayer to obtain the full benefit of suspended passive activity losses (which are limited in application) before using any losses that are not from passive activities (or NOL car-

¹⁶ For example, net operating losses carried forward from taxable years prior to 1987 are not limited under the passive loss rule even though they may arise from activities that, once the provision becomes effective, are treated as passive activities.

ryovers). If a taxpayer has net passive activity income for the year (after the application of all suspended passive losses), the income may be offset by current-year non-passive losses and by NOL carryovers.

In the case of a closely held C corporation (other than a personal service corporation), the passive loss rule applies in modified form: passive losses may be used to offset active business income, but not portfolio income. In applying this rule, losses from passive activities (including such losses carried over from prior years after the effective date) are offset against income from passive activities to determine the aggregate passive loss, if any. If there is such a loss, it may be applied only against active business income, but not portfolio income, of the corporation. As is generally the case, NOLs are applied after the application of the passive loss rule.

The determination of whether a loss is suspended under the passive loss rule is made after the application of the at-risk rules. A loss that would not be allowed for the year because the taxpayer is not at risk with respect to it is suspended under the at-risk provision, not the passive loss rule. Such amounts may become subject to the passive loss rule in subsequent years when they would be allowable under the at-risk rule.¹⁷

Under the Act, interest deductions allocable to passive activities are subject to the passive loss rule (as under the Senate amendment), but are not subject to the investment interest limitation (see Part C., below). Thus, for example, if a taxpayer has net passive losses of \$100 for a taxable year beginning after 1986, \$40 of which consists of interest expense, the entire \$100 is subject to limitation under the passive loss rule, and no portion of the loss is subject to limitation under the investment interest limitation.

Credits.—Credits arising with respect to passive activities generally are treated in the same manner as deductions.¹⁸ That is, credits may not be used to offset tax attributable to income other than passive income. The amount of tax attributable to net passive income is determined by comparing (i) the amount that the taxpayer would pay with regard to all income, with (ii) the amount that the taxpayer would pay with regard to taxable income other than net passive income (disregarding, in both cases, the effect of credits).

For example, if a taxpayer would owe \$50,000 of tax disregarding net passive income, and \$80,000 of tax considering both net passive and other taxable income (in both cases, disregarding the effect of credits), then the amount of tax attributable to passive income is \$30,000. In this case, any passive credits not in excess of \$30,000 attributable to the taxpayer's passive activities are allowable. Any passive credits not in excess of \$30,000 are, in addition, subject to

¹⁷ Amounts at risk are reduced even if deductions which would be allowed under the at-risk rules are suspended under the passive loss rule. Similarly, basis is reduced as under present law, even in the case where deductions are suspended under the passive loss rule. However, if an amount at risk or basis has been reduced by a deduction not allowed under the passive loss rule, the amount at risk or basis is not again reduced when the deduction becomes allowable under the passive loss rule.

¹⁸ The allowability of foreign tax credits, however, is unaffected by the passive loss provision. Instead, foreign tax credits are limited solely by the various rules applying generally to such credits (e.g., the sec. 904 limitation, which is applied after determining the amounts of foreign source and worldwide income consistently with the application of the passive loss rule).

other limitations applicable to the allowance of credits. In the absence of net passive income for a taxable year, no tax is attributable to passive income, and passive credits generally are not allowable for the year.

Passive credits may be allowable to offset tax on income other than passive income with respect to the special rule providing up to \$25,000 of benefit for certain rental real estate activities. Under this rule, credits are allowed to offset tax on the portion of the \$25,000 (or less, as appropriate) that the taxpayer has not been able to offset by the use of deductions.

The amount of tax on such remaining portion (and thus, the amount of credits that can be used against other income, assuming that there are sufficient credits available) is determined by comparing (i) the amount that the taxpayer would owe (disregarding credits) with respect to income other than any net passive losses, but reduced by rental real estate deductions in the full amount allowable under the \$25,000 rule, with (ii) the amount that the taxpayer would owe (again disregarding credits) if the allowable rental real estate deductions equalled \$25,000 (or less as appropriate, i.e., in the phaseout range for this amount).

In general, credits arising with respect to passive activities, like deductions relating to such activities, can be carried forward indefinitely, and cannot be carried back. However, the character of a credit relating to a passive activity changes, in effect, when the credit becomes allowable under the passive loss rule (i.e., there either is sufficient passive income to allow its use, or it is within the scope of the \$25,000 benefit for rental real estate activities). At such time, such credit is aggregated with credits relating to non-passive activities of the taxpayer, for purposes of determining whether all such credits are allowable in light of other limitations applying to the use of credits (e.g., the 75 percent tax liability limitation, and the provision that credits cannot be used to reduce regular tax liability to less than tentative minimum tax liability).

In the event that any credits are not allowable because of such other limitations, the passive credits that are allowable under the passive activity rules are thereupon treated as non-passive credits arising in the current taxable year. Thus, the treatment of such credits then is determined in all respects by the general rules applying to such credits, including carryover periods.¹⁹ The credit carryover periods begin to run, with respect to a credit (or portion thereof) theretofore disallowed under the passive loss rule, in the year when the credit (or portion thereof) first is allowable under the passive loss rule. This treatment of credit carryover periods is distinguishable from the treatment of credits under the credit at-risk rules (sec. 46).

The Act provides that for the rehabilitation and low-income housing credits, the phase-out range for offsetting tax on up to \$25,000 of non-passive income is increased to between \$200,000 and \$250,000 of adjusted gross income (calculated without regard to net passive losses, IRA contributions, or taxable social security bene-

¹⁹ Credits that are subject to special limitations (e.g., the limitation on the use of research and development credits to offset certain unrelated income of the taxpayer) continue to be subject to such limitations when they cease to be limited by the passive activity rules.

fits), and such credits are allowed under the \$25,000 rule regardless of whether the taxpayer actively participates in the activity generating the credits. In the case of the low-income housing credit, the increase in the phase-out range (to between \$200,000 and \$250,000, as opposed to between \$100,000 and \$150,000 as for other rental real estate losses and credits), and the waiver of the requirement that the taxpayer actively participate in the activity generating the low-income housing credit, apply only with respect to the original credit compliance period for the property, and only to property placed in service before 1990, except if the property is placed in service before 1991, and 10 percent or more of the total project costs are incurred before 1989.

This increase in the adjusted gross income phase-out range may be illustrated as follows. Assume that an individual has \$5,000 (deduction equivalent amount) of low-income housing credits from a limited partnership interest (in which, under the passive loss rule, he is considered not to materially or actively participate) in a rental real estate activity. His adjusted gross income (determined without regard to passive losses) is \$200,000, and he has no other passive losses, credits or income for the year. The individual is permitted under the \$25,000 allowance rule to take the low income housing credit.

Other credit limitations.—The limitation on the credit for research and development activities to the tax on income from such activities is applied before the passive loss limitation is applied to such credits. The overall limitation on credits under the Act (providing that credits generally cannot offset more than 75 percent of the taxpayer's tax liability for the year or reduce regular tax below tentative minimum tax) is applied after the amount of credits allowable under the passive loss rule is determined. Once a credit is allowed for a year under the passive loss rule, it is treated as an active credit arising in that year.

Dispositions

In general.—When a taxpayer disposes of his entire interest in a passive activity, the actual economic gain or loss on his investment can be finally determined. Thus, under the passive loss rule, upon a fully taxable disposition, any overall loss from the activity realized by the taxpayer is recognized and allowed against income (whether active or passive income). This result is accomplished by triggering suspended losses upon disposition.

The reason for this rule is that, prior to a disposition of the taxpayer's interest, it is difficult to determine whether there has actually been gain or loss with respect to the activity. For example, allowable deductions may exceed actual economic costs, or may be exceeded by untaxed appreciation. Upon a taxable disposition, net appreciation or depreciation with respect to the activity can be finally ascertained. Since the purpose of the disposition rule is to allow real economic losses of the taxpayer to be deducted, credits, which are not related to the measurement of such loss, are not specially allowable by reason of a disposition. Disallowed credits are carried forward (but not back) until they become allowable under the passive loss rule, as discussed above.

Taxable dispositions of entire interest in activity.—The type of disposition that triggers full recognition of any loss from a passive activity (and of suspended losses from a former passive activity) is a fully taxable disposition of the taxpayer's entire interest in the activity to an unrelated person. A fully taxable disposition generally includes a sale of the property to a third party at arm's length, and thus, presumably, for a price equal to its fair market value. Gain realized upon a transfer of an interest in a passive activity generally is treated as passive, and is first offset by the suspended losses from that activity. This accomplishes the purpose of the rule to recognize net income or loss with respect to the activity when it can be finally determined.

Where the taxpayer transfers an interest in a passive activity in a transaction in which the form of ownership merely changes, suspended losses generally are not allowed, because the gain or loss he has realized with respect to the activity has not been finally determined. (Such suspended losses are allowed, however, to the extent that any gain recognized on such a transfer, together with other income from passive activities for the year, exceeds losses from passive activities for the year.) Special rules are provided for gifts and in the case of death of the taxpayer. No disposition occurs when the taxpayer is treated as no longer subject to the passive loss rule with respect to the activity (i.e., where the taxpayer does not dispose of his interest in the activity, but it is treated as no longer passive).

The taxpayer must dispose of his entire interest in the activity in order to trigger the recognition of loss. If he disposes of less than his entire interest, then the issue of ultimate economic gain or loss on his investment in the activity remains unresolved. A disposition of the taxpayer's entire interest involves a disposition of the taxpayer's interest in all entities that are engaged in the activity, and to the extent held in proprietorship form, of all assets used or created in the activity. If a partnership or S corporation conducts two separate activities, fully taxable disposition by the entity of all the assets used or created in one activity constitutes a disposition of the partner's or shareholder's entire interest in the activity. Similarly, if a grantor trust conducts two separate activities, and sells all the assets used or created in one activity, the grantor is considered as disposing of his entire interest in that activity. If the taxpayer has adequate records of the suspended losses that are allocable to that activity, and includes in income the gain (if any) allocable to his entire interest in the activity, such losses are allowed in full upon the disposition.

An installment sale of the taxpayer's entire interest in an activity in a fully taxable transaction triggers the allowance of suspended losses. The losses are allowed in the ratio that the gain recognized in each year bears to the total gain on the sale.

A transfer of a taxpayer's interest in an activity by reason of his death causes suspended losses to be allowed to the extent they exceed the amount, if any, by which the basis of the interest in the activity is increased at death under section 1014. Suspended losses are eliminated to the extent of the amount of the basis increase. The losses allowed generally would be reported on the final return of the deceased taxpayer.

A transaction constituting a sale (or other taxable disposition) in form, however, to the extent not treated as a taxable disposition under general tax rules, does not give rise to the allowance of suspended deductions. For example, sham transactions, wash sales, and transfers not properly treated as sales due to the existence of a put, call, or similar right relating to repurchase, do not give rise to the allowance of suspended losses.

Related party transactions.—The Act provides that the taxpayer is not treated as having disposed of an interest in a passive activity, for purposes of triggering suspended losses, if he disposes of it in an otherwise fully taxable transaction to a related party (within the meaning of sec. 267(b) or 707(b)(1), including applicable attribution rules). In the event of such a related party transaction, because it is not treated as a disposition for purposes of the passive loss rule, suspended losses are not triggered, but rather remain with the taxpayer. Such suspended losses may be offset by income from passive activities of the taxpayer.

When the entire interest owned by the taxpayer and the interest transferred to the related transferee in the passive activity are transferred to a party who is not related to the taxpayer (within the meaning of sec. 267(b) or 707(b)(1), including applicable attribution rules) in a fully taxable disposition, then to the extent the transfer would otherwise qualify as a disposition triggering suspended losses, the taxpayer may deduct the suspended losses attributable to his interest in the passive activity.

Certain insurance transactions.—In the case of certain transactions involving dispositions of interests in syndicates that insure U.S. risks, generally, when an owner of an interest in such a syndicate that is treated as a passive activity enters into a transaction whereby he disposes of his interest in the syndicate in a fully taxable closing transaction, he is treated as having made a disposition of his interest in the passive activity.

Abandonment.—The scope of a disposition triggering suspended losses under the passive loss rule includes an abandonment, constituting a fully taxable event under present law, of the taxpayer's entire interest in a passive activity. Thus, for example, if the taxpayer owns rental property which he abandons in a taxable event which would give rise to a deduction under section 165(a), the abandonment constitutes a taxable disposition that triggers the recognition of suspended losses under the passive loss rule.

Similarly, to the extent that the event of the worthlessness of a security is treated under section 165(g) of the Code as a sale or exchange of the security, and the event otherwise represents the disposition of an entire interest in a passive activity, it is treated as a disposition. No inference is intended with respect to whether a security includes an interest in any entity other than a corporation.

Interaction with capital loss limitation.—Upon a fully taxable disposition of a taxpayer's entire interest in a passive activity, the passive loss rule provides that any deductions previously suspended with respect to that activity are allowed in full. However, to the extent that any loss recognized upon such a disposition is a loss from the sale or exchange of a capital asset, it is limited to the amount of gains from the sale or exchange of capital assets plus \$3,000 (in the case of individuals). The limitation on the deductibil-

ity of capital losses is applied before the determination of the amount of losses allowable upon the disposition under the passive loss rule.

Thus, for example, if a taxpayer has a capital loss of \$10,000 upon the disposition of a passive activity, and is also allowed to deduct \$5,000 of previously suspended ordinary losses as a result of the disposition, the \$5,000 of ordinary losses are allowed, but the capital loss deduction is limited to \$3,000 for the year (assuming the taxpayer has no other gains or losses from the sale of capital assets for the year). The remainder of the capital loss from the disposition is carried forward and allowed in accordance with the provisions determining the allowance of such capital losses.

Basis adjustment for credits.—Under the Act, an election is provided in the case of a fully taxable disposition of an interest in an activity in connection with which a basis adjustment was made as a result of placing in service property for which a credit was taken. Upon such a disposition, the taxpayer may elect to increase the basis of the credit property (by an amount no greater than the amount of the original basis reduction of the property) to the extent that the credit has not theretofore been allowed by reason of the passive loss rule. At the time of the basis adjustment election, the amount of the suspended credit which may thereafter be applied against tax liability is reduced by the amount of the basis adjustment. The purpose for providing this election is to permit the taxpayer to recognize economic gain or loss, taking account of the full cost of property for which no credit was allowed.

This rule may be illustrated as follows. A taxpayer places in service rehabilitation credit property generating an allowable credit of \$50, and reduces the basis of the property by \$50 as required by the provisions governing the rehabilitation credit, but is prevented under the passive loss rule from taking any portion of the credit. In a later year, having been allowed no portion of the credit by virtue of the passive loss rule, the taxpayer disposes of his entire interest in the activity, including the property whose basis was reduced. Immediately prior to the disposition, the taxpayer may elect to increase basis of the credit property by the amount of the original basis adjustment (to the extent of the amount of the unused credit) with respect to the property.

If the property is disposed of in a transaction that, under the passive loss rule, does not constitute a fully taxable disposition of the taxpayer's entire interest in the passive activity, then no basis adjustment may be elected at any time. To the extent the credit has been suspended by virtue of the passive loss rule, however, it may remain available to offset tax liability attributable to passive income.

Disposition of activity of limited partnership.—In general, under the passive loss rule, suspended deductions are allowed upon a taxable disposition of the taxpayer's entire interest in an activity, because it becomes possible at that time to measure the taxpayer's actual gain or loss from the activity. A disposition of the taxpayer's entire interest in an activity conducted by a limited partnership, like a disposition of an activity conducted in any other form, may constitute a disposition giving rise to the allowance of suspended deductions from the activity.

Nevertheless, it is the intent of Congress that a limited partnership interest in an activity is (except as provided in Treasury regulations) treated as an interest in a passive activity. Because a limited partner generally is precluded from materially participating in the partnership's activities, losses and credits attributable to the limited partnership's activities are generally treated as from passive activities, except that items properly treated as portfolio income and personal service income are not treated as passive.

Changes in nature of activity.—The fact that the nature of an activity changes in the course of its development does not give rise to a disposition for purposes of the passive loss provision. For example, when a real estate construction activity becomes a rental activity upon the completion of construction and the commencement of renting the constructed building, the change is not treated as a disposition.

Other transfers

A gift of all or part of the taxpayer's interest in a passive activity does not trigger suspended losses. However, if he has given away his entire interest, he cannot make a future taxable disposition of it. Suspended losses are therefore added to the basis of the property (i.e., the interest in the activity) immediately before the gift. Similarly, if the taxpayer gives away less than all of his interest, an allocable portion of any suspended losses are added to the donee's basis.²⁰ Suspended losses of the donor are eliminated when added to the donee's basis, and the remainder of the losses continue to be suspended in the donor's hands. The treatment of subsequent deductions from the activity, to the extent of the donee's interest in it, depends on whether the activity is treated as passive in the donee's hands.

An exchange of the taxpayer's interest in an activity in a nonrecognition transaction, such as an exchange governed by sections 351, 721, or 1031 in which no gain or loss is recognized, does not trigger suspended losses. Following such an exchange, the taxpayer retains an interest in the activity (or, e.g., in another like-kind activity), and hence has not realized the ultimate economic gain or loss on his investment in it. To the extent the taxpayer does recognize gain on the transaction (e.g., boot in an otherwise tax-free exchange), the gain is treated as passive activity income, against which passive losses may be deducted.

The suspended losses not allowed upon such a nonrecognition transaction continue to be treated as passive activity losses of the taxpayer, except that in some circumstances they may be applied against income from the property received in the tax-free exchange which is attributable to the original activity.²¹ Such suspended

²⁰ For purposes of determining the donee's loss in a subsequent transaction, however, the donee's basis may not exceed the fair market value of the gift at the time the donee received it. See, sec. 1015(a). As under prior law, losses attributable to unrealized depreciation in value of the property at the time of the gift are not deductible.

²¹ This rule does not apply, however, to permit the offset of suspended passive losses against dividends or other income or gain otherwise treated as portfolio income. In addition, following some transactions such as a sec. 1031 like-kind exchange, for example, the taxpayer may no longer have an interest in the original activity. Therefore, there is no special rule permitting suspended losses from the prior interest to be offset by income from the new activity, unless it, too, is a passive activity.

losses may not be applied against income from the property which is attributable to a different activity from the one which the taxpayer exchanged.²²

Activity no longer treated as passive activity

Other circumstances may arise which do not constitute a disposition, but which terminate the application of the passive loss rule to the taxpayer generally, or to the taxpayer with respect to a particular activity. For example, an individual who previously was passive in relation to a trade or business activity which generates net losses may begin materially participating in the activity. When a taxpayer's participation in an activity is material in any year after a year (or years) during which he was not a material participant, previously suspended losses remain suspended and continue to be treated as passive activity losses. Such previously suspended losses, however, unlike passive activity losses generally, are allowed against income from the activity realized after it ceases to be a passive activity with respect to the taxpayer. As with tax-free exchanges of the taxpayer's entire interest in an activity, however, the taxpayer must be able to show that such income is from the same activity in which the taxpayer previously did not materially participate.²³

A similar situation arises when a corporation (such as a closely held C corporation or personal service corporation) subject to the passive loss rule ceases to be subject to the passive loss rule because it ceases to meet the definition of an entity subject to the rule. For example, if a closely held C corporation makes a public offering of its stock and thereafter ceases to meet the stock ownership criteria for being closely held, it is no longer subject to the passive loss rule. The corporation's ownership has been so broadened that the reason for limiting the corporation's ability to shelter its portfolio income becomes less compelling. A corporation which is not closely held is less susceptible to treatment as the alter ego of its shareholders, but competing considerations also apply. So as not to encourage tax-motivated transactions involving free transferability of losses, the suspended passive losses are not made more broadly applicable (i.e., against portfolio income) by the change in ownership, but continue to be applicable against all income other than portfolio income of the corporation. Deductions arising in years after the year in which the corporation's status changes are not subject to limitation under the passive loss rule.

The Act provides that the rule applicable to a change in status of a closely held C corporation also applies to a change in status of a personal service corporation. That is, if a personal service corporation ceases to meet the definition of a personal service corporation subject to the passive loss rule in any year, losses from a passive

²² For example, suspended passive activity losses cannot be applied against portfolio income of a pass-through entity.

²³ The reason for this treatment is that the taxpayer could have deducted the suspended losses against income from the activity had the change in his relation to the activity not occurred. Although income from the activity may no longer be passive activity income, prior passive activity losses generated by *that activity* continue to be deductible against income from the activity. It would be inequitable to give less favorable treatment to a taxpayer whose income from an activity becomes active (i.e., not passive) than to one who continues to be merely a passive investor.

activity conducted by the corporation and previously suspended by reason of the application of the passive loss rule are not triggered by the change in status, but are allowed against income from that activity. Any previously suspended losses and (deduction equivalent) credits in excess of income from the activity continue to be treated as from a passive activity. Losses and credits from an activity arising in a year when the corporation does not meet the definition of a personal service corporation (or a closely held C corporation) are not subject to limitation under the passive loss rule.

3. Treatment of portfolio income

In general

Under the Act, portfolio income is not treated as income from a passive activity, and passive losses and credits generally may not be applied to offset it. Portfolio income generally includes interest, dividends, annuities, and royalties. Also included in portfolio income are gain or loss attributable to disposition of (1) property that is held for investment (and that is not a passive activity) and (2) property that normally produces interest, dividend, annuity, or royalty income.

Portfolio investments ordinarily give rise to positive income, and are not likely to generate losses which could be applied to shelter other income. Therefore, for purposes of the passive loss rule, portfolio income generally is not treated as derived from a passive activity, but rather is treated like other positive income sources such as salary. To permit portfolio income to be offset by passive losses or credits would create the inequitable result of restricting sheltering by individuals dependent for support on wages or active business income, while permitting sheltering by those whose income is derived from an investment portfolio.

Under the Act, dividends on C corporation stock,²⁴ dividends, and income from a REIT, RIC, or REMIC, interest on debt obligations, and royalties from the licensing of property generally are included in portfolio income. Similarly, gains (or losses) from the sale of interests which normally produce such income are treated as portfolio income or losses. These types of assets ordinarily are positive income sources. On the other hand, except as provided below, income from a general or limited partnership interest, from S corporation stock, from a grantor trust, or from a lease of property generally are not treated as portfolio income. Such interests can generate losses which may be applied to shelter unrelated income of the taxpayer. In addition, although such interests might otherwise be considered as held for investment, gains from the sale of such interests, when they are interests in passive activities, are not treated as portfolio income, except to the extent gain on sale of such interests is itself attributable to portfolio income. For example, if a general partnership owns a portfolio of appreciated stocks and bonds and also conducts a business activity, a part of the gain

²⁴ Similarly, dividends paid by an S corporation that was formerly a C corporation, that are treated as derived from earnings and profits from a C corporation year under Code sec. 1368, are treated as portfolio income, even though the income or loss passed through to the S corporation shareholders would otherwise be treated as passive. Subpart F income that is included in the taxpayer's gross income under sec. 951 is likewise treated as portfolio income.

on sale of a partnership interest would be attributable to portfolio income and would, consequently, be treated as portfolio income.

Portfolio income of a passive activity is taken into account separately from other items relating to the activity. Thus, for example, portfolio income of an entity which is not attributable to, or part of, an activity of the entity that constitutes a passive activity is accounted for separately from any passive income or loss. Where a taxpayer has an interest in a passive activity, portfolio income of the activity is not taken into account in determining passive income or loss from the activity. Rather, such portfolio income is treated as non-passive income of the taxpayer. This rule is necessary in part because taxpayers otherwise would be able to shelter portfolio income to the extent that they transferred the assets from which it is derived to passive activities in which they had investment interests.

The application of the rule can be explained with regard to the example of a limited partnership that is engaged in the publication of a magazine. The partnership also holds a portfolio of dividend and interest bearing securities, but the income from them is more than offset by the tax losses of operating the magazine. Each limited partner must separately account for his share of the portfolio income and the losses from the operations of the magazine, and may not offset them against each other in calculating his tax liability. The portfolio income retains its character as income that is not income from a passive activity, despite the fact that non-portfolio income and loss attributable to a limited partnership interest is treated as income or loss from a passive activity.

The rule treating portfolio income as not from a passive activity does not apply to the extent that income, of a type generally regarded as portfolio income, is derived in the ordinary course of a trade or business. For example, the business income of a bank typically is largely interest. Similarly, a securities broker/dealer may earn a substantial portion of the income from the business in the form of dividends and gains on sales of dividend-bearing instruments. Interest income may also arise in the ordinary course of a trade or business with respect to installment sales and interest charges on accounts receivable.

In these cases, the rationale for treating portfolio-type income as not from the passive activity does not apply, since deriving such income is what the business activity actually, in whole or in part, involves. Accordingly, interest, dividend, annuity, or royalty income which is derived in the ordinary course of a trade or business is not treated, for purposes of the passive loss provision, as portfolio income. If a taxpayer directly, or through a passthrough entity, owns an interest in an activity deriving such income, such income is treated as part of the activity, which, as a whole, may or may not be treated as passive, depending on whether the taxpayer materially participates in the activity.

The rationale for treating interest income as portfolio income normally does apply, however, in the case where a taxpayer makes a complete disposition of his interest in a passive activity (triggering suspended losses), and the consideration is an interest-bearing instrument. Although the gain, if any, on such a disposition is generally treated as passive income, the interest on the instrument is

appropriately treated as portfolio income, where the disposition (as is likely to be true of dispositions of entire interests in passive activities) is not a transaction arising in the ordinary course of a trade or business.

No exception is provided for the treatment of portfolio income arising from working capital, i.e., amounts set aside for the reasonable needs of the business. Although setting aside such amounts may be necessary to the trade or business, earning portfolio income with respect to such amounts is investment-related and not a part of the trade or business itself. Under this rule, for example, interest earned on funds set aside by a limited partnership operating a shopping mall, for the purpose of expanding the mall, is treated as portfolio income and is not taken into account in determining a limited partner's passive income or loss from the activity of operating the shopping mall.

Expenses allocable to portfolio income.—The Act provides that portfolio income is reduced by the deductible expenses (other than interest) that are clearly and directly allocable to such income. Properly allocable interest expense also reduces portfolio income. Such deductions accordingly are not treated as attributable to a passive activity.

The Congress anticipated that the Treasury Department would issue regulations setting forth standards for appropriate allocation of expenses and interest under the passive loss rule. These regulations should be consistent with the purpose of the passive loss rules to prevent sheltering of income from personal services and portfolio income with passive losses. Moreover, the regulations should attempt to avoid inconsistent allocation of interest deductions under different Code provisions.²⁵

In the case of entities, a proper method of allocation may include, for example, allocation of interest to portfolio income on the basis of assets, although there may be situations in which tracing is appropriate because of the integrated nature of the transactions involved. Because of the difficulty of recordkeeping that would be required were interest expense of individuals allocated rather than traced, it is anticipated that, in the case of individuals, interest expense generally will be traced to the asset or activity which is purchased or carried by incurring or continuing the underlying indebtedness.

Self-charged interest.—A further issue with respect to portfolio income arises where an individual receives interest income on debt of a passthrough entity in which he owns an interest. Under certain circumstances, the interest may essentially be "self-charged," and thus lack economic significance. For example, assume that a taxpayer charges \$100 of interest on a loan to an S corporation in which he is the sole shareholder. In form, the transaction could be viewed as giving rise to offsetting payments of interest income and passthrough interest expense, although in economic substance the taxpayer has paid the interest to himself.²⁶

²⁵ For example, an interest deduction that is disallowed under sec. 265 should not be allowed, capitalized, or suspended under another provision.

²⁶ Similar considerations apply where a partnership makes a loan to a partner (e.g., to finance such partner's purchase of all or part of his interest in the partnership, and the interest expense may be treated as part of his passive loss).

Under these circumstances, it is not appropriate to treat the transaction as giving rise both to portfolio interest income and to passive interest expense. Rather, to the extent that a taxpayer receives interest income with respect to a loan to a passthrough entity in which he has an ownership interest, such income should be allowed to offset the interest expense passed through to the taxpayer from the activity for the same taxable year.

The amount of interest income of the partner from the loan that is appropriately offset by the interest expense of the partnership on the loan should not exceed the taxpayer's allocable share of the interest expense to the extent not increased by any special allocation. For example, assume that an individual has a 40-percent interest in a partnership that conducts a business activity in which he does not materially participate, and the individual makes a loan to the partnership on which the partnership pays \$100 of interest expense for the year. Since 40 percent of the partnership's interest expense is allocable to the individual, only \$40 of the partner's \$100 of interest income should be permitted to offset his share of the partnership interest expense, and the remaining \$60 is properly treated as portfolio income that cannot be offset by passive losses.

Congress anticipated the issuance of Treasury regulations to provide for the above result. Such regulations may also, to the extent appropriate, identify other situations in which netting of the kind described above is appropriate with respect to a payment to a taxpayer by an entity in which he has an ownership interest. The netting permitted in any such instances should not, however, permit any passive deductions to offset non-passive income except to the extent of the taxpayer's allocable share of the specific payment at issue. Similar considerations should apply in the consolidated return context.

Regulatory authority of Treasury in defining non-passive income.—The Act instructs the Treasury to provide such regulations as may be necessary or appropriate to carry out the purpose of the passive loss provisions, i.e., to prevent the sheltering of positive income sources through the use of tax losses derived from passive activities. Specifically, the Treasury is authorized to provide by regulations that certain items of gross income will not be taken into account in determining income or loss from any activity (and to provide for the appropriate treatment of expenses allocable to such income). The Act also specifically authorizes regulations under which net income or gain from a limited partnership or other passive activity are treated as not from a passive activity.

Congress intended such regulations to prevent taxpayers from structuring income-producing activities (including those that do not bear significant expenses) in ways that are designed to produce passive income that may be offset by unrelated passive losses. For example, regulations may provide that, in order to prevent avoidance of the passive loss rule, a limited partner's share of income from a limited partnership is treated as not from a passive activity. Circumstances in which such treatment could be appropriate would include a transfer by a corporation of an income-producing activity to a limited partnership with a distribution to shareholders of limited partnership interests. The regulations might also treat as not passive those activities that previously generated active business

losses and that the taxpayer, with the purpose of circumventing the passive loss rule, intentionally seeks to treat as passive at a time when they generate net income. A further example of a situation where regulatory authority might appropriately be exercised is the case of related party leases or sub-leases, with respect to property used in a business activity, that have the effect of reducing active business income and creating passive income. In addition, regulatory authority could address the situation of ground rents that produce income without significant expenses.

Treatment of closely held corporations

The passive loss rule applies to closely held C corporations (other than personal service corporations) in modified form. Such corporations may offset passive losses and credits against active business income, but not against portfolio income. Portfolio income of a closely held corporation generally has the same definition as portfolio income of any other taxpayer subject to the passive loss rule, except that, for purposes of such a corporation (as well as for a personal service corporation) the dividends received deduction is allowed.

4. Material participation

General rule

In general, a taxpayer's interest in a trade or business activity is not treated as an interest in a passive activity for a taxable year if the taxpayer materially participates in the activity throughout such year.²⁷ In certain instances, however, material participation is not determinative. Working interests in oil and gas properties generally are treated as active whether or not the taxpayer materially participates, and interests in rental activities are treated as passive whether or not the taxpayer materially participates. In the case of rental real estate activities, a separate standard, active participation, is relevant in determining whether the taxpayer is permitted to use losses and credits from such activities to offset up to \$25,000 of other income.

Working as an employee, and providing services as part of a personal service business (including professional businesses such as law, accounting, and medicine), intrinsically require personal involvement by the taxpayer. Thus, by their nature, they are not passive activities.²⁸

²⁷ This rule is applied by considering services provided both by the taxpayer and by the taxpayer's spouse (whether or not such taxpayer and spouse file a joint return). Further, it is intended that in determining whether the taxpayer has materially participated throughout the year, all the facts and circumstances are to be taken into account. Thus, for example, if the taxpayer's involvement rises to the level of material participation in an activity on some, but not all, days during the year, but the taxpayer's involvement for the year as a whole is regular, continuous and substantial, then the taxpayer has materially participated for the year. Material participation is determined with respect to the activity for the entire period during the year that he owns an interest in the activity (not, e.g., prorated between periods of greater or lesser involvement). For example, the fact that a taxpayer takes vacations during the year can be fully consistent with a finding of material participation.

²⁸ The generally "active" nature of the above two undertakings is relevant, not only to the question of whether the taxpayer satisfies the material participation standard, but also to whether either of such two undertakings can be part of the same activity as any other undertaking. See sec. 5, *infra*.

Material participation of a taxpayer in an activity is determined separately for each taxable year. In most cases, the material participation (or lack thereof) of a taxpayer in an activity is not expected to change from year to year, although there will be instances in which it does change.

Limited partnerships

In the case of a limited partnership interest, except to the extent provided by regulations, it is conclusively presumed that the taxpayer has not materially participated in the activity. In general, under relevant State laws, a limited partnership interest is characterized by limited liability, and in order to maintain limited liability status, a limited partner, as such, cannot be active in the partnership's business. The presumption that a limited partnership interest is passive applies even when the taxpayer possesses the limited partnership interest indirectly through a tiered entity arrangement (e.g., the taxpayer owns a general partnership interest, or stock in an S corporation, and the partnership or corporation in which the taxpayer owns such interest itself owns a limited partnership interest in another entity).

When a taxpayer possesses both a limited partnership interest and another type of interest, such as a general partnership interest, with respect to an activity, except as otherwise provided in regulations, lack of material participation is conclusively presumed with respect to the limited partnership interest (thus limiting the use of deductions and credits allocable thereto). The presence of material participation for purposes of any other interests in the activity owned by the taxpayer is determined with reference to the relevant facts and circumstances.

Under the Act, the Secretary of the Treasury is empowered to provide through regulations that limited partnership interests in certain circumstances will not be treated (other than through the application of the general facts and circumstances test regarding material participation) as interests in passive activities. It is intended that this grant of authority be used to prevent taxpayers from manipulating the rule that limited partnerships generally are passive, in attempting to evade the passive loss provision.²⁹

For example, the exercise of such authority by the Secretary may be appropriate in certain situations where taxpayers divide their interests in activities between limited and general partnership interests, e.g., to facilitate establishing a disposition of the taxpayer's entire interest in an activity, or in connection with special allocations of items of income, deduction, or credit as between limited and general partnership interests. The exercise of such authority by the Secretary would also be appropriate if taxpayers were permitted under State law to establish limited liability entities (that are not taxable as corporations) for personal service or other active

²⁹ Examples of such evasion would include attempting to treat income that generally is regarded as not passive in nature (e.g., personal service income) as passive and accordingly as shelterable, or creating an unrealistically small separate "activity" in order to trigger suspended losses upon a partial disposition. Even absent the exercise of the Secretary's authority, items such as a guaranteed cash return or portfolio income from a limited partnership are not regarded as passive. Similarly, payments to a retiring partner under sec. 736 that are in the nature of income for past (or present) services, for example, are not regarded as passive.

businesses, and to denominate as "limited partnership interests" any interests in such businesses related to the rendering of personal services.^{29A} The exercise of regulatory authority might also be appropriate where taxpayers sought to avoid limited partnership status with respect to substantially equivalent entities.

Involvement in operations on a regular, continuous, and substantial basis

Outside of the limited partnership context, the presence or absence of material participation generally is to be determined with reference to all of the relevant facts and circumstances. In order to be treated as materially participating for purposes of the provision, the taxpayer must be involved in the operations of the activity on a regular, continuous, and substantial basis. This standard is based on the material participation standards under Code sections 1402(a) (relating to the self-employment tax) and 2032A (relating to valuation of farm property for purposes of the estate tax). However, the standard is modified consistently with the purposes of the passive loss provision.

Thus, precedents regarding the application of those preexisting legal standards, whether set forth in regulations, rulings, or cases, are not intended to be controlling with regard to the passive loss rule. For example, whether or not, under existing authorities interpreting sections 1402(a) and 2032A, it could be argued that the material participation requirement (for purposes of those sections) is in certain circumstances satisfied by periodic consultation with respect to general management decisions, the standard under this provision is not satisfied thereby in the absence of regular, continuous, and substantial involvement in operations.

In order to satisfy the material participation standard, the individual's involvement must relate to operations. Consider, for example, the case of a general partnership engaged in the business of producing movies. Among the services that may be necessary to this business are the following: writing screenplays; reading and selecting screenplays; actively negotiating with agents who represent writers, actors, or directors; directing, editing, scoring, or acting in the films; actively negotiating with third parties regarding financing and distribution; and actively supervising production (e.g., selecting and negotiating for the purchase or use of sets, costumes, etc.). An individual who does not make a significant contribution regarding these or similar services is not treated as materially participating. For example, merely approving a financing target, accepting a recommendation regarding selection of the screenplay, cast, locations, and director, or appointing others to perform the above functions, generally does not constitute involvement in operations.

In practice, a taxpayer is most likely to have materially participated in an activity for purposes of this provision in cases where involvement in the activity is the taxpayer's principal business. For example, an individual who spends 35 hours per week operating a grocery store, and who does not devote a comparable amount of

^{29A} Section 469(e)(3) provides in any event that earned income is not taken into account in computing income or loss from a passive activity.

time to any other business, clearly is materially participating in the business of the grocery store.

By contrast, when an activity is not an individual's principal business, it is less likely that the individual is materially participating. For example, an individual who works full-time as an employee or in a professional service business (such as law, accounting, or medicine), and who has also invested in a general partnership or S corporation engaged in a business involving orange groves, is unlikely to have materially participated in the orange grove business.

However, the fact that an activity is or is not an individual's principal business is not conclusive in determining material participation. An individual may materially participate in no business activities (e.g., someone who does not work or is retired), or in more than one business activity (e.g., a farmer who lives and works on his farm and "moonlights" by operating a gas station).

Another factor that may be highly relevant in showing regular, continuous, and substantial involvement in the operations of an activity, and thereby establishing material participation, is whether, and how regularly, the taxpayer is present at the place or places where the principal operations of the activity are conducted. For example, in the case of an employee or professional who invests in a horse breeding activity, if the taxpayer lives hundreds of miles from the site of the activity, and does not often visit the site, such taxpayer is unlikely to have materially participated in the activity. By contrast, an individual who raises horses on land that includes, or is close to, his primary residence, is more likely to have materially participated.

Again, however, this factor is not conclusive. For example, even if the taxpayer in the above example lived near the site of the horse breeding activity, or visited it on numerous occasions during the year, it would still be necessary for the taxpayer to demonstrate regular, continuous, and substantial involvement in the operations of the activity. Such involvement might be shown, for example, by hiring and from time to time supervising those responsible for taking care of the horses on a daily basis, along with making decisions (i.e., not merely ratifying decisions) regarding the purchase, sale, and breeding of horses.

Moreover, under some circumstances, an individual may materially participate in an activity without being present at the activity's principal place of business. In order for such a taxpayer materially to participate, however, the taxpayer still must be regularly, continuously, and substantially involved in providing services integral to the activity. For example, in the case of an investor in a barge that transports grain along the Mississippi River, one way of materially participating is regularly to travel with the barge (not merely as a passenger, but performing substantial services with respect to the transporting of grain). Another way of materially participating, without being present at the principal place of business, is to work on a regular basis at finding new customers for the barge service, and to negotiate with customers regarding the terms on which the service is provided. In the case of farming, Congress anticipated that an individual who does not perform physical work relating to a farm, but who is treated as having self-employment

income with respect to the farm under section 1402, generally will be treated as materially participating.

In determining material participation, the performance of management functions generally is treated no differently than rendering other services or performing physical work with respect to the activity. However, a merely formal and nominal participation in management, in the absence of a genuine exercise of independent discretion and judgment, does not constitute material participation.

For example, in the case of a cattle-feeding activity, the fact that an investor regularly receives and responds to "check-a-box" forms regarding when grain should be purchased, what the cattle should be fed, etc., may have little or no bearing on material participation. If the management decisions being made by the taxpayer are illusory (e.g., whether to feed the cattle or let them starve), or guided by an expert in the absence of any independent exercise of judgment by the taxpayer, or unimportant to the business,³⁰ they are given little weight. Similarly, in situations where the investor's assets are pooled with those of other investors (such as a cattle herd), the fact that the investor's decisions regarding management do not differ or differ only insubstantially from those of other investors is a factor indicating that the investor's involvement in the activity may not rise to the level of material participation.

The fact that a taxpayer has little or no knowledge or experience regarding the cattle-feeding business is highly significant in determining whether such taxpayer's participation in management is likely to amount to material participation. However, even if a taxpayer has such knowledge and experience, if he merely approves management decisions recommended by a paid advisor, the taxpayer's role is not substantial (and he accordingly has not materially participated), since the decisions could have been made without his involvement.

Even an intermittent role in management, while relevant, does not establish material participation in the absence of regular, continuous, and substantial involvement in operations. For example, the fact that one has responsibility for making significant management decisions with respect to an activity does not establish material participation, even if one from time to time exercises such responsibility. It is almost always true (disregarding special cases such as limited partnership interests) that the owner of an interest in an activity has some right to make management decisions regarding the activity, at least to the extent that his interest is not outweighed by that of other owners. Yet many individuals who possess significant ownership interests do not materially participate, and, under present law, have received tax benefits that Congress concluded should be subject to limitation under the passive loss rule.³¹ Participation in management cannot be relied upon unduly

³⁰ For example, management decisions may be unimportant to the business where the tax benefits from the business outweigh any risk of economic loss that may result from the decisions.

³¹ Experience in applying existing legal standards confirms that a test based on participation in management is subject to manipulation and creates frequent factual disputes between taxpayers and the Internal Revenue Service. Sec. 464, for example, disallows prepaid expenses incurred in a farming activity if more than 35 percent of the loss from the activity is allocated to limited partners or persons who do not actively participate in management. As a result, farming

both because its genuineness and substantiality are difficult to verify, and because a general management role, absent more, may fall short of the level of involvement that the material participation standard in the provision is meant to require. Nevertheless, it is likely that, despite the difficulty in many circumstances of ascertaining whether the management services rendered by an individual are substantial and *bona fide*, such services are likely to be so when the individual is rendering them on a full-time basis and the success of the activity depends in large part upon his exercise of business judgment.

The fact that an individual works full time in a line of business consisting of one or more business activities does not determine his material participation in a particular activity, although his work may rise to the level of material participation with respect to one or more of the activities. An individual's material participation in any activity is determined on the basis of his regular, continuous, and substantial involvement in the operations of the activity. His involvement in the operations of other activities is not determinative. Thus, for example, a taxpayer's material participation in a rental activity (which is treated as passive without regard to the taxpayer's material participation) does not affect his material participation, if any, in other activities.

A taxpayer is likely to be materially participating in an activity, if he does everything that is required to be done to conduct the activity, even though the actual amount of work to be done to conduct the activity is low in comparison to other activities.

Providing legal, tax, or accounting services as an independent contractor (or as an employee thereof), or that the taxpayer commonly provides as an independent contractor, would not ordinarily constitute material participation in an activity other than the activity of providing these services to the public. Thus, for example, a member of a law firm who provides legal services to a client regarding a general partnership engaged in research and development, is not, if he invests in such partnership, treated as materially participating in the research and development activity by reason of such legal services.

The fact that a taxpayer utilizes employees or contract services to perform daily functions in running the business does not prevent such taxpayer from qualifying as materially participating. However, the activities of such agents are not attributed to the taxpayer, and the taxpayer must still personally perform sufficient services to establish material participation.

A special rule, derived from section 2032A, applies with respect to farming activities, permitting taxpayers to qualify as materially participating in certain situations involving retired or disabled individuals who previously were materially participating (as that

activities that rely upon syndication to outside investors, and that are operated principally under the direction of an agent, have been structured so as to assist otherwise passive investors in demonstrating that they play a role in management decisions. While the Internal Revenue Service may argue in any such instance that an investor is not truly participating in management, such argument may be difficult to sustain in the absence of reliable direct evidence regarding the investor's independence of judgment. Congress expects that the material participation standard for purposes of the passive loss rule, in light of its focus on the taxpayer's role in actual operations, will not be similarly subject to manipulation and ambiguity.

term is used for purposes of the passive loss rule), or involving a surviving spouse of an individual who was so participating. Thus, to the extent that, under section 2032A(b)(4) or (5), such person would be treated as still materially participating during retirement or disability (or, in the case of a surviving spouse, after the decedent's death), such person shall be treated as materially participating for purposes of the passive loss provision.

With respect to material participation in an agricultural activity, certain decision-making, if *bona fide* and undertaken on a regular, continuous, and substantial basis, may be relevant to material participation. The types of decision-making that may be relevant in this regard include, without being limited to, decision-making regarding (1) crop rotation, selection, and pricing, (2) the incursion of embryo transplant or breeding expenses, (3) the purchase, sale, and leasing of capital items, such as cropland, animals, machinery, and equipment, (4) breeding and mating decisions, and (5) the selection of herd or crop managers who then act at the behest of the taxpayer, rather than as paid advisors directing the conduct of the taxpayer.

The application of the material participation standard to a condominium hotel that is not a rental activity for purposes of the passive loss rules may be illustrated as follows. Assume that an individual who is an investor in the hotel does not live nearby, has a principal business that is unrelated to operating the hotel, is inexperienced in the hotel business, and employs agents to perform various essential hotel functions. However, such individual's participation in the hotel business involves making frequent visits to the hotel in order to conduct onsite inspections, meet with onsite management, and otherwise participate in integral functions of the business. In addition, the individual on a regular basis uses his independent discretion to make business decisions such as the following: (1) regularly establishing room rental rates, (2) establishing and reviewing hiring and other personnel policies, including review of management personnel, (3) reviewing and approving periodic and annually audited financial reports, (4) participating in budget operating costs and establishing capital expenditures, (5) establishing the need for and level of financial reserves, (6) selecting the banking depository for rental proceeds and reserve funds, (7) participating in frequent meetings at the hotel to review operations and the business plan, and (8) assisting in offsite business promotion activities. The individual is personally assessed his owner association charges and personally pays them, is assessed separately and personally the property taxes against his room or rooms, must personally appeal his assessment if he thinks it incorrect, and personally pays any debt service on his unit when due.

Under these circumstances, if the standard requiring regular, continuous, and substantial involvement is satisfied, then the taxpayer is treated as materially participating in the hotel activity. He is not so treated, however, in the absence of sufficient involvement. No safe harbor should be inferred from the preceding paragraph. For example, if the taxpayer's role in any of the above respects was limited to pro forma ratification of decisions made by management agents, that would tend to rebut material participa-

tion. Merely approving decisions made by others does not satisfy the standard.³²

Material participation by a corporation subject to the passive loss rule

Special rules apply in the case of corporations that are subject to the passive loss rule. A corporation that is subject to the passive loss provision is treated as materially participating in an activity with respect to which one or more shareholders, owning in the aggregate more than 50 percent of the outstanding stock of the corporation, materially participate. Thus, for example, a corporation with 5 shareholders, each owning 20 percent of the stock, is treated as materially participating in an activity if three or more of such shareholders so participate. If one of the three shareholders who so participated owned only 5 percent of the stock, and as a result the three participating shareholders owned only 45 percent of the stock in the corporation, the corporation would not be treated as materially participating in the activity.³³

A closely held C corporation subject to the passive loss provision that is not a personal service corporation (as defined for purposes of the provision) may also be treated as materially participating in an activity if it meets the standard set forth in section 465(c)(7)(C), disregarding clause (iv). This standard generally is satisfied if (i) for the prior 12-month period, at least one full-time employee of the corporation provided sufficient services in active management with respect to the activity, (ii) during the same period, at least 3 full-time nonowner employees provided sufficient services directly related to the activity, and (iii) the amount of business deductions by the taxpayer attributable to the activity exceeded 15 percent of gross income from the activity for the taxable year.

Active participation in a rental real estate activity

Allowance of \$25,000 of losses and credits against other income under specified circumstances

For purposes of the passive loss provision, rental activities are treated as passive without regard to whether the taxpayer materially participates. The reasons for this rule are specified above in the section entitled "Reasons for Change."

³² See 132 Cong. Rec. S8244-46 (June 24, 1986) and S13958 (September 27, 1986) (colloquies between Senators Packwood and Hatfield).

³³ No special rule is provided for determining material participation by a trust. Prior and present law provide that, generally speaking, an arrangement will be treated as a trust under the Internal Revenue Code if it can be shown that the purpose of the arrangement is to vest in trustees responsibility for the protection and conservation of property for beneficiaries who cannot share in the discharge of this responsibility and, therefore, are not associates in a joint venture for the conduct of business for profit (Treas. Reg. sec. 301.7701-4). A trust may be treated as an association taxable as a corporation, for tax purposes, if it is a joint enterprise for the conduct of business for profit. Thus, it is unlikely that a trust as such for Federal income tax purposes will be materially participating in a trade or business activity, within the meaning of the passive loss rule. In the case of a grantor trust, to the extent the grantor or beneficiary is treated as the owner for tax purposes (sec. 671), the material participation of the person treated as the owner is relevant to the determination of whether income or loss from an activity owned through the grantor trust is treated as passive in the hands of the owner. Similarly, in the case of a qualified electing Subchapter S trust (sec. 1361(d)(1)(B)) that is treated as a grantor trust (i.e., the beneficiary is treated as the owner for tax purposes), the material participation of the beneficiary is relevant to the determination of whether the S corporation's activity is a passive activity with respect to the beneficiary.

In the case of rental real estate, however, some specifically targeted relief has been provided because rental real estate is held, in many instances, to provide financial security to individuals with moderate incomes. In some cases, for example, an individual may hold for rental a residence that he uses part time, or that previously was and at some future time may be his primary residence. Even absent any such residential use of the property by the taxpayer, Congress believed that a rental real estate investment in which the taxpayer has significant responsibilities with respect to providing necessary services, and which serves significant nontax purposes of the taxpayer, is different in some respects from the activities that are meant to be fully subject to limitation under the passive loss provision.³⁴

Under the relief provision for rental real estate, an individual may offset up to \$25,000 of income that is not treated as passive, by using losses and credits from rental real estate activities with respect to which such individual actively participates.³⁵ (Low-income housing and rehabilitation credits can be so used on a deduction-equivalent basis, as a part of the overall \$25,000 amount, whether or not the individual actively participates in the rental real estate activity to which such credits relate.) This relief applies only if the individual does not have sufficient passive income for the year, after considering all other passive deductions and credits, to use fully the losses and credits from such rental real estate activities. No relief is provided under the provision to taxpayers other than individuals (e.g., to trusts, personal service corporations, or closely held C corporations subject to the passive loss provision),³⁶ except for a special 2-year rule for estates, discussed in Section 1, above.

The \$25,000 amount is reduced, but not below zero, by 50 percent of the amount by which the taxpayer's adjusted gross income for the year exceeds \$100,000 (\$200,000 in the case of low-income housing and rehabilitation credits). In the case of a married individual not filing a joint return, no more than \$12,500 of such relief is available, reduced by 50 percent of the amount by which such individual's adjusted gross income exceeds \$50,000. For these purposes, adjusted gross income is determined without reference to net losses from passive activities (other than losses allowable solely by reason of a fully taxable disposition of an activity).

Since relief under this rule applies only to rental real estate activities, it does not apply to passive real estate activities that are not treated as rental activities under the provision (e.g., an interest in the activity of operating a hotel). Similarly, relief is not provided with regard to the renting of property other than real estate (e.g., equipment leasing).

³⁴ For example, in the case of a rental real estate investor whose cash expenses with respect to the investment (e.g., mortgage payments, condominium or management fees, and costs of upkeep) exceed cash inflows (i.e., rent), tax losses other than those relating to depreciation may not be providing any cash flow benefit.

³⁵ For purposes of applying this standard, as with respect to material participation, services performed both by the taxpayer and by the taxpayer's spouse are considered (whether or not such individuals file a joint return). It is worth noting that, while standards requiring active management or active participation in management apply for certain purposes under prior law (see secs. 55(e), 464(e)(2)(b), and 2032A), these standards are not the same as the active participation standard described herein.

³⁶ See *Overview, supra*.

Scope of active participation

A taxpayer is treated as not having actively participated in a rental real estate activity if the taxpayer (in conjunction with such taxpayer's spouse, even in the absence of a joint return) owns less than 10 percent (by value) of all interests in such activity at any time during the year (or shorter relevant period of ownership).³⁷ This requirement is designed to assist in restricting the relief provided under the \$25,000 rule (assuming all other applicable requirements are met) to appropriate circumstances—for example, the case of a home in which the taxpayer formerly lived or plans subsequently to live, as opposed to a syndicated real estate shelter. In addition, the 10 percent rule reflects the fact that active participation by a less than 10 percent owner typically represents services performed predominantly with regard to ownership interests of co-owners.

In the case of a taxpayer owning an interest in a rental real estate activity and meeting the 10-percent ownership requirement, up to \$25,000 of relief may be available if the taxpayer actively participates in the activity. This standard is designed to be less stringent than the material participation requirement, in light of both the special nature of rental activities, which generally require less in the way of personal services, and the Congress' reasons for providing up to \$25,000 of relief in this instance.

The difference between active participation and material participation is that the former can be satisfied without regular, continuous, and substantial involvement in operations, so long as the taxpayer participates, e.g., in the making of management decisions or arranging for others to provide services (such as repairs), in a significant and *bona fide* sense. Management decisions that are relevant in this context include approving new tenants, deciding on rental terms, approving capital or repair expenditures, and other similar decisions.

Thus, for example, a taxpayer who owns and rents out an apartment that formerly was his primary residence, or that he uses as a part-time vacation home, may be treated as actively participating even if he hires a rental agent and others provide services such as repairs. So long as the taxpayer participates in the manner described above, a lack of material participation in operations does not lead to the denial of relief.

A limited partner, to the extent of his limited partnership interest, is treated as not meeting the active participation standard.³⁸ In addition, a lessor under a net lease is unlikely to have the degree of involvement which active participation entails. Moreover, as with regard to the material participation standard, services provided by an agent are not attributed to the principal, and a merely formal and nominal participation in management, in the absence of a genuine exercise of independent discretion and judgment, is insufficient.

³⁷ Since low-income housing and rehabilitation credits are allowable without regard to active participation, they are unaffected by this requirement.

³⁸ The active participation rules do not prevent a limited partner from receiving \$25,000 of benefit with regard to the low-income housing or rehabilitation credit, since relief relating to such credits does not depend upon active participation.

In this regard, it is useful to compare the above example of a taxpayer who owns and rents out an apartment that formerly was his primary residence with a tax shelter investor. The former taxpayer, even if he hires a rental agent and uses contract or other services to handle day-to-day problems such as routine repairs, still is likely to participate actively in light of the fact that he likely is not using it principally to generate tax losses.

By contrast, consider the case of a taxpayer who purchases an undivided interest in a shopping mall. The taxpayer purchased his interest from a promoter, based on a prospectus describing the investment opportunity and stressing the tax benefits of the \$25,000 rule. Since one of the taxpayer's principal interests in the investment is to shelter income, he relies on a professional management company which also holds an interest in the shopping mall to make all significant management decisions. In order to create an evidentiary record purporting to show active participation, the management company sends letters to the investor detailing operating expenses, changes in tenants and new lease terms. The management company also informs the investor as to market trends, and requests approval of decisions to seek certain types of retailers as tenants. The investor ratifies such judgments without independently exercising judgment. The investor has not actively participated in the activity.

5. Definition of activity

In applying the passive loss rule, one of the most important determinations that must be made is the scope of a particular activity. This determination is important for several reasons. For example, if two undertakings are part of the same activity, the taxpayer need only establish material participation with respect to the activity as a whole, whereas if they are separate activities he must establish such participation separately for each. In the case of a disposition, knowing the scope of the activity is critical to determining whether the taxpayer has disposed of his entire interest in the activity, or only of a portion thereof.³⁹

Defining separate activities either too narrowly or too broadly could lead to evasion of the passive loss rule. For example, an overly narrow definition would permit taxpayers to claim losses against salary, portfolio, or active business income by selectively disposing of portions of their interests in activities with respect to which there has been depreciation or loss of value, while retaining any portions with respect to which there has been appreciation. An overly broad definition would permit taxpayers to amalgamate undertakings that in fact are separate, and thus to use material participation in one undertaking as a basis for claiming without limitation losses and credits from another undertaking.

The determination of what constitutes a separate activity is intended to be made in a realistic economic sense. The question to be answered is what undertakings consist of an integrated and inter-related economic unit, conducted in coordination with or reliance

³⁹ Determining the scope of an activity also is important with respect to the 10 percent ownership requirement for actively participating in a rental real estate activity, and in certain situations where the taxpayer disposes of an activity other than through a taxable transaction.

upon each other, and constituting an appropriate unit for the measurement of gain or loss.

Section 183, relating to hobby losses, involves issues similar to those arising with respect to passive losses.⁴⁰ Section 183 requires that separate activities be identified in order to determine whether a specific activity constitutes a hobby. Treasury Regulations interpreting this provision note that all facts and circumstances of a specific case must be taken into account, and then identify as the most significant facts and circumstances: "the degree of organizational and economic interrelationship in various undertakings, the business purpose which is (or might be) served by carrying on the various undertakings separately or together . . . and the similarity of the various undertakings." These facts and circumstances likewise are relevant to determining the scope of an activity for purposes of the passive loss rule.⁴¹

In general, providing two or more substantially different products or services involves engaging in more than one activity (unless customarily or for business reasons provided together—e.g., the appliance and clothing sections of a department store). For example, operating a restaurant and engaging in research and development are objectively so different that they are extremely unlikely to be part of the same activity. In addition, different stages in the production and sale of a particular product that are not carried on in an integrated fashion generally are not part of the same activity. For example, operating a retail gas station and engaging in oil and gas drilling generally are not part of the same activity. In general, normal commercial practices are highly probative in determining whether two or more undertakings are or may be parts of a single activity.

On the other hand, the fact that two undertakings involve providing the same products or services does not establish that they are part of the same activity absent the requisite degree of economic interrelationship or integration. For example, separate real estate rental projects built and managed in different locations by a real estate operator generally will constitute separate activities. Similarly, in the case of farming, each farm generally will constitute a separate activity. On the other hand, an integrated apartment project or shopping center generally will be treated as a single activity.

Separate research and development projects may constitute separate activities in the absence of a sufficient interrelationship between the activities (e.g., with regard to personnel, facilities used, or the common use of knowhow developed in specific undertakings). When sufficient interrelationship exists, however, the

⁴⁰ By contrast, the at-risk rules, to the extent that they define "activity," address issues different from those that are relevant with respect to passive losses. See sec. 465(c)(2). The at-risk rules define "activity" in terms of narrow asset units, such as individual items of property, in light of the goal of such rules to establish a relationship between each such asset and financing attributable to it. In the passive loss context, unlike the at-risk context, financing is not the relevant issue.

⁴¹ See Treas. Reg. sec. 1.183-1(d)(1). The provision in this regulation that a taxpayer's characterization of what constitutes an activity will be accepted unless it is unduly "artificial" does not apply with respect to the passive loss rule. While the Congress anticipated that artificial characterizations will be disregarded as a matter of course with respect to passive losses, there is no presumption that the taxpayer's characterization is correct even absent such "artificiality."

projects are part of the same activity. For example, if a particular research project is terminated, but knowhow developed from the project contributes to a subsequent project, it may be inaccurate to view the termination as establishing a loss. Any economic success realized by the second project may be attributable in part to amounts spent on the first project, and thus may establish that such amounts were not lost upon termination.

Certain types of integration among undertakings are not sufficient to establish that they are part of the same activity. For example, the fact that the taxpayer has ultimate management responsibilities with respect to different undertakings does not establish that they are part of the same activity, nor does the fact that the undertakings have access to common sources of financing, or benefit for goodwill purposes from sharing a common name. These common features may often be shared by all of the undertakings in which a particular individual is engaged, without establishing, in a substantial economic sense, that all such undertakings are part of the same activity.

The fact that two undertakings are conducted by the same entity (such as a partnership or S corporation) does not establish that they are part of the same activity. Conversely, the fact that two undertakings are conducted by different entities does not establish that they are different activities. Rather, the activity rules generally are applied by disregarding the scope of passthrough entities such as partnerships and S corporations.

With respect to limited partnerships, an additional rule applies in light of the special status of limited partnership interests with respect to material participation. An interest in a limited partnership is not treated as being part of the same activity as any activity in which the taxpayer is treated as materially participating. However, when otherwise appropriate, a limited partnership interest is treated as part of a larger activity in which the taxpayer does not materially participate (e.g., when two limited partnerships are conducting the same activity, or an individual is both a limited partner and a nonparticipating general partner with respect to the same activity).⁴²

In applying the facts and circumstances test regarding what constitutes an activity, any undertaking that is accorded special treatment under the passive loss rule (e.g., treatment as always being active or as always being passive) is not treated as part of the same activity as any undertaking that does not receive identical treatment under the passive loss rule. For example, providing services as an employee or in a personal service business intrinsically is not passive, without requiring the examination of further facts and circumstances. Thus, such an undertaking generally is not part of the same activity as an undertaking in which further facts and circumstances must be examined. An oil and gas working interest is treated as not passive without regard to material participation, and thus is treated as separate from any undertaking not relating to oil

⁴² These special rules regarding limited partnership interests do not apply in the case of any such interest that, pursuant to the Secretary's special regulatory authority, is treated as not intrinsically passive (i.e., as passive only to the extent established by examination of the relevant facts and circumstances).

and gas working interests.⁴³ This rule is necessary so that the special rules for particular undertakings will not in effect be extended to other types of undertakings (e.g., through the argument that an undertaking that is not a working interest is part of the same activity as a working interest, and hence should not be treated as passive even in the absence of material participation).

6. Rental activity

In general

Under the passive loss rule, a rental activity is generally treated as a passive activity regardless of whether the taxpayer materially participates in the activity. Deductions and credits from a rental activity generally may be applied to offset only other income from passive activities. In the case of rental real estate activities in which the taxpayer actively participates, a special rule permits the application of losses and credits from the activity against up to \$25,000 of non-passive income of the taxpayer, for individual taxpayers. A taxpayer is not considered to actively participate in the activity if he owns less than a 10 percent interest in it at any time during the year (or relevant shorter period of ownership).

In determining what is a rental activity for purposes of these rules, prior law applicable in determining when an S corporation had passive rental income, as opposed to active business income, for purposes of continuing to qualify as an S corporation, provides a useful analogy.⁴⁴ The purpose of the prior law rule, like the passive loss rule, is to distinguish between rental activity that is passive in nature and nonrental activity which may not be passive. Thus, under the passive loss rule, a rental activity generally is an activity, the income from which consists of payments principally for the use of tangible property, rather than for the performance of substantial services.⁴⁵

Some activities are not treated as rental activities under the passive loss rule even though they may involve the receipt of payments for the use of tangible property, because significant services are rendered in connection with such payments. Payments for the use of tangible property for short periods, with heavy turnover among the users of the property, may cause an activity not to be a rental activity, especially if significant services are performed in connection with each new user of the property. Another factor indicating that an activity should not be treated as a rental activity is

⁴³ See sec. 6, *infra*, noting that, for the same reasons, a rental real estate undertaking, as well as a rental undertaking involving property other than real estate, each is treated as not part of the same activity as any other type of undertaking.

⁴⁴ Sec. 1372(e)(5) (as in effect prior to the Subchapter S Revision Act of 1982) applied principles that are relevant in determining whether significant services are performed in connection with furnishing property. For example, regulations applicable in interpreting that section provided that rents did not include payments for the use or occupancy of rooms where significant services were also rendered to the occupant (such as hotels and the like which furnish hotel services). The regulations further provided, "services are considered rendered to the occupant if they are primarily for his convenience and are other than those usually or customarily rendered in connection with the rental of rooms or other space for occupancy only. The supplying of maid service, for example, constitutes such services; whereas the furnishing of heat, light, . . . the collection of trash, etc., are not considered as services rendered to the occupant."

⁴⁵ A rental activity generally does not include payments for the use of intangible property (e.g., stocks), or other payments more properly characterized as interest (e.g., for the use or forbearance of money).

that expenses of day-to-day operations are not insignificant in relation to rents produced by the property, or in relation to the amount of depreciation and the cost of carrying the rental property.

On the other hand, although the period for which property is rented is not in itself determinative of whether the activity is a rental activity, a long-term rental period (in comparison to the useful life of the property) and low turnover in the lessees of the property, is indicative that the activity is a rental activity.

For example, an activity consisting of the short-term leasing of motor vehicles, where the lessor furnishes services including maintenance of gas and oil, tire repair and changing, cleaning and polishing, oil changing and lubrication and engine and body repair, is not treated as a rental activity. By contrast, furnishing a boat under a bare boat charter, or a plane under a dry lease (i.e., without pilot, fuel or oil), constitutes a rental activity under the passive loss rule, because no significant services are performed in connection with providing the property.

Based on similar considerations, renting hotel rooms or similar space used primarily for lodging of transients where significant services are provided generally is not a rental activity under the passive loss rule. By contrast, renting apartments to tenants pursuant to leases (with, e.g., month-to-month or yearly lease terms) is treated as a rental activity. Similarly, being the lessor of property subject to a net lease is a rental activity.

A rental activity may include the performance of services that are incidental to the activity (e.g., a laundry room in a rental apartment building). However, if a sufficient amount of such services are rendered, they may rise to the level of a separate activity, or the entire activity may not constitute a rental activity under the provision (e.g., a hotel).

Scope of rental activity

Some businesses involve the conduct of rental activities in association with other activities not involving renting tangible property. Although the other activities may immediately precede the rental activity, be conducted by the same persons, or take place in the same general location, they are not treated as a part of the rental activity, because under the passive loss rule rental activities are considered passive activities without regard to the taxpayer's material participation. In the case of other activities, an examination of the taxpayer's material participation generally determines whether an activity is passive. Rental activities generally are treated as separate from nonrental activities involving the same persons or property. Thus, for example, automobile leasing is treated as a different activity from automobile manufacturing, and real estate construction and development is a different activity from renting the newly constructed building.

Similarly, suppose a travel agency operated in the form of a general partnership has its offices on three floors of a 10-story building that it owns. The remainder of the space in the building is rented out to tenants. The travel agency expects to take over another floor for its own use in a year. The partnership is treated as being engaged in two separate activities: a travel agency activity and a rental real estate activity. Deductions and credits attributable to

the building are allocable to the travel agency activity only to the extent that they relate to the space occupied by the travel agency during the taxable year.

Separate rental real estate activity

Because only rental real estate activities are eligible for the \$25,000 offset of losses and credits against non-passive income, a rental real estate undertaking is not considered as part of the same activity as any undertaking other than another rental real estate undertaking. For these purposes, the word "rental" is interpreted consistently with its meaning in other respects for purposes of the passive loss provision. Thus, for example, a hotel is treated neither as a rental real estate undertaking, nor as consisting of two activities only one of which is a rental real estate undertaking.

To be eligible for the \$25,000 offset, a taxpayer must actively participate in the rental real estate activity. He is not considered to actively participate unless he has at least a 10 percent interest in the activity, because without a significant ownership interest his participation in the activity is likely to be for the benefit of other owners. For purposes of determining whether his interest in the activity amounts to at least 10 percent, separate buildings are treated as separate rental real estate activities if the degree of integration of the business and other relevant factors do not require treating them as parts of a larger activity (e.g., an integrated shopping center).

In the case of units smaller than an entire building, it similarly is necessary to assess the degree of business and functional integration among the units in determining whether they are separate activities. A cooperative apartment in an apartment building, owned by a taxpayer unrelated to those owning the other apartments in the building, generally will qualify as a separate activity, despite the fact that ownership of the building may be shared with owners of other apartments in the building, and despite the sharing with other apartments of such services as management and maintenance of common areas. By contrast, ownership of an undivided interest in a building, or of an area too small to be rented as a separate unit (or that is not rented as a separate unit) does not qualify as a separate activity.

In the case of a commercial building, for example, that is rented out to various tenants, and in which different parties own different floors, it again is necessary to examine the degree of integration with which business relating to different floors is conducted. An arrangement in which the rights to the various floors are separately sold to different parties, but rental of the building is handled in a centralized fashion, generally constitutes a single activity, whereas such treatment might not be appropriate if the owners of different floors separately manage their own rental businesses.

7. Working interest in oil and gas property

When a taxpayer owns a working interest in an oil and gas property, the working interest is not treated as a passive activity, whether or not the taxpayer materially participates. Thus, losses and credits derived from such activity can be used to offset other

income of the taxpayer without limitation under the passive loss rule.

In general, a working interest is an interest with respect to an oil and gas property that is burdened with the cost of development and operation of the property.⁴⁶ Rights to overriding royalties, production payments, and the like, do not constitute working interests, because they are not burdened with the responsibility to share expenses of drilling, completing, or operating oil and gas property. Similarly, contract rights to extract or share in oil and gas, or in profits from extraction, without liability to share in the costs of production, do not constitute working interests. Income from such interests generally is considered to be portfolio income.

A working interest generally has characteristics such as responsibility for signing authorizations for expenditures with respect to the activity, receiving periodic drilling and completion reports, receiving periodic reports regarding the amount of oil extracted, possession of voting rights proportionate to the percentage of the working interest possessed by the taxpayer, the right to continue activities if the present operator decides to discontinue operations, a proportionate share of tort liability with respect to the property (e.g., if a well catches fire), and some responsibility to share in further costs with respect to the property in the event that a decision is made to spend more than amounts already contributed.

However, the fact that a taxpayer is entitled to decline, or does decline, to make additional contributions under a buyout, nonparticipation, or similar arrangement, does not contradict such taxpayer's possessing a working interest. In addition, the fact that tort liability may be insured against does not contradict such taxpayer's possessing a working interest.

When the taxpayer's form of ownership limits the liability of the taxpayer, the interest possessed by such taxpayer is not a working interest for purposes of the passive loss provision. Thus, for purposes of the passive loss rules, an interest owned by a limited partnership is not treated as a working interest with regard to any limited partner, and an interest owned by an S corporation is not treated as a working interest with regard to any shareholder.⁴⁷ The same result follows with respect to any form of ownership that is substantially equivalent in its effect on liability to a limited partnership interest or interest in an S corporation, even if different in form.

When an interest is not treated as a working interest because the taxpayer's form of ownership limits his liability, the general rules regarding material participation apply to determine whether the interest is treated as in a passive activity. Thus, for example, a limited partner's interest generally is treated as in a passive activity. In the case of a shareholder in an S corporation, the general

⁴⁶ See Treas. Reg. sec. 1.612-4(a), along with cases and rulings decided thereunder, such as *Phillips v. Comm'r* 233 F. Supp. 59 (E.D. Tex. 1964), *aff'd. per curiam*, (5th Cir.), 66-1 U.S.T.C. Paragraph 9157; *Haass v. Comm'r*, 55 T.C. 43 (1970), *acq.*, 1971-2 C.B. 2; *Cottingham v. Comm'r*, 63 T.C. 695 (1975); *Miller v. Comm'r* 78-1 U.S.T.C. paragraph 9127 (C.D. Cal. 1977); Rev. Rul. 68-139, 1968-1 C.B. 311.

⁴⁷ However, the fact that an interest is not treated as a working interest for purposes of the passive loss rules due to the taxpayer's form of ownership has no effect on whether it qualifies as a working interest for any other purpose under the Internal Revenue Code.

facts and circumstances test for material participation applies and the working interest exception does not apply, because the form of ownership limits the taxpayer's liability.

In determining whether the taxpayer's form of ownership limits his liability, the rule described in the two prior paragraphs is applied by looking through tiered entities. For example, a general partner in a partnership that owns a limited partnership interest in a partnership that owns a working interest is not treated as owning a working interest.

A special rule applies in any case where, for a prior taxable year, net losses from a working interest in a property were treated by the taxpayer as not from a passive activity. In such a case, any net income realized by the taxpayer from the property (or from any substituted basis property, e.g., property acquired in a sec. 1031 like-kind exchange for such property) in a subsequent year also is treated as active. Under this rule, for example, if a taxpayer claims losses for a year with regard to a working interest and then, after the property to which the interest relates begins to generate net income, transfers the interest to an S corporation in which he is a shareholder, or to a partnership in which he has an interest as a limited partner, his interest with regard to the property continues to be treated as not passive.⁴⁸

Under some circumstances, deductions relating to a working interest may be subject to limitation under other provisions in the Internal Revenue Code. For example, protection against loss through nonrecourse financing, guarantees, stop-loss agreements or other similar arrangements, may cause certain deductions allocable to the taxpayer to be disallowed under section 465. Such limitations are applied prior to and independently of the passive loss rule.

Effective Date

The passive loss rule is effective in taxable years beginning on or after January 1, 1987. It applies to all passive activity losses incurred in taxable years beginning on or after that date, and to passive activity credits for property placed in service in taxable years beginning on or after that date. However, in the case of certain pre-enactment interests, the rule is phased in. The amount disallowed under the passive loss provision during any year in the transitional period cannot exceed the applicable percentage of the amount that would be disallowed for that year under the provision if fully effective. The applicable percentage is 35 percent for 1987, 60 percent for 1988, 80 percent for 1989, 90 percent for 1990, and 100 percent for 1991 and thereafter.

Interests in passive activities acquired by the taxpayer on or before the date of enactment of the Act (October 22, 1986) are eligible for the phase-in of the passive loss rule. Interests in activities acquired after October 22, 1986, however, are not eligible for the phase-in, but rather are fully subject to the passive loss rule.

⁴⁸ This rule applies whether or not the working interest would have been treated as passive in the absence of the provision treating working interests as *per se* active, i.e., if material participation were relevant in this context.

The Congress intended that a contractual obligation to purchase an interest in a passive activity that is binding on October 22, 1986 be treated as an acquisition of the interest in the activity for this purpose. A binding contract qualifies under this rule; even if the taxpayer's obligation to acquire an interest is subject to contingencies, so long as the contingencies are beyond the reasonable control of the taxpayer. Thus, if the taxpayer has, by October 22, 1986, signed a subscription agreement to purchase a limited partnership interest contingent upon the agreement of other purchasers to acquire interests in the limited partnership amounting to a particular total, then if the contingency is satisfied, he is eligible for the phase-in rule with respect to the interest he was contractually bound to acquire. On the other hand, a conditional obligation to purchase, or one subject to contingencies within the taxpayer's control, does not give rise to eligibility under the phase-in rule.

In the case where, after October 22, 1986, investors in an activity contribute additional capital to the activity, their interests still qualify in full for relief under the phase-in to the extent that their percentage ownership interests do not change as a result of the contribution. However, if a taxpayer's ownership interest is increased after October 22, 1986, then (except to the extent the increase in the taxpayer's interest arises pursuant to a pre-October 23, 1986 binding contract or partnership agreement), the portion of his interest attributable to such increase does not qualify for the phase-in relief. For example, if a taxpayer, after October 22, 1986, increases his ownership interest in a partnership from 25 percent to 50 percent, then only the losses attributable to the 25 percent interest held prior to October 23, 1986 will qualify for transitional relief.⁴⁹

In general, in order to qualify for phase-in relief, the interest acquired by a taxpayer must be in an activity which has commenced by October 22, 1986. For example, a rental activity has commenced when the rental property has been placed in service in the activity. When an entity in which the taxpayer owns an interest liquidates or disposes of one activity and commences another after October 22, 1986, the new activity does not qualify for phase-in relief. In the case of property purchased for personal use but converted to business use (e.g., a home that the taxpayer converts to rental use), similar rules apply. The activity qualifies for phase-in relief if it commences by October 22, 1986. In the case of a residence converted to rental use, for example, the residence must be held out for rental by October 22, 1986.

However, in the case of an activity that has not commenced by October 22, 1986, phase-in treatment nevertheless applies if the entity (or an individual owning the activity directly) has entered into a binding contract effective on or before August 16, 1986, to acquire the assets used to conduct the activity. Similarly, phase-in treatment applies in the case of self-constructed business property of an entity (or direct owner), where construction of the property to

⁴⁹ Phase-in relief applies only with respect to the percentage interest held by the taxpayer at all times after October 22, 1986. Thus, for example, if a taxpayer after October 22, 1986 reduces his interest in an activity from 50 percent to 25 percent, and subsequently purchases additional interests restoring his share to 50 percent, then only the 25 percent share held throughout qualifies for phase-in relief after such subsequent purchase.

be used in the activity has commenced on or before August 16, 1986.

In the case of a taxpayer owning both pre-October 23, 1986 and post-October 22, 1986 interests in passive activities, it is necessary to calculate the amount of passive loss qualifying for the phase-in. In order to determine this amount, it is necessary first to determine the amount that would be disallowed absent the phase-in. Phase-in relief then applies to the lesser of the taxpayer's total passive loss, or the passive loss taking into account only pre-enactment interests. Thus, for example, if a taxpayer has \$100 of passive loss relating to pre-October 23, 1986 interests that would be disallowed in the absence of the phase-in, and has \$60 of net passive income from post-October 22, 1986 interests, resulting in a total passive loss of \$40, then the phase-in treatment applies to the lesser of \$100 or \$40 (i.e., \$40). For purposes of this rule, the pre-October 23, 1986 and post-October 22, 1986 losses are calculated by including credits, in a deduction-equivalent sense.

Under the Act, any passive loss that is disallowed for a taxable year during the phase-in period and carried forward is allowable in a subsequent year only to the extent that there is net passive income in the subsequent year (or there is a fully taxable disposition of the activity).

For example, assume that a taxpayer has a passive loss of \$100 in 1987, \$65 of which is allowed under the applicable phase-in percentage for the year and \$35 of which is carried forward. Such \$35 is not allowed in part in a subsequent year under the phase-in percentage applying for such year. If the taxpayer has a passive loss of \$35 in 1988, including the amount carried over from 1987, then no relief under the phase-in is provided. If the taxpayer has a passive loss of \$50 in 1988 (consisting of the \$35 from 1987 and \$15 from 1988, all of which is attributable to pre-October 23, 1986 interests), then \$6 of losses (40 percent of the \$15 loss arising in 1988) is allowed against active income under the phase-in rule. The \$35 loss carryover from 1987 is disallowed in 1988 and is carried forward (along with the disallowed \$9 from 1988) and allowed in any subsequent year in which the taxpayer has net passive income.

The applicable phase-in percentage applies to the passive loss net of any portion of such loss that may be allowed against non-passive income under the \$25,000 rule.

Transition relief is provided in the case of low-income housing activities. Losses from certain investments after 1983 in low income housing are not treated as from a passive activity, applicable for a period of up to 7 years from the taxpayer's original investment.⁵⁰

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$753 million in 1987, \$3,008 million in 1988, \$4,831 million in 1989, \$6,811 million in 1990, and \$8,003 million in 1991.

⁵⁰ See, 132 Cong. Rec. E3392, October 2, 1986 (statement of Mr. Rostenkowski).

B. Extension of At-Risk Rules to Real Estate Activities (sec. 503 of the Act and sec. 465 of the Code)⁵¹

Prior Law

Loss limitation rules

Prior and present law (Code sec. 465) provide an at-risk limitation on losses from business and income-producing activities other than real estate and certain corporate active business activities, applicable to individuals and to certain closely held corporations.⁵² The rule is designed to prevent a taxpayer from deducting losses in excess of the taxpayer's actual economic investment in an activity.

Under the loss limitation at-risk rules applicable to activities other than the holding of real property under prior and present law, a taxpayer's deductible losses from an activity for any taxable year are limited to the amount the taxpayer has placed at risk (i.e., the amount the taxpayer could actually lose) in the activity. The initial amount at risk is generally the sum of (1) the taxpayer's cash contributions to the activity; (2) the adjusted basis of other property contributed to the activity; and (3) amounts borrowed for use in the activity with respect to which the taxpayer has personal liability or has pledged as security for repayment property not used in the activity. This amount is generally increased each year by the taxpayer's share of income and is decreased by the taxpayer's share of losses and withdrawals from the activity.

In the case of activities other than holding real property, a taxpayer is generally not considered at risk with respect to borrowed amounts if (1) the taxpayer is not personally liable for repayment of the debt (nonrecourse loans); or (2) the lender has an interest (other than as a creditor) in the activity (except to the extent provided in Treasury regulations). The taxpayer is also not considered at risk with respect to amounts for which the taxpayer is protected against loss by guarantees, stop-loss arrangements, insurance (other than casualty insurance) or similar arrangements. Losses which may not be deducted for any taxable year because of the loss limitation at-risk rule may be deducted in the first succeeding year in which the rule does not prevent the deduction.

The loss limitation at-risk rule for activities other than holding real property under prior and present law is applicable to individ-

⁵¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 401; H.Rep. 99-426, pp. 292-295; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1411; S.Rep. 99-313, pp. 747-751; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 134-136 (Conference Report).

⁵² The Tax Reform Act of 1976 (P.L. 94-455) applied the at-risk rule to four specific activities: (1) holding, producing, or distributing motion picture films or video tapes; (2) farming; (3) leasing of personal property; and (4) exploring for, or exploiting, oil and natural gas resources. The Revenue Act of 1978 (P.L. 95-600) extended the rule to all activities except real estate and certain equipment leasing engaged in by closely held corporations. The Deficit Reduction Act of 1984 (P.L. 98-369) created an exception for certain active businesses of closely held C corporations.

uals and to closely held corporations more than 50 percent in value of the stock in which was owned, at any time during the last half of the taxable year, by or for 5 or fewer individuals. Stock ownership is generally determined according to the rules applicable for purposes of identifying a personal holding company (sec. 542(a)(2)). In the case of a partnership or S corporation, the rules apply at the partner or shareholder level respectively.

Generally, a taxpayer's amount at risk is separately determined with respect to separate activities. Nevertheless, activities are treated as one activity (i.e., aggregated) if the activities constitute a trade or business and (1) the taxpayer actively participates in the management of that trade or business, or (2) in the case of a trade or business carried on by a partnership or S corporation, 65 percent or more of losses is allocable to persons who actively participate in the management of the trade or business. Authority is provided to prescribe regulations under which activities are aggregated or treated as separate activities.⁵³ In addition, an exception from the at-risk rules is provided for certain active business activities of closely held corporations, and for this purpose, the component members of an affiliated group are treated as a single taxpayer (sec. 465(c)(7)(F)).

Investment tax credit rules

Prior law also provided rules requiring the taxpayer to be at-risk with respect to property in order to qualify for the investment tax credit (sec. 46(c)(8)). These rules provided an exception where the property is financed by certain third party nonrecourse loans.

The investment tax credit at-risk rules limited the credit base of property used in an activity that was subject to the loss limitation at-risk rules, and generally provided that nonrecourse debt was treated as an amount at risk for investment credit purposes where (1) it was borrowed from an unrelated commercial lender, or represented a loan from or was guaranteed by certain governmental entities; (2) the property was acquired from an unrelated person; (3) the lender was unrelated to the seller; (4) the lender or a related person did not receive a fee with respect to the taxpayer's investment in the property; (5) the debt was not convertible debt; and (6) the nonrecourse debt did not exceed 80 percent of the credit base of the property.

Reasons for Change

Congress concluded that it is appropriate to apply the at-risk rules to real estate activities so as to limit the opportunity for overvaluation of property (resulting in inflated deductions), and to prevent the transfer of tax benefits arising from real estate activities to taxpayers with little or no real equity in the property.

The Act therefore extends the at-risk rules to real estate, with an exception for certain nonrecourse financing provided by organizations in the business of lending.

⁵³ Similar rules apply in the case of activities described in sec. 465(c)(2)(A) (which includes certain motion picture, farming, leasing, oil and gas and geothermal deposit activities).

Nonrecourse financing by the seller of real property or a promoter (or a person related to either the seller or promoter) is not treated as an amount at risk under the Act, because there may be little or no incentive to limit the amount of such financing to the value of the property. In the case of third party commercial financing secured solely by the real property, however, the lender is much less likely to make loans which exceed the property's value or which cannot be serviced by the property; it is more likely that such financing will be repaid and that the purchaser consequently has or will have real equity in the activity, and therefore that the financing may appropriately be treated as an amount at risk. Where the lender is a related person with respect to the taxpayer (other than the seller or the promoter, or a person related to either of them), however, Congress was concerned about opportunities for overvaluation of property (resulting in inflated deductions) and for the transfer of tax benefits attributable to amounts that resemble equity. Accordingly, financing from such a related person may be treated as an amount at risk under the Act only if the terms of the loan are commercially reasonable and on substantially the same terms as loans involving unrelated persons.

Explanation of Provision

Under the Act, the at-risk rules (which continue to apply to activities other than holding real property) are extended to the activity of holding real property. In the case of such a real estate activity, the Act provides an exception for qualified nonrecourse financing which is secured by real property used in the activity; the taxpayer is treated at-risk with respect to such financing. In the case of a real estate activity involving nonrecourse financing from related persons (not including the seller, a person receiving a fee for the investment (such as a promoter), or a person related to either of them), the financing can be treated as an amount at risk only if the terms of the loan are commercially reasonable and on substantially the same terms as loans involving unrelated persons.

Qualified nonrecourse financing

The exception provided for qualified nonrecourse financing is similar to the rules for qualified commercial financing under the investment tax credit at-risk rules of prior law, with certain modifications. Qualified nonrecourse financing generally includes financing that is secured by real property used in the activity and that is loaned by a Federal, State or local government or instrumentality thereof or guaranteed by a Federal, State, or local government, or is borrowed by the taxpayer from a qualified person, with respect to the activity of holding real property (other than mineral property). Convertible debt is not treated as qualified nonrecourse financing.

Generally, to the extent an activity was not subject to the at-risk rules (by virtue of section 465(c)(3)(D) of prior law), it will be treated under the Act as the activity of holding real property. The provision of services and the holding of personal property which is merely incidental to the activity of making real property available

as living accommodations is treated as part of the activity of holding real property.

For purposes of the provision, nonrecourse financing means financing with respect to which no person is personally liable, except to the extent otherwise provided in regulations. Regulations may set forth the circumstances in which guarantees, indemnities, or personal liability (or the like) of a person other than the taxpayer will not cause the financing to be treated as other than qualified nonrecourse financing.

Qualified persons include any person actively and regularly engaged in the business of lending money. Such persons generally include, for example, a bank, savings and loan association, credit union, or insurance company regulated under Federal, State, or local law, or a pension trust. However, qualified persons do not include (1) any person from which the taxpayer acquired the property (or a person related to such person), or (2) any person who receives a fee (e.g., a promoter) with respect to the taxpayer's investment in the property (or a person related to such person). Thus, for example, no portion of seller financing and promoter financing is qualified nonrecourse financing.

The Act adopts the definition of related person applicable under the prior law investment tax credit at-risk rules, with modifications. Under this rule, related persons generally include family members, fiduciaries, and corporations or partnerships in which a person has at least a 10-percent interest.

In the case of a real estate activity where nonrecourse financing is from a related person (other than seller or promoter financing, which cannot be treated as qualified nonrecourse financing), additional requirements are imposed. Such amounts can be treated as at risk if the terms of the loan are commercially reasonable and on substantially the same terms as loans involving unrelated persons. Congress imposed these additional requirements in the case of related party nonrecourse financing in real estate activities because of concern not only about the opportunity for overvaluation in related party financing, but also about the transfer of tax benefits attributable to amounts that are in the nature of equity contributions (rather than loans) supplied by related persons.

Congress intends that terms of nonrecourse financing are commercially reasonable if the financing is a written unconditional promise to pay on demand or on a specified date or dates a sum or sums certain in money, and the interest rate is a reasonable market rate of interest (taking into account the maturity of the obligation). If the interest rate is below a reasonable market rate, a portion of the principal may in fact represent interest, with the result that the stated principal amount may exceed the fair market value of the financed property (or the amount that actually is debt for tax purposes, if the property is less than 100 percent debt financed). Generally, an interest rate will not be considered commercially reasonable if it is significantly below the market rate on comparable loans by qualified persons who are not related (within the meaning of sec. 465(b)(3)(C)) to the borrowers under the comparable loans. In addition, it is likely that a loan which would be treated as a "below-market loan" within the meaning of section 7872(e) of the Code is not commercially reasonable.

Similarly, if the interest rate exceeds a reasonable market rate, or is contingent on profits or gross receipts, a portion of the principal amount may in fact represent a disguised equity interest (and a portion of the interest in fact is a return on equity) with the result that the stated principal amount may exceed the fair market value of the financed property (or the amount that actually is debt for tax purposes, if the property is not 100 percent debt financed). Thus, generally, an interest rate will not be considered commercially reasonable if it significantly exceeds the market rate on comparable loans by unrelated qualified persons. Nor will an interest rate be considered commercially reasonable if it is contingent. Congress does not intend, however, to limit the use of interest rates that are not fixed rates, provided that interest is calculated with respect to a market interest index such as the prime rate charged by a major commercial bank, LIBOR, the rate on government securities (such as Treasury bills or notes), or the applicable Federal rate (within the meaning of sec. 1274(d)). For example, an interest rate floating at 1 point above the prime rate charged by a major commercial bank will not generally be considered contingent.

The terms of the financing will also not be considered commercially reasonable if, for example, the term of the loan exceeds the useful life of the property, or if the right to foreclosure or collection with respect to the debt is limited (except to the extent provided under applicable State law).

Generally, Congress intended that the financing be debt with arms' length terms, to carry out the purpose of the at-risk rule to limit deductions to the taxpayer's amount at risk. Thus, nonrecourse financing from a person related to the taxpayer must be on substantially the same terms as financing involving unrelated persons.

Congress also intended that no inference is to be drawn from this provision (permitting certain nonrecourse financing to be treated as at risk without regard to whether the lender is a related person) as to the determination of a partner's distributive share of partnership items of a partnership under section 704, or a partner's share of partnership liabilities under section 752.

Under the Act, convertible debt is not treated as qualified nonrecourse financing. Congress has concluded that it is not appropriate to treat investors as at risk with respect to nonrecourse debt that is convertible and that consequently represents a right to an equity interest, because taxpayers are not intended to be treated as at risk for amounts representing others' rights to equity investments.

A special rule for partnerships provides that partnership-level qualified nonrecourse financing may increase a partner's (including a limited partner's) amount at risk, determined in accordance with his share of the liability (within the meaning of sec. 752), provided the financing is qualified nonrecourse financing with respect to that partner as well as with respect to the partnership. For the purpose of determining whether partnership borrowings are treated as qualified nonrecourse financing with respect to the partnership, the partnership is treated as the taxpayer. For the purpose of determining whether a share of partnership borrowings is treated as qualified nonrecourse financing with respect to a partner, the partner is also treated as the borrower. The amount for which part-

ners are treated as at risk under this rule may not exceed the total amount of the qualified nonrecourse financing at the partnership level.

In the case of property taken subject to a nonrecourse debt which constituted qualified nonrecourse financing in the hands of the original borrower, such debt may be considered as qualified nonrecourse financing as to the original borrower's transferee, provided that all the criteria for qualified nonrecourse financing are satisfied for that debt with respect to the transferee. The same rule applies to subsequent transfers of the property taken subject to the debt, and to the admission of new partners to a partnership (or sale or exchange of a partnership interest), so long as the debt constitutes qualified nonrecourse financing with respect to each transferee or new partner.

Aggregation rules

The prior and present law at-risk aggregation rules (sec. 465(c)(3)(B)) generally apply to the activity of holding real property. Under these rules, Congress intended that if a taxpayer actively participates in the management of several partnerships each engaged in the real estate business, the real estate activities of the various partnerships may be aggregated and treated as one activity with respect to that partner for purposes of the at-risk rules. Also it was intended that the regulations relating to the treatment of at-risk amounts in the case of an affiliated group of corporations (Treasury Reg. sec. 1.1502-45) be appropriately modified, in the case of an affiliated group which is engaged principally in the real estate business, to allow aggregation of the real estate activities, where the component members of the group are actively engaged in the management of the real estate business (not including real estate financing other than between members of the affiliated group).

Credit at-risk rules

The Act extends the investment tax credit at-risk rules (sec. 46(c)(8)) to activities involving real estate where a credit is otherwise allowable.⁵⁴ In applying the credit at-risk requirement that the financing not exceed 80 percent of the credit base, in the case of property where only a portion of the basis is eligible for a credit, under regulations, only the financing with respect to that portion shall be taken into account.

Effective Date

The extension of the at-risk rules to the activity of holding real property is effective for property placed in service after December 31, 1986, and for losses attributable to an interest in a partnership or S corporation or other pass-through entity that is acquired after December 31, 1986. One specific transition rule is provided.

⁵⁴ For special rules relating to the application of the credit at-risk rules to the low-income housing credit, see Title II, Part E, *supra*.

Revenue Effect

The provision is estimated to reduce fiscal year budget receipts by \$24 million in 1987 and \$15 million in 1988, and increase fiscal year budget receipts by \$30 million in 1989, \$23 million in 1990, and \$33 million in 1991.

C. Interest Deduction Limitations (Sec. 511 of the Act and secs. 163 (d) and (h) of the Code)⁵⁵

Prior Law

In general

Under prior law (Code sec. 163(d)), in the case of a noncorporate taxpayer, deductions for interest on indebtedness incurred or continued to purchase or carry property held for investment were generally limited to \$10,000 per year, plus the taxpayer's net investment income. Under prior and present law, investment interest paid or accrued during the year which exceeds the limitation on investment interest is not permanently disallowed, but is subject to an unlimited carryover and may be deducted in future years (subject to the applicable limitation) (prior-law sec. 163(d)(2)). Under prior law, interest incurred to purchase or carry certain property subject to a net lease generally was treated as investment interest, if certain trade or business deductions were less than 15 percent of the rental income, or if the lessor was guaranteed a specific return or guaranteed against loss of income.

Income and interest of partnerships and S corporations generally retained their entity level character (as either investment or non-investment interest or income) in the hands of the partners and shareholders. The prior-law treatment of interest incurred to purchase or carry a partnership interest or S corporation stock was not entirely clear.⁵⁶

Investment income and expenses

Investment income.—Investment income under prior law was income from interest, dividends, rents, royalties, short-term capital gains arising from the disposition of investment assets, and any amount of gain treated as ordinary income pursuant to the depreciation recapture provisions (secs. 1245, 1250, and 1254), but only if the income was not derived from the conduct of a trade or business (sec. 163(d)(3)(A)).

Investment expenses.—In determining net investment income, the investment expenses taken into account were trade or business expenses, real and personal property taxes, bad debts, depreciation, amortizable bond premiums, expenses for the production of income,

⁵⁵ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 402; H.Rep. 99-426, pp. 296-301; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1421; S.Rep. 99-313, pp. 802-808; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 151-157 (Conference Report).

⁵⁶ Proposed Treas. Reg. sec. 1.57-2(b)(2)(i) implied that the interest would not be investment interest where the underlying assets are not investment assets. Compare Rev. Proc. 72-18, 1972-1 C.B. 740, sec. 4.05 (relating to sec. 265 of the Code), and sec. 163(d)(7); see H.R. Rep. No. 97-760, 97th Cong., 2d Sess. at 476-477 (1982).

and depletion, to the extent these expenses were directly connected with the production of investment income.

For purposes of this determination, depreciation with respect to any property was taken into account on a straight-line basis over the useful life of the property, and depletion was taken into account on a cost basis.

Other interest

Under prior law, no limitation was imposed under section 163(d) on the deductibility of interest on indebtedness incurred for other purposes, e.g. to purchase or carry consumption goods. Under prior and present law, interest on indebtedness incurred in connection with the taxpayer's trade or business is also not subject to the limitation on the deductibility of interest expense under section 163.

Reasons for Change

Investment interest

Under prior law, leveraged investment property was subject to an interest limitation, for the purpose of preventing taxpayers from sheltering or reducing tax on other, non-investment income by means of the unrelated interest deduction. Congress concluded that the interest limitation should be strengthened so as to reduce the mismeasurement of income which can result from the deduction of investment interest expense in excess of current investment income, and from deduction of current investment expenses with respect to investment property on which appreciation has not been recognized.

Under prior law, no part of long-term capital gains were included in net investment income. Congress concluded that the continuation of this rule was inappropriate because long-term capital gains are generally taxed at the same effective rate as ordinary income when the Act is fully phased in.

Personal interest

Prior law excluded or mismeasured income arising from the ownership of housing and other consumer durables. Investment in such goods allowed consumers to avoid the tax that would apply if funds were invested in assets producing taxable income and to avoid the cost of renting these items, a cost which would not be deductible in computing tax liability. Thus, the tax system under prior law provided an incentive to invest in consumer durables rather than assets which produce taxable income and, therefore, an incentive to consume rather than save.

Although Congress believed that it would not be advisable to subject to income tax imputed rental income with respect to consumer durables owned by the taxpayer, it nevertheless concluded that it is appropriate and practical to address situations where personal expenditures are financed by borrowing. By phasing out the present deductibility of personal interest, Congress intended to eliminate from the prior tax law a significant disincentive to saving.

While Congress recognized that the imputed rental value of owner-occupied housing may be a significant source of untaxed income, the Congress nevertheless determined that encouraging

home ownership is an important policy goal, achieved in part by providing a deduction for residential mortgage interest. Therefore, the personal interest limit does not affect the deductibility of interest on debt secured by the taxpayer's principal residence or second residence, to the extent of the basis of the principal residence (or second residence). In addition, because the Congress intended to provide special treatment to taxpayers who borrow to finance medical or educational expenses, interest on debt secured by the taxpayer's principal residence or second residence that is used to pay educational or medical expenses of the taxpayer or a family member is deductible, even though such borrowings cause the total debt secured by the residence to exceed the taxpayer's basis in the residence, provided the total debt does not exceed the fair market value of the residence.

Explanation of Provisions

In general

In general, under the Act, personal interest is not deductible, and the deduction for investment interest is limited to investment income for the year with an indefinite carryforward of disallowed investment interest. The personal interest limitation does not apply to interest on debt secured by the taxpayer's principal residence (to the extent of its basis plus the amount of such debt used to pay certain educational or medical expenses) and interest on debt secured by a second residence of the taxpayer (to the extent of its basis plus the amount of such debt used to pay certain educational or medical expenses), provided the total amount of such debt does not exceed the fair market value of such residence.

The Act provides that the deduction for investment interest is limited to the amount of net investment income. Interest disallowed under the provision is carried forward and treated as investment interest in the succeeding taxable year. Interest disallowed under the provision is allowed in a subsequent year only to the extent the taxpayer has net investment income in such year. Interest expense that is paid or incurred in carrying on a trade or business is not subject to the interest deduction limitations under the Act but may be subject to the passive loss limitation (Act sec. 501) in some circumstances.

Definition of investment interest

Investment interest is defined to include interest paid or accrued on indebtedness incurred or continued to purchase or carry property held for investment. For this purpose, any interest held by the taxpayer in an activity involving a trade or business which is not a passive activity under the passive loss rule (as added by sec. 501 of the Act) and in which the taxpayer does not materially participate is treated as held for investment. Investment interest also includes interest expense properly allocable to portfolio income under the passive loss rule.

In addition, investment interest includes the portion of interest expense on indebtedness incurred or continued to purchase or carry an interest in a passive activity, to the extent attributable to portfolio income (within the meaning of the passive loss rule).

Investment interest does not include any interest that is taken into account in determining the taxpayer's income or loss from a passive activity.⁵⁷ Investment interest does not include interest properly allocable to a rental real estate activity in which the taxpayer actively participates, within the meaning of the passive loss rule. Investment interest also does not include any qualified residence interest, as described below.

Net investment income

Investment income includes gross income from property held for investment, gain (whether long term or short term) attributable to the disposition of property held for investment, and amounts treated as gross portfolio income under the passive loss rule.⁵⁸ Investment income also includes income from interests in activities, involving a trade or business, in which the taxpayer does not materially participate, if that activity is not treated as a passive activity under the passive loss rule.

Net investment income is investment income net of investment expenses. Investment expenses are deductible expenses (other than interest) directly connected with the production of investment income. Under the Act, if depreciation or depletion deductions are allowed with respect to assets that produce investment income, investment expense is determined utilizing the actual depreciation or depletion deductions allowable. In determining other deductible investment expenses, it is intended that investment expenses be considered as those allowed after application of the rule limiting deductions for miscellaneous expenses to those expenses exceeding two percent of adjusted gross income. In computing the amount of expenses that exceed the 2-percent floor, expenses that are not investment expenses are intended to be disallowed before any investment expenses are disallowed.

Property subject to a net lease is not treated as investment property under this provision, to the extent it constitutes a rental activity that is treated as a passive activity under the passive loss rule. Income from a rental real estate activity in which the taxpayer actively participates is not included in investment income.

The investment interest limitation is not intended to disallow a deduction for interest expense which in the same year is required to be capitalized (e.g., construction interest subject to sec. 263A) or is disallowed (e.g., under sec. 265 (relating to tax-exempt interest)).

⁵⁷ As under prior law, interest on indebtedness incurred to purchase an interest in a trade or business partnership as a general partner (that is not treated as an interest in a passive activity) generally is not treated as investment interest for purposes of sec. 163(d). See, e.g., Technical Advice Memorandum 8235004 (May 21, 1982). Similarly, it is intended that interest on indebtedness to acquire stock in an S corporation whose assets are used solely in conducting a trade or business, where the stock is not an interest in a passive activity because the taxpayer materially participates in the trade or business of the S corporation, is not investment interest, but rather is treated as interest incurred or continued in connection with a trade or business. In addition, interest treated as allocable to an interest in a partnership, or stock in an S corporation, that is treated as an interest in a passive activity under the passive loss rule (see discussion of the passive loss rule, *supra*), is not subject to the investment interest limitation (except to the extent such interest expense is allocated to portfolio income under the passive loss rule).

⁵⁸ A technical correction (deleting the flush language at the end of Act sec. 163(d)(4)(B)) may be needed so that the statute reflects this intent. Such a correction was included in the versions of H. Con. Res. 395 that passed the House and the Senate in the 99th Congress.

Personal interest

Under the Act, personal interest is not deductible. Personal interest is any interest, other than interest incurred or continued in connection with the conduct of a trade or business (other than the trade or business of performing services as an employee),⁵⁹ investment interest, or interest taken into account in computing the taxpayer's income or loss from passive activities for the year. Thus, personal interest includes, for example, interest on a loan to purchase an automobile, interest on a loan to purchase a life insurance policy, and credit card interest, where such interest is not incurred or continued in connection with the conduct of a trade or business. Personal interest also includes interest on underpayments of individual Federal, State or local income taxes notwithstanding that all or a portion of the income may have arisen in a trade or business, because such taxes are not considered derived from the conduct of a trade or business.⁶⁰ However, personal interest does not include interest payable on estate tax deferred under sections 6163 or 6166.

Personal interest does not include qualified residence interest of the taxpayer, as discussed below.

Qualified residence interest

Under the Act, qualified residence interest is not subject to the limitation on personal interest. Qualified residence interest generally means interest on debt secured by a security interest valid against a subsequent purchaser under local law on the taxpayer's principal residence or a second residence of the taxpayer.⁶¹ Qualified residence interest means interest on such debt to the extent that the debt does not exceed the amount of the taxpayer's basis for the residence (including the cost of home improvements), plus the amount of qualified medical and qualified educational expenses. Qualified residence interest does not include interest on any portion of such debt in excess of the fair market value of the residence. Interest on a loan secured by a recorded deed of trust, mortgage, or other security interest in a taxpayer's principal or second residence, in a State such as Texas where such recorded security instrument will be rendered ineffective or the enforceability of such instrument will be otherwise restricted by State and local laws such as the Texas homestead law, shall be treated as qualified residence interest, provided that such interest is otherwise qualified residence interest.⁶² The fact that, under applicable State or

⁵⁹ Thus, for example, interest on debt to finance an employee business expense is not deductible, under this rule.

⁶⁰ Personal interest does not include interest on taxes, other than income taxes, that are incurred in connection with a trade or business. (For the rule that taxes on net income are not attributable to a trade or business, see Treas. Reg. sec. 1.62-1(d), relating to nondeductibility of State income taxes in computing adjusted gross income.) In addition, personal interest does not include interest of an S corporation which is attributable to an underpayment of income tax from a year in which the corporation was a C corporation or from the underpayment of the taxes imposed by sec. 1374 or 1375. Nor does personal interest include interest on an underpayment of income tax of a corporation payable by a shareholder by reason of transferee liability (under sec. 6901).

⁶¹ Generally, under local law such a security interest must be recorded.

⁶² See colloquy between Senators Bentsen and Packwood, 132 Cong. Rec. S13956 (September 27, 1986); and Statement of Chairman Rostenkowski, 132 Cong. Rec. H8363 (September 25, 1986).

local law, a buyer does not acquire legal title to a residence he has purchased by means of debt until the debt is fully paid is not intended to have the result that the debt is treated as not secured by the residence, for purposes of this provision. Qualified residence interest is not subject to the limitation on personal interest even though the borrowed funds are used for personal expenditures.

Residences of the taxpayer.—The taxpayer's principal residence is intended to be the residence that would qualify for rollover of gain under section 1034 if it were sold. A principal residence may be a condominium or cooperative unit.⁶³ A dwelling unit will qualify as a residence only if it meets the requirements for use as a residence under section 280A. A second residence of the taxpayer includes a dwelling unit used by the taxpayer as a residence within the meaning of section 280A (gain on which could qualify for rollover treatment under section 1034 if the residence were used as a principal residence). If a second residence is not rented at any time during the taxable year, the taxpayer need not meet the requirement of section 280A(d)(1) that the residence be used for personal (non-rental) purposes for the greater of 14 days or 10 percent of the number of days it is rented.⁶⁴ In the case of a joint return, a second residence includes a residence used by the taxpayer or his spouse and which is owned by either or both spouses.

Qualified residence interest may include interest paid by the taxpayer on debt secured by a residence of the taxpayer that he owns jointly or as a tenant in common, provided that all the requirements for qualified residence interest are met.

Qualified residence interest not treated as personal interest under the provision may include all or a portion of the interest on debt secured by the taxpayer's stock in a housing cooperative unit that is a residence of the taxpayer, or by his proprietary lease with respect to the unit. In addition, qualified residence interest not treated as personal interest under the provision may include all or a portion of the taxpayer's share under section 216 of interest expense of the housing cooperative allocable to his unit and to his share of common residential (but not commercial) areas of the cooperative. In applying the qualified residence interest exception where the taxpayer's residence is a cooperative housing unit, it is intended that regulations will be issued providing that the basis and fair market value limitations will apply in such a way as to achieve a result comparable to that which would occur if the taxpayer owned his share of the assets of the cooperative directly.

In the case of housing cooperatives, debt secured by stock held by the taxpayer as a tenant-stockholder is treated as secured by the residence the taxpayer is entitled to occupy as a tenant-stockholder. Where the stock may not be used as security by virtue of restrictions arising, for example, pursuant to local or State law, or pursuant to reasonable restrictions in the cooperative agreement, the stock may be treated as securing such debt, if the taxpayer es-

⁶³ A principal residence may also include a houseboat or house trailer. See Treas. Reg. sec. 1.1034-1(c)(3).

⁶⁴ A technical correction may be needed so that the statute properly reflects this intent. Such a correction was included in the versions of H. Con. Res. 395 that passed the House and the Senate in the 99th Congress.

establishes to the satisfaction of the Internal Revenue Service that the debt was incurred to acquire the stock.

In the case of a husband and wife filing separate returns, each spouse may deduct interest on debt secured by one residence. Alternatively the spouses may consent in writing to allow one spouse to claim interest on debt secured by two residences at least one of which is a principal residence. In the latter case, any interest of the other spouse on debt secured by a residence is treated as interest which may be subject to disallowance.

In the case of a taxpayer who owns more than two residences, the taxpayer may designate each year which residence (other than the taxpayer's principal residence) the taxpayer wishes to have treated as the second residence.

Amount of limitation.—Qualified residence interest is calculated as interest on debt secured by the residence, up to the amount of the basis of the residence, plus the amount incurred after August 16, 1986, for qualified medical and educational expenses. If the amount of any debt incurred on or before August 16, 1986, and secured by the residence on August 16, 1986 (reduced by any principal payments thereon) exceeds the taxpayer's basis for the residence, then such amount (reduced by any principal payments thereon) shall be substituted for the taxpayer's basis in applying the preceding sentence. Increases after August 16, 1986 in the amount of debt secured by the residence on August 16, 1986 (for example, in the case of a line of credit) are treated as incurred after August 16, 1986. Thus, interest on outstanding debt secured by the taxpayer's principal or second residence, incurred on or before August 16, 1986, is treated as fully deductible (to the extent the debt does not exceed the fair market value of the residence), regardless of whether the borrowed funds are used for personal expenditures. Interest on debt secured by the taxpayer's principal or second residence, incurred after August 16, 1986, which debt exceeds the taxpayer's basis in the residence, is allowed only if the debt is incurred for qualified medical or educational expenses.

For purposes of determining qualified residence interest, the amount of the taxpayer's basis is determined without taking into account adjustments to basis under section 1034(e) (relating to roll-over of gain upon the sale of the taxpayer's principal residence), or 1033(b) (relating to involuntary conversions). The basis for the residence includes the cost of improvements to the residence that are added to the basis of the residence.⁶⁵ The taxpayer's basis is determined without regard to other adjustments to basis, such as depreciation. Thus, for example, if a taxpayer's second residence is rented to tenants for a portion of the year, and its basis is reduced by deductions for depreciation allowed in connection with the rental use of the property, the amount of his basis for the residence is not reduced by such deductions for purposes of this provision. Where the basis of a residence is determined under section 1014 (relating to the basis of property acquired from a decedent), the basis under this provision is the basis determined under section 1014 (plus the cost of home improvements made by the taxpayer

⁶⁵ In the case of a home improvement loan, it is intended that the basis limitation under this provision will be adjusted to reflect the use of the loan proceeds for home improvements.

that are included in basis). In general, under this provision, the amount of debt on which the taxpayer may deduct interest as qualified interest will not be less than his purchase price for the residence.

Generally, interest on debt secured by the taxpayer's principal or second residence (up to the amount of the taxpayer's basis) is treated as qualified residence interest. Thus, for example, if the taxpayer's basis in his principal residence is \$100,000 (and this amount does not exceed fair market value), and the residence is secured by debt in the amount of \$60,000, interest on a refinancing for a total of \$100,000 (including the original \$60,000 plus an additional \$40,000) is treated as qualified residence interest, regardless of the fact that the borrowed funds are used for personal expenditures by the taxpayer.

Qualified medical expenses are those amounts paid for medical care within the meaning of sec. 213(d)(1)(A) and (B) (not including amounts paid for insurance covering medical care under sec. 213(d)(1)(C)), of the taxpayer, his spouse and dependents.

Qualified educational expenses are those amounts paid for reasonable living expenses while away from home, and for any tuition and related expenses incurred that would qualify as scholarships (under sec. 117(b) as amended by the Act), for the taxpayer, his spouse or dependent, while a student at an educational organization described in section 170(b)(1). Thus, tuition expenses for primary, secondary, college and graduate level education are generally included in qualified educational expenses. The qualified educational expenses or qualified medical expenses must be incurred within a reasonable period of time before or after the debt is incurred. Medical or educational expenses that are reimbursed are not intended to be treated as qualified medical or educational expenses.

Interest on debt that is used to pay qualified medical or educational expenses, to be deductible as qualified residence interest, must be secured by the taxpayer's principal residence or second residence. Interest expense is so treated if the debt is so secured at the time the interest is paid or accrued.

Effective Date

The investment and personal interest limitations, as amended by the Act, are effective for taxable years beginning on or after January 1, 1987, regardless of when the obligation was incurred. The limitations are phased in. The personal interest limitation and the investment interest limitation are each phased in separately at the same rate.

Investment interest.—Under the Act, the amount of investment interest disallowed during the phase-in period is generally the sum of (i) the amount of investment interest that would have been disallowed under prior law plus (ii) the applicable portion of the additional amount of investment interest that would be disallowed once the provision is fully phased in. The amount of passive losses allowed under the passive loss phase-in rule (*supra*) that are sub-

tracted from investment income are subject the investment interest phase-in applicable percentages.⁶⁶

The applicable percentage under the investment interest phase-in rule is 35 percent in 1987, 60 percent in 1988, 80 percent in 1989, 90 percent in 1990 and 100 percent in 1991 and thereafter. Thus, for example, if an individual taxpayer has \$20,000 of investment interest expense in excess of investment income in 1987, 35 percent of the amount that does not exceed \$10,000 or \$3,500, plus the amount in excess of the \$10,000 allowance would be disallowed. Thus, \$13,500 would be disallowed, and \$6,500 would be allowed for 1987 (assuming the taxpayer had no net passive loss for the year).

With respect to the investment interest limitation, for taxable years beginning on or after January 1, 1987 and before January 1, 1991, the amount of net investment income is reduced by the amount of losses from passive activities that is allowed as a deduction by virtue of the phase-in of the passive loss rule (other than net losses from rental real estate in which the taxpayer actively participates). For example, if a taxpayer has a passive loss which would be disallowed were the passive loss rule fully phased in (as in taxable years beginning after December 31, 1990), but a percentage of which is allowed under the passive loss phase-in rule, the amount of loss so allowed reduces the amount of the taxpayer's net investment income under the investment interest limitation for that year.

Further, any amount of investment interest that is disallowed under the investment interest limitation during the period that the investment interest limitation is phased in (that is, taxable years beginning on or after January 1, 1987 and before January 1, 1991) is not allowed as a deduction in a subsequent year except to the extent the taxpayer has net investment income in excess of investment interest in the subsequent year.⁶⁷

Personal interest.—The limitation on personal interest is phased in over the same period and applying the same percentages as for the investment interest limitation. No carryforwards are permitted for disallowed personal interest.

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$620 million in 1987, \$4,511 million in 1988, \$6,260 million in 1989, \$8,370 million in 1990, and \$9,597 million in 1991.

⁶⁶ A technical correction may be needed so that the statute properly reflects this intent. Such a correction was included in the versions of H. Con. Res. 395 that passed the House and the Senate.

⁶⁷ For example, assume that, in 1987, the taxpayer has a passive loss of \$80,000 of which \$30,000 is attributable to rental real estate activities in which the taxpayer actively participates. Assuming the taxpayer is entitled to deduct \$25,000 of active rental losses, then 35 percent of the remaining \$55,000, or \$19,250, would be suspended under the passive loss limitation. Of the deductible \$35,750 of passive losses, the portion not attributable to active rental activities reduces the taxpayer's net investment income under the investment interest limitation for 1987.

That portion is determined by first calculating the ratio of (1) the amount of 1987 losses that are *not* attributable to rental real estate activities in which the taxpayer actively participates (\$50,000) to (2) the amount of 1987 losses that are subject to the passive loss phase-in rule (\$55,000). The ratio is applied to the total amount of passive losses allowed in 1987, other than those allowed under the \$25,000 allowance (\$35,750), to determine the portion allowed under the passive loss phase-in rule. This portion (i.e., \$32,500) is subtracted from the amount of net investment income, under the investment interest limitation phase-in rule.

TITLE VI—CORPORATE TAXATION

A. Corporate Tax Rates (Sec. 601 of the Act and sec. 11 of the Code)¹

Prior Law

Under prior law, corporate taxable income was subject to tax under a 5-step graduated rate structure. The top corporate tax rate was 46 percent on taxable income over \$100,000. The corporate taxable income brackets and tax rates were as set forth in the table below.

Taxable income	Tax rate (percent)
Not over \$25,000	15
Over \$25,000 but not over \$50,000	18
Over \$50,000 but not over \$75,000	39
Over \$75,000 but not over \$100,000	40
Over \$100,000	46

This schedule of corporate tax rates was originally enacted in the Economic Recovery Tax Act of 1981 (ERTA), effective for 1983 and later years. For 1982, the applicable rates were 16 percent for taxable income not over \$25,000, and 19 percent for taxable income over \$25,000 but not over \$50,000. For taxable years after 1978 and before 1982, the rates were 17 percent and 20 percent, respectively, for the lowest two brackets.

An additional 5-percent corporate tax was imposed on a corporation's taxable income in excess of \$1 million. The maximum additional tax was \$20,250. This provision phased out the benefit of graduated rates for corporations with taxable income between \$1,000,000 and \$1,405,000; corporations with taxable income in excess of \$1,405,000, in effect, paid a flat tax at a 46-percent rate. This provision was enacted in the Deficit Reduction Act of 1984, effective for taxable years beginning after 1983.²

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 301; H.Rep. 99-426, pp. 231-233; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 601; S.Rep. 99-313, pp. 219-221; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 158-159 (Conference Report).

² Under prior and present law, rules are provided in the Code to prevent the benefits of graduated rates from being proliferated through the use of multiple, commonly controlled corporations (secs. 1551, 1561-1564). Other statutory provisions attempt to limit the use of corporations to avoid the imposition of individual income tax. These are principally the accumulated earnings tax (sec. 531 et seq.), the personal holding company tax (sec. 541 et seq.), and certain personal service corporation provisions (sec. 269A).

Reasons for Change

A principal objective of the Act was to reduce marginal tax rates on income earned by individuals and by corporations. Congress believed that lower tax rates promote economic growth by increasing the rate of return on investment. Lower tax rates also improve the allocation of resources within the economy by reducing the impact of tax considerations on business and investment decisions. In addition, lower tax rates promote compliance by reducing the potential gain from engaging in transactions designed to avoid or evade income tax. Under the Act, the maximum corporate rate is reduced from 46 percent to 34 percent.

Although Congress believed that the graduated rate structure should be retained to encourage growth in small business, it felt that the benefit of the lower rates should be limited to smaller corporations. Accordingly, under the Act the benefit of the graduated rate structure is phased out beginning at \$100,000 of taxable income as compared to \$1 million under prior law. In addition, Congress simplified the graduated rate structure for corporations by reducing the number of brackets from five to three.

Explanation of Provision

Under the Act, tax would be imposed on corporations under the schedule shown in the following table.

Taxable income	Tax rate (percent)
Not over \$50,000	15
\$50,000 to \$75,000	25
Over \$75,000	34

An additional 5-percent tax is imposed on a corporation's taxable income in excess of \$100,000. The maximum additional tax is \$11,750. This provision phases out the benefit of graduated rates for corporations with taxable income between \$100,000 and \$335,000; corporations with income in excess of \$335,000, in effect, will pay a flat tax at a 34-percent rate.

Effective Date

The revised corporate tax rates are effective for taxable years beginning on or after July 1, 1987. Income in taxable years that include July 1, 1987 (other than as the first date of such year) is subject to a blended rate under the rules specified in section 15 of the Code.

Under section 15, tentative taxes for the entire taxable year are first computed by 1) applying the rates (including the applicable phaseout of the graduated rates) for the period before July 1, 1987 to the taxable income for the entire taxable year, and 2) applying the rates (including the applicable phaseout of the graduated rates) for the period on and after July 1, 1987 to the entire taxable year. The actual tax for the taxable year is then computed as the sum of

that proportion of each tentative tax which the number of days in each period bears to the number of days in the entire taxable year.³

As one example, in the case of a calendar year corporate taxpayer with \$2 million of ordinary taxable income, the tax for 1987 is computed by first determining a tentative tax under prior law of \$920,000 (46 percent of \$2 million) and a tentative tax under the amended law of \$680,000 (34 percent of \$2 million). The actual tax equals the sum of \$456,219.18 (181/365 of \$920,000) and \$342,794.52 (184/365 of \$680,000) or \$799,013.70.⁴

Revenue Effect

The provision is estimated to reduce fiscal year budget receipts by \$6,711 million in 1987, \$20,068 million in 1988, \$27,505 million in 1989, \$29,999 million in 1990, and \$32,415 million in 1991.

³ See Treas. Reg. sec. 1.21-1(b).

⁴ 181 is the number of days in the calendar year 1987 prior to July 1; 184 is the number of days in the calendar year 1987 on or after July 1.

B. Corporate Dividends Received Deduction (Sec. 611 of the Act and secs. 243-246A of the Code)⁵

Prior Law

Under prior law, corporations that received dividends generally were entitled to a deduction equal to 85 percent of the dividends received (sec. 243(a)(1)). Under prior and present law, dividends received from a small business investment company operating under the Small Business Investment Act of 1958 (sec. 243(a)(2)), and "qualifying dividends" received from certain members of an affiliated group, are eligible for a 100-percent dividends received deduction (sec. 243(a)(3)). In addition, under prior and present law, pursuant to Treasury regulations, dividends received by one member of an affiliated group filing a consolidated return from another member of the group are not taxed to the recipient (Treas. Reg. sec. 1.1502-14).

There are exceptions for certain dividends received by a U.S. corporation from a foreign corporation and from certain other entities. The dividends received deduction is limited in certain other circumstances.

Reasons for Change

Under prior law, dividends eligible for the 85-percent dividends received deduction were taxed at a maximum rate of 6.9 percent (15 percent of the top corporate rate of 46 percent). The Congress did not believe that the reduction in corporate tax rates generally should result in a significant reduction in this effective rate. Thus, the dividends received deduction has been reduced to 80 percent, resulting in a maximum rate of 6.8 percent on dividends subject to the reduced top corporate rate (20 percent of the top corporate rate of 34 percent).

Explanation of Provision

Under the Act, the 85-percent dividends received deduction is lowered to 80 percent.

Effective Date

The reduction in the dividends received deduction is applicable to dividends received or accrued after December 31, 1986, in taxable years ending after such date.

⁵ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 303; H.Rep. 99-426, pp. 243-246; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 611; S.Rep. 99-313, pp. 221; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 161 (Conference Report).

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$140 million in 1987, \$223 million in 1988, \$225 million in 1989, \$239 million in 1990, and \$253 million in 1991.

C. Dividend Exclusion for Individuals (Sec. 612 of the Act and sec. 116 of the Code)⁶

Prior Law

Under prior law, the first \$100 of qualified dividends received by an individual shareholder (\$200 by a married couple filing jointly) from domestic corporations was excluded from income (sec. 116(a)).

The dividend exclusion for individuals did not apply to dividends received from an organization that was exempt from tax under section 501 or a tax-exempt farmers' cooperative in either the year of distribution or the preceding year (sec. 166(b)(1)), dividends received from a real estate investment trust (sec. 116(b)(2)), dividends received from a mutual savings bank that received a deduction for the dividend under section 591 (sec. 116(c)(1)), or to an ESOP dividend for which the corporation received a deduction (sec. 116(e)). The exclusion was limited with respect to dividends received from a regulated investment company (sec. 116(c)(2)).

Reasons for Change

The Congress believed that the dividend exclusion for individuals under prior law provided little relief from the two-tier corporate income tax because of the low limitation. As an exclusion from income, it also tended to benefit high-bracket taxpayers more than low-bracket taxpayers. On balance, the Congress believed it is preferable to eliminate the exclusion and use the revenues to reduce tax rates.

Explanation of Provision

Under the Act, the dividend exclusion for individuals is repealed.

Effective Date

The provision is effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provision is expected to increase fiscal year budget receipts by \$212 million in 1987, \$573 million in 1988, \$580 million in 1989, \$605 million in 1990, and \$631 million in 1991.

⁶ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 313; H.Rep. 99-426, p. 247; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 612; S.Rep. 99-313, p. 222; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 162 (Conference Report).

D. Stock Redemption Payments (Sec. 613 of the Act and section 162(l) of the Code)⁷

Prior Law

Under prior and present law, a deduction is allowed for all ordinary and necessary business expenses incurred during the taxable year in carrying on a trade or business (sec. 162(a)). A deduction is not allowed currently, however, for the costs of acquiring property whose life extends substantially beyond the close of the taxable year; such costs must be capitalized (sec. 263).

The purchase of stock, including the repurchase by an issuing corporation of its own stock, is generally treated as a capital transaction that does not give rise to a current deduction. Some authority existed under prior law for the proposition that, in certain extraordinary circumstances, amounts paid by a corporation to repurchase its stock may be fully deductible in the year paid. The validity of this authority, however, has been questioned. Thus, in *Five Star Manufacturing Co. v. Comm'r*, 355 F.2d 724 (5th Cir. 1966), the court relied on the fact that liquidation of the corporation was imminent in the absence of the repurchase, and that no value would have been realized by the shareholders on such a liquidation, in upholding the deduction of the payments. Subsequent cases, however, strictly limited the holding in *Five Star* to its peculiar facts,⁸ or questioned its validity.⁹

The Supreme Court has held that the requirement that stock redemption payments be capitalized extends not only to amounts representing consideration for the stock itself, but also to expenses such as legal, brokerage, and accounting fees incident to the acquisition.¹⁰

Reasons for Change

Congress understood that some corporate taxpayers were taking the position that expenditures incurred to repurchase stock from stockholders to prevent a hostile takeover of the corporation by such shareholders—so-called “greenmail” payments—were deductible business expenses. Congress wished to provide expressly that

⁷ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 314; H.Rep. 99-426, pp. 248-249; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 613; S.Rep. 99-313, pp. 222-224; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 168-169 (Conference Report).

⁸ See, e.g., *Jim Walter Corp. v. United States*, 498 F.2d 631 (5th Cir. 1974); *Markham & Brown, Inc. v. United States*, 648 F.2d 1043 (5th Cir. 1981); *H. & G. Industries v. Comm'r*, 495 F.2d 653 (3d Cir. 1974); *Harder Services, Inc. v. Comm'r*, 67 T.C. 585 (1976), aff'd without opinion 573 F.2d 1290 (2d Cir. 1977).

⁹ See, e.g., *Proskauer v. Comm'r*, 46 T.C.M. 679, 684 (1983), noting that the *Five Star* court may have applied the “primary purpose” standard that was often used in determining whether the expenditure was capital in nature before the Supreme Court’s rejection of that standard in *Woodward v. Comm'r*, 397 U.S. 572 (1970).

¹⁰ See *Woodward v. Comm'r*, supra; *United States v. Hilton Hotels Corp.*, 397 U.S. 580 (1970).

all expenditures by a corporation incurred in purchasing its own stock, whether representing direct consideration for the stock, a premium payment above the apparent stock value, or costs incident to the purchase, and whether incurred in a hostile takeover situation or otherwise, are nonamortizable capital expenditures.

Explanation of Provision

The Act denies a deduction for any amount paid or incurred by a corporation in connection with the redemption of its stock. Congress intended that amounts subject to this provision will include amounts paid to repurchase stock; premiums paid for the stock; legal, accounting, brokerage, transfer agent, appraisal, and similar fees incurred in connection with the repurchase; and any other expenditure that is necessary or incident to the repurchase, whether representing costs incurred by the purchasing corporation or by the selling shareholder (and paid or reimbursed by the purchasing corporation), or incurred by persons or entities related to either.¹¹ The provision was also intended to apply to any amount paid by a corporation to a selling shareholder (or any related person) pursuant to an agreement entered into as part of or in connection with a repurchase of stock, whereunder the seller agrees not to purchase, finance a purchase, acquire, or in any way be a party or agent to the acquisition of stock of the corporation for a specified or indefinite period of time (so-called "standstill" agreements).

The provision does not apply to interest deductible under section 163. In addition, it does not apply to amounts constituting dividends within the meaning of section 561, relating to payments (or deemed payments) for purposes of the accumulated earnings, personal holding company, and foreign personal holding company taxes, and for purposes of the regular income tax in the case of regulated investment companies and real estate investment trusts.¹² Thus, such amounts continue to qualify for the dividends paid deduction to the same extent as under prior law.

Further, the provision does not apply to otherwise deductible expenses incurred by a regulated investment company that is an open-end mutual fund in connection with the redemption of its stock upon the demand of a shareholder. Thus, for example, costs incurred by such a company in processing applications for redemption and issuing checks in payment for redeemed shares are deductible to the same extent as under prior law.¹³

While the phrase "in connection with [a] redemption" was intended to be construed broadly, Congress did not intend the provision to deny a deduction for otherwise deductible amounts paid in a transaction that has no nexus with the redemption other than being proximate in time or arising out of the same general circumstances. For example, if a corporation redeems a departing employee's stock and makes a payment to the employee in discharge of the corporation's obligations under an employment contract, the

¹¹ Thus, the provision was intended to apply where the costs are incurred indirectly as well as directly, for example, by a controlling shareholder, a controlled subsidiary, or other related party.

¹² See secs. 535, 545, 556, 852, and 857.

¹³ See Rev. Rul. 73-463, 1973-2 C.B. 34.

payment in discharge of the contractual obligation is not subject to disallowance under this provision.¹⁴ Payments in discharge of other types of contractual obligations, in settlement of litigation, or pursuant to other actual or potential legal obligations or rights, may also be outside the intended scope of the provision to the extent it is clearly established that the payment does not represent consideration for the stock or expenses related to its acquisition, and is not a payment that is a fundamental part of a "standstill" or similar agreement.

Congress anticipated that where a transaction is not directly related to a redemption but is proximate in time, the Internal Revenue Service will scrutinize the transaction to determine whether the amount purportedly paid in the transaction is reasonable. Thus, even where the parties have countervailing tax interests, the parties' stated allocation of the total consideration between the redemption and the unrelated transaction will be respected only if it is supported by all the facts and circumstances.¹⁵

However, Congress intended that agreements to refrain from purchasing stock of a corporation or other similar types of "standstill" agreements in all events will be considered related to any redemption of the payee's stock. Accordingly, payments pursuant to such agreements are nondeductible under this provision provided there is an actual purchase of all or part of the payee's stock. Congress intended no inference regarding the deductibility of payments under standstill or similar agreements that are unrelated to any redemption of stock owned by the payee.

In denying a deduction for payments in connection with redemptions of stock, Congress intended no inference regarding the deductibility of such payments under prior law. Moreover, no inference was intended as to the character of such payments in the hands of the payee.

Effective Date

The provision is effective for amounts paid or incurred after February 28, 1986.

Revenue Effect

The provision is estimated to have no effect on fiscal year budget receipts.

¹⁴ This would be so whether the employment contract and the redemption agreement were contained in one document or separate documents, and whether or not they were separately negotiated. Likewise, this provision was not intended to deny an employer a deduction for compensation where a deduction has been deferred under other provisions of the Code, and the deduction becomes allowable when the employer reacquires the employee's stock. See, e.g., sections 83 and 421(b).

¹⁵ Compare *American International Coal Co. v. Comm'r*, PH Memo TC para. 82,204 (1982) (corporation's payment to shareholder-employee was nondeductible distribution in redemption of stock, not compensation for services) with *Atwater & Co. v. Comm'r*, 10 T.C. 218 (1948) (corporation's payment to shareholder-employee under agreement to repurchase shares upon termination of employment, held, deductible to extent represented additional compensation for services).

E. Extraordinary Dividends Received by Corporate Shareholders (Sec. 614 of the Act and sec. 1059 of the Code)¹⁶

Prior Law

Under prior (and present) law, if a corporate shareholder received an "extraordinary dividend" on stock and disposed of the stock without having held it for more than one year, the basis of the stock was reduced by the amount of the nontaxed portion of the dividend (sec. 1059). If the nontaxed portion of an extraordinary dividend exceeded the shareholder's adjusted basis in the stock with respect to which it was paid, the excess was treated as gain from the sale or exchange of property at the date on which the stock became ex-dividend.

An extraordinary dividend was defined in terms of the size of the dividend in relation to the shareholder's adjusted basis of the share of stock with respect to which it was distributed. A dividend was extraordinary if it equalled or exceeded a "threshold percentage" of 10 percent (5 percent in the case of a share of stock preferred as to dividends) of the shareholder's basis in the share, determined without regard to this provision.

In the case of a cash distribution, the nontaxed portion of the dividend was the amount offset by the dividends received deduction. In the case of a distribution of property, the nontaxed portion was the fair market value of the property (reduced, as provided in section 301(b)(2), for liabilities assumed by the shareholder or to which the shareholder is subject), less any portion of such amount that is not offset by the dividends received deduction.

In general, under both prior and present law, a distribution in redemption of stock that is essentially equivalent to a dividend is treated as a dividend for tax purposes (sec. 302). A redemption of the stock of a shareholder is essentially equivalent to a dividend if it does not result in a meaningful reduction in the shareholder's proportionate interest in the distributing corporation. In some situations it is unclear what constitutes a meaningful reduction in interest. Distributions in partial liquidation of the distributing corporation are not treated as dividends if the recipient is a non-corporate shareholder.

Reasons for Change

Congress believed that the extraordinary dividend provision, as enacted in 1984, had not been an adequate deterrent to the tax-motivated transactions at which the provision was directed. Taxpayers

¹⁶ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 614; S. Rep. 99-313, pp. 248-250; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 163-166 (Conference Report).

were able to obtain the tax benefits that Congress intended to curtail, simply by holding stock beyond the one-year period.

For example, under prior law, a corporation could acquire stock in another corporation following or in anticipation of the latter's announcement that it would pay a large dividend and could hold the stock with the intention of disposing of it shortly after the expiration of the one-year holding period necessary to avoid a basis reduction under section 1059. After the distribution, the shareholder would have dividend income taxable under prior law at a maximum rate of 6.9 percent, and the market price of the dividend-paying stock would have declined by approximately the value of the dividend. However, provided the stock was held for more than one year, the shareholder's basis in the shares would reflect its full cost, since no reduction in the basis was required. The taxpayer could then dispose of the stock for an amount reflecting the decrease in market price due to payment of the dividend. Since the taxpayer's basis in the stock was not reduced, this disposition could either create a long-term capital loss for tax purposes (which the taxpayer could use to offset other capital gains), or it might reduce any long-term capital gain the taxpayer would otherwise have realized on disposition of the stock. Under the prior law maximum 28 percent long-term capital gains rate, the taxpayer could thus receive a tax benefit of 28 percent of the amount of the dividend. Since the dividend was taxed at a maximum rate of 6.9 percent, the taxpayer could thus obtain a 21.1 percent tax "arbitrage" benefit at essentially no actual economic cost.¹⁷ The Act's reduction of the maximum rate on intercorporate dividends to 6.8 percent and the elimination of a preferential rate for long-term capital gains (thus making long-term capital losses relatively more valuable) increases the potential arbitrage benefit for a corporation.

Congress believed that the circumstances should be expanded in which a corporate shareholder is required to reduce its basis in stock for the nontaxed portion of an extraordinary dividend. However, in light of the longer holding period, Congress believed it appropriate to mitigate the application of the definition of extraordinary dividends by reference to basis under prior law, if the shareholder can establish a higher fair market value of the stock to the satisfaction of the Commissioner.

Congress understood that because the law is not entirely clear when a redemption is essentially equivalent to a dividend, there are cases in which individual distributees take the position that a redemption is a sale or exchange, while corporate distributees take the position the redemption is a dividend. Similar differences might occur in the case of partial liquidation distributions that individual distributees must treat as a sale or exchange, if corporate distributees take the position the distribution is a dividend.

¹⁷ Although the shareholder in such transactions was exposed to the risk that the value of the stock would decline during the one-year holding period, taxpayers continued to engage in such transactions. Given the substantial potential tax benefit, the apparent premise for the more than one year holding period requirement of prior law—that the shareholder's exposure to market risk during this period would be sufficient to deter such tax arbitrage—in many situations appeared to be unfounded.

Explanation of Provisions

Under the Act, a corporation that disposes of a share of stock must reduce its basis in the stock (but not below zero) by the nontaxed portion of any extraordinary dividend paid with respect to the share, if a holding period requirement described below, is not met. Except for purposes of determining whether subsequent distributions are extraordinary, this basis reduction is required only for purposes of determining gain or loss on the disposition of the share. If the aggregate nontaxed portions of extraordinary dividends exceed the shareholder's basis, the excess is treated as gain from a sale or exchange at the time of disposition.

The determination whether a dividend is extraordinary is generally made under the prior law percentage-of-adjusted-basis test. Thus, under the Act, a dividend is extraordinary if it equals or exceeds the "threshold percentage" of 10 percent (5 percent in the case of preferred stock) of the shareholder's basis in the share. However, unlike prior law, for purposes of this determination basis is reduced by the nontaxed portion of any prior extraordinary dividends under the provision. Also, the Act provides a taxpayer the option of determining the status of a distribution as an extraordinary dividend by reference to the fair market value of the share on the day before the ex-dividend date, in lieu of the adjusted basis of the share. This special rule applies only if the taxpayer establishes the fair market value of the share to the satisfaction of the Commissioner.

Instead of the one-year post-acquisition holding period requirement of prior law, the Act provides a test based on the holding period of the distributee as of the date the distribution is declared, announced, or agreed to by the distributing corporation, whichever is earliest. Under this test, an extraordinary dividend distribution with respect to stock will require a basis reduction if the taxpayer has not held the stock for more than two years on the earliest of the date of declaration, announcement, or agreement.

For purposes of determining whether the two-year holding period requirement has been met, a distribution is announced if the amount thereof has been announced, even though legal declaration of the dividend may not have occurred, and even though the distribution may be scheduled to occur at some time in the future, or its payment may otherwise be deferred. Similarly, if there is a formal or informal agreement to pay the particular dividend prior to the declaration date, the date of such agreement shall be treated as the dividend announcement date. Whether there is such a formal or informal agreement is determined based on all the facts and circumstances. In general, a broad agreement in a joint venture arrangement that dividends will be paid as funds are available will not be considered an agreement to pay a particular dividend in the absence of other facts, such as facts showing a particular expectation that a large dividend would be paid after the acquisition of a new interest in the venture.

Although any fixed dividend on preferred stock is in a sense "announced" by the terms of the stock at the time the stock is acquired, it is not intended that all such fixed dividends on the stock, however long it is held, would thus be considered to be "announced

or agreed to" within the 2-year period. However, it is intended that the fixed dividends attributable to the first 2 years the preferred stock is held will be considered "announced or agreed to" within the first 2 years, even though a payment date might be missed or there might otherwise be a delay in paying such dividends beyond the first 2 years to which they are attributable. As one example, if newly issued preferred stock provides an annual fixed dividend of 12 percent of its issue price but with the dividends for the first two years to be payable only in the third year after issuance, the dividends attributable to the first two years will be considered "announced or agreed to" within the first two years, and will require basis reduction even if paid to an original holder in the third year after issuance, unless the special relief rule for qualified preferred dividends (described below) applies.

Similarly, if preferred stock provides for a cumulative dividend of 12 percent of annual profits, the dividends attributable to the first 2 years' profits will be subject to the extraordinary dividend tests, and will require basis reduction if the threshold percentage is exceeded, even if the dividends are not paid until the third year. Since such dividends would not be "fixed", in amount, special relief would not be available under the qualified preferred dividend rule described below.

The basis reduction rules are also intended to apply in other situations that attempt to avoid the threshold amount or holding period requirements by deferring or staggering dividend payments.

The Act provides a special rule for certain qualified preferred dividends. Absent this special rule, the basic definition of extraordinary dividend would create an extraordinary dividend if a preferred stock pays, within any period of 85 days or less, dividends equal to or exceeding 5 percent of the shareholder's adjusted basis (or, if applicable, the fair market value of the stock). Thus, for example, under the basic definition, a fixed 6-percent preferred stock dividend that is paid once annually will be extraordinary. On the other hand, under the same basic definition, if the preferred stock paid four quarterly 4.9-percent dividends, none of the dividends will be considered extraordinary.

The special rule for qualified preferred dividends is intended to provide relief for certain transactions to the extent that there is no potential for effectively purchasing a dividend that accrued prior to the date of purchase ("dividend-stripping"). Under the special rule, those dividends that qualify for relief are treated as extraordinary dividends only to the lesser of the extent required by the basic rule or the extent that the aggregate eligible dividends received by the taxpayer during the period it owns the stock exceed the dividends it "earned." Furthermore, if the taxpayer holds the stock for more than 5 years, no basis reduction is required for such dividends.

Preferred stock dividends qualify for relief only if (1) they are fixed (i.e., not varying in amount) preferred dividends, payable not less often than annually; and (2) dividends were not in arrears when the taxpayer acquired the stock. Also, no relief is available if the aggregate dividends received by the taxpayer during the period it owns the stock exceed an annualized rate of 15 percent of the

lower of (a) the taxpayer's adjusted basis or (b) the liquidation preference of the stock.¹⁸

To determine whether the taxpayer's fixed dividends qualify for relief under the above rules and, if they do, to determine the extent of such relief by determining whether such dividends exceed the dividends "earned," the taxpayer's "actual rate of return" is first computed. The actual rate of return is the average annual amount of dividends received (or deemed received under section 305 or any other provision) during the period the taxpayer owned the stock, computed as a return on the taxpayer's adjusted basis or, if lesser, the stock's liquidation preference.

If this actual rate of return exceeds 15 percent, no dividends are eligible for relief. Accordingly, the normal operation of the basic rule requires reduction of basis for any otherwise extraordinary dividends declared, announced, or agreed to within the 2-year holding period.

On the other hand, if the actual rate of return does not exceed 15 percent, relief may be available for otherwise qualified preferred dividends. If the stock is held more than 5 years, no basis reduction is required for such dividends. Even if the stock is held less than 5 years, no basis reduction is required if the actual rate of return does not exceed the stated rate of return, because the taxpayer is not considered to have received more dividends than it "earned." However, if the stock is held less than 5 years and the actual rate of return during the entire holding period exceeds the stated rate, a basis reduction will occur, but limiting the extraordinary dividend amount that would otherwise require basis reduction to the aggregate "excess" amount of dividends for the entire holding period. The required basis reduction will thus be the lesser of: (a) the full amount required under the basic rule with respect to the dividends that do not satisfy the 2-year holding period; or (b) the amount required if the aggregate amount of excess dividends for the entire holding period (up to five years) is treated as being an extraordinary dividend declared, announced, or agreed to prior to the expiration of the 2-year holding period.

The following is an example of the general operation of the special qualifying preferred stock rule: assume that on January 1, 1987, a corporation purchases for \$1,000 ten shares of preferred stock having a liquidation preference of \$100 per share and paying only fixed preferred dividends of \$6 per share to shareholders of record semi-annually on March 31 and September 30 of each year. The basic extraordinary dividend rule would generally require the taxpayer to reduce the basis in the stock by the untaxed portion of each dividend attributable to the period prior to the expiration of the two-year holding period (in this case, the first four dividends, or \$24 per share). This is because a dividend equaling or exceeding 5 percent of adjusted basis (or fair market value, if shown to the satisfaction of the Secretary) paid semi-annually is an extraordinary dividend under the general rule.¹⁹ However, the special rule will

¹⁸ It is understood that liquidation preference for this purpose and for other purposes of the provision does not include dividend arrearages, if any.

¹⁹ If the dividend were 3 percent paid quarterly, it would not be an extraordinary dividend under the general rule and no basis reduction would be required.

apply to the preferred stock. Under this provision, the taxpayer's stated rate of return per share is 12 percent per year (\$12/\$100). If the taxpayer sells the stock on October 1, 1988, (after holding the stock for 1.75 years) the taxpayer's actual rate of return would not have exceeded the stated rate of return if the taxpayer had received dividends up to \$21 per share ($12/100 \times 1.75$). However, the taxpayer has received dividends of \$24 per share, for an actual rate of return per share of 13.7 percent ($\$24/\$100$ divided by 1.75). The amount by which the actual rate of return exceeds the stated rate of return is \$3 per share. Accordingly, this amount of the total aggregate dividends (\$30 total, or 12.5 percent of the aggregate total dividends) will be treated as an extraordinary dividend described in section 1059(a) and will require basis reduction. However, if the corporation does not sell the stock until January 1, 1989, its actual rate of return per share will be 12 percent ($\$24/\$100$ divided by 2.0). This does not exceed the stated dividend rate; accordingly, no portion of the qualified preferred dividends will be treated as an extraordinary dividend.

Under the Act the term "extraordinary dividend" is also expanded to include any distribution (without regard to the holding period for the stock) to a corporate shareholder in partial liquidation of the distributing corporation. Congress thus intended the nontaxed portion of any partial liquidation distribution that is treated as a dividend to reduce basis, without regard to whether the two-year holding period is otherwise satisfied and without regard to whether the distribution is less than the "threshold percentage" otherwise required for an extraordinary dividend. For this purpose, a distribution will be treated as in partial liquidation if it satisfies the requirements of section 302(e) of the Code. Since the determination whether a distribution is in partial liquidation is made at the corporate rather than the shareholder level, Congress intended that the Treasury Department will have the authority to require the distributing corporation to advise its shareholders (with notice to the Internal Revenue Service) as to the character of the distribution. This characterization will generally be binding on the shareholders.²⁰ The Internal Revenue Service, however, will be free to challenge the characterization of the distribution, provided it takes a consistent position with respect to corporate and noncorporate shareholders.

Finally, under the Act the term "extraordinary dividend" includes any redemption of stock that is non-pro rata (again, without regard to the holding period of the stock or the relative size of the distribution). Congress thus intended the nontaxed portion of any non-pro rata redemption that is treated as a dividend to reduce basis, without regard to whether the two-year holding period is otherwise satisfied and without regard to whether the distribution is less than the "threshold percentage" otherwise required for an extraordinary dividend.

²⁰ Congress intended that there will be a presumption, rebuttable by clear and convincing evidence, that this characterization of the distribution is correct. Congress anticipated that the Treasury Department may require the taxpayer to disclose on its return the fact that it is taking a contrary position and its reasons for doing so.

Under a special relief provision, a distribution that would otherwise constitute an extraordinary dividend is not considered to be extraordinary if the distributee has held the stock for the entire period the distributing corporation (and any predecessor corporation) has been in existence, the earnings and profits of the corporation were accumulated only during such period, and the application of this exception to the dividend is not inconsistent with the purposes of the extraordinary dividend rules. This relief provision was intended to permit distributions without basis reduction, even though the distributions exceed the threshold percentage and are declared, announced or agreed to within the 2-year holding period, only in those cases in which the earnings and profits from which the dividend is paid could not have been attributable to any person other than the original shareholder receiving the distribution. For this purpose, earnings and profits would not be considered attributable solely to such shareholder if any more than de minimis part of such earnings and profits is derived, directly or indirectly, from any other entity in which the shareholder was not an original shareholder with an interest at least as great as such shareholder's original and continuing interest in the distributing corporation at the time of the distribution.

Thus, for example, the relief provision would not apply if any more than a de minimis part of the earnings and profits from which the dividend is paid were derived (e.g., by distribution or by a transaction described in sec. 381) directly or indirectly from another corporation in which the original shareholder did not at all times hold at least as great an interest as such shareholder's interest in the distributing corporation at the time of the distribution.

However, the fact that the distributing corporation directly or indirectly received de minimis amounts of earnings and profits from other entities (such as non-extraordinary dividends received from temporary portfolio investments of funds), would not generally be expected to preclude the application of the relief provision.

For similar reasons, due to Congress' expectation that earnings and profits would be solely attributable to the distributee shareholders, the extraordinary dividend provision generally would not apply to distributions that constitute qualifying dividends within the meaning of section 243(b)(1), or to similar distributions between members of an affiliated group filing a consolidated return. Also, to the extent the consolidated return regulations would require basis reduction in any event, the provision would not simultaneously apply to dividend distributions (or deemed dividend distributions) between members of an affiliated group filing consolidated returns.

In order to prevent double inclusions in earnings and profits, Congress expected that the amount, if any, of earnings and profits resulting from gain on the disposition of stock shall be determined without regard to the basis adjustments made under this section.

Effective Date

The provision is generally effective for dividends declared after July 18, 1986. However, distributions constituting extraordinary dividends by virtue of being a distribution in partial liquidation or

a non-pro rata distribution are subject to the provision only if announced or declared after October 22, 1986 (the date of enactment).

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$32 million in 1987, \$55 million in 1988, \$57 million in 1989, \$60 million in 1990, and \$63 million in 1991.

F. Special Limitations on Net Operating Loss and Other Carryforwards (Sec. 621 of the Act and secs. 382 and 383 of the Code)²¹

Prior Law

Overview

In general, a corporate taxpayer is allowed to carry a net operating loss ("NOL(s)") forward for deduction in a future taxable year, as long as the corporation's legal identity is maintained. After certain nontaxable asset acquisitions in which the acquired corporation goes out of existence, the acquired corporation's NOL carryforwards are inherited by the acquiring corporation. Similar rules apply to tax attributes other than NOLs, such as net capital losses and unused tax credits. Historically, the use of NOL and other carryforwards has been subject to special limitations after specified transactions involving the corporation in which the carryforwards arose (referred to as the "loss corporation"). Prior law also provided other rules that were intended to limit tax-motivated acquisitions of loss corporations.

The operation of the special limitations on the use of carryforwards turned on whether the transaction that caused the limitations to apply took the form of a taxable sale or exchange of stock in the loss corporation or one of certain specified tax-free reorganizations in which the loss corporation's tax attributes carried over to a corporate successor. After a purchase (or other taxable acquisition) of a controlling stock interest in a loss corporation, NOL and other carryforwards were disallowed unless the loss corporation continued to conduct its historical trade or business. In the case of a tax-free reorganization, NOL and other carryforwards were generally allowed in full if the loss corporation's shareholders received stock representing at least 20 percent of the value of the acquiring corporation.

NOL and other carryforwards

Although the Federal income tax system generally requires an annual accounting, a corporate taxpayer was allowed to carry NOLs back to the three taxable years preceding the loss and then forward to each of the 15 taxable years following the loss year (sec. 172). The rationale for allowing the deduction of NOL carryforwards (and carrybacks) was that a taxpayer should be able to average income and losses over a period of years to reduce the disparity between the taxation of businesses that have stable income and businesses that experience fluctuations in income.²²

²¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 321; H. Rep. 99-426, pp. 250-273; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 621; S.Rep. 99-313, pp. 224-248; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 170-196 (Conference Report).

²² H.R. Rep. No. 1337, 83d Cong., 2d sess. 27 (1954).

In addition to NOLs, other tax attributes eligible to be carried back or forward include unused investment tax credits (secs. 30 and 39), excess foreign tax credits (sec. 904(c)), and net capital losses (sec. 1212). Like NOLs, unused investment tax credits were allowed a three-year carryback and a 15-year carryforward. Subject to an overall limitation based on a taxpayer's U.S. tax attributable to foreign-source income, excess foreign tax credits were allowed a two-year carryback and a five-year carryforward. For net capital losses, generally, corporations had a three-year carryback (but only to the extent the carrybacks did not increase or create a NOL) and a five-year carryforward.

NOL and other carryforwards that were not used before the end of a carryforward period expired.

Carryovers to corporate successors

In general, a corporation's tax history (e.g., carryforwards and asset basis) was preserved as long as the corporation's legal identity was continued. Thus, under the general rules of prior law, changes in the stock ownership of a corporation did not affect the corporation's tax attributes. Following are examples of transactions that effected ownership changes without altering the legal identity of a corporation:

(1) A taxable purchase of a corporation's stock from its shareholders (a "purchase"),

(2) A type "B" reorganization, in which stock representing control of the acquired corporation is acquired solely in exchange for voting stock of the acquiring corporation (or a corporation in control of the acquiring corporation) (sec. 368(a)(1)(B)),

(3) A transfer of property to a corporation after which the transferors own 80 percent or more of the corporation's stock (a "section 351 exchange"),

(4) A contribution to the capital of a corporation, in exchange for the issuance of stock, and

(5) A type "E" reorganization, in which interests of investors (shareholders and bondholders) are restructured (sec. 368(a)(1)(E)).

Statutory rules also provided for the carryover of tax attributes (including NOL and other carryforwards) from one corporation to another in certain tax-free acquisitions in which the acquired corporation went out of existence (sec. 381). These rules applied if a corporation's assets were acquired by another corporation in one of the following transactions:

(1) The liquidation of an 80-percent owned subsidiary (sec. 332),

(2) A statutory merger or consolidation, or type "A" reorganization (sec. 368(a)(1)(A)),

(3) A type "C" reorganization, in which substantially all of the assets of one corporation is transferred to another corporation in exchange for voting stock, and the transferor completely liquidates (sec. 368(a)(1)(C)),

(4) A "nondivisive D reorganization," in which substantially all of a corporation's assets are transferred to a controlled corporation, and the transferor completely liquidates (secs. 368(a)(1)(D) and 354(b)(1)),

(5) A mere change in identity, form, or place of organization of a single corporation, or type "F" reorganization (sec. 368(a)(1)(F)), and

(6) A type "G" reorganization, in which substantially all of a corporation's assets are transferred to another corporation pursuant to a court approved insolvency or bankruptcy reorganization plan, and stock or securities of the transferee are distributed pursuant to the plan (sec. 368(a)(1)(G)).

In general, to qualify an acquisitive transaction (including a B reorganization) as a tax-free reorganization, the shareholders of the acquired corporation had to retain "continuity of interest." Thus, a principal part of the consideration used by the acquiring corporation had to consist of stock, and the holdings of all shareholders had to be traced. Further, a tax-free reorganization was required to satisfy a "continuity of business enterprise" test. Generally, continuity of business enterprise requires that a significant portion of an acquired corporation's assets be used in a business activity (see Treas. reg. sec. 1.368-1(d)).

Acquisitions to evade or avoid income tax

The Secretary of the Treasury was authorized to disallow deductions, credits, or other allowances following an acquisition of control of a corporation or a tax-free acquisition of a corporation's assets if the principal purpose of the acquisition was tax avoidance (sec. 269). This provision applied in the following cases:

(1) where any person or persons acquired (by purchase or in a tax-free transaction) at least 50 percent of a corporation's voting stock, or stock representing 50 percent of the value of the corporation's outstanding stock;

(2) where a corporation acquired property from a previously unrelated corporation and the acquiring corporation's basis for the property was determined by reference to the transferor's basis; and

(3) where a corporation purchased the stock of another corporation in a transaction that qualified for elective treatment as a direct asset purchase (sec. 338), a section 338 election was not made, and the acquired corporation was liquidated into the acquiring corporation (under sec. 332).

Treasury regulations under section 269 provided that the acquisition of assets with an aggregate basis that is materially greater than their value (i.e., assets with built-in losses), coupled with the utilization of the basis to create tax-reducing losses, is indicative of a tax-avoidance motive (Treas. reg. sec. 1.269-3(c)(1)).

Consolidated return regulations

To the extent that NOL carryforwards were not limited by the application of section 382 or section 269, after an acquisition, the use of such losses might be limited under the consolidated return regulations. In general, if an acquired corporation joined the acquiring corporation in the filing of a consolidated tax return by an affiliated group of corporations, the use of the acquired corporation's pre-acquisition NOL carryforwards against income generated by other members of the group was limited by the "separate return limitation year" ("SRLY") rules (Treas. reg. sec. 1.1502-21(c)). An acquired corporation was permitted to use pre-acquisition NOLs only up to the amount of its own contribution to the consolidated group's taxable income. Section 269 was available to prevent taxpayers from avoiding the SRLY rules by diverting income-produc-

ing activities (or contributing income-producing assets) from elsewhere in the group to a newly acquired corporation (see Treas. reg. sec. 1.269-3(c)(2), to the effect that the transfer of income-producing assets by a parent corporation to a loss subsidiary filing a separate return may be deemed to have tax avoidance as a principal purpose).

Applicable Treasury regulations provided rules to prevent taxpayers from circumventing the SRLY rules by structuring a transaction as a "reverse acquisition" (defined in regulations as an acquisition where the "acquired" corporation's shareholders end up owning more than 50 percent of the value of the "acquiring" corporation) (Treas. reg. sec. 1.1502-75(d)(3)). Similarly, under the "consolidated return change of ownership" ("CRCO") rules, if more than 50 percent of the value of stock in the common parent of an affiliated group changed hands, tax attributes (such as NOL carryforwards) of the group were limited to use against post-acquisition income of the members of the group (Treas. reg. sec. 1.1502-21(d)).

Treasury regulations also prohibited the use of an acquired corporation's built-in losses to reduce the taxable income of other members of an affiliated group (Treas. reg. sec. 1.1502-15). Under the regulations, built-in losses were subject to the SRLY rules. In general, built-in losses were defined as deductions or losses that economically accrued prior to the acquisition but were recognized for tax purposes after the acquisition, including depreciation deductions attributable to a built-in loss (Treas. reg. sec. 1.1502-15(a)(2)). The built-in loss limitations did not apply unless, among other things, the aggregate basis of the acquired corporation's assets (other than cash, marketable securities, and goodwill) exceeded the value of those assets by more than 15 percent.

Allocation of income and deductions among related taxpayers

The Secretary of the Treasury was authorized to apportion or allocate gross income, deductions, credits, or allowances, between or among related taxpayers (including corporations), if such action was necessary to prevent evasion of tax or to clearly reflect the income of a taxpayer (sec. 482). Section 482 could apply to prevent the diversion of income to a loss corporation in order to absorb NOL carryforwards.

Libson Shops doctrine

In *Libson Shops v. Koehler*, 353 U.S. 382 (1957) (decided under the 1939 Code), the U.S. Supreme Court adopted a test of business continuity for use in determining the availability of NOL carryovers. The court denied NOL carryovers following the merger of 16 identically owned corporations (engaged in the same business at different locations) into one corporation, on the ground that the business generating post-merger income was not substantially the same business that incurred the loss (three corporations that generated the NOL carryovers continued to produce losses after the merger).

There was uncertainty whether the *Libson Shops* doctrine had continuing application as a separate nonstatutory test under the 1954 Code. Compare *Maxwell Hardware Co. v. Commissioner*, 343 F.2d 713 (9th Cir. 1965) (holding that *Libson Shops* is inapplicable

to years governed by the 1954 Code) with Rev. Rul. 63-40, 1963-1 C.B. 46, as modified by T.I.R. 773 (October 13, 1965) (indicating that *Libson Shops* may have continuing vitality where, inter alia, there is a shift in the "benefits" of an NOL carryover).²³

1954 Code special limitations

The application of the special limitations on NOL carryforwards was triggered under the 1954 Code by specified changes in stock ownership of the loss corporation (sec. 382). In measuring changes in stock ownership, section 382(c) specifically excluded "nonvoting stock which is limited and preferred as to dividends." Different rules were provided for the application of special limitations on the use of carryovers after a purchase and after a tax-free reorganization. Section 382 did not address the treatment of built-in losses.

If the principal purpose of the acquisition of a loss corporation was tax avoidance, section 269 would apply to disallow NOL carryforwards even if section 382 was inapplicable. Similarly, the SRLY rules could apply even if section 382 did not apply.

Taxable purchases

If the special limitations applied after a purchase, NOL carryforwards were disallowed entirely under the 1954 Code. The rule for purchases applied if (1) one or more of the loss corporation's ten largest shareholders increased their common stock ownership within a two-year period by at least 50 percentage points, (2) the change in stock ownership resulted from a purchase or a decrease in the amount of outstanding stock, and (3) the loss corporation failed to continue the conduct of a trade or business substantially the same as that conducted before the proscribed change in ownership (sec. 382(a)). An exception to the purchase rule was provided for acquisitions from related persons.

Tax-free reorganizations

After a tax-free reorganization to which section 382(b) applied, NOL carryovers were allowed in full under the 1954 Code so long as the loss corporation's shareholders received stock representing 20 percent or more of the value of the successor corporation (and section 269 did not apply). For each percentage point less than 20 percent received by the loss corporation's shareholders, the NOL carryover was reduced by five percent (e.g., if the loss corporation's shareholders received 15 percent of the acquiring corporation's stock, 25 percent of the NOL carryover was disallowed). The reorganizations described in section 382(b) were those referred to in section 381(a)(2), in which the loss corporation goes out of existence and NOL carryforwards carry over to a corporate successor. Where an acquiring corporation used stock of a parent corporation as consideration (in a triangular reorganization), the 20-percent test was applied by treating the loss corporation's shareholders as if they received stock of the acquiring corporation with an equivalent value, rather than stock of the parent corporation. An exception to the

²³ The legislative history of the 1976 Act amendments to section 382—discussed below—specifically provided that *Libson Shops* would have no application to years governed by those amendments. See S. Rep. 938, 94th Cong., 2d Sess. p. 206 (1976).

reorganization rule was provided for mergers of corporations that are owned substantially by the same persons in the same proportion (thus, the result in the *Libson Shops* case was reversed).

Bankruptcy proceedings and stock-for-debt exchanges

In the case of a G reorganization, a creditor who received stock in the reorganization was treated as a shareholder immediately before the reorganization. Thus, NOL carryforwards were generally available without limitation following changes in stock ownership resulting from a G reorganization.

If security holders exchanged securities for stock in a loss corporation, the transaction could qualify as an E reorganization or a section 351 exchange. If unsecured creditors (e.g., trade creditors) exchanged their debt claims for stock in a loss corporation, such creditors recognized gain or loss: (1) indebtedness of the transferee corporation not evidenced by a security was not considered as issued for property for purposes of section 351, and (2) the definition of an E reorganization required an exchange involving stock or securities. Thus, a stock-for-debt exchange by unsecured creditors was treated as a taxable purchase that triggered the special limitation.

Transactions involving "thrifts"

The general rules applied to taxable purchases of stock in a savings and loan association or savings bank (referred to as a "thrift"). Thus, after an ownership change resulting from a taxable purchase, a thrift's NOL carryforwards were unaffected if the thrift continued its business. Moreover, section 382 did not apply to a section 351 transfer to a thrift.

Where the acquisition of a thrift resulted from a reorganization described in section 368(a)(3)(D)(ii),²⁴ depositors were treated as stockholders and their deposits were treated as stock for purposes of the special limitations applicable to reorganizations (prior law sec. 382(b)(7)). Thus, a thrift's NOL carryforwards were unaffected if the depositors' interests (including the face amount of their deposits) represented at least 20 percent of the acquiring corporation's value after the merger.

Special limitations on other tax attributes

Section 383 incorporated by reference the same limitations contained in section 382 for carryforwards of investment credits, foreign tax credits, and capital losses.

1976 Act amendments

The Tax Reform Act of 1976 extensively revised section 382 to provide more nearly parallel rules for taxable purchases and tax-free reorganizations and to address technical problems arising under the 1954 Code. The 1976 Act amendments were to be effective

²⁴ Prior law section 368(a)(3)(D)(ii) provided nonrecognition treatment to thrift reorganizations that would otherwise qualify as G reorganizations, provided the Federal Home Loan Bank Board, the Federal Savings and Loan Insurance Corporation ("FSLIC"), or an equivalent State authority certified that the thrift was insolvent, could not meet its obligations currently, or would be unable to meet its obligations in the immediate future.

tive in 1978; however, the effective date was delayed several times. The 1976 Act amendments to the rule for purchases technically became effective for taxable years beginning after December 31, 1985. The amended reorganization rules technically became effective for reorganizations pursuant to plans adopted on or after January 1, 1986.

Reasons for Change

The Act draws heavily on the recommendations regarding limitations on NOL carryforwards that were made by the Finance Committee Staff as part of its comprehensive final report regarding reform of subchapter C of the Internal Revenue Code. (See S. Prt. 99-47, 99th Cong., 1st Sess. (1985), "The Subchapter C Revision Act of 1985, A Final Report Prepared by the Staff").

Preservation of the averaging function of carryovers

The primary purpose of the special limitations is the preservation of the integrity of the carryover provisions. The carryover provisions perform a needed averaging function by reducing the distortions caused by the annual accounting system. If, on the other hand, carryovers can be transferred in a way that permits a loss to offset unrelated income, no legitimate averaging function is performed. With completely free transferability of tax losses, the carryover provisions become a mechanism for partial recoupment of losses through the tax system. Under such a system, the Federal Government would effectively be required to reimburse a portion of all corporate tax losses. Regardless of the merits of such a reimbursement program, the carryover rules appear to be an inappropriate and inefficient mechanism for delivery of the reimbursement.

Appropriate matching of loss to income

The 1976 Act amendments reflect the view that the relationship of one year's loss to another year's income should be largely a function of whether and how much the stock ownership changed in the interim, while the *Libson Shops* business continuation rule measures the relationship according to whether the loss and the income were generated by the same business. The Act acknowledges the merit in both approaches, while seeking to avoid the economic distortions and administrative problems that a strict application of either approach would entail.

A limitation based strictly on ownership would create a tax bias against sales of corporate businesses, and could prevent sales that would increase economic efficiency. For example, if a prospective buyer could increase the income from a corporate business to a moderate extent, but not enough to overcome the loss of all carryovers, no sale would take place because the business would be worth more to the less-efficient current owner than the prospective buyer would reasonably pay. A strict ownership limitation also would distort the measurement of taxable income generated by capital assets purchased before the corporation was acquired, if the tax deductions for capital costs economically allocable to post-acqui-

sition years were accelerated into pre-acquisition years, creating carryovers that would be lost as a result of the acquisition.

Strict application of a business continuation rule would also be undesirable, because it would discourage efforts to rehabilitate troubled businesses. Such a rule would create an incentive to maintain obsolete and inefficient business practices if the needed changes would create the risk of discontinuing the old business for tax purposes, thus losing the benefit of the carryovers.

Permitting the carryover of all losses following an acquisition, as is permitted under the 1954 Code if the loss business is continued following a purchase, provides an improper matching of income and loss. Income generated under different corporate owners, from capital over and above the capital used in the loss business, is related to a pre-acquisition loss only in the formal sense that it is housed in the same corporate entity. Furthermore, the ability to use acquired losses against such unrelated income creates a tax bias in favor of acquisitions. For example, a prospective buyer of a loss corporation might be a less efficient operator of the business than the current owner, but the ability to use acquired losses could make the loss corporation more valuable to the less efficient user and thereby encourage a sale.

Reflecting the policies described above, the Act addresses three general concerns: (1) the approach of prior law (*viz.*, the disallowance or reduction of NOL and other carryforwards), which is criticized as being too harsh where there are continuing loss-corporation shareholders, and ineffective to the extent that NOL carryforwards may be available for use without limitation after substantial ownership changes, (2) the discontinuities in the prior law treatment of taxable purchases and tax-free reorganizations, and (3) defects in the prior law rules that presented opportunities for tax avoidance.

General approach

After reviewing various options for identifying events that present the opportunity for a tax benefit transfer (*e.g.*, changes in a loss corporation's business), it was concluded that changes in a loss corporation's stock ownership continue to be the best indicator of a potentially abusive transaction. Under the Act, the special limitations generally apply when shareholders who bore the economic burden of a corporation's NOLs no longer hold a controlling interest in the corporation. In such a case, the possibility arises that new shareholders will contribute income-producing assets (or divert income opportunities) to the loss corporation, and the corporation will obtain greater utilization of carryforwards than it could have had there been no change in ownership.

To address the concerns described above, the Act adopts the following approach: After a substantial ownership change, rather than reducing the NOL carryforward itself, the earnings against which an NOL carryforward can be deducted are limited. This general approach has received wide acceptance among tax scholars and practitioners. This "limitation on earnings" approach is intended to permit the survival of NOL carryforwards after an acquisition, while limiting the ability to utilize the carryforwards against unrelated income.

The limitation on earnings approach is intended to approximate the results that would occur if a loss corporation's assets were combined with those of a profitable corporation in a partnership. This treatment can be justified on the ground that the option of contributing assets to a partnership is available to a loss corporation. In such a case, only the loss corporation's share of the partnership's income could be offset by the corporation's NOL carryforward. Presumably, except in the case of tax-motivated partnership agreements, the loss corporation's share of the partnership's income would be limited to earnings generated by the assets contributed by the loss corporation.

For purposes of determining the income attributable to a loss corporation's assets, the Act prescribes an objective rate of return on the value of the corporation's equity. Consideration was given to the arguments made in favor of computing the prescribed rate of return by reference to the gross value of a loss corporation's assets, without regard to outstanding debt. It was concluded that it would be inappropriate to permit the use of NOL carryforwards to shelter earnings that are used (or would be used in the absence of an acquisition) to service a loss corporation's debt. The effect of taking a loss corporation's gross value into account would be to accelerate the rate at which NOL carryforwards would be used had there been no change in ownership, because interest paid on indebtedness is deductible in its own right (thereby deferring the use of a corresponding amount of NOLs). There is a fundamental difference between debt capitalization and equity capitalization: true debt represents a claim against a loss corporation's assets.

Annual limitation

The annual limitation on the use of pre-acquisition NOL carryforwards is the product of the prescribed rate and the value of the loss corporation's equity immediately before a proscribed ownership change. The average yield for long-term marketable obligations of the U.S. government was selected as the measure of a loss corporation's expected return on its assets.

The rate prescribed by the Act is higher than the average rate at which loss corporations actually absorb NOL carryforwards. Indeed, many loss corporations continue to experience NOLs, thereby increasing—rather than absorbing—NOL carryforwards. On the other hand, the adoption of the average absorption rate may be too restrictive for loss corporations that out-perform the average. Therefore, it would be inappropriate to set a rate at the lowest rate that is theoretically justified. The use of the long-term rate for Federal obligations was justified as a reasonable risk-free rate of return a loss corporation could obtain in the absence of a change in ownership.

Anti-abuse rules

The mechanical rules described above could present unintended tax-planning opportunities and might foster certain transactions that many would perceive to be violative of the legislative intent. Therefore, the Act includes several rules that are designed to prevent taxpayers from circumventing the special limitations or otherwise appearing to traffic in loss corporations by (1) reducing a loss

corporation's assets to cash or other passive assets and then selling off a corporate shell consisting primarily of NOLs and cash or other passive assets, or (2) making pre-acquisition infusions of assets to inflate artificially a loss corporation's value (and thereby accelerate the use of NOL carryforwards). In addition, the Act retains the prior law principles that are intended to limit tax-motivated acquisitions of loss corporations (e.g., section 269, relating to acquisitions to evade or avoid taxes, and the regulatory SRLY and CRCO rules).

Consideration also was given to transactions in which taxpayers effectively attempt to purchase the NOLs of a loss corporation by the use of a partnership in which the loss corporation, as a partner, is allocated a large percentage of taxable income for a limited time period. During this time, the NOL partner's losses are expected to shelter the partnership's income while the cash flow from the partnership's assets is used for other purposes. Later the NOL partner's share of income is reduced. When all the facts and circumstances are considered, including the arrangements and actual transactions with respect to capital accounts, it often appears to be questionable whether the economic benefit that corresponds to the initial special allocation to the NOL partner is fully received by such partner. Nevertheless, some taxpayers take the position that such allocations have substantial economic effect under section 704(b). The Act contemplates that the Treasury Department will review this situation under section 704(b).

The Act provides that the Treasury Department shall prescribe such regulations as may be necessary or appropriate to prevent the avoidance of section 382 through the use of related parties, pass-through entities, or other intermediaries. For example, regardless of whether a special allocation has substantial economic effect under section 704(b), special allocations of income to a loss partner, or other arrangements shifting taxable income, will not be permitted to result in a greater use of losses than would occur if the principles of section 382 were applied to the arrangement.

Technical problems

The Act addresses the technical problems of prior law by (1) coordinating the rules for taxable purchases with the rules for tax-free transactions, (2) expanding the scope of the rules to cover economically similar transactions that effect ownership changes (such as capital contributions, section 351 exchanges, and B reorganizations), (3) refining the definition of the term "stock," and (4) applying the special limitations to built-in losses and taking into account built-in gains.

Discontinuities

Because the 1954 Code threshold for purchases was 50 percent, but the threshold for reorganizations was 20 percent, those rules presented the possibility that economically similar transactions would receive disparate tax treatment. Further, the special limitations applied after a purchase only if a pre-acquisition trade or business was discontinued, while the reorganization rule looked solely to changes in ownership. Finally, if the purchase rule applied, all NOL carryforwards were disallowed. In contrast, the rule

for reorganizations merely reduced NOL carryforwards in proportion to the ownership change. The Act eliminates such discontinuities.

Continuity-of-business enterprise

The requirement under the 1954 Code rules that a loss corporation continue substantially the same business after a purchase presented potentially difficult definitional issues. Specifically, taxpayers and the courts were required to determine at what point a change in merchandise, location, size, or the use of assets should be treated as a change in the loss corporation's business. It was also difficult to identify a particular business where assets and activities were constantly combined, separated, or rearranged. Further, there was a concern that the prior law requirement induced taxpayers to continue uneconomic businesses.

The Act eliminates the business-continuation rule. The continuity-of-business-enterprise rule generally applicable to tax-free reorganizations also applies to taxable transactions.

Participating stock

The Act addresses the treatment of transactions in which the beneficial ownership of an NOL carryforward does not follow stock ownership. This problem is illustrated by the case of *Maxwell Hardware Co.*, in which a loss corporation's old shareholders retained common stock representing more than 50 percent of the corporation's value, but new shareholders received specially tailored preferred stock that carried with it a 90-percent participation in the corporation's earnings attributable to income-producing assets contributed by the new shareholders.²⁵

Built-in gains and losses

Built-in losses should be subject to special limitations because they are economically equivalent to pre-acquisition NOL carryforwards. If built-in losses were not subject to limitations, taxpayers could reduce or eliminate the impact of the general rules by causing a loss corporation (following an ownership change) to recognize its built-in losses free of the special limitations (and then invest the proceeds in assets similar to the assets sold).

The Act also provides relief for loss corporations with built-in gain assets. Built-in gains are often the product of special tax provisions that accelerate deductions or defer income (e.g., accelerated depreciation or installment sales reporting). Absent a special rule, the use of NOL carryforwards to offset built-in gains recognized after an acquisition would be limited, even though the carryforwards would have been fully available to offset such gains had the gains been recognized before the change in ownership occurred. (Similarly, a partnership is required to allocate built-in gain or loss to the contributing partner.)

Although the special treatment of built-in gains and losses may require valuations of a loss corporation's assets, the Act limits the

²⁵ 343 F.2d 713 (9th Cir. 1965).

circumstances in which valuations will be required by providing a generous *de minimis* rule.

Other technical gaps

The Act also corrects the following defects in the 1954 Code rules: (1) only NOL deductions from prior taxable years were limited; thus, NOLs incurred in the year of a substantial ownership change were unaffected, (2) the rule for purchases was inapplicable to ownership changes resulting from section 351 exchanges, capital contributions, the liquidation of a partner's interest in a partnership that owns stock in a loss corporation, and nontaxable acquisitions of interests in a partnership (e.g., by contribution) that owns stock in a loss corporation, (3) the reorganization rule was inapplicable to B reorganizations, (4) the measurement of the continuing interest of a loss corporation's shareholders after a triangular reorganization enabled taxpayers to circumvent the 20-percent-continuity-of-interest rule, and (5) taxpayers took the position that the reorganization rule did not apply to reverse mergers (where an acquiring corporation's subsidiary merged into a loss corporation and the loss corporation's shareholders received stock of the acquiring corporation in the exchange).

Insolvent corporations

Under the general rule of the Act, no carryforwards would be usable after the acquisition of an insolvent corporation because the corporation's value immediately before the acquisition would be zero. In such a case, however, the loss corporation's creditors are the true owners of the corporation, although it may be impossible to identify the point in time when ownership shifted from the corporation's shareholders.²⁶ Relief from a strict application of the general rule is provided, as the creditors of an insolvent corporation frequently have borne the losses reflected in an NOL carryforward. There was a concern, however, about the potential for abusive transactions if an exception were generally available. For example, if there were a general stock-for-debt exception, an acquiring corporation could purchase a loss corporation's debt immediately before or during a bankruptcy proceeding, exchange the debt for stock without triggering the special limitations, and then use the loss corporation's NOL carryforwards immediately and without limitation. Alternatively, an acquiring corporation could purchase stock from the creditors after the bankruptcy proceeding, and after the loss corporation's value has been increased by capital contributions.

For these reasons, the Act provides an exception for ownership changes that occur as part of a G reorganization or a stock-for-debt exchange in a Title 11 or similar proceeding, but includes appropriate safeguards intended to limit tax-motivated acquisitions of debt issued by loss corporations.

²⁶ Cf. *Helvering v. Alabama Asphaltic Limestone Co.*, 315 U.S. 179 (1942) ("When the equity owners are excluded and the old creditors become the stockholders . . . , it conforms to reality to date [the creditors] equity ownership from the time when they invoked the processes of the law to enforce their rights of full priority").

Explanation of Provisions

Overview

The Act alters the character of the special limitations on the use of NOL carryforwards. After an ownership change, as described below, the taxable income of a loss corporation available for offset by pre-acquisition NOL carryforwards is limited annually to a prescribed rate times the value of the loss corporation's stock immediately before the ownership change. In addition, NOL carryforwards are disallowed entirely unless the loss corporation satisfies continuity-of-business enterprise requirements for the two-year period following any ownership change. The Act also expands the scope of the special limitations to include built-in losses and allows loss corporations to take into account built-in gains. The Act includes numerous technical changes and several anti-avoidance rules. Finally, the Act applies similar rules to carryforwards other than NOLs, such as net capital losses and excess foreign tax credits.

Ownership change

The special limitations apply after any ownership change. An ownership change occurs, in general, if the percentage of stock of the new loss corporation owned by any one or more 5-percent shareholders (described below) has increased by more than 50 percentage points relative to the lowest percentage of stock of the old loss corporation owned by those 5-percent shareholders at any time during the testing period (generally a three-year period) (new sec. 382(g)(1)).²⁷ The determination of whether an ownership change has occurred is made by aggregating the increases in percentage ownership for each 5-percent shareholder whose percentage ownership has increased during the testing period. For this purpose, all stock owned by persons who own less than five percent of a corporation's stock generally is treated as stock owned by a single 5-percent shareholder (new sec. 382(g)(4)(A)). The determination of whether an ownership change has occurred is made after any owner shift involving a 5-percent shareholder or any equity structure shift.

Determinations of the percentage of stock in a loss corporation owned by any person are made on the basis of value. Except as provided in regulations to be prescribed by the Secretary, changes in proportionate ownership attributable solely to fluctuations in the relative fair market values of different classes of stock are not taken into account (new sec. 382(l)(3)(D)).

In determining whether an ownership change has occurred, changes in the holdings of certain preferred stock are disregarded. Except as provided in regulations, all "stock" (not including stock described in section 1504(a)(4)) is taken into account (new sec. 382(k)(6)(A)). Under this standard, the term stock does not include stock that (1) is not entitled to vote, (2) is limited and preferred as to dividends and does not participate in corporate growth to any significant extent, (3) has redemption and liquidation rights that do not exceed the stock's issue price upon issuance (except for a rea-

²⁷ Unless specifically identified as a taxable year, all references to any period constituting a year (or multiple thereof) means a 365-day period (or multiple thereof).

sonable redemption premium), and (4) is not convertible to any other class of stock. If preferred stock carries a dividend rate materially in excess of a market rate, this may indicate that it would not be disregarded.

Under grants of regulatory authority, the Treasury Department is expected to publish regulations disregarding, in appropriate cases, certain stock that would otherwise be counted in determining whether an ownership change has occurred, when necessary to prevent avoidance of the special limitations (new sec. 382(k)(6)(B)). For example, it may be appropriate to disregard preferred stock (even though voting) or common stock where the likely percentage participation of such stock in future corporate growth is disproportionately small compared to the percentage value of the stock as a proportion of total stock value, at the time of the issuance or transfer. Similarly, there is a concern that the inclusion of voting preferred stock (which is not described in section 1504(a)(4) solely because it carries the right to vote) in the definition of stock presents the potential for avoidance of section 382. As another example, stock such as that issued to the old loss company shareholders and retained by them in the case of *Maxwell Hardware Company v. Commissioner*, 343 F.2d 716 (9th Cir. 1969), is not intended to be counted in determining whether an ownership change has occurred.

In addition, the Treasury Department will promulgate regulations regarding the extent to which stock that is not described in section 1504(a)(4) should nevertheless not be considered stock. For example, the Treasury Department may issue regulations providing that preferred stock otherwise described in section 1504(a)(4) will not be considered stock simply because the dividends are in arrears and the preferred shareholders thus become entitled to vote.

Owner shift involving a 5-percent shareholder

An owner shift involving a 5-percent shareholder is defined as any change in the respective ownership of stock of a corporation that affects the percentage of stock held by any person who holds five percent or more of the stock of the corporation (a "5-percent shareholder") before or after the change (new sec. 382(g)(2)). For purposes of this rule, all less-than-5-percent shareholders are aggregated and treated as one 5-percent shareholder. Thus, an owner shift involving a 5-percent shareholder includes (but is not limited to) the following transactions:

- (1) A taxable purchase of loss corporation stock by a person who holds at least five percent of the stock before the purchase;
- (2) A disposition of stock by a person who holds at least five percent of stock of the loss corporation either before or after the disposition;
- (3) A taxable purchase of loss corporation stock by a person who becomes a 5-percent shareholder as a result of the purchase;
- (4) A section 351 exchange that affects the percentage of stock ownership of a loss corporation by one or more 5-percent shareholders;
- (5) A decrease in the outstanding stock of a loss corporation (e.g., by virtue of a redemption) that affects the percentage of stock own-

ership of the loss corporation by one or more 5-percent shareholders;

(6) A conversion of debt (or pure preferred stock that is excluded from the definition of stock) to stock where the percentage of stock ownership of the loss corporation by one or more 5-percent shareholders is affected; and

(7) An issuance of stock by a loss corporation that affects the percentage of stock ownership by one or more 5-percent shareholders.

Example 1.—The stock of L corporation is publicly traded; no shareholder holds five percent or more of L stock. During the three-year period between January 1, 1987 and January 1, 1990, there are numerous trades involving L stock. No ownership change will occur as a result of such purchases, provided that no person (or persons) becomes a 5-percent shareholder, either directly or indirectly, and increases his (or their) ownership of L stock by more than 50 percentage points.

Example 2.—On January 1, 1987, the stock of L corporation is publicly traded; no shareholder holds five percent or more of L stock. On September 1, 1987, individuals A, B, and C, who were not previously L shareholders and are unrelated to each other or any L shareholders, each acquire one-third of L stock. A, B, and C each have become 5-percent shareholders of L and, in the aggregate, hold 100 percent of the L stock. Accordingly, an ownership change has occurred, because the percentage of L stock owned by the three 5-percent shareholders after the owner shift (100 percent) has increased by more than 50 percentage points over the lowest percentage of L stock owned by A, B, and C at any time during the testing period (0 percent prior to September 1, 1987).

Example 3.—On January 1, 1987, individual I owns all 1,000 shares of corporation L. On June 15, 1987, I sells 300 of his L shares to unrelated individual A. On June 15, 1988, L issues 100 shares to each of B, C, and D. After these owner shifts involving I, A, B, C, and D, each of whom is a 5-percent shareholder, there is no ownership change, because the percentage of stock owned by A, B, C, and D after the owner shifts (approximately 46 percent—A-23 percent; B, C, and D-7.7 percent each) has not increased by more than 50 percentage points over the lowest percentage of stock owned by those shareholders during the testing period (0 percent prior to June 15, 1987). On December 15, 1988, L redeems 200 of the shares owned by I. Following this owner shift affecting I, a 5-percent shareholder, there is an ownership change, because the percentage of L stock owned by A, B, C, and D (approximately 55 percent—A-27.3 percent; B, C, and D-9.1 percent each) has increased by more than 50 percentage points over the lowest percentage owned by those shareholders during the testing period (0 percent prior to June 15, 1987).

Example 4.—L corporation is closely held by four unrelated individuals, A, B, C, and D. On January 1, 1987, there is a public offering of L stock. No person who acquires stock in a public offering acquires five percent or more, and neither A, B, C, nor D acquires any additional stock. As a result of the offering, less-than-5-percent shareholders own stock representing 80 percent of the outstanding L stock. The stock ownership of the less-than-5-percent shareholders are aggregated and treated as owned by a single 5-percent

shareholder for purposes of determining whether an ownership change has occurred. The percentage of stock owned by the less-than-5-percent shareholders after the owner shift (80 percent) has increased by more than 50 percentage points over the lowest percentage of stock owned by those shareholders at any time during the testing period (0 percent prior to January 1, 1987). Thus, an ownership change has occurred.

Example 5.—On January 1, 1987, L corporation is wholly owned by individual X. On January 1, 1988, X sells 50 percent of his stock to 1,000 shareholders, all of whom are unrelated to him. On January 1, 1989, X sells his remaining 50-percent interest to an additional 1,000 shareholders, all of whom also are unrelated to him. Based on these facts, there is not an ownership change immediately following the initial sales by X, because the percentage of L stock owned by the group of less-than-5-percent shareholders (who are treated as a single 5-percent shareholder) after the owner shift (50 percent) has not increased by more than 50 percentage points over the lowest percentage of stock owned by this group at any time during the testing period (0 percent prior to January 1, 1988). On January 1, 1989, however, there is an ownership change, because the percentage of L stock owned by the group of less-than-5-percent shareholders after the owner shift (100 percent) has increased by more than 50 percentage points over their lowest percentage ownership at any time during the testing period (0 percent prior to January 1, 1988).

Example 6.—The stock of L corporation is publicly traded; no shareholder owns five percent or more. On January 1, 1987, there is a stock offering as a result of which stock representing 60 percent of L's value is acquired by an investor group consisting of 12 unrelated individuals, each of whom acquires five percent of L stock. Based on these facts, there has been an ownership change, because the percentage of L stock owned after the owner shift by the 12 5-percent shareholders in the investor group (60 percent) has increased by more than 50 percentage points over the lowest percentage of stock owned by those shareholders at any time during the testing period (0 percent prior to January 1, 1987).

Example 7.—On January 1, 1987, L corporation is owned by two unrelated shareholders, A (60 percent) and C (40 percent). LS corporation is a wholly owned subsidiary of L corporation and is therefore deemed to be owned by A and C in the same proportions as their ownership of L (after application of the attribution rules, as discussed below). On January 1, 1988, L distributes all the stock of LS to A in exchange for all of A's L stock in a section 355 transaction. There has been an ownership change of L, because the percentage of L stock owned by C (100 percent) has increased by more than 50 percentage points over the lowest percentage of L stock owned by C at any time during the testing period (40 percent prior to the distribution of LS stock). There has not been an ownership change of LS, because the percentage of LS stock owned by A (100 percent) has not increased by more than 50 percentage points over the lowest percentage of stock owned by A at any time during the testing period (60 percent, after application of the attribution rules, as discussed below), prior to January 1, 1988.

Equity structure shift

An equity structure shift is defined as any tax-free reorganization within the meaning of section 368, other than a divisive "D" or "G" reorganization or an "F" reorganization (new sec. 382(g)(3)(A)). In addition, to the extent provided in regulations, the term equity structure shift may include other transactions, such as public offerings not involving a 5-percent shareholder or taxable reorganization-type transactions (e.g., mergers or other reorganization-type transactions that do not qualify for tax-free treatment due to the nature of the consideration or the failure to satisfy any of the other requirements for a tax-free transaction) (new secs. 382(g)(3)(B), (g)(4), and (m)(5)).²⁸ A purpose of the provision that considers only owner shifts involving a 5-percent shareholder is to relieve widely held companies from the burden of keeping track of trades among less-than-5-percent shareholders. For example, a publicly traded company that is 60 percent owned by less-than-5-percent shareholders would not experience an ownership change merely because, within a three-year period, every one of such shareholders sold his stock to a person who was not a 5-percent shareholder. There are situations involving transfers of stock involving less-than-5-percent shareholders, other than tax-free reorganizations (for example, public offerings), in which it will be feasible to identify changes in ownership involving such shareholders, because, unlike public trading, the changes occur as part of a single, integrated transaction. Where identification is reasonably feasible or a reasonable presumption can be applied, the Treasury Department is expected to treat such transactions under the rules applicable to equity structure shifts.

For purposes of determining whether an ownership change has occurred following an equity structure shift, the less-than-5-percent shareholders of each corporation that was a party to the reorganization will be segregated and treated as a single, separate 5-percent shareholder (new sec. 382(g)(4)(B)(i)). The Act contemplates that this segregation rule will similarly apply to acquisitions by groups of less-than-5 percent shareholders through corporations as well as other entities (e.g., partnerships) and in transactions that do not constitute equity structure shifts (new sec. 382(g)(4)(C)). Moreover, the Act provides regulatory authority to apply similar segregation rules to segregate groups of less than 5-percent shareholders in cases that involve only a single corporation, (for example, a public offering or a recapitalization). (new sec. 382(m)(5)).

Example 8.—On January 1, 1988, L corporation (a loss corporation) is merged (in a transaction described in section 368(a)(1)(A)) into P corporation (not a loss corporation), with P surviving. Both L and P are publicly traded corporations with no shareholder owning five percent or more of either corporation or the surviving corporation. In the merger, L shareholders receive 30 percent of the stock of P. There has been an ownership change of L, because the percentage of P stock owned by the former P shareholders (all of whom are less-than-5-percent shareholders who are treated as a

²⁸ The regulatory authority provided by section 382(g)(3)(B) should not be construed to limit the scope of section 382(g)(4)(C), as augmented by section 382(m)(5). See discussion in text following Example 8, *supra*.

separate, single 5-percent shareholder) after the equity structure shift (70 percent) has increased by more than 50 percentage points over the lowest percentage of L stock owned by such shareholders at any time during the testing period (0 percent prior to the merger). If, however, the former shareholders of L had received at least 50 percent of the stock of P in the merger, there would not have been an ownership change of L.

An ownership change would similarly occur after a taxable merger in which L acquires P (in which L's losses are not affected other than by the special limitations), if L's former shareholders receive only 30 percent of the combined company, pursuant to new section 382(g)(4)(C). The Congress expected that section 382(g)(4)(C) would by its terms generally cause the segregation of the less-than 5-percent shareholders of separate entities where an entity other than a single corporation is involved in a transaction. Section 382(g)(3)(B) and section 382(m)(5) provide additional authority for Treasury to segregate groups of less than 5 percent shareholders where there is only one corporation involved.

Example 9.—On January 1, 1987, L corporation is owned by two unrelated shareholders, A (60 percent) and C (40 percent). On January 1, 1988, L redeems all of A's L stock in exchange for non-voting preferred stock described in section 1504(a)(4). Following this recapitalization (which is both an equity structure shift and an owner shift involving a 5-percent shareholder), there has been an ownership change of L, because the percentage of L stock (which does not include preferred stock within the meaning of section 1504(a)(4)) owned by C following the equity structure shift (100 percent) has increased by more than 50 percentage points over the lowest percentage of L stock owned by C at any time during the testing period (40 percent prior to the recapitalization).

Assume, alternatively, that on January 1, 1987, the stock of L corporation was widely held, with no shareholder owning as much as five percent, and that 60 percent of the stock was redeemed in exchange for non-voting preferred stock in a transaction that is otherwise identical to the transaction described above (which would be an equity structure shift, but not an owner shift involving a 5-percent shareholder because of the existence of only a single 5-percent shareholder, the aggregated less-than-5-percent shareholders, who owns 100 percent of L both before and after the exchange). In such a case, the Secretary will prescribe regulations segregating the less-than-5-percent shareholders of the single corporation, so that the group of shareholders who retain common stock in the recapitalization will be treated as a separate, single 5-percent shareholder. Accordingly, such a transaction would constitute an ownership change, because the percentage of L stock owned by the continuing common shareholders (100 percent) has increased by more than 50 percentage points over the lowest percent of stock owned by such shareholders at any time during the testing period (40 percent prior to the recapitalization).

Example 10.—L corporation stock is widely held; no shareholder owns as much as five percent of L stock. On January 1, 1988, L corporation, which has a value of \$1 million, directly issues stock with a value of \$2 million to the public; no one person acquired as much as five percent in the public offering. No ownership change has oc-

curred, because a public offering in which no person acquires as much as five percent of the corporation's stock, however large, by a corporation that has no five-percent shareholder before the offering would not affect the percentage of stock owned by a 5-percent shareholder.²⁹ In other words, the percentage of stock owned by less-than-5-percent shareholders of L immediately after the public offering (100 percent) has not increased by more than 50 percentage points over the lowest percentage of stock owned by the less-than-5-percent shareholders of L at any time during the testing period (100 percent).

To the extent provided in regulations that will apply prospectively from the date the regulations are issued, a public offering can be treated, in effect, as an equity structure shift with the result that the offering is a measuring event, even if there is otherwise no change in ownership of a person who owns 5-percent of the stock before or after the transaction. Rules also would be provided to segregate the group of less-than-5-percent shareholders prior to the offering and the new group of less than-5-percent shareholders that acquire stock pursuant to the offering. Under such regulations, therefore, the less-than-5-percent shareholders who receive stock in the public offering could be segregated and treated as a separate 5-percent shareholder. Thus, an ownership change may result from the public offering described above, because the percentage of stock owned by the group of less-than-5-percent shareholders who acquire stock in the public offering, who are treated as a separate 5-percent shareholder (66.67 percent), has increased by more than 50 percentage points over the lowest percentage of L stock owned by such shareholders at any time during the testing period (0 percent prior to the public offering). The Act contemplates that the regulations may provide rules to allow the corporation to establish the extent, if any, to which existing shareholders acquire stock in the public offering.

Multiple transactions

As described above, the determination of whether an ownership change has occurred is made by comparing the relevant shareholders' stock ownership immediately after either an owner shift involving a 5-percent shareholder or an equity structure shift with the lowest percentage of such shareholders' ownership at any time during the testing period. Thus, changes in ownership that occur by reason of a series of transactions including both owner shifts involving a 5-percent shareholder and equity structure shifts may constitute an ownership change. Where the segregation rule applies, for purposes of determining whether an ownership change has occurred as a result of any transaction, the acquisition of stock shall be treated as being made proportionately from all the shareholders immediately before the acquisition, unless a different proportion is established (new section 382(g)(4)(B)(ii) and (C)).

²⁹ A different result would occur if the public offering were performed by an underwriter on a "firm commitment" basis, because the underwriter would be a 5-percent shareholder whose percentage of stock (66.67 percent) has increased by more than 50 percentage points over the lowest percentage of stock owned by the underwriter at any time during the testing period (0 percent prior to public offering). See Rev. Rul. 78-294, 1978-2 C.B. 141.

Example 11.—On January 1, 1988, I (an individual) purchased 40 percent of the stock of L. The remaining stock of L is owned by 25 shareholders, none of whom own as much as five percent. On July 1, 1988, L is merged into P—which is wholly owned by I—in a tax-free reorganization. In exchange for their stock in L, the L shareholders (immediately before the merger) receive stock with a value representing 60 percent of the P stock that is outstanding immediately after the merger (24 percent to I; 36 percent to the less-than-5-percent shareholders of L). No other transactions occurred with respect to L stock during the testing period preceding the merger. There is an ownership change with respect to L immediately following the merger, because the percentage of stock owned by I in the combined entity (64 percent—40 percent by virtue of I's ownership of P prior to the merger plus 24 percent received in the merger) has increased by more than 50 percentage points over the lowest percentage of stock in L owned by I during the testing period (0 percent prior to January 1, 1988).

Example 12.—On July 12, 1989, L corporation is owned 45 percent by P, a publicly traded corporation (with no 5-percent shareholders), 40 percent by individual A, and 15 percent by individual B. All of the L shareholders have owned their stock since L's organization in 1984. Neither A nor B owns any P stock. On July 30, 1989, B sells his entire 15-percent interest to C for cash. On August 13, 1989, P acquires A's entire 40-percent interest in exchange for P stock representing an insignificant percentage of the outstanding P voting stock in a "B" reorganization.

There is an ownership change immediately following the B reorganization, because the percentage of L stock held (through attribution, as described below) by P shareholders (all of whom are less than-5-percent shareholders who are treated as one 5-percent shareholder) and C (100 percent—P shareholders-85 percent; C-15 percent) has increased by more than 50 percentage points over the lowest percentage of stock owned by P shareholders and C at any time during the testing period (45 percent held constructively by P shareholders prior to August 13, 1989).

Example 13.—The stock of L corporation is widely held by the public; no single shareholder owns five percent or more of L stock. G corporation also is widely held with no shareholder owning five percent or more. On January 1, 1988, L corporation and G corporation merge (in a tax-free transaction), with L surviving, and G shareholders receive 49 percent of L stock. On July 1, 1988, B, an individual who has never owned stock in L or G, purchases five percent of L stock in a transaction on a public stock exchange.

The merger of L and G is not an ownership change of L, because the percentage of stock owned by the less-than-5-percent shareholders of G (who are aggregated and treated as a single 5-percent shareholder) (49 percent) has not increased by more than 50 percentage points over the lowest percentage of L stock owned by such shareholders during the testing period (0 percent prior to the merger). The purchase of L stock by B is an owner shift involving a five-percent shareholder, which is presumed (unless otherwise established) to have been made proportionately from the groups of former G and L shareholders (49 percent from the G shareholders and 51 percent from the L shareholders). There is an ownership

change of L because, immediately after the owner shift involving B, the percentage of stock owned by the G shareholders (presumed to be 46.55 percent—49 percent actually acquired in the merger less 2.45 percent presumed sold to B) and B (5 percent) has increased by more than 50 percentage points over the lowest percentage of L stock owned by those shareholders at any time during the testing period (0 percent prior to the merger).

Example 14.—The stock of L corporation and G corporation is widely held by the public; neither corporation has any shareholder owning as much as five percent of its stock. On January 1, 1988, B purchases 10 percent of L stock. On July 1, 1988, L and G merge (in a tax-free transaction), with L surviving, and G shareholders receiving 49 percent of L stock.

The merger of L and G is an ownership change because, immediately after the merger, the percentage of stock owned by G shareholders (49 percent) and B (5.1 percent) has increased by more than 50 percentage points over the lowest percentage of L stock owned by such shareholders at any time during the testing period (0 percent prior to the stock purchase by B).

Attribution and aggregation of stock ownership

Attribution from entities.—In determining whether an ownership change has occurred, the constructive ownership rules of section 318, with several modifications, are applied (new sec. 382(l)(3)). Except to the extent provided in regulations, the rules for attributing ownership of stock (within the meaning of new section 382(k)(6)) from corporations to their shareholders are applied without regard to the extent of the shareholders' ownership in the corporation.³⁰ Thus, any stock owned by a corporation is treated as being owned proportionately by its shareholders. Moreover, except as provided in regulations, any stock attributed to a corporation's shareholders is not treated as being held by such corporation. Stock attributed from a partnership, estate or trust similarly shall not be treated as being held by such entity. The effect of the attribution rules is to prevent application of the special limitations after an acquisition that does not result in a more than 50 percent change in the ultimate beneficial ownership of a loss corporation.³¹ Converse-

³⁰ The attribution rules apply to stock or other interests in a manner consistent with the basic definition of an ownership change under the Act. Thus, section 318 is applied only to "stock" that is taken into account for purposes of section 382. For example, assume a corporation owns both common stock and stock described in section 1504(a)(4) of a type which is not counted in determining whether there has been an ownership change (referred to as "pure preferred") in a holding company. The pure preferred represents 55 percent of the holding company's value. The holding company's only asset consists of 100 percent of the common stock—the only class outstanding—in an operating subsidiary that is a loss corporation. The sale of the pure preferred would not constitute an ownership change because no stock in the loss corporation may be attributed through such stock. On the other hand, assume 100 percent of the stock in a loss corporation is transferred in a section 351 exchange, in which the loss corporation's sole shareholder receives pure preferred representing 51 percent of the transferee's value, and an unrelated party receives 100 percent of the transferee's common stock. Here, an ownership change would result with respect to the loss corporation.

Similar rules would apply where a loss corporation is owned directly or indirectly by a partnership (or other intermediary) that has outstanding ownership interests substantially similar to a pure preferred stock interest.

³¹ The Act contemplates that regulations may provide rules to allow a widely held loss corporation to establish the extent, if any, to which there is overlapping stock ownership between an acquiring widely held corporation and such loss corporation.

ly, the attribution rules result in an ownership change where more than 50 percent of a loss corporation's stock is acquired indirectly through an acquisition of stock in the corporation's parent corporation.

Example 15.—L corporation is publicly traded; no shareholder owns as much as five percent. P corporation is publicly traded; no shareholder owns as much as five percent. On January 1, 1988, P corporation purchases 100 percent of L corporation stock on the open market. The L stock owned by P is attributed to the shareholders of P, all of whom are less-than-5-percent shareholders who are treated as a single, separate 5-percent shareholder under section 382(g)(4)(C). Accordingly, there has been an ownership change of L, because the percentage of stock owned by the P shareholders after the purchase (100 percent) has increased by more than 50 percentage points over the lowest percentage of L stock owned by that group at any time during the testing period (0 percent prior to January 1, 1988).

Aggregation rules.—Special aggregation rules are applied for all stock ownership, actual or deemed, by shareholders of a corporation who are less-than-5-percent shareholders. Except as provided in regulations, stock owned by such persons is treated as being held by a single, separate 5-percent shareholder. For purposes of determining whether transactions following an equity structure shift or owner shift involving a 5-percent shareholder constitute an ownership change, the aggregation rules trace any subsequent change in ownership by a group of less-than-5-percent shareholders. In analyzing subsequent shifts in ownership, unless a different proportion is established otherwise, acquisitions of stock shall be treated as being made proportionately from all shareholders immediately before such acquisition.

Example 16.—Corporation A is widely held by a group of less-than-5-percent shareholders ("Shareholder Group A"). Corporation A owns 80 percent of both corporation B and corporation C, which respectively own 100 percent of corporation L and corporation P. Individual X owns the remaining stock in B (20 percent) and individual Y owns the remaining stock in C (20 percent). On January 1, 1988, L and P are, respectively, the only assets of B and C; and B and C are of equal value. On January 1, 1988, B merges into C with C surviving. After the merger, X owns 10 percent of C stock, Y owns 10 percent of C stock, and A owns 80 percent of C stock. The attribution rules (see sec. 382(1)(3)) and special aggregation rules (see sec. 382(g)(4)) apply to treat Shareholder Group A as a single, separate 5-percent shareholder owning 80 percent of the stock of L prior to the merger. Following the merger, Shareholder Group A still owns 80 percent of the stock of L, X owns 10 percent of the stock of L, and Y owns 10 percent of the stock of L. No ownership change occurs as a result of the merger, because the stock of L owned by Shareholder Group A is the same before and after the merger (80 percent), the stock of L owned by X has not increased but has decreased, and the stock of L owned by Y (0 percent before the merger and 10 percent after the merger) has not increased by more than 50 percentage points.

Example 17.—L corporation is publicly traded; no shareholder owns more than five percent. LS is a wholly owned subsidiary of L

corporation. On January 1, 1988, L distributes all the stock of LS pro rata to the L shareholders. There has not been any change in the respective ownership of the stock of LS, because the less-than-5 percent shareholders of L, who are aggregated and treated as a single, separate 5-percent shareholder, are treated as owning 100 percent of LS (by attribution) before the distribution and directly own 100 percent of LS after the distribution. Thus, no owner shift involving a 5-percent shareholder has occurred; accordingly, there has not been an ownership change.

Example 18.—L Corporation is valued at \$600. Individual A owns 30 percent of L stock, with its remaining ownership widely held by less-than-5-percent shareholders ("Shareholder Group L"). P corporation is widely held by less-than-5-percent shareholders ("Shareholder Group P"), and is valued at \$400. On January 1, 1988, L and P consolidate in a tax free reorganization into L/P Corporation, with 60 percent of the value of such stock being distributed to former L corporation shareholders. On June 15, 1988, 17 percent of L/P corporation stock is acquired in a series of open market transactions by individual B. At all times between January 1, 1988 and June 15, 1988, A's ownership interest in L/P Corporation remained unchanged.

The consolidation by L and P on January 1, 1988 is an equity structure shift, but not an ownership change with respect to L. Under the attribution and aggregation rules, the ownership interest in new loss corporation, L/P Corporation, is as follows: A owns 18 percent (60 percent of 30 percent), Shareholder Group L owns 42 percent (60 percent of 70 percent) and Shareholder Group P owns 40 percent. The only 5-percent shareholder whose stock interest in new loss corporation increased relative to the lowest percentage of stock ownership in old loss corporation during the testing period, Shareholder Group P, did not increase by more than 50 percentage points.

The Act provides that, unless a different proportion is established by the taxpayer or the Internal Revenue Service, acquisitions of stock following the consolidation are treated as being made proportionately from all shareholders immediately before such transaction. Thus, under the general rule, B's open market purchase on June 15, 1988 of L/P Corporation stock would be treated as being made proportionately from A, Shareholder Group L, and Shareholder Group P. As a result, the application of this convention without modification would result in an ownership change, because the interests of B (17 percent) and Shareholder Group P (40 percent less the 6.8 percent deemed acquired by B) in new loss corporation would have increased by more than 50 percentage points during the testing period (50.2 percent). A's ownership interest in L/P corporation, however, has in fact remained unchanged. Because L/P Corporation could thus establish that the acquisition by B was not proportionate from all existing shareholders, however, it would be permitted to establish a different proportion for the deemed shareholder composition following B's purchase as follows: (1) A actually owns 18 percent, (2) B actually owns 17 percent, (3) Shareholder Group L is deemed to own 33.3 percent (42 percent less (17 percent $\times$ 42/82)), and (4) Shareholder Group P is deemed to own 31.7 percent (40 percent less (17 percent $\times$ 40/82)). If L/P Cor-

poration properly establishes these facts, no ownership change has occurred, because B and Shareholder Group P have a stock interest in L/P Corporation (48.7 percent) that has not increased by more than 50 percentage points over the lowest percentage of stock owned by such shareholders in L/P Corporation, or L Corporation at any time during the testing period (0 percent).

If B purchased eleven percent from A, there would be an ownership change. The presumption does not apply in the case of subsequent purchases from persons who are 5-percent shareholders without regard to the aggregation rules.

Other attribution rules.—The family attribution rules of sections 318(a)(1) and 318(a)(5)(B) do not apply, but an individual, his spouse, his parents, his children, and his grandparents are treated as a single shareholder. “Back” attribution to partnerships, trusts, estates, and corporations from partners, beneficiaries, and shareholders will not apply except as provided in regulations.

The Act does not provide rules for attributing stock that is owned by a government. For example, stock that is owned by a foreign government is not treated as owned by any other person. Thus, if a government of a country owned 100% of the stock of a corporation and, within the testing period, sold all of such stock to members of the public who were citizens of the country, an ownership change would result. Governmental units, agencies, and instrumentalities that derive their powers, rights, and duties from the same sovereign authority will be treated as a single shareholder.

Finally, except as provided in regulations, the holder of an option is treated as owning the underlying stock if such a presumption would result in an ownership change.³² This rule is intended to apply to options relating to stock in a loss corporation as well as any other instrument relating to the direct or indirect ownership in a loss corporation. The subsequent exercise of an option is disregarded if the holder of the option has been treated as owning the underlying stock. On the other hand, if the holder of the option was not treated as owning the underlying stock, the subsequent exercise will be taken into account in determining whether there is an owner shift at time of exercise. This rule is to be applied on an option-by-option basis so that, in appropriate cases, certain options will be deemed exercised while others may not. Similarly, a person will be treated as owning stock that may be acquired pursuant to any contingency, warrant, right to acquire stock, conversion feature, put, or similar interest, if such a presumption results in an ownership change.³³ If the option or other contingency expires

³² Thus, except as provided in regulations, the stock underlying an option or other interest subject to the rule in section 382(l)(3)(A)(iv) may be taken into account on and after the date on which the interest is acquired or is later transferred, for purposes of determining whether an ownership change occurs following any transaction (including such acquisition or transfer). It is expected that the Treasury Department may consider whether there are circumstances in which it may be appropriate to limit the operation of this rule to transactions occurring during any three-year testing period that includes the date the option or other interest is issued or transferred.

³³ The types of rights to acquire stock that are subject to this rule thus may extend beyond those rights that have been treated as options under section 318(a)(4) as applied for other purposes. For example, it is intended that a right to acquire unissued stock of a corporation would (except as provided in regulations) be treated as exercised if an ownership change would result,

without a transfer of stock ownership, but the existence of the option or other contingency resulted in an ownership change under this rule, the loss corporation will be able to file amended tax returns (subject to any applicable statute of limitations) for prior years as if the corporation had not been subject to the special limitations.

Example 19.—L corporation has 1,000 shares of stock outstanding, which are owned by 25 unrelated shareholders, none of whom own five percent or more. P corporation is wholly owned by individual A. On January 1, 1987, L corporation acquires 100 percent of P stock from A. In exchange, A receives 750 shares of L stock and a contingent right to receive up to an additional 500 shares of L stock, depending on the earnings of P corporation over the next five years.

Except as provided in regulations, A would be treated as owning all the L stock that he might receive on occurrence of the contingency (and such stock is thus treated as additional outstanding stock). Accordingly, an ownership change of L would occur, because the percentage of stock owned (and treated as owned) by A (1,250 shares—55.5 percent (33.3 percent (750 of 2,250 shares) directly and 22.2 percent (500 of 2,250 shares) by attribution)) increased by more than 50 percentage points over the lowest percentage of stock owned by A at any time during the testing period (0 percent prior to January 1, 1987).

Example 20.—L corporation and P corporation are publicly traded; no shareholder owns five percent or more of either corporation. On January 1, 1989, P corporation purchases 40 percent of the stock in L corporation and an option to acquire the remaining 60 percent of L corporation stock. The option is exercisable three years after the date on which the option is issued.

Under the Act, if P is treated as owning the L corporation stock obtainable on exercise of the option, then P corporation would be treated as owning 100 percent of L corporation. Thus, the presumption provided by section 382(l)(3)(A) would apply, and an ownership change would result. The same result would apply even if the option were exercisable only in the event of a contingency such as the attaining of a specified earnings level by the end of a specified period.

Stock acquired by reason of death, gift, divorce or separation.—If (i) the basis of any stock in the hands of any person is determined under section 1014 (relating to property acquired from a decedent), section 1015 (relating to property acquired by a gift or transfer in trust), or section 1041(b) (relating to transfers of property between spouses or incident to divorce), (ii) stock is received by any person in satisfaction of a right to receive a pecuniary bequest, or (iii) stock is acquired by a person pursuant to any divorce or separation instrument (within the meaning of section 71(b)(2)), then such persons shall be treated as owning such stock during the period such

without regard to how such a right may have been treated under section 318(a)(4). Compare Rev. Rul. 68-601, 1968-2 C.B. 124; *J. Milton Sorem v. Commissioner*, 335 F.2d 275 (10th Cir. 1964); *W.H. Bloch v. United States*, 261 F. Supp. 597 (S.D. Tex. 1967), *aff'd per curiam*, 386 F.2d 531 (5th Cir., 1968). It is expected that Treasury will exercise its regulatory authority, however, to prevent the use of this rule in appropriate cases—as one example, where options or other interests subject to the rule are issued shortly after a corporation has incurred a de minimis amount of loss.

stock was owned by the person from whom it was acquired (new sec. 382(l)(3)(B)). Such transfers, therefore, would not constitute owner shifts.

Special rule for employee stock ownership plans.—If certain ownership and allocation requirements are satisfied, the acquisition of employer securities (within the meaning of section 409(l)) by either a tax credit employee stock ownership plan or an employee stock ownership plan (within the meaning of section 4975(e)(7)) shall not be taken into account in determining whether an ownership change has occurred (new sec. 382(l)(3)(C)). The acquisition of employer securities from any such plan by a participant of any such plan pursuant to the requirements of section 409(h) also will not be taken into account in determining whether an ownership change has occurred.

Utilization of holding company structures.—The mere formation of a holding company unaccompanied by a change in the beneficial ownership of the loss corporation will not result in an ownership change. The attribution rules of section 318, as modified for purposes of applying these special limitations, achieve this result by generally disregarding any corporate owner of stock as the owner of any loss corporation stock (new sec. 382(l)(3)(A)(ii)(II)). Instead, the attribution rules are designed to provide a mechanism for tracking the changes in ownership by the ultimate beneficial owners of the loss corporation. The creation of a holding company structure is significant to the determination of whether an ownership change has occurred only if it is accompanied by a change in the ultimate beneficial ownership of the loss corporation.

Example 21.—The stock of L corporation is owned equally by unrelated individuals, A, B, C, and D. On January 1, 1988, A, B, C, and D contribute their L corporation stock to a newly formed holding company ("HC") in exchange for equal interests in stock and securities of HC in a transaction that qualifies under section 351.

The formation of HC does not result in an ownership change with respect to L. Under the attribution rules, A, B, C, and D following the incorporation of L corporation are considered to own 25 percent of the stock of L corporation and, unless provided otherwise in regulations, HC is treated as not holding any stock in L corporation. Accordingly, the respective holdings in L corporation were not altered to any extent and there is thus no owner shift involving a 5-percent shareholder. The result would be the same if L corporation were owned by less-than-5-percent shareholders prior to the formation of the holding company.

Example 22.—The stock of L corporation is widely held by the public ("Public/L") and is valued at \$600. P is also widely held by the public ("Public/P") and is valued at \$400. On January 1, 1988, P forms Newco with a contribution of P stock. Immediately thereafter, Newco acquires all of the properties of L corporation in exchange for its P stock in a forward triangular merger qualifying under section 368(a)(2)(D). Following the transaction, Public/L and Public/P respectively are deemed to own 60 percent and 40 percent of P stock.

Inserting P between Public/L and L corporation (which becomes Newco in the merger) does not result in an ownership change with respect to Newco, the new loss corporation. Under new section

382(g)(4)(B)(i), Public/L and Public/P are each treated as a separate 5-percent shareholder of Newco, the new loss corporation.³⁴ Unless regulations provide otherwise, P's direct ownership interest in L corporation is disregarded. Because the percentage of Newco stock owned by Public/P shareholders after the equity structure shift (40 percent) has not increased by more than 50 percentage points over the lowest percentage of stock of L (the old loss corporation) owned by such shareholders at any time during the testing period (0 percent prior to January 1, 1988), the transaction does not constitute an ownership change with respect to Newco.

3-year testing period

In general, the relevant testing period for determining whether an ownership change has occurred is the three-year period preceding any owner shift involving a 5-percent shareholder or any equity structure shift (new sec. 382(i)(1)). Thus, a series of unrelated transactions occurring during a three-year period may constitute an ownership change. A shorter period, however, may be applicable following any ownership change. In such a case, the testing period for determining whether a second ownership change has occurred does not begin before the day following the first ownership change (new sec. 382(i)(2)).

In addition, the testing period does not begin before the first day of the first taxable year from which there is a loss carryforward (including a current NOL that is defined as a pre-change loss) or excess credit (new sec. 382(i)(3)). Thus, transactions that occur prior to the creation of any attribute subject to limitation under section 382 or section 383 are disregarded. Except as provided in regulations, the special rule described above does not apply to any corporation with a net unrealized built-in loss. The Act contemplates, however, that the regulations will permit such corporations to disregard transactions that occur before the year for which such a corporation establishes that a net unrealized built-in loss first arose.

Effect of ownership change

Section 382 limitation

For any taxable year ending after the change date (*i.e.*, the date on which an owner shift resulting in an ownership change occurs or the date of the reorganization in the case of an equity structure shift resulting in an ownership change), the amount of a loss corporation's (or a successor corporation's) taxable income that can be offset by a pre-change loss (described below) cannot exceed the section 382 limitation for such year (new sec. 382(a)). The section 382 limitation for any taxable year is generally the amount equal to the value of the loss corporation immediately before the ownership change multiplied by the long-term tax-exempt rate (described below) (new sec. 382(b)(1)).

³⁴ The rules described above aggregate all less-than-5-percent shareholders of any corporation. These aggregation rules are to be applied after taking into account the attribution rules. In the above example, the old loss corporation and new loss corporation are properly treated as the same corporation. Thus, even though L does not survive the reorganization, Public/L is properly treated as a continuing 5-percent shareholder of Newco, the new loss corporation. The same result would be appropriate if the transaction had been structured as a reverse triangular merger under section 368(a)(2)(E).

The Treasury Department is required to prescribe regulations regarding the application of the section 382 limitation in the case of a short taxable year. These regulations will generally provide that the section 382 limitation applicable in a short taxable year will be determined by multiplying the full section 382 limitation by the ratio of the number of days in the year to 365. Thus, taxable income realized by a new loss corporation during a short taxable year may be offset by pre-change losses not exceeding a ratable portion of the full section 382 limitation.

If there is a net unrealized built-in gain, the section 382 limitation for any taxable year is increased by the amount of any recognized built-in gains (determined under rules described below). Also, the section 382 limitation is increased by built-in gain recognized by virtue of a section 338 election (to the extent such gain is not otherwise taken into account as a built-in gain). Finally, if the section 382 limitation for a taxable year exceeds the taxable income for the year, the section 382 limitation for the next taxable year is increased by such excess.

If two or more loss corporations are merged or otherwise reorganized into a single entity, separate section 382 limitations are determined and applied to each loss corporation that experiences an ownership change.

Example 23.—X corporation is wholly owned by individual A and its stock has a value of \$3,000; X has NOL carryforwards of \$10,000. Y corporation is wholly owned by individual B and its stock has a value of \$9,000; Y has NOL carryforwards of \$100. Z corporation is owned by individual C and its stock has a value of \$18,000; Z has no NOL carryforwards. On July 22, 1988, X, Y and Z consolidate into W corporation in a transaction that qualifies as a tax-free reorganization under section 368(a)(1)(A). The applicable long-term tax-exempt rate on such date is 10 percent. As a result of the consolidation, A receives 10 percent of W stock, B receives 30 percent and C receives 60 percent.

The consolidation of X, Y and Z results in an ownership change for old loss corporations X and Y. The Act applies a separate section 382 limitation to the utilization of the NOL carryforwards of each loss corporation that experiences an ownership change. Therefore, the annual limitation on X's NOL carryforwards is \$300 and the annual limitation Y's NOL carryforwards is \$900.

For W's taxable year ending on December 31, 1989, W's taxable income before any reduction for its NOLs is \$1,400. The amount of taxable income of W that may be offset by X and Y's pre-change losses (without regard to any unused section 382 limitation) is \$400 (the \$300 section 382 limitation for X's NOL carryforwards and all \$100 of Y's NOL carryforwards because that amount is less than Y's \$900 section 382 limitation). The unused portion of Y's section 382 limitation may not be used to augment X's section 382 limitation for 1989 or in any subsequent year.

Special rule for post-change year that includes the change date.—In general, the section 382 limitation with respect to an ownership change that occurs during a taxable year does not apply to the utilization of losses against the portion of the loss corporation's taxable income, if any, allocable to the period before the change. For this purpose, except as provided in regulations, taxable income (not

including built-in gains or losses, if there is a net unrealized built-in gain or loss) realized during the change year is allocated ratably to each day in the year. The regulations may provide that income realized before the change date from discrete sales of assets would be excluded from the ratable allocation and could be offset without limit by pre-change losses. Moreover, these regulations may provide a loss corporation with an option to determine the taxable income allocable to the period before the change by closing its books on the change date and thus forgoing the ratable allocation.

Value of loss corporation

The value of a loss corporation is generally the fair market value of the corporation's stock (including preferred stock described in section 1504(a)(4)) immediately before the ownership change (new sec. 382(e)(1)). If a redemption occurs in connection with an ownership change—either before or after the change—the value of the loss corporation is determined after taking the redemption into account (new sec. 382(e)(2)).³⁵ The Treasury Department is given regulatory authority to treat other corporate contractions in the same manner as redemptions for purposes of determining the loss corporation's value. The Treasury Department also is required to prescribe such regulations as are necessary to treat warrants, options, contracts to acquire stock, convertible debt, and similar interests as stock for purposes of determining the value of the loss corporation (new sec. 382(k)(6)(B)(i)).

In determining value, the price at which loss corporation stock changes hands in an arms-length transaction would be evidence, but not conclusive evidence, of the value of the stock. Assume, for example, that an acquiring corporation purchased 40 percent of loss corporation stock over a 12-month period. Six months following this 40 percent acquisition, the acquiring corporation purchased an additional 20 percent of loss corporation stock at a price that reflected a premium over the stock's proportionate amount of the value of all the loss corporation stock; the premium is paid because the 20-percent block carries with it effective control of the loss corporation. Based on these facts, it would be inappropriate to simply gross-up the amount paid for the 20-percent interest to determine the value of the corporation's stock. Under regulations, it is anticipated that the Treasury Department will permit the loss corporation to be valued based upon a formula that grosses up the purchase price of all of the acquired loss corporation stock if a control block of such stock is acquired within a 12-month period.

Example 24.—All of the outstanding stock of L corporation is owned by individual A and has a value of \$1,000. On June 15, 1988, A sells 51 percent of his stock in L to unrelated individual B. On

³⁵ It was intended that the redemption provisions would apply to transactions that effectively accomplish similar economic results, without regard to formal differences in the structure used, or the order of events by which similar consequences are achieved. Thus, the fact that a transaction might not constitute a "redemption" for other tax purposes does not determine the treatment of the transaction for purposes of this provision. As one example, a "bootstrap" acquisition, in which aggregate corporate value is directly or indirectly reduced or burdened by debt to provide funds to the old shareholders, could generally be subject to the provision. This may include cases in which debt used to pay the old shareholders remains an obligation of an acquisition corporation or an affiliate, where the source of funds for repayment of the obligation is the acquired corporation. See section 382(m)(4), relating to corporate contractions.

January 1, 1989, L and A enter into a 15-year management contract and L redeems A's remaining stock interest in such corporation. The latter transactions were contemplated in connection with B's earlier acquisition of stock in 1988.

The acquisition of 51 percent of the stock of L on June 15, 1988, constituted an ownership change. The value of L for purposes of computing the section 382 limitation is the value of the stock of such corporation immediately before the ownership change. Although the value of such stock was \$1,000 at that time, the value must be reduced by the value of A's stock that was subsequently redeemed in connection with the ownership change.

Long-term tax-exempt rate

The long-term tax-exempt rate is defined as the highest of the Federal long-term rates determined under section 1274(d), as adjusted to reflect differences between rates on long-term taxable and tax-exempt obligations, in effect for the month in which the change date occurs or the two prior months (new sec. 382(f)). The Treasury Department will publish the long-term tax-exempt rate by revenue ruling within 30 days after the date of enactment and monthly thereafter. The long-term tax-exempt rate will be computed as the yield on a diversified pool of prime, general obligation tax-exempt bonds with remaining periods to maturity of more than nine years.

The use of a rate lower than the long-term Federal rate is necessary to ensure that the value of NOL carryforwards to the buying corporation is not more than their value to the loss corporation. Otherwise there would be a tax incentive to acquire loss corporations. If the loss corporation were to sell its assets and invest in long-term Treasury obligations, it could absorb its NOL carryforwards at a rate equal to the yield on long-term government obligations. Since the price paid by the buyer is larger than the value of the loss company's assets (because the value of NOL carryforwards are taken into account), applying the long-term Treasury rate to the purchase price would result in faster utilization of NOL carryforwards by the buying corporation. The long-term tax-exempt rate normally will fall between 66 (1 minus the maximum corporate tax rate of 34 percent) and 100 percent of the long-term Federal rate.

Example 25.—Corporation L has \$1 million of net operating loss carryforwards. L's taxable year is the calendar year, and on July 1, 1987, all of the stock of L is sold in a transaction constituting an ownership change of L. (Assume the transaction does not terminate L's taxable year.) On that date, the value of L's stock was \$500,000 and the long-term tax-exempt rate was 10 percent. Finally, L incurred net operating loss during 1987 of \$100,000, and L had no built-in gains or losses.

On these facts, the taxable income of L after July 1, 1987, that could be offset by L's losses incurred prior to July 1, 1987, would generally be limited. In particular, for all taxable years after 1987, the pre-change losses of L generally could be used to offset no more than \$50,000 of L's taxable income each year. (For L's 1987 taxable year, the limit would be \$25,000 ($1/2 \times$ the \$50,000 section 382 limitation)). The pre-change losses of L would constitute the \$1 million of NOL carryforwards plus one-half of the 1987 net operating loss, or a total of \$1,050,000. If, in taxable year 1988, L had \$30,000 of

taxable income to be offset by L's losses, it could be fully offset by L's pre-change NOLs and the amount of L's 1989 taxable income that could be offset by pre-change losses would be limited to \$95,000 (\$50,000 annual limit plus \$45,000 carryover).

If L had income of \$100,000 in 1987, instead of a net operating loss, L's 1987 taxable income that could be offset by pre-change losses would generally be limited to \$75,000 ($1/2 \times$ the \$50,000 section 382 limitation plus $1/2 \times$ \$100,000 1987 income). (In appropriate circumstances, the Secretary could, by regulations, require allocation of income using a method other than daily proration. Such circumstances might include, for example, an instance in which substantial income-producing assets are contributed to capital after the change date.)

Continuity of business enterprise requirements

Following an ownership change, a loss corporation's NOL carryforwards (including any recognized built-in losses, described below) are subject to complete disallowance (except to the extent of any recognized built-in gains or section 338 gain, described below), unless the loss corporation's business enterprise is continued at all times during the two-year period following the ownership change. If a loss corporation fails to satisfy the continuity of business enterprise requirements, no NOL carryforwards would be allowed to the new loss corporation for any post-change year. This continuity of business enterprise requirement is the same requirement that must be satisfied to qualify a transaction as a tax-free reorganization under section 368. (See Treasury regulation section 1.368-1(d)). Under these continuity of business enterprise requirements, a loss corporation (or a successor corporation) must either continue the old loss corporation's historic business or use a significant portion of the old loss corporation's assets in a business. Thus, the requirements may be satisfied even though the old loss corporation discontinues more than a minor portion of its historic business. Changes in the location of a loss corporation's business or the loss corporation's key employees, in contrast to the results under the business-continuation rule in the 1954 Code version of section 382(a), will not constitute a failure to satisfy the continuity of business enterprise requirements under the conference agreement.

Reduction in loss corporation's value for certain capital contributions

Any capital contribution (including a section 351 transfer) that is made to a loss corporation as part of a plan a principal purpose of which is to avoid any of the special limitations under section 382 shall not be taken into account for any purpose under section 382. For purposes of this rule, except as provided in regulations, a capital contribution made during the two-year period ending on the change date is irrebuttably presumed to be part of a plan to avoid the limitations. The application of this rule will result in a reduction of a loss corporation's value for purposes of determining the section 382 limitation. The term "capital contribution" is to be interpreted broadly to encompass any direct or indirect infusion of capital into a loss corporation (e.g., the merger of one corporation into a commonly owned loss corporation). Regulations generally

will except (i) capital contributions received on the formation of a loss corporation (not accompanied by the incorporation of assets with a net unrealized built-in loss) where an ownership change occurs within two years of incorporation, (ii) capital contributions received before the first year from which there is an NOL or excess credit carryforward (or in which a net unrealized built-in loss arose), and (iii) capital contributions made to continue basic operations of the corporation's business (e.g. to meet the monthly payroll or fund other operating expenses of the loss corporation). The regulations also may take into account, under appropriate circumstances, the existence of substantial nonbusiness assets on the change date (as described below) and distributions made to shareholders subsequent to capital contributions, as offsets to such contributions.

Reduction in value for corporations having substantial non-business assets

If at least one-third of the fair market value of a corporation's assets consists of nonbusiness assets, the value of the loss corporation, for purposes of determining the section 382 limitation, is reduced by the excess of the value of the nonbusiness assets over the portion of the corporation's indebtedness attributable to such assets. The term nonbusiness assets includes any asset held for investment, including cash and marketable stock or securities. Assets held as an integral part of the conduct of a trade or business (e.g., assets funding reserves of an insurance company or similar assets of a bank) would not be considered nonbusiness assets. In addition, stock or securities in a corporation that is at least 50 percent owned (voting power and value) by a loss corporation are not treated as nonbusiness assets. Instead, the parent loss corporation is deemed to own its ratable share of the subsidiary's assets. The portion of a corporation's indebtedness attributable to nonbusiness assets is determined on the basis of the ratio of the value of nonbusiness assets to the value of all the loss corporation's assets.

Regulated investment companies, real estate investment trusts, and real estate mortgage investment conduits are not treated as having substantial nonbusiness assets.

Losses subject to limitation

The term "pre-change loss" includes (i) for the taxable year in which an ownership change occurs, the portion of the loss corporation's NOL that is allocable (determined on a daily pro rata basis, without regard to recognized built-in gains or losses, as described below) to the period in such year before the change date, (ii) NOL carryforwards that arose in a taxable year preceding the taxable year of the ownership change and (iii) certain recognized built-in losses and deductions (described below).

For any taxable year in which a corporation has income that, under section 172, may be offset by both a pre-change loss (i.e., an NOL subject to limitation) and an NOL that is not subject to limitation, taxable income is treated as having been first offset by the pre-change loss (new sec. 382(1)(2)(B)). This rule minimizes the NOLs that are subject to the special limitations. For purposes of determining the amount of a pre-change loss that may be carried

to a taxable year (under section 172(b)), taxable income for a taxable year is treated as not greater than the section 382 limitation for such year reduced by the unused pre-change losses for prior taxable years. (New sec. 382(l)(2)(A)).

Built-in losses

If a loss corporation has a net unrealized built-in loss, the recognized built-in loss for any taxable year ending within the five-year period ending at the close of the fifth post-change year (the "recognition period") is treated as a pre-change loss (new sec. 382(h)(1)(B)).

Net unrealized built-in losses.—The term "net unrealized built-in loss" is defined as the amount by which the fair market value of the loss corporation's assets immediately before the ownership change is less than the aggregate adjusted bases of a corporation's assets at that time. Under a *de minimis* exception, the special rule for built-in losses is not applied if the amount of a net unrealized built-in loss does not exceed 25 percent of the value of the corporation's assets immediately before the ownership change. For purposes of the *de minimis* exception, the value of a corporation's assets is determined by excluding any (1) cash, (2) cash items (as determined for purposes of section 368(a)(2)(F)(iv)), or (3) marketable securities that have a value that does not substantially differ from adjusted basis.

Example 26.—L corporation owns two assets: asset X, with a basis of \$150 and a value of \$50 (a built-in loss asset), and asset Y, with a basis of zero and a value of \$50 (a built-in gain asset, described below). L has a net unrealized built-in loss of \$50 (the excess of the aggregate bases of \$150 over the aggregate value of \$100).

Recognized built-in losses.—The term "recognized built-in loss" is defined as any loss that is recognized on the disposition of an asset during the recognition period, except to the extent that the new loss corporation establishes that (1) the asset was not held by the loss corporation immediately before the change date, or (2) the loss (or a portion of such loss) is greater than the excess of the adjusted basis of the asset on the change date over the asset's fair market value on that date. The recognized built-in loss for a taxable year cannot exceed the net unrealized built-in loss reduced by recognized built-in losses for prior taxable years ending in the recognition period.

The amount of any recognized built-in loss that exceeds the section 382 limitation for any post-change year must be carried forward (not carried back) under rules similar to the rules applicable to net operating loss carryforwards and will be subject to the special limitations in the same manner as a pre-change loss.

Accrued deductions.—The Treasury Department is authorized to issue regulations under which amounts that accrue before the change date, but are allowable as a deduction on or after such date (e.g., deductions deferred by section 267 or section 465), will be treated as built-in losses. Depreciation deductions cannot be treated as accrued deductions or built-in losses;³⁶ however, the Secretary

³⁶ Similarly, Section 382 does not provide relief for built-in income other than gain on disposition of an asset.

of the Treasury is required to conduct a study of whether built-in depreciation deductions should be subject to section 382, and report to the tax-writing committees of the Congress before January 1, 1989.

Built-in gains

If a loss corporation has a net unrealized built-in gain, the section 382 limitation for any taxable year ending within the five-year recognition period is increased by the recognized built-in gain for the taxable year (new sec. 382(h)(1)(A)).

Net unrealized built-in gains.—The term “net unrealized built-in gain” is defined as the amount by which the value of a corporation’s assets exceeds the aggregate bases of such assets immediately before the ownership change. Under the *de minimis* exception described above, the special rule for built-in gains is not applied if the amount of a net unrealized built-in gain does not exceed 25 percent of the value of a loss corporation’s assets.

Recognized built-in gains.—The term “recognized built-in gain” is defined as any gain recognized on the disposition of an asset during the recognition period, if the taxpayer establishes that the asset was held by the loss corporation immediately before the change date, to the extent the gain does not exceed the excess of the fair market value of such asset on the change date over the adjusted basis of the asset on that date. The recognized built-in gain for a taxable year cannot exceed the net unrealized built-in gain reduced by the recognized built-in gains for prior years in the recognition period.

Bankruptcy proceedings

The special limitations do not apply after any ownership change of a loss corporation if (1) such corporation was under the jurisdiction of a bankruptcy court in a Title 11 or similar case immediately before the ownership change, and (2) the corporation’s historic shareholders and creditors (determined immediately before the ownership change) own 50 percent of the value and voting power of the loss corporation’s stock immediately after the ownership change (new sec. 382(l)(5)). The 50-percent test is satisfied if the corporation’s shareholders and creditors own stock of a controlling corporation that is also in bankruptcy (new sec. 382(l)(5)(A)(ii)).

This special rule applies only if the stock-for-debt exchange, reorganization, or other transaction is ordered by the court or is pursuant to a plan approved by the court. For purposes of the 50-percent test, stock of a creditor that was converted from indebtedness is taken into account only if such indebtedness was held by the creditor for at least 18 months before the date the bankruptcy case was filed or arose in the ordinary course of the loss corporation’s trade or business and is held by the person who has at all times held the beneficial interest in the claim. Indebtedness will be considered as having arisen in the ordinary course of the loss corporation’s business only if the indebtedness was incurred by the loss corporation in connection with the normal, usual, or customary conduct of its business. It is not relevant for this purpose whether the debt was related to ordinary or capital expenditures of the loss corporation. In addition, stock of a shareholder is taken into account only to the

extent such stock was received in exchange for stock that was held immediately before the ownership change.

If the exception for bankruptcy proceedings applies, several special rules are applicable. First, the pre-change losses and excess credits that may be carried to a post-change year are reduced by one-half of the amount of any cancellation of indebtedness income that would have been included in the loss corporation's income as a result of any stock-for-debt exchanges that occur as part of the Title 11 or similar proceeding under the principles of section 108(e)(10) (without applying section 108(e)(10)(B)). Thus, the NOL carryforwards would be reduced by 50 percent of the excess of the amount of the indebtedness canceled over the fair market value of the stock exchanged. Second, the loss corporation's pre-change NOL carryforwards are reduced by the interest on the indebtedness that was converted to stock in the bankruptcy proceeding and paid or accrued during the period beginning on the first day of the third taxable year preceding the taxable year in which the ownership change occurs and ending on the change date. Finally, after an ownership change that qualifies for the bankruptcy exception, a second ownership change during the following two-year period will result in the elimination of NOL carryforwards that arose before the first ownership change. The special bankruptcy provisions do not apply to stock-for-debt exchanges in informal workouts, but the Secretary of the Treasury is required to study informal bankruptcy workouts under sections 108 and 382, and report to the tax-writing committees of the Congress before January 1, 1988.

The Act provides an election, subject to such terms and conditions as the Secretary may prescribe, to forgo the exception for title 11 or similar cases (new sec. 382(l)(5)(H)). If this election is made, the general rules described above will apply except that the value of the loss corporation will reflect any increase in value resulting from any surrender or cancellation of creditors' claims in the transaction (for purposes of applying new section 382(e)).

Thrift institutions

A modified version of the bankruptcy exception (described above) applies to certain ownership changes of a thrift institution involved in a G reorganization by virtue of section 368(a)(3)(D)(ii). This rule also applies to ownership changes resulting from an issuance of stock or equity structure shift that is an integral part of a transaction involving such a reorganization, provided that the transaction would not have resulted in limitations under prior law.³⁷ The bankruptcy exception is applied to qualified thrift reorganizations by requiring shareholders and creditors (including depositors) to retain a 20-percent (rather than 50-percent) interest. For this purpose, the fair market value of the outstanding stock of the new loss corporation includes the amount of deposits in such corporation im-

³⁷ For example, a supervisory conversion of a mutual thrift into a stock thrift qualifying under section 368(a)(3)(D)(ii), followed by an issuance of stock for cash, would come within this special rule. The issuance of stock would not be regarded as a second ownership change for purposes of the bankruptcy exception.

mediately after the change, as under prior law.³⁸ The general bankruptcy rules that eliminate from the NOL carryforwards both interest deductions on debt that was converted and income that would be recognized under the principles of section 108(e)(10) are not applicable to thrifts.

Transactions involving solvent thrifts, including a purchase of the stock of a thrift, or merger of a thrift into another corporation, will be subject to the general rules relating to ownership changes. The conversion of a solvent mutual savings and loan association into a stock savings and loan (or other transactions involving a savings and loan not entitled to special treatment), although not within the special rules applicable to troubled thrifts, will not necessarily constitute an ownership change. In such a conversion, the mutual thrift converts to stock form as a preliminary step to the issuance of stock to investors for purposes of raising capital. Under prior law IRS rulings, the entire transaction may qualify as a tax-free reorganization if certain conditions are met. For purposes of determining whether there has been an ownership change causing a limitation on the use of losses, the issuance of stock generally will be treated under the rules applicable to owner shifts. For example, the depositors holding liquidation accounts would generally be considered a group of less-than-5-percent shareholders, and if the stock were issued entirely to less-than-5-percent shareholders, or 5-percent shareholders acquired less than 50 percent, no ownership change would occur. Treasury regulations may be issued, on a prospective basis, that would treat public offerings generally in the same manner as equity structure shifts and treat the old shareholders and the persons acquiring stock in the offering as separate 5-percent shareholder groups. If such regulations are issued and apply this same approach to the conversion of a solvent mutual savings and loan association to stock form and the issuance of new stock, an ownership change could result, however, if the value of the stock issued in the public offering exceeds the equity of the depositors in the mutual represented by liquidation accounts. The application of any such regulations to thrift institutions (whether solvent or insolvent) would not be effective before January 1, 1989.

Carryforwards other than NOLs

The Act also amends section 383, relating to special limitations on unused business credits and research credits, excess foreign tax credits, and capital loss carryforwards. Under regulations to be prescribed by the Secretary, capital loss carryforwards will be limited to an amount determined on the basis of the tax liability that is attributable to so much of the taxable income as does not exceed the section 382 limitation for the taxable year, with the same ordering rules that apply under present law. Thus, any capital loss

³⁸ A technical correction may be needed so that the statute reflects this intent. Such a correction was included in H. Con Res. 395 as passed by the House and Senate in the 99th Congress. Also, under a literal interpretation of the statute, in order to meet the requirements of section 1504(a)(2), the shareholders and creditors of the old loss corporation must meet the 20-percent test in terms of value and voting power. New section 382(l)(5)(F)(ii)(III) provides a rule for determining the deemed value, but there is no similar rule for measuring voting power. It was not intended that the voting power requirement would apply in this situation to cause a failure of the 20 percent test solely because deposits do not carry adequate voting power. A technical correction may be needed so that the statute reflects this intent.

carryforward used in a post-change year will reduce the section 382 limitation that is applied to pre-change losses. In addition, the amount of any excess credit that may be used following an ownership change will be limited, under regulations, on the basis of the tax liability attributable to an amount of taxable income that does not exceed the applicable section 382 limitation, after any NOL carryforwards, capital loss carryforwards, or foreign tax credits are taken into account. The Act also expands the scope of section 383 to include passive activity losses and credits and minimum tax credits.

Anti-abuse rules

The Act does not alter the continuing application of section 269, relating to acquisitions made to evade or avoid taxes, as under prior law. Similarly, the SRLY and CRCO principles under the regulations governing the filing of consolidated returns will continue to apply. The *Libson Shops* doctrine will have no application to transactions subject to the provisions of the Act.

The Act provides that the Treasury Department shall prescribe regulations preventing the avoidance of the purposes of section 382 through the use of, among other things, pass-through entities. For example, a special allocation of income to a loss partner should not be permitted to result in a greater utilization of losses than would occur if the principles of section 382 were applicable.

In the case of partnerships, for example, the regulations are expected to limit the tax benefits that may be derived from transactions in which allocations of partnership income are made to a loss partner or to a corporation that is a member of a consolidated group with NOL carryovers (a "loss corporation partner") under an arrangement that contemplates the diversion of any more than an insignificant portion of the economic benefit corresponding to such allocation (or any portion of the economic benefit of the loss corporation partner's NOL) to a higher tax bracket partner.

This grant of authority contemplates any rules that the Treasury Department considers appropriate to achieve this objective. For example, regulations may provide, as a general rule, that the limitations of section 382 (and section 383) should be made applicable to restrict a loss corporation partner's use of losses against its distributive share of each item of partnership income and that any portion of the distributive share of partnership income so allocated which may not be offset by the loss corporation's NOLs should be taxed at the highest marginal tax rate. Such regulations could also provide that the allocation of income to the loss corporation may, in the discretion of the Secretary, be reallocated to the extent that other partners in the partnership have not been reasonably compensated for their services to the partnership. If the Treasury Department uses such a format to restrict the utilization of NOLs, it may be appropriate to exempt from these rules any partnership with respect to which, throughout the term of the partnership, (i) every allocation to every partner would be a qualified allocation as described in section 168(j)(9)(B) if it were made to a tax-exempt entity, with appropriate exceptions (e.g., section 704(c) allocations) and (ii) distributions are made to one partner only if there is a simultaneous pro rata distribution to all partners at the same time.

Special rules would, of course, have to be provided to apply section 382 (and section 383) in this context.

No inference was intended regarding whether allocations made to loss corporations by partnerships that involve transfers of the economic benefit of a loss partner's loss to another partner have substantial economic effect. As described in the report of the Committee on Finance, there are circumstances in which it appears to be questionable whether the economic benefit that corresponds to a special allocation to the NOL partner is fully received by such partner; however, some taxpayers nevertheless take the position that such allocations have substantial economic effect under section 704(b). The Treasury Department is expected to review this situation.

The regulations issued under this grant of authority with respect to partnerships should be effective for transactions after the date of enactment. Any regulations addressing other situations, under the Treasury Department's general authority to limit the ability of other parties to obtain any portion of the benefit of a loss corporation's losses, may be prospective within the general discretion of the Secretary.

1976 Act amendments

The Act generally repeals the amendments to section 382 and 383 made by the Tax Reform Act of 1976, effective retroactively as of January 1, 1986. Thus, the law that was in effect as of December 31, 1985, applies to transactions that are not subject to the new provisions because of the effective dates of the conference agreement. The Act, by repealing the 1976 Act amendments, also retroactively repeals section 108(e)(10)(C), as included by the Tax Reform Act of 1984.

Effective Dates

The provisions of the Act generally apply to ownership changes that occur on or after January 1, 1987. In the case of equity structure shifts (notwithstanding the fact that the transaction falls within the definition of an owner shift), the new rules apply to reorganizations pursuant to plans adopted on or after January 1, 1987. In the case of an ownership change occurring immediately after an owner shift (other than an equity structure shift) completed on or after January 1, 1987, new section 382 shall apply. In the case of an equity structure shift (including equity structure shifts that are also owner shifts), Congress intended that new section 382 shall apply to any post-1986 ownership change occurring immediately after the completion of any reorganization pursuant to a plan adopted on or after January 1, 1987. Congress also intended that new section 382 shall apply to any post-1986 ownership change occurring immediately after the completion of a reorganization pursuant to a plan adopted before January 1, 1987, unless the shift in ownership caused by such reorganization, when considered together only with any other shifts in ownership that may have occurred

on or after May 6, 1986, and before December 31, 1986, would have caused an ownership change.^{38a}

For purposes of the effective date rules, if there is an ownership change with respect to a subsidiary corporation as the result of the acquisition of the parent corporation, the subsidiary's treatment is governed by the nature of the parent-level transaction. For example, if all the stock of a parent corporation is acquired in a tax-free reorganization pursuant to a plan adopted before January 1, 1987, then the resulting indirect ownership change with respect to a subsidiary loss corporation will be treated as having occurred by reason of a reorganization pursuant to a plan adopted before January 1, 1987.

A reorganization plan will be considered adopted on the date that the boards of directors of all parties to the reorganization adopt the plans or recommend adoption to the shareholders, or on the date the shareholders approve, whichever is earlier. The parties' boards of directors may approve a plan of reorganization based on principles, and negotiations to date, and delegate to corporate officials the power to refine and execute a binding reorganization agreement, including a binding agreement subject to regulatory approval. Any subsequent board approval or ratification taken at the time of consummating the transaction as a formality (*i.e.*, that is not required, because the reorganization agreement is already legally binding under prior board approval) may occur without affecting the application of the effective date rule for reorganizations. In the case of a reorganization described in section 368(a)(1)(G) or an exchange of debt for stock in a Title 11 or similar case, the amendments do not apply to any ownership change resulting from such a reorganization or proceeding if a petition in such case was filed with the court before August 14, 1986.

The earliest testing period under the Act begins on May 6, 1986 (the date of Senate Finance Committee action).³⁹ If an ownership change occurs after May 5, 1986, but before January 1, 1987, and section 382 and 383 (as amended by the Act) do not apply, then the earliest testing date will not begin before the first day following the date of such ownership change. For example, assume 60 percent of a loss corporation's stock (wholly owned by X) is purchased by B on May 29, 1986, and section 382 under the 1954 Code does not apply (because, for example, the loss corporation's business is continued and section 269 is not implicated). Assume further that X's remaining 40 percent stock interest is acquired by B on February 1, 1987. Under the Act, no ownership change occurs after the second purchase because the testing period begins on May 30, 1986, the day immediately after the ownership change; thus, an ownership change would not result from the second purchase. Conversely, if 40 percent of a loss corporation's stock (wholly owned by X) is purchased by D on July 1, 1986, and an additional 15 percent is purchased by P on January 15, 1987, then an ownership change

^{38a} A reorganization pursuant to a 1986 plan is thus treated under the Act as if the reorganization (and any ownership change resulting from the plan) occurred in 1986 when the plan was adopted. Other shifts in ownership in 1987 before completion of a 1986 plan are not protected.

³⁹ The Congress intended the May 6, 1986 date to apply for purposes of determining whether an ownership change occurred after May 5, 1986 but before January 1, 1987.

would result from the second purchase, and the amendments would apply to limit the use of the loss corporation's NOL carryforwards.

Moreover, if an ownership change that occurs after December 31, 1986 is not affected by the amendments to section 382 (because, for example, in the foregoing example the initial 40 percent stock purchase occurred on May 5, 1986, prior to the commencement of the testing period), the 1954 Code version of section 382 will remain applicable to the transaction. The 1954 Code version of section 382 is generally intended to have continuing application to any increase in percentage points to which the amendments made by the Act do not apply by application of any transitional rule, including the rules prescribing measurement of the testing period by reference only to transactions after May 5, 1986, and the rules grandfathering or disregarding ownership changes following or resulting from certain transactions.⁴⁰

For purposes of determining whether shifts in ownership have occurred on or after May 6, 1986 and before December 31, 1986, the rule of section 382(l)(3)(A)(iv) in the case of options, and the similar rule in the case of any contingent purchase, warrant, convertible debt, stock subject to a risk of forfeiture, contract to acquire stock, or similar interests, shall apply. For example, in the case of such interests issued on or after May 6, 1986,^{41a} the underlying stock could generally be treated as acquired at the time the interest was issued. However, for this transition period, it is expected that the Treasury Department may provide for a different treatment in the case of an acquisition of an option or other interest that is not in fact exercised, as appropriate where the effect of treating the underlying stock as if it were acquired would be to cause an ownership change that would be grandfathered under the transition rules and start a new testing period.

Contingent interests arising prior to January 1, 1987, for example, contingent options created in business transactions occurring prior to that date, are not treated as ownership changes merely by operation of the January 1, 1987, effective date. No inference is intended regarding the treatment of such contingent interests under the Act, other than to clarify that they are not treated as ownership changes merely by operation of the January 1, 1987 effective date.⁴¹

Special transitional rules are provided under which prior law continues to apply to certain ownership changes after January 1, 1987.

Revenue Effect

These provisions are estimated to increase fiscal year budget receipts by \$9 million in 1987, \$29 million in 1988, \$39 million in 1989, \$38 million in 1990, and \$29 million in 1991.

⁴⁰ A technical correction may be needed so that the statute reflects this intent.

^{41a} No inference is intended as to how pre-May 6, 1986 options or other interests would be treated.

⁴¹ See Floor statements by Mr. Rostenkowski, 132 *Cong. Rec.* H8363 (September 25, 1986) and 132 *Cong. Rec.* E 3390 (October 2, 1986); and Senators Dole and Packwood, 132 *Cong. Rec.* S 13958 (September 27, 1986).

G. Recognition of Gain or Loss on Liquidating Sales and Distributions of Property (*General Utilities*) (Secs. 631, 632, and 633 of the Act and secs. 336, 337, and 1374 of the Code) ⁴²

Prior Law

Overview

As a general rule, under prior law (as under present law) corporate earnings from sales of appreciated property were taxed twice, first to the corporation when the sale occurred, and again to the shareholders when the net proceeds were distributed as dividends. At the corporate level, the income was taxed at ordinary rates if it resulted from the sale of inventory or other ordinary income assets, or at capital gains rates if it resulted from the sale of a capital asset held for more than six months. With certain exceptions, shareholders were taxed at ordinary income rates to the extent of their pro rata share of the distributing corporation's current and accumulated earnings and profits.

An important exception to this two-level taxation of corporate earnings was the so-called *General Utilities* rule.⁴³ The *General Utilities* rule permitted nonrecognition of gain by corporations on certain distributions of appreciated property⁴⁴ to their shareholders and on certain liquidating sales of property. Thus, its effect was to allow appreciation in property accruing during the period it was held by a corporation to escape tax at the corporate level. At the same time, the transferee (the shareholder or third-party purchaser) obtained a stepped-up, fair market value basis under other provisions of the Code, with associated additional depreciation, depletion, or amortization deductions. Accordingly, the "price" of a step up in the basis of property subject to the *General Utilities* rule was typically a single capital gains tax paid by the shareholder on receipt of a liquidating distribution from the corporation.

Although the *General Utilities* case involved a dividend distribution of appreciated property by an ongoing business, the term "*General Utilities* rule" was often used in a broader sense to refer to the nonrecognition treatment accorded in certain situations to liquidating as well as nonliquidating distributions to shareholders and to liquidating sales. The rule was reflected in Code sections

⁴² For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 331; H.Rep. 99-426, pp. 274-291; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 198-207 (Conference Report).

⁴³ *General Utilities & Operating Co. v. Helvering*, 296 U.S. 200 (1935).

⁴⁴ Taxable gain may result on disposition of property even if the property's economic value remains constant (or decreases) over the taxpayer's holding period, due to tax depreciation and other downward adjustments to basis. The term "appreciated property" as used herein refers to property whose fair market value or sales price exceeds its adjusted (and not necessarily its original) basis in the hands of the transferor corporation.

311, 336, and 337 of prior law.⁴⁵ Section 311 governed the treatment of nonliquidating distributions of property (dividends and redemptions), while section 336 governed the treatment of liquidating distributions in kind. Section 337 provided nonrecognition treatment for certain sales of property pursuant to a plan of complete liquidation.

Numerous limitations on the *General Utilities* rule, both statutory and judicial, developed over the years following its codification. Some directly limited the statutory provisions embodying the rule, while others, including the collapsible corporation provisions, the recapture provisions, and the tax benefit doctrine, did so indirectly.

Case law and statutory background

Genesis of the General Utilities rule

The precise meaning of *General Utilities* was a matter of considerable debate in the years following the 1935 decision. The essential facts were as follows. General Utilities had purchased 50 percent of the stock of Islands Edison Co. in 1927 for \$2,000. In 1928, a prospective buyer offered to buy all of General Utilities' shares in Islands Edison, which apparently had a fair market value at that time of more than \$1 million. Seeking to avoid the large corporate-level tax that would be imposed if it sold the stock itself, General Utilities offered to distribute the Islands Edison stock to its shareholders with the understanding that they would then sell the stock to the buyer. The company's officers and the buyer negotiated the terms of the sale but did not sign a contract. The shareholders of General Utilities had no binding commitment upon receipt of the Islands Edison shares to sell them to the buyer on these terms.

General Utilities declared a dividend in an amount equal to the value of the Islands Edison stock, payable in shares of that stock. The corporation distributed the Islands Edison shares and, four days later, the shareholders sold the shares to the buyer on the terms previously negotiated by the company's officers.

The Internal Revenue Service took the position that the distribution of the Islands Edison shares was a taxable transaction to General Utilities. Before the Supreme Court, the Commissioner argued that the company had created an indebtedness to its shareholders in declaring a dividend, and that the discharge of this indebtedness using appreciated property produced taxable income to the company under the holding in *Kirby Lumber Co. v. United States*.⁴⁶ Alternatively, he argued, the sale of the Islands Edison stock was in reality made by General Utilities rather than by its shareholders following distribution of the stock. Finally, the Commissioner contended that a distribution of appreciated property by a corporation in and of itself constitutes a realization event. All dividends are distributed in satisfaction of the corporation's general obligation to pay out earnings to shareholders, he argued, and the satisfaction of that obligation with appreciated property causes a realization of the gain.

⁴⁵ Unless otherwise indicated, all section references in this section ("*Prior Law*") are to the Internal Revenue Code of 1954, as in effect immediately prior to the effective date of the amendments made by the Act.

⁴⁶ 284 U.S. 1 (1931).

The Supreme Court held that the distribution did not give rise to taxable income under a discharge of indebtedness rationale. The Court did not directly address the Commissioner's third argument, that the company realized income simply by distributing appreciated property as a dividend. There is disagreement over whether the Court rejected this argument on substantive grounds or merely on the ground it was not timely made. Despite the ambiguity of the Supreme Court's decision, however, subsequent cases interpreted the decision as rejecting the Commissioner's third argument and as holding that no gain is realized on corporate distributions of appreciated property to its shareholders.

Five years after the decision in *General Utilities*, in a case in which the corporation played a substantial role in the sale of distributed property by its shareholders, the Commissioner successfully advanced the imputed sale argument the Court had rejected earlier on procedural grounds. In *Commissioner v. Court Holding Co.*,⁴⁷ the Court upheld the Commissioner's determination that, in substance, the corporation rather than the shareholders had executed the sale and, accordingly, was required to recognize gain.

In *United States v. Cumberland Public Service Co.*,⁴⁸ the Supreme Court reached a contrary result where the facts showed the shareholders had in fact negotiated a sale on their own behalf. The Court stated that Congress had imposed no tax on liquidating distributions in kind or on dissolution, and that a corporation could liquidate without subjecting itself to corporate gains tax notwithstanding the primary motive is to avoid the corporate tax.⁴⁹

In its 1954 revision of the Internal Revenue Code, Congress reviewed *General Utilities* and its progeny and decided to address the corporate-level consequences of distributions statutorily. It essentially codified the result in *General Utilities* by enacting section 311(a) of prior law, which provided that a corporation recognized no gain or loss on a nonliquidating distribution of property with respect to its stock. Congress also enacted section 336, which in its original form provided for nonrecognition of gain or loss to a corporation on distributions of property in partial or complete liquidation. Although distributions in partial liquidations were eventually removed from the jurisdiction of section 336, in certain limited circumstances a distribution in partial liquidation could, prior to the Act, still qualify for nonrecognition at the corporate level.⁵⁰

Finally, Congress in the 1954 Act provided that a corporation did not recognize gain or loss on a sale of property if it adopted a plan of complete liquidation and distributed all of its assets to its shareholders within twelve months of the date of adoption of the plan (sec. 337). Thus, the distinction drawn in *Court Holding Co.* and *Cumberland Public Service Co.*, between a sale of assets followed by liquidating distribution of the proceeds and a liquidating distribution in kind followed by a shareholder sale, was in large part eliminated. Regulations subsequently issued under section 311 acknowledged that a distribution in redemption of stock constituted a "dis-

⁴⁹ *Id.* at 454-455.

⁵⁰ This exception for partial liquidations is discussed below under the heading "Nonliquidating distributions."

tribution with respect to . . . stock" within the meaning of the statute.⁵¹ The 1954 Code in its original form, therefore, generally exempted all forms of nonliquidating as well as liquidating distributions to shareholders from the corporate-level tax.

Nonliquidating distributions: section 311

Congress subsequently enacted a number of statutory exceptions to the *General Utilities* rule. Under prior law (as under present law), the presumption under *General Utilities* was reversed for nonliquidating distributions: the general rule was that a corporation recognized gain (but not loss) on a distribution of property as a dividend or in redemption of stock.⁵² The distributing corporation is treated as if it sold the property for its fair market value on the date of the distribution. A number of exceptions to the general rule were provided. First, no gain was generally recognized to the distributing corporation with respect to distributions in partial liquidation made with respect to "qualified stock." Qualified stock was defined as stock held by noncorporate shareholders who at all times during the five-year period prior to the distribution (or the period the corporation had been in existence, if shorter) owned 10 percent or more in value of the distributing corporation's outstanding stock.⁵³

Second, an exception from the general gain recognition rule was provided for a distribution with respect to qualified stock that constituted a "qualified dividend." A "qualified dividend" for this purpose was a dividend of property (other than inventory or receivables) used in the active conduct of certain "qualified businesses."⁵⁴ A "qualified business" was any trade or business that had been actively conducted for the five-year period ending on the date of the distribution and was not acquired in a transaction in which gain or loss was recognized in whole or in part during such period.⁵⁵ Thus, nonrecognition under this exception did not apply to distributions from holding companies or consisting of ordinary income property, and was limited to distributions to certain long-term, 10-percent shareholders other than corporations.

Third, an exception was provided for distributions with respect to qualified stock of stock or obligations in a subsidiary if substantially all of the assets of the subsidiary consisted of the assets of one or more qualified businesses, no substantial part of the subsidiary's nonbusiness assets were acquired in a section 351 transaction or as a capital contribution from the distributing corporation within the five-year period ending on the date of the distribution, and more than 50 percent in value of the stock of the subsidiary was distributed with respect to qualified stock.⁵⁶

⁵¹ Treas. Reg. sec. 1.311-1(a).

⁵² The statute (sec. 311(d)(1)(A)) by its terms applied only to "distribution[s] to which subpart A [of subchapter C, part I] applies"

⁵³ See secs. 311(d)(2)(A) and 302(b)(4) and (e). The Treasury Department was granted regulatory authority to prevent taxpayers not eligible for this special partial liquidation treatment from obtaining these benefits through the use of section 355, 351, 337, or other provisions of the Code or the regulations (sec. 346(b)).

⁵⁴ Sec. 311(e)(3).

⁵⁵ Sec. 311(e)(2)(B)(i).

⁵⁶ Sec. 311(d)(2)(B).

Finally, exceptions were provided for redemptions to pay death taxes, certain distributions to private foundations, and distributions by certain regulated investment companies in redemption of stock upon the demand of a shareholder.⁵⁷

Section 311 also provided under separate rules that a corporation recognized gain on the distribution of encumbered property to the extent the liabilities assumed or to which the property was subject exceeded the distributing corporation's adjusted basis;⁵⁸ on the distribution of LIFO inventory, to the extent the basis of the inventory determined under a FIFO method exceeded its LIFO value;⁵⁹ and on the distribution of an installment obligation, to the extent of the excess of the face value of the obligation over the distributing corporation's adjusted basis in the obligation.⁶⁰

Liquidating distributions and sales: sections 336 and 337

The rules regarding nonrecognition of gain on distributions in liquidation of a corporation were less restrictive than those applicable to nonliquidating distributions under prior law. Section 336 of prior law generally provided for nonrecognition of gain or loss by a corporation on the distribution of property in complete liquidation of the corporation. Gain was recognized, however, on a distribution of an installment obligation, unless the obligation was acquired in a liquidating sale that would have been tax-free under section 337, or the distribution was by a controlled subsidiary in a section 332 liquidation where the parent took a carryover basis under section 334(b)(1).⁶¹ Section 336 also required recognition of the LIFO recapture amount in liquidating distributions.

Section 337 of prior law provided that if a corporation adopted a plan of complete liquidation and within twelve months distributed all of its assets in complete liquidation, gain or loss on any sales by the corporation during that period generally was not recognized. Section 337 did not apply, and recognition was required, on sales of inventory (other than inventory sold in bulk), stock in trade, and property held primarily for sale to customers in the ordinary course of business. If the corporation accounted for inventory on a LIFO basis, section 337 required that the LIFO recapture amount be included in income.

Distributions by S corporations

Under both prior and present law, a closely-held business operating in corporate form may elect to have business gains and losses taxed directly to or deducted directly by its individual shareholders.

⁵⁷ Sec. 311(d)(2)(C), (D), (E).

⁵⁸ In the case of a distribution of property that was subject to a liability that was not assumed by the shareholder, the gain recognized was limited to the excess of the property's fair market value over its adjusted basis (sec. 311(c)). If the liability was nonrecourse, however, fair market value was treated as being not less than the amount of the liability (sec. 7701(g)).

⁵⁹ Sec. 311(b). Under the last-in, first-out or "LIFO" method of accounting, goods purchased or produced most recently are deemed to be the first goods sold. "FIFO" (first-in, first-out) accounting assumes that the first goods purchased or produced are the first goods sold. The LIFO recapture and installment obligation rules were applied before the recognition rules of section 311(d)(1).

⁶⁰ Sec. 453B. Installment obligations received by a corporation in a sale or exchange qualifying for nonrecognition under section 337 could be distributed to shareholders without recognition at the corporate level. Sec. 453B(d)(2).

⁶¹ Sec. 453B(d).

ers. This election is available under subchapter S of the Code (secs. 1361-1379). The principal advantage of a subchapter S election to the owners of a business is the ability to retain the advantages of operating in corporate form while avoiding taxation of corporate earnings at both the corporate and shareholder levels.

Prior to 1983, shareholders of corporations making a subchapter S election were taxed on actual cash dividend distributions of current earnings and profits of the corporation, and on undistributed taxable income as a deemed dividend. Accordingly, all of the taxable income of a corporation taxable under subchapter S passed through to its shareholders as dividends. A shareholder increased his basis in his stock by the amount of his pro rata share of undistributed taxable income.

The Subchapter S Revision Act of 1982 substantially modified these rules. The dividends-earnings and profits system was abandoned in favor of a pass-through approach based more closely on the system under which partnership income is taxed. Under these new rules, gain must be recognized by an S corporation (which gain is passed through to its shareholders) on a nonliquidating distribution of appreciated property as if it had sold the property for its fair market value (sec. 1363(d)). The purpose of this rule is to assure that the appreciation does not escape tax entirely. A shareholder in an S corporation generally does not recognize gain on receipt of property from the corporation, but simply reduces his basis in his stock by the fair market value of the property, taking a basis in the property equal to that value. The shareholder can then sell the property without recognizing any gain. Thus, unless the distribution triggered gain at the corporate level, no current tax would be paid on the appreciation in the distributed property.

Under prior law, liquidating distributions by an S corporation were taxed in the same manner as liquidating distributions of C corporations. Thus, no gain was recognized by the corporation (secs. 1363(e) and 336). Although the *General Utilities* rule in this context was not responsible for the imposition of only a single, shareholder-level tax on appreciation in corporate property,⁶² it could allow a portion of the gain that would otherwise be ordinary to receive capital gains treatment under prior law.

Statutory law and judicial doctrines affecting application of General Utilities rule

Recapture rules

The nonrecognition provisions of sections 311, 336, and 337 were subject to several additional limitations beyond those expressly set forth in those sections. These limitations included the statutory "recapture" rules for depreciation deductions, investment tax credits, and certain other items that might have produced a tax benefit for the transferor-taxpayer in prior years.⁶³

The depreciation recapture rules (sec. 1245) required inclusion, as ordinary income, of any gain attributable to depreciation deduc-

⁶² A shareholder would under the subchapter S rules be entitled to a basis increase equal to the amount of gain recognized by the corporation.

⁶³ These rules applied not just to corporate distributions but to sales and other dispositions of property, other than in tax-free reorganizations.

tions previously claimed by the taxpayer with respect to "section 1245 property"—essentially, depreciable personal property—disposed of during the year, to the extent the depreciation claimed exceeded the property's actual decline in value.⁶⁴

A more limited depreciation recapture rule applied to real estate. Under section 1250, gain on disposition of residential real property held for more than one year was recaptured as ordinary income to the extent prior depreciation deductions exceeded depreciation computed on the straight-line method. Gain on disposition of non-residential real property held for more than one year, however, was generally subject to recapture of all depreciation unless a straight-line method had been elected, in which case there was no recapture.⁶⁵

A number of other statutory recapture provisions could apply to a liquidating or nonliquidating distribution of property, including section 617(d) (providing for recapture of post-1965 mining exploration expenditures), section 1252 (soil and water conservation and land-clearing expenditures), and section 1254 (post-1975 intangible drilling and development costs).

Collapsible corporation rules

Under prior law (as under present law), section 341 modified the tax treatment of transactions involving stock in or property held by "collapsible" corporations. In general, a collapsible corporation was one the purpose of which was to convert ordinary income into capital gain through the sale of stock by its shareholders, or through liquidation of the corporation, before substantial income had been realized.

Under section 341, if a shareholder disposed of stock in a collapsible corporation in a transaction that would ordinarily produce long-term capital gain, the gain was treated as ordinary income. Likewise, any gain realized by a shareholder on a liquidating distribution of property from a collapsible corporation was ordinary income. Finally, prior law section 337 was inapplicable in the case of a collapsible corporation. Thus, liquidating sales of appreciated inventory or other property held by the corporation for sale to customers generated ordinary income that was fully recognized at the corporate level.⁶⁶

Certain stock purchases treated as asset purchases

Under both prior and present law, section 338 permits a corporation that purchases a controlling stock interest in another corporation (the "target" corporation) within a twelve-month period to elect to treat the transaction as a purchase of the assets of that

⁶⁴ In the case of sales or exchanges of property in taxable transactions, the effect of this provision was to convert a portion of what would otherwise be capital gain into ordinary income. In the case of nonrecognition transactions, the effect was to require recognition of gain that would otherwise have gone unrecognized.

⁶⁵ Sec. 1245(a)(5). See also sec. 291(a), subjecting a portion of the straight-line depreciation on real estate to recapture in the case of corporations.

⁶⁶ It was possible for gain on sales of capital or section 1231 assets in a section 337 liquidation of a collapsible corporation to be eligible for taxation at capital gains rates. A sale in liquidation could produce corporate level income that eliminated the collapsible status of the corporation, so that the shareholders were eligible for capital gains treatment on any gain realized on relinquishment of their shares in the liquidation.

corporation for tax purposes. If the election is made, the target is treated as if it had sold all of its assets pursuant to a plan of complete liquidation on the date the purchaser obtained a controlling interest in the target (the "acquisition date"), for an amount essentially equal to the purchase price of the stock plus its liabilities. Under prior law, this deemed sale was regarded as occurring under section 337. Accordingly, no gain was recognized on the deemed sale other than gain attributable to section 1245 or other provisions that overrode section 337. The target was then treated as a newly organized corporation which purchased all of the "old" target's assets for a price essentially equal to the purchase price of the stock plus the old target's liabilities on the beginning of the day after the qualified stock purchase. Thus, the new target corporation was able to obtain a stepped-up basis in its assets equal to their fair market value.

Prior to the enactment of section 338, similar results could be achieved under section 332 and former section 334(b)(2) by liquidating the acquired corporation into its parent within a specified period of time. One abuse Congress sought to prevent in enacting section 338 was selective tax treatment of corporate acquisitions. Taxpayers were able to take a stepped-up basis in some assets held by a target corporation or its affiliates while avoiding recapture tax and other unfavorable tax consequences with respect to other assets.⁶⁷ Section 338 contains elaborate "consistency" rules designed to prevent selectivity with respect to acquisitions of stock and assets of a target corporation (and its affiliates) by an acquiring corporation (and its affiliates). All such purchases by the acquiring group must be treated consistently as either asset purchases or stock purchases if they occur within the period beginning one year before and ending one year after the twelve-month acquisition period.⁶⁸

Section 338 of prior (and present) law contained an alternative election under which, in certain circumstances, a corporate purchaser and a seller of an 80-percent-controlled subsidiary could elect to treat the sale of the subsidiary stock as if it had been a sale of the underlying assets. Among the requirements for the filing of an election under section 338(h)(10) were that the selling corporation and its target subsidiary must be members of an affiliated group filing a consolidated return for the taxable year that included the acquisition date. If an election was made, the underlying assets of the corporation that was sold received a stepped-up, fair market value basis; the selling consolidated group recognized the gain or loss attributable to the assets; and there was no separate tax on the seller's gain attributable to the stock. This provision offered taxpayers relief from a potential multiple taxation at the corporate level of the same economic gain, which could result when a transfer of appreciated corporate stock was taxed without providing a corresponding step-up in basis of the assets of the corporation.

⁶⁷ Prior to TEFRA, a step-up could be achieved through a partial liquidation of the target as well as a complete liquidation under sections 332 and 334(b)(2).

⁶⁸ Exceptions are provided for assets acquired in the ordinary course of business, acquisitions in which the basis of property is carried over, and other asset acquisitions as provided in regulations.

Judicially created doctrines

Under prior law, the courts applied nonstatutory doctrines from other areas of the tax law to in-kind distributions to shareholders. These doctrines also apply under present law. For example, it was held that, where the cost of property distributed in a liquidation or sold pursuant to a section 337 plan of liquidation had previously been deducted by the corporation, the tax benefit doctrine overrode the statutory rules to cause recognition of income.⁶⁹ The application of the tax benefit doctrine turns on whether there is a "fundamental inconsistency" between the prior deduction and some subsequent event.⁷⁰

The courts also applied the assignment of income doctrine to require a corporation to recognize income on liquidating and nonliquidating distributions of its property.⁷¹

Reasons for Change

In general

Congress believed that the *General Utilities* rule, even in its more limited form, produced many incongruities and inequities in the tax system. First, the rule could create significant distortions in business behavior. Economically, a liquidating distribution is indistinguishable from a nonliquidating distribution; yet the Code provided a substantial preference for the former. A corporation acquiring the assets of a liquidating corporation was able to obtain a basis in assets equal to their fair market value, although the transferor recognized no gain (other than possibly recapture amounts) on the sale. The tax benefits made the assets potentially more valuable in the hands of a transferee than in the hands of the current owner. This might induce corporations with substantial appreciated assets to liquidate and transfer their assets to other corporations for tax reasons, when economic considerations might indicate a different course of action. Accordingly, Congress reasoned, the *General Utilities* rule could be at least partly responsible for the dramatic increase in corporate mergers and acquisitions in recent years. Congress believed that the Code should not artificially encourage corporate liquidations and acquisitions, and that repeal of the *General Utilities* rule was a major step towards that goal.

Second, the *General Utilities* rule tended to undermine the corporate income tax. Under normally applicable tax principles, nonrecognition of gain is available only if the transferee takes a carryover basis in the transferred property, thus assuring that a tax will eventually be collected on the appreciation. Where the *General Utilities* rule applied, assets generally were permitted to leave corporate solution and to take a stepped-up basis in the hands of the

⁶⁹ See, e.g., *Bliss Dairy v. United States*, 460 U.S. 370 (1983) and *Tennessee Carolina Transportation, Inc. v. Commissioner*, 65 T.C. 440 (1975), *aff'd* 582 F.2d 378 (6th Cir. 1978) (liquidating distribution of previously expensed items); *Estate of Munter v. Commissioner*, 63 T.C. 663 (1975) (sale of previously deducted items pursuant to plan of liquidation).

⁷⁰ *Bliss Dairy*, *supra*.

⁷¹ E.g., *Commissioner v. First State Bank*, 168 F.2d 1004 (5th Cir.), *cert. denied*, 335 U.S. 867 (1948) (a decision rendered prior to the enactment of sec. 311); *Siegel v. United States*, 464 U.S. 891 (1972), *cert. dismissed*, 410 U.S. 918 (1973).

transferee without the imposition of a corporate-level tax.⁷² Thus, the effect of the rule was to grant a permanent exemption from the corporate income tax.

Anti-tax avoidance provisions

In repealing the *General Utilities* rule, which provided for non-recognition of losses as well as gains on distributions, Congress was concerned that taxpayers might utilize various means (including other provisions of the Code or the Treasury regulations) to circumvent repeal of the rule or, alternatively, might exploit the provision to realize losses in inappropriate situations or inflate the amount of the losses actually sustained. For example, under the general rule permitting loss recognition on liquidating distributions, taxpayers might be able to create artificial losses at the corporate level or to duplicate shareholder losses in corporate solution through contributions of property having previously accrued ("built-in") losses. In an effort to prevent these potential abuses, Congress included in the Act regulatory authority to prevent circumvention of the purposes of the amendments through use of any provision of law or regulations. In addition, it included specific statutory provisions designed to prevent avoidance of tax on corporate-level gains through conversions to subchapter S corporation status and unwarranted recognition of losses at the corporate level.

Conforming changes to provisions relating to nonliquidating distributions

The tax treatment of corporations with respect to nonliquidating distributions of appreciated property historically has been the same as liquidating distributions. In recent years, however, nonliquidating distributions have been subjected to stricter rules than liquidating distributions, and corporations have generally been required to recognize gain as a result of nonliquidating distributions of appreciated property. Consistent with this relationship, the Act generally conforms the treatment of nonliquidating distributions with liquidating distributions.

Relief from repeal of the General Utilities rule

Several exceptions to the recognition requirement are provided in the Act. The first relates to distributions of the stock and securities of a controlled subsidiary which under prior law (as under the Act) the distributee shareholder may receive tax-free pursuant to section 355. Congress felt that the same policy rationale that justifies nonrecognition by the shareholder on receipt of the stock—namely, that the transfer merely effects a readjustment of the shareholder's continuing interest in the corporation in modified form and subject to certain statutory and other constraints—also justifies nonrecognition of gain (or loss) to the distributing corporation in this situation. Similarly, certain distributions pursuant to a plan of reorganization also are not subject to recognition.⁷³

⁷² The price of this basis step up was, at most, a single, shareholder-level capital gains tax (and perhaps recapture, tax benefit, and other similar amounts). In some cases, moreover, payment of the capital gains tax was deferred because the shareholder's gain was reported under the installment method.

⁷³ See secs. 311 and 336 as amended by the Act. See also 361 as amended by the Act.

Another exception relates to certain section 332 liquidations in which an 80-percent corporate shareholder receives property with a carryover basis. Congress believed that this exception was justified on the ground that the property (together with the other attributes of the liquidated subsidiary) is retained within the economic unit of the affiliated group. Because such an intercorporate transfer within the group is a nonrecognition event, carryover basis follows. As a result of the carryover basis, the corporate level tax will be paid if the distributed property is disposed of by the recipient corporation to a person outside of the group. Where gain recognition with respect to the distributed property would not be preserved (e.g., certain transfers to a tax-exempt or foreign corporate parent), the exception for liquidating distributions to an 80-percent corporate shareholder does not apply.⁷⁴

Election to treat sales or distributions of certain subsidiary stock as asset transfers

Congress believed it was appropriate to conform the treatment of liquidating and nonliquidating sales or distributions and to require recognition when appreciated property, including stock of a subsidiary, is transferred to a corporate or individual recipient outside the economic unit of the selling or distributing affiliated group. Thus, the Act provides that such transactions result in the recognition of gain or loss to the parent corporation on the appreciation in the stock (that is, on the "outside" gain). There is a potential multiple taxation at the corporate level of the same economic gain, which may result when a transfer of appreciated corporate stock is taxed without providing a corresponding step-up in basis of the "inside" assets of the corporation. (In many cases, however, the "outside" gain may be less than the "inside" gain; furthermore, the deferral of such "inside" gain may significantly reduce any actual economic multiple corporate taxation effect). Congress believed it was appropriate to permit an election to recognize the inside gain immediately in lieu of the outside gain, thus in effect treating the transaction as a transfer of the underlying assets. Such an election was already available under prior law in some circumstances under section 338(h)(10).⁷⁵ However, this election was not available, for example, when the subsidiary did not file a consolidated return with the selling shareholder, or when the stock of the subsidiary was distributed to shareholders.⁷⁶ Congress granted regulatory authority to the Treasury Department to expand the scope of the election to treat the sale of a corporation's stock as a sale of its underlying assets to

⁷⁴ In amending section 311 in 1984, Congress determined that the existence of a carryover basis in the hands of a corporate distributee, even where the distributee was a member of the same affiliated group, did not justify nonrecognition for nonliquidating distributions. Nonliquidating distributions present opportunities for selective transfer of gain or loss that were not believed to be present in a corporate liquidation qualifying for relief. See, H. Rep. 98-861 (June 23, 1984), p. 821.

⁷⁵ As discussed above, section 338(h)(10) permits an election under which the selling corporation's gain on the sale of its subsidiary's stock is ignored, and gain is recognized by the subsidiary as if it had sold its assets in a taxable sale and then liquidated in a section 332 liquidation.

⁷⁶ Distributions of subsidiary stock may qualify for nonrecognition at both the corporate and shareholder levels if the requirements of section 355 are met. However, specific statutory requirements, including a five-year active business test, must be met before section 355 is applicable.

include sales not covered by section 338(h)(10) and distributions of stock in a controlled subsidiary.

Explanation of Provisions

Overview

The Act provides that gain or loss generally is recognized by a corporation on liquidating distributions of its property as if the property had been sold at fair market value to the distributee. Gain or loss is also recognized by a corporation on liquidating sales of its property. Exceptions are provided for distributions in which an 80-percent corporate shareholder receives property with a carry-over basis in a liquidation under section 332, and certain distributions and exchanges involving property that may be received tax-free by the shareholder under subchapter C of the Code.

The Act also makes certain conforming changes in the provisions relating to nonliquidating distributions of property to shareholders, and in the provisions relating to corporations taxable under subchapter S.

Distributions in complete liquidation

General rule

The Act provides that, in general, gain or loss is recognized to a corporation on a distribution of its property in complete liquidation. The distributing corporation is treated as if it had sold the property at fair market value to the distributee-shareholders.

If the distributed property is subject to a liability, the fair market value of the property for this purpose is deemed to be no less than the amount of the liability. Thus, for example, if the amount of the liability exceeds the value of the property that secures it, the selling corporation will recognize gain in an amount equal to the excess of the liability over the adjusted basis of the property.⁷⁷ Likewise, if the shareholders of the liquidating corporation assume liabilities of the corporation and the amount of liabilities assumed exceeds the fair market value of the distributed property, the corporation will recognize gain to the extent the assumed liabilities exceed the adjusted basis of the property. However, the provision does not affect, and no inference was intended regarding, the amount realized by or basis of property received by the distributee-shareholders in these circumstances.

⁷⁷ See also section 7701(g) of the Code, providing that an identical rule for nonrecourse debt applies with respect to any Code provision (including secs. 336 and 311) in which the amount of gain realized with respect to certain transfers or dispositions is determined by specific reference to the fair market value of the property directly or indirectly disposed of. Treas. Reg. secs. 1.1001-1 and 1.1001-2 also provide generally for the treatment of transfers in which recourse or nonrecourse liabilities are involved. As under these provisions, Congress did not intend to require that any liabilities incurred by reason of the acquisition of property that were not taken into account in determining the transferor's basis for such property be taken into account in determining the amount of gain or loss under this provision.

Exceptions

*Section 332 liquidations*⁷⁸

An exception to the recognition rule is provided for certain distributions in connection with the liquidation of a controlled subsidiary into its parent corporation. Under new section 337 of the Code, no gain or loss is generally recognized with respect to property distributed to a corporate shareholder (an "80-percent distributee") in a liquidation to which section 332 applies. If a minority shareholder receives property in such a liquidation, the distribution to the minority shareholder is treated in the same manner as a distribution in a nonliquidating redemption. Accordingly, gain (but not loss) is recognized to the distributing corporation.⁷⁹

The exception for 80-percent corporate shareholders does not apply where the shareholder is a tax-exempt organization unless the property received in the distribution is used by the organization in an activity, the income from which is subject to tax as unrelated business taxable income (UBTI), immediately after the distribution. If such property later ceases to be used in an activity of the organization acquiring the property, the income from which is subject to tax as UBTI, the organization will be taxed at that time (in addition to any other tax imposed, for example, on depreciation recapture under section 1245) on the lesser of (a) the built-in gain in the property at the time of the distribution, or (b) the difference between the adjusted basis of the property and its fair market value at the time of the cessation.

The exception for liquidations into a controlling corporate shareholder is also inapplicable where the parent is a foreign corporation. The Act amends section 367 of the Code to require recognition in a liquidation into a controlling foreign corporation, unless regulations provide otherwise. Congress expected that such regulations may permit nonrecognition if the potential gain on the distributed property at the time of the distribution is not being removed from the U.S. taxing jurisdiction prior to recognition.

If gain is recognized on a distribution of property in a liquidation described in section 332(a), a corresponding increase in the distributee's basis in the property will be permitted.⁸⁰

The Act relocates the provisions of section 332(c) to section 337(c) of the Code. Distributions of property to the controlling parent corporation in liquidations to which section 332 applies in exchange for debt obligations of the subsidiary are treated in the same manner as distributions in exchange for stock of the subsidiary, as under prior law section 332(c).

Tax-free reorganizations and distributions

The general rule requiring gain or loss recognition on liquidating distributions of property is inapplicable to transactions governed by Part III of subchapter C of the Code, relating to corporate organiza-

⁷⁸ Congress anticipated that, in a consolidated return context, the Treasury Department will consider whether aggregation of ownership rules similar to those in sec. 1.1502-34 of the regulations should be provided for purposes of determining a corporation's status as an 80-percent distributee.

⁷⁹ See sec. 336(d)(3) of the Code, as amended by the Act.

⁸⁰ A technical correction may be needed so that the statute reflects this intent.

tions and reorganizations, to the extent the recipient may receive the property without recognition of gain (i.e., to the extent the recipient does not receive "boot").⁸¹ In addition, the provision is not intended to apply to nonreorganization transactions described in section 355 of the Code to the extent the recipient may receive the distribution without recognition of gain under Part III of subchapter C.⁸² Thus, on a liquidating distribution of boot in a transaction qualifying under section 355 that is not pursuant to a plan of reorganization, the distributing corporation recognizes gain (but not loss) with respect to any "boot" distributed to shareholders.⁸³

Limitations on recognition of losses

The Act includes two provisions designed to prevent inappropriate corporate-level recognition of losses on liquidating dispositions of property. In enacting these provisions, Congress did not intend to create any inference regarding the deductibility of such losses under other statutory provisions or judicially created doctrines, or to preclude the application of such provisions or doctrines where appropriate.⁸⁴

Distributions to related persons

Under the first loss limitation rule, a liquidating corporation may not recognize loss with respect to a distribution of property to a related person within the meaning of section 267,⁸⁵ unless (i) the property is distributed to all shareholders on a pro rata basis *and* (ii) the property was not acquired by the liquidating corporation in a section 351 transaction or as a contribution to capital during the five years preceding the distribution.

Thus, for example, a liquidating corporation may not recognize loss on a distribution of recently acquired property to a shareholder who, directly or indirectly, owns more than 50 percent in value of the stock of the corporation. Similarly, a liquidating corporation may not recognize a loss on any property, regardless of when or how acquired, that is distributed to such a shareholder on a non-pro rata basis.

Dispositions of certain carryover basis property acquired for tax-avoidance purpose

Under the second loss limitation rule, recognition of loss may be limited if property whose adjusted basis exceeds its value is contributed to a liquidating corporation, in a carryover basis transac-

⁸¹ Section 361 provides rules governing the treatment of certain distributions in a reorganization. Under amended section 361, sections 336 and 337 do not apply to distributions of property pursuant to a plan of reorganization.

⁸² A technical correction may be needed so that the statute reflects this intent.

⁸³ A technical correction may also be needed to clarify that the distributing corporation recognizes gain but not loss on a distribution of boot in these circumstances.

⁸⁴ See, e.g., section 482 and Treas. Reg. section 1.482-1(d)(5); *National Securities Corp. v. Comm'r*, 137 F.2d 600 (3d Cir. 1943), affg 46 B.T.A. 562 (1942), cert. denied, 320 U.S. 794 (1943) (loss on sale by subsidiary of securities transferred by parent in nonrecognition transaction reallocated to parent, where purpose of transfer was to shift unrealized loss on securities to subsidiary); *Court Holding Co. v. U.S.*, 324 U.S. 321 (1945) (corporation treated as true seller of property distributed to shareholders and purportedly sold by them to third party); and *Gregory v. Helvering*, 293 U.S. 465 (1935) (in addition to meeting literal requirements of statute, transaction must have valid business purpose to qualify for nonrecognition).

⁸⁵ This was intended to refer to a person having a relationship to the distributing corporation that is described in section 267(b).

tion, with a principal purpose of recognizing the loss upon the sale or distribution of the property (and thus eliminating or otherwise limiting corporate level gain). In these circumstances, the basis of the property for purposes of determining loss is reduced, but not below zero, by the excess of the adjusted basis of the property on the date of contribution over its fair market value on such date.⁸⁶

If the adoption of a plan of complete liquidation occurs in a taxable year following the date on which the tax return including the loss disallowed by this provision is filed, except as provided in regulations, the liquidating corporation will recapture the disallowed loss on the tax return for the taxable year in which such plan of liquidation is adopted. In the alternative, regulations may provide for the corporation to file an amended return for the taxable year in which the loss was reported.⁸⁷

Example

The application of the basis reduction rule can be illustrated by the following example:

Assume that on June 1, 1987, a shareholder who owns 10 percent of the stock of a corporation (which is a calendar year taxpayer) participates with other shareholders in a contribution of property to the corporation that qualifies for nonrecognition under section 351, contributing nondepreciable property with a basis of \$1,000 and a value of \$100 to the corporation. Also assume that a principal purpose of the acquisition of the property by the corporation was to recognize loss by the corporation and offset corporate-level income or gain in anticipation of the liquidation. On September 30, 1987, the corporation sells the property to an unrelated third party for \$200, and includes the resulting \$800 loss on its 1987 tax return. Finally, the corporation adopts a plan of liquidation on December 31, 1988.

For purposes of determining the corporation's loss on the sale of the property in 1987, the property's basis is reduced to \$100 — that is, \$1,000 (the transferred basis under section 362) minus \$900 (the excess of the property's basis over its value on the date of contribution). No loss would be realized on the sale, since the corporation received \$200 for the property. Likewise, the corporation would recognize no gain on the sale, since its basis for purposes of computing gain is \$1,000. Congress expected that regulations might provide for the corporation to file an amended return for 1987 reflecting no gain or loss on the sale of the property. Otherwise, the corporation would be required to reflect the disallowance of the loss by including the amount of the disallowed loss on its 1988 tax return.⁸⁸

⁸⁶ The effect of the rule is to deny recognition to the liquidating corporation of that portion of the loss on the property that accrued prior to the contribution, but to permit recognition of any loss accruing after the contribution. In the event that a transaction is described both in section 336(d)(1) and section 336(d)(2), section 336(d)(1) will prevail.

This provision was not intended to override section 311(a). Thus, if property is distributed in a nonliquidating context, the entire loss (and not merely the built-in loss) will be disallowed.

⁸⁷ A technical correction may be needed so that the statute reflects the intention that recapture in the year of liquidation is required unless regulations provide otherwise.

⁸⁸ See footnote 87, *supra*.

Presumption of tax-avoidance purpose in case of contributions within two years of liquidation

For purposes of the loss limitation rule, there is a statutory presumption that the tax-avoidance purpose is present with respect to any section 351 transfer or contribution to capital of built-in loss property within the two-year period prior to the adoption of the plan of liquidation (or at any time thereafter). Although Congress recognized that a contribution more than two years before the adoption of a plan of liquidation might have been made for such a tax-avoidance purpose, Congress also recognized that the determination that such purpose existed in such circumstances might be difficult for the Internal Revenue Service to establish and therefore as a practical matter might occur infrequently or in relatively unusual cases.

Congress intended that the Treasury Department will issue regulations generally providing that the presumed prohibited purpose for contributions of property within two years of the adoption of a plan of liquidation will be disregarded *unless* there is no clear and substantial relationship between the contributed property and the conduct of the corporation's current or future business enterprises.

A clear and substantial relationship between the contributed property and the conduct of the corporation's business enterprises would generally include a requirement of a corporate business purpose for placing the property in the particular corporation to which it was contributed, rather than retaining the property outside that corporation. If the contributed property has a built-in loss at the time of contribution that is significant in amount as a proportion of the built-in corporate gain at that time, special scrutiny of the business purpose would be appropriate.

As one example, assume that A owns Z Corporation which operates a widget business in New Jersey. That business operates exclusively in the northeastern region of the United States and there are no plans to expand those operations. In his individual capacity, A had acquired unimproved real estate in New Mexico that has declined in value. On March 22, 1988, A contributes such real estate to Z and six months later a plan of complete liquidation is adopted. Thereafter, all of Z's assets are sold to an unrelated party and the liquidation proceeds are distributed. A contributed no other property to Z during the two-year period prior to the adoption of the plan of liquidation. Because A contributed the property to Z less than two years prior to the adoption of the plan of liquidation, it is presumed to have been contributed with a prohibited purpose. Moreover, because there is no clear and substantial relationship between the contributed property and the conduct of Z's business, Congress did not expect that any loss arising from the disposition of the New Mexico real estate would be allowed under the Treasury regulations.

However, Congress expected that such regulations will permit the allowance of any resulting loss from the disposition of any of the assets of a trade or business (or a line of business) that are contributed to a corporation where prior law would have permitted the allowance of the loss and the clear and substantial relationship test is satisfied. In such circumstances, application of the loss disallow-

ance rule is inappropriate assuming there is a meaningful (i.e., clear and substantial) relationship between the contribution and the utilization of the particular corporate form to conduct a business enterprise. If the contributed business is disposed of immediately after the contribution it is expected that it would be particularly difficult to show that the clear and substantial relationship test was satisfied. Congress also anticipated that the basis adjustment rules will generally not apply to a corporation's acquisition of property as part of its ordinary start-up or expansion of operations during its first two years of existence. However, if a corporation has substantial gain assets during its first two years of operation, a contribution of substantial built-in loss property followed by a sale or liquidation of the corporation would be expected to be closely scrutinized.

Conversions from C to S corporation status

The Act modifies the treatment of an S corporation that was formerly a C corporation. A corporate-level tax is imposed on any gain that arose prior to the conversion ("built-in" gain) and is recognized by the S corporation, through sale, distribution or other disposition⁸⁹ within ten years after the date on which the S election took effect. The total amount of gain that must be recognized by the corporation, however, is limited to the aggregate net built-in gain of the corporation at the time of conversion to S corporation status.⁹⁰ Congress expected that the Treasury Department could prevent avoidance of the built-in gain rule by contributions of built-in loss property prior to the conversion for the purpose of reducing the net built-in gain.

Gains on sales or distributions of assets by the S corporation are presumed to be built-in gains, except to the extent the taxpayer establishes that the appreciation accrued after the conversion, such as where the asset was acquired by the corporation in a taxable acquisition after the conversion. Built-in gains are taxed at the maximum corporate rate applicable to the particular type of income (i.e., the maximum rate on ordinary income under section 11 or, if applicable, the alternative rate on capital gain income under section 1201) for the year in which the disposition occurs. The corporation may take into account all of its subchapter C tax attributes in computing the amount of the tax on recognized built-in gains. Thus, for example, it may use unexpired net operating losses, capital loss carryovers, and similar items to offset the gain or the resulting tax.⁹¹

⁸⁹ For the particular purposes of this built-in gain tax under new section 1374, Congress intended the term "disposition of any asset" to include not only sales or exchanges but other income-recognition events that effectively dispose of or relinquish the taxpayer's right to claim or receive income. For instance, the term "disposition of any asset" for purposes of this provision will include the collection of accounts receivable by a cash method taxpayer and the completion of a long-term contract performed by a taxpayer using the completed contract method of accounting.

⁹⁰ Congress intended that the recognized built-in gains taken into account for any taxable year shall not exceed the excess, if any, of (a) the net unrealized built-in gain at the time of the conversion, over (b) the amount (if any) by which recognized built-in gains for prior taxable years beginning in the recognition period exceed recognized built-in losses for such years.

⁹¹ A technical correction may be needed so that the statute reflects this intent in the case of capital loss carryovers and similar items.

Congress intended that in a carryover basis transfer of property with built-in gain to an S corporation from a C corporation, the built-in gain with respect to property will be preserved in the hands of the transferee for the 10-year period. Similarly, in the case of a transfer of built-in gain property in a substituted basis transaction, the property received by the transferor will assume the built-in gain taint of the transferred property. If a C corporation converts to S status and is subject to the built-in gain rule, built-in gain assets that such corporation transfers to another S corporation in a carryover basis transaction will retain their original 10-year taint in the hands of the transferee.

Regulatory authority to prevent circumvention of General Utilities repeal

The repeal of the *General Utilities* rule is designed to require the corporate level recognition of gain on a corporation's sale or distribution of appreciated property, irrespective of whether it occurs in a liquidating or nonliquidating context. Congress expected the Treasury Department to issue, or to amend, regulations to ensure that the purpose of the new provisions (including the new subchapter S built-in gain provisions) is not circumvented through the use of any other provision, including the consolidated return regulations or the tax-free reorganization provisions of the Code (part III of subchapter C) or through the use of other pass-through entities such as regulated investment companies (RICs) or real estate investment trusts (REITs). For example, this would include rules to require the recognition of gain if appreciated property of a C corporation is transferred to a RIC or a REIT in a carryover basis transaction that would otherwise eliminate corporate-level tax on the built-in appreciation.

Application of other statutory rules and judicial doctrines

In providing for recognition of gain on liquidating distributions, Congress did not intend to supersede other existing statutory rules and judicial doctrines, including (but not limited to) section 1245 and 1250 recapture, the tax benefit doctrine, and the assignment of income doctrine. Accordingly, these rules will continue to apply to determine the character of gain recognized on liquidating distributions where they are otherwise applicable.

Nonliquidating distributions

The Act makes certain conforming changes to the provisions relating to nonliquidating distributions of property. For purposes of determining the amount realized on a distribution of property, the fair market value of the property is treated as being no less than the amount of any liability to which it is subject or which is assumed by the shareholder under the principles applicable to liquidating distributions. The prior-law exceptions to recognition that were provided for nonliquidating distributions to ten percent, long-term noncorporate shareholders, and for certain distributions of property in connection with the payment of estate taxes or in connection with certain redemptions of private foundation stock, are repealed. As under prior law, no loss is recognized to a distributing

corporation on a nonliquidating distribution of property to its shareholders.

Election to treat sale or distribution of subsidiary stock as disposition of subsidiary's assets

The Act generally conforms the treatment of liquidating sales and distributions of subsidiary stock to the prior-law treatment of nonliquidating sales or distributions of such stock; thus, such liquidating sales or distributions are generally taxable at the corporate level. Congress believed it was appropriate to conform the treatment of liquidating and nonliquidating sales or distributions and to require recognition when appreciated property, including stock of a subsidiary, is transferred to a corporate or individual recipient outside the economic unit of the selling or distributing corporation.

However, Congress believed it was appropriate to provide relief from a potential multiple taxation at the corporate level of the same economic gain, which may result when a transfer of appreciated corporate stock is taxed without providing a corresponding step-up in basis of the assets of the corporation. In addition to retaining the election available under section 338(h)(10) of prior law, the Act permits the expansion of the concept of that provision, to the extent provided in regulations, to dispositions of a controlling interest in a corporation for which this election is currently unavailable. For example, the election could be made available where the selling corporation owns 80 percent of the value and voting power of the subsidiary but does not file a consolidated return with the subsidiary. Moreover, the Act provides that, under regulations, principles similar to those of section 338(h)(10) may be applied to taxable distributions of controlled corporation stock.⁹²

Congress intended that the regulations under this elective provision will account for appropriate principles that underlie the liquidation-reincorporation doctrine. For example, to the extent that regulations make available an election to treat a stock transfer of controlled corporation stock to persons related to such corporation within the meaning of section 368(a)(2)(H) (i.e., section 304(c)), it may be appropriate to provide special rules for such corporation's section 381(c) tax attributes so that net operating losses may not be used to offset liquidation gains, earnings and profits may not be manipulated, or accounting methods may not be changed.

Congress did not intend this election to affect the manner in which a corporation's distribution to its shareholders is characterized for purposes of determining the shareholder level income tax consequences.

Treasury study of subchapter C

The Act directs the Treasury Department to consider whether changes to the provisions of subchapter C (relating to the income taxation of corporations and their shareholders) and related sections of the Code are desirable, and to report to the tax-writing committees of Congress no later than January 1, 1988.

⁹² The Act provides in the case of a sale or distribution of stock of a subsidiary by a qualifying parent corporation, that under regulations "such corporation" may make the election. Congress did not intend to require the election to be made unilaterally. Compare section 338(h)(10).

Effective Dates

In general

The repeal of the *General Utilities* rule is generally effective for liquidating sales and distributions after July 31, 1986. The Act provides a number of general transitional rules, some of which are based on action before November 20, 1985 (the date of action by the House Ways and Means Committee), some of which are based on action before August 1, 1986 (the date of action by the conference committee), and some of which are based on actions after July 31, 1986, and before January 1, 1987. The amendments made by the Act are inapplicable to transactions covered by these general transitional rules.

In addition to these general transitional rules, the Act provides a special delayed effective date for transactions involving certain closely held corporations of limited size. With certain modifications, these transactions are also subject to prior-law rules.

General transitional rules based on pre-November 20, 1985 action

The amendments made by the Act do not apply to distributions or sales and exchanges made pursuant to a plan of liquidation adopted before November 20, 1985, provided the liquidation is completed before January 1, 1988. Special rules apply in determining whether a plan of liquidation was adopted for purposes of these transitional rules⁹³ and whether a distribution, sale, or exchange is made pursuant to such a plan of liquidation. In general, the rules are intended to provide relief in situations in which a decision to liquidate has clearly been made regarding an acquisition, or a decision regarding acquisition has been made and the essential terms have been determined. Some transactions may qualify for relief under more than one provision. A liquidation will be treated as completed under the same standard that is applied under the general transitional rules for liquidations before January 1, 1987.

First rule

The first rule under which a distribution, sale or exchange is treated as pursuant to a plan of liquidation adopted before November 20, 1985, looks to action taken by the liquidating company before the November 20 date. If the board of directors of that company adopted a resolution to solicit shareholder approval for a transaction described in section 336 or 337 of prior law⁹⁴ or if the shareholders or board of directors of the liquidating company have approved such a transaction, then distributions, sales and exchanges that occur pursuant to the transaction are not subject to the Act provided that the liquidation is completed before January 1, 1988.

⁹³ These special rules do not apply, however, for purposes of the transitional rules based on pre-August 1, 1986, action.

⁹⁴ For purposes of these transitional rules generally, transactions described in section 336 or 337 of prior law include complete liquidations and the related distributions, sales or exchanges described in those sections.

Pre-November 20 action

For purposes of this first rule, certain actions taken before November 20, 1985, were intended to constitute implicitly the necessary board or directors or shareholder approval even though formal board of shareholder approval may not otherwise have occurred before that date. Congress intended the requisite board or shareholder approval will be deemed to have occurred if, before November 20, 1985, there was sufficient written evidence to establish that a decision to liquidate has been approved by the board of directors or shareholders, even though the approval may have been given informally, as may occur, for example, in a closely held setting. Examples of sufficient written evidence include written contacts with third parties indicating the decision to liquidate and seeking any necessary approvals for asset transfers or for other actions in connection with the liquidation.

Congress also intended that the requisite board or shareholder approval would be deemed to have occurred, if a company had, before November 20, 1985, entered into a binding contract to sell substantially all of its assets, or entered into a letter of intent with a buyer specifying the essential terms of such a contract.⁹⁵ Similarly, the requisite approval would be deemed to have occurred if, before the relevant date, the board of directors of a corporation adopted a resolution approving or recommending the grant by its shareholders of an option to purchase a majority of the stock of the corporation; or if the shareholders granted such an option before the relevant date, if the option in each case would be a binding option as to the seller, enforceable by the optionee (purchaser).

"Pursuant to" requirement

To qualify for transitional relief, distributions, sales or exchanges must be pursuant to the transaction that the board of directors approved, or for which it solicited shareholder authority (as described above). This will generally be presumed to be the case if a formal plan of liquidation is adopted and the distributions, or sales and exchanges pursuant to such plan commence within one year of the original shareholder or board action. If such action is not taken within a year of such time, all the facts and circumstances must be considered, including, for example, a decision to seek a ruling request from the Internal Revenue Service or the need to obtain governmental rulings or approvals, or third party approvals for asset transfers. If the requisite shareholder or board approval is reflected in a binding contract or letter of intent, the specified sale must thereafter be consummated in accordance with the contract or letter of intent and the formal plan of liquidation be adopted as required above.

⁹⁵ As an example, if prior to November 20, 1985, the company had entered a letter of intent specifying that either substantially all the assets of the company will be sold to a particular purchaser or purchasers for a particular price, or that all the stock of the company will be sold to such persons (who may then liquidate the corporation or make a section 338 election), it will generally be considered that the requisite shareholder or board approval of a transaction described in section 337 of prior law occurred if the contract to sell assets was in fact entered and the corporation liquidates in a transaction described in section 337 before 1988. The same transaction could qualify under the transitional rule for an offer to acquire stock if the contract to sell stock were entered into (and the purchaser made a section 338 election with respect to a pre-1988 acquisition date, or liquidated the corporation before 1988).

Second rule

Under a second rule relating to pre-November 20, 1985 action, sales or distributions pursuant to a plan of liquidation (which includes, for purposes of this purpose, a section 338 election) are not affected by the Act if, before November 20, 1985, (i) there was an offer to purchase a majority of the voting stock of the liquidating corporation, or (ii) the board of directors of the liquidating corporation has adopted a resolution approving an acquisition of the company or recommending the approval of an acquisition of the company to the shareholders; provided in each case the sale or distribution is pursuant to or was contemplated by the terms of the offer or resolution, and a complete liquidation occurs (or the section 338 acquisition date, with respect to which a section 338 election is made) before January 1, 1988. The term "liquidating corporation" includes an acquired corporation (and affiliates) with respect to which a section 338 election is made.

Pre-November 20 action

An offer to purchase a majority of the stock of a corporation is intended to include a tender offer or a binding option given by the offeror and enforceable by the offeree. An offer also includes a letter of intent entered into by the purchaser and seller specifying the essential terms of an acquisition. Any binding contract to acquire a corporation presupposes an offer (as well as the approval and acceptance of the required corporation's shareholders or board of directors). Congress did not intend that a nonbinding offer, as to which there has been no implicit or explicit approval by the board of directors or shareholders of the corporation to be acquired, would be within the scope of the transition rule.

"Pursuant to" requirement

For purposes of these transitional rules, in determining whether a sale or distribution is pursuant to or was contemplated as part of a transaction, Congress intended that deemed sales or exchanges pursuant to a timely section 338 election made with respect to a qualified stock purchase will be presumed to be pursuant to and contemplated by the terms of a pre-November 20, 1985 offer or of a board-approved or recommended acquisition that resulted in the purchase. For example, if, prior to November 20, 1985, the board of directors of a corporation adopted a resolution approving the acquisition of that corporation and if, after November 20, 1985, the acquisition occurs and a timely section 338 election is made prior to January 1, 1988 with respect to the acquired company and its affiliates, the deemed sales pursuant to the section 338 election will not be affected by the Act. In addition, if a corporation qualifies for this transitional rule by virtue of a letter of intent or binding contract the acquisition must occur in accordance with the letter or contract.

Congress also intended that distributions, sales or exchanges will generally be considered pursuant to and contemplated by an acquisition transaction if a formal plan of liquidation is adopted within one year after the acquisition is consummated and the distributions, sales or exchanges commence within that time. However,

Congress intended that if such actions commence more than one year after the acquisition, a determination whether the distributions, sales or exchanges are pursuant to or were contemplated by the terms of the offer will be determined on the basis of all the facts and circumstances. Such circumstances include, but are not limited to, references to or statements regarding the possibility of a liquidation made in the acquisition documents, proxy material or other correspondence with shareholders, public announcements, or requests for governmental approvals, as well as internal documentation and correspondence with attorneys or others involved in the acquisition.

Third rule

Under the third rule relating to pre-November 20, 1985 action, distributions, sales or exchanges in a liquidation (including a section 338 election) are not affected by the amendments under the Act if, prior to that date, a ruling request was submitted to the Internal Revenue Service with respect to a transaction (which transaction includes or contemplates a transaction described in section 336 or 337 of prior law (including a section 338 election)), and, pursuant to the transaction described in the ruling request, a plan of complete liquidation is adopted (or a sec. 338 election made) and the liquidation is completed (or the section 338 acquisition date occurs) before January 1, 1988.

Related corporations

In applying the foregoing rules, action (as described above) taken by the board of directors or shareholders of a corporation with respect to a subsidiary of such corporation is treated as taken by the board of directors or shareholders of such subsidiary. For example, if the board of directors of a parent corporation adopted a resolution approving the sale of substantially all the assets and subsequent liquidation of the subsidiary, that action will be considered action of the shareholders and board of the subsidiary regardless of how many tiers below the parent the subsidiary may be (so long as the parent has effective control over the subsidiary).

In certain instances involving a group of several tiers of subsidiaries, even though the parent corporation has not formally adopted such a resolution, the action of a lower-tier subsidiary may be considered evidence of implicit action by the parent. For example, in the case of the liquidation of a group of corporations constituting an affiliated group involving sales under prior-law section 337, all distributee members of the group must liquidate within one year. If one member of such group has prior to November 20, 1985, taken board or shareholder action of the type qualifying for transition relief (as described above) and if that member and the other members do liquidate within the required one year period, it was intended that timely approval by the board or shareholders of the parent corporation of the group will generally be presumed. In other situations involving pre-November 20 action by only one member of a group of commonly controlled corporations, whether that action can be attributed to members of the group other than an effectively controlled subsidiary of the acting corporation will be determined on the basis of all the facts and circumstances.

General transitional rules based on pre-August 1, 1986 or pre-January 1, 1987 action

The amendments made by the Act also do not apply to transactions which do not meet the requirements of the general transitional rules based on pre-November 20, 1985 action, but which are described in one or more of the following categories:

- (1) a liquidation completed before January 1, 1987;
- (2) a deemed liquidation pursuant to a section 338 election where the acquisition date (the first date on which there is a qualified stock purchase under section 338) occurs before January 1, 1987;⁹⁶
- (3) a liquidation pursuant to a plan of liquidation adopted before August 1, 1986, that is completed before January 1, 1988;
- (4) a liquidation if a majority of the voting stock of the corporation is acquired on or after August 1, 1986, pursuant to a written binding contract in effect before August 1, 1986, and if the liquidation is completed before January 1, 1988;
- (5) a liquidation if there was a binding written contract or contracts to acquire substantially all the assets of the corporation in effect before August 1, 1986, and the liquidation is completed before January 1, 1988; and
- (6) a deemed liquidation, under section 338, of a corporation for which a qualified stock purchase under section 338 first occurs on or after August 1, 1986, pursuant to a written binding contract in effect before August 1, 1986, provided the section 338 acquisition date occurs before January 1, 1988.

Rules applicable in determining when plan of liquidation adopted

A plan of liquidation is adopted if the plan has been approved by the shareholders (see Treas. Reg. sec. 1.337-2(b)). If a plan of liquidation would have been considered adopted for purposes of commencing the twelve-month period under prior-law section 337, it will be deemed adopted for this purpose.

Rules applicable in determining whether binding contract in effect of August 1, 1986

For purposes of determining whether there was a binding written contract or contracts to sell substantially all of the assets of a corporation before August 1, 1986, the term "substantially all of the assets" shall generally mean 70 percent of the gross fair market value and 90 percent of the net fair market value of the assets. In addition, even though the contract or contracts cover a lesser amount of assets, if such contract or contracts would require shareholder approval under the applicable state law that may require such approval for a sale of substantially all of such corporation's assets, then they will qualify as contracts to sell substantial-

⁹⁶ If the "acquisition date" under section 338 occurs before the relevant transition date, the prior law provision allowing additional stock to be purchased within a year after the section 338 "acquisition date" is also available. Thus, if there is a qualified stock purchase of 80 percent of the stock of a qualified corporation on December 1, 1986, followed by purchase of the remaining 20 percent on February 1, 1987, the nonrecognition percentage for purposes of section 337 of prior law would be 100 percent. See section 338(c)(1) and Prop. Treas. Reg. section 1.338-4T(k)(5).

ly all the assets and will be considered binding even though shareholder approval has not yet been obtained.

An acquisition of stock or assets will be considered made pursuant to a binding written contract even though the contract is subject to normal commercial due diligence or similar provisions and the final terms of the actual acquisition may vary pursuant to such provisions.

For purposes of these rules, a liquidation is completed by a required date if it would be considered completed for purposes of section 337 of prior law by that date. For example, there may be a distribution of assets to a qualified liquidating trust (*See, e.g.*, Rev. Rul. 80-150, 1980-1 C.B. 316).

Amendments to provisions relating to nonliquidating distributions

In general, the conforming amendments to section 311 are effective for distributions after July 31, 1986.

Amendments to provisions relating to subchapter S corporations

The provisions relating to S corporations that were formerly C corporation are generally effective with respect to returns filed pursuant to S elections made after December 31, 1986.⁹⁷ Thus, in the case of S corporations whose election was made before January 1, 1987, the prior-law version of section 1374 will apply. For example, if such an S corporation is liquidated after December 31, 1986 and within 3 years of converting from C to S status, new section 1363 and new section 336 will apply (subject to special transition rules for certain closely held corporations) to require the recognition of gain on the liquidation. If there is capital gain of sufficient amount, prior law section 1374 will impose a corporate level tax on that gain in liquidation.

Delayed effective dates for certain closely held corporations

In general

Special delayed effective dates are provided for certain closely held corporations that are limited in size.⁹⁸ Corporations eligible for this rule are generally entitled to prior-law treatment with respect to liquidating sales and distributions occurring before January 1, 1989, provided the liquidation is completed before that date. A liquidation will be treated as completed under the same standard that is applied under the general transitional rules. However, this special transitional rule requires the recognition of income on distributions of ordinary income property (appreciated property that would not produce capital gain if disposed of in a taxable transaction) and short-term capital gain property. Thus, the failure of an eligible closely held corporation to complete its liquidation by December 31, 1986, or otherwise to satisfy the general transitional rules, will result in the loss of nonrecognition treatment for the distribution of appreciated ordinary income and short-term capital

⁹⁷ For purposes of the transition provisions, if a corporation was a C corporation at any time before December 31, 1986, any "S" status of such a corporation prior to its "C" corporation status is disregarded in determining whether under the statute the first taxable year for which the corporation is an S corporation is pursuant to an S election made after December 31, 1986.

⁹⁸ See Act section 633(d).

gain property. It will also require recognition on distributions of installment obligations that are received in exchange for such property. Congress did not intend to require corporate level recognition on distribution of installment obligations that are received in exchange for long-term capital gain property (including section 1231 property the disposition of which would produce long-term capital gain) where the distribution of such obligations would not have caused recognition under prior law sections 337 and 453B(d)(2).

Corporations eligible for this rule may also make an S election prior to January 1, 1989, without becoming subject to the new rules under section 1374 relating to built-in gains except with respect to ordinary income and short-term capital gain property (it is not necessary that such a corporation liquidate prior to January 1, 1989).⁹⁹ However, a corporation having a value in excess of \$5 million (but not in excess of \$10 million), is subject to a phase-out of this relief. Thus, in such circumstances new section 1374 will apply to a portion of the built-in long-term capital gain. Prior law section 1374 will apply to any portion of the built-in long-term capital gains not subject to new section 1374. In addition, to the extent a corporation is eligible for relief under the small corporation rule, a portion of any other long-term capital gain that would be covered by prior law section 1374 (whether or not built-in at the time of conversion) will continue to be covered by that section.

A taxpayer that purchases the stock of a qualified corporation in a qualified stock purchase prior to that date is entitled to apply prior-law rules (modified as in the case of actual liquidations) with respect to an election under section 338, even though in the hands of the acquiring corporation the qualified corporation no longer satisfies the stock holding period requirements and may not satisfy the size or shareholder requirements due to the size or shareholders of the acquiring corporation.¹⁰⁰

Although the Act repeals section 333, in the case of a liquidating distribution to which section 333 of prior law would apply a shareholder of a qualified corporation electing such treatment is entitled to apply section 333 without any phase-out of shareholder level relief under the Act. However, an increase in shareholder-level gain could result from an increase in corporate earnings and profits resulting from application of the corporate-level phase-out of relief from repeal of *General Utilities*.

Finally, for distributions prior to January 1, 1989, qualifying corporations continue to be eligible for relief under prior-law rules relating to nonliquidating distributions with respect to qualified stock (sec. 311(d)(2)). However, this relief does not apply to distributions of ordinary income property or short-term capital gain property.

Requirements for qualification

A corporation is eligible for these special delayed effective dates if it was in existence on August 1, 1986, its value does not exceed

⁹⁹ A technical correction may be needed to clarify that the election need only be made (not become effective) by this date. Such a correction was included in H. Con. Res. 395 as passed by the House and Senate in the 99th Congress.

¹⁰⁰ A technical correction may be needed so that the statute reflects this intent.

\$10 million, and more than 50 percent (by value) of the stock ¹⁰¹ in such corporation is owned by ten or fewer individuals who have held such stock for five years or longer (or the life of the corporation, if less than five years).¹⁰² Full relief is available under this rule only if the corporation's value does not exceed \$5 million; relief is phased out for corporations with values between \$5 million and \$10 million. For purposes of this rule, a corporation's value will be the higher of the value on August 1, 1986, or its value as of the date of adoption of a plan of liquidation (or, in the case of a nonliquidating distribution, the date of such distribution).

Aggregation rules similar to those in section 1563 apply for purposes of determining the value of the corporation on the relevant date, except that control is defined as more than 50 percent rather than 80 percent. Thus, the value of a corporation for purposes of this transitional rule includes the value of other corporations that are (or were) members of its controlled group on the relevant date, including corporations that were completely liquidated prior to January 1, 1987. In providing that all members of the same controlled group of corporations are treated as a single corporation for purposes of this rule, however, Congress did not intend to require that all corporations in a controlled group that would qualify for relief be liquidated in order for the liquidation of any one or more corporations in the group to qualify for relief.

Revenue Effect

These provisions are estimated to increase fiscal year budget receipts by \$15 million in 1987, \$180 million in 1988, \$348 million in 1989, \$460 million in 1990, and \$551 million in 1991.

¹⁰¹ See Act section 633(d)(5)(A).

¹⁰² A technical correction may be needed so that the statute reflects the holding period requirement. A similar correction was included in H. Con. Res. 395 as passed by the House and Senate in the 99th Congress.

Congress intended that, where stock passes to an estate, the holding period of the estate includes that of the decedent. Also, it was intended that the "look-through" attribution rules, generally applicable where stock is held by an entity, would not apply in the case of trusts qualifying under section 1361(c)(2)(ii) or (iii) just as they do not apply under the statute in the case of estates. Thus, stock held by such entities, like stock held by an estate, is to be treated as held by a single qualified person, so that the 10 shareholder test will not cease to be satisfied merely because a decedent's stock passes to such a trust. (In the case of other trusts holding stock, it was intended that the "look-through" attribution rules would apply to determine whether more than 10 qualified persons ultimately own stock.) It was also intended that the holding period of a decedent's estate (or a 1361(c)(2)(ii) or (iii) trust) would be tacked with that of a beneficiary who would have been treated as "one person" with the decedent under the applicable attribution rules. Technical corrections may be needed so that the statute reflects such intent.

In the case of indirect ownership attributed through another entity (for example, a corporation or a partnership) Congress did not intend the rules of section 1223 to apply in all cases for purposes of determining the holding period of the qualified person. In such cases, the qualified person's holding period is the lesser of (1) the period during which the entity held the stock in the qualified corporation, or (2) the period during which the qualified person held the interest in the entity. In the case of holdings through tiers of entities, similar rules apply at each level in determining the holding period of intermediate entities. A technical correction may be necessary so that the statute reflects this intent.

H. Allocation of Purchase Price in Certain Sales of Assets (Sec. 641 of the Act and new section 1060 of the Code)¹⁰³

Prior Law

A sale of a going business for a lump-sum amount is viewed as a sale of each individual asset rather than of a single capital asset.¹⁰⁴ Both the buyer and the seller must allocate the purchase price among the assets for tax purposes. An allocation by the seller is necessary to determine the amount and character of the gain or loss, if any, it will recognize on the sale. An allocation by the buyer is necessary to determine its basis in the assets purchased. This allocation of basis will affect the amount of allowable depreciation or amortization deductions and the amount and character of any gain or loss recognized by the buyer on a subsequent sale, and may have other tax consequences.

Although the parties may agree to a specific allocation of the purchase price among the assets and reflect this allocation in the sales contract, the Code has not required such agreement; thus, the contract may simply state the total purchase price. If the parties do make a specific contractual allocation with appropriate regard to value, they generally may not themselves challenge the allocation for tax purposes.¹⁰⁵ In addition, the courts and the Internal Revenue Service generally have accepted a stated allocation with appropriate regard to value, provided the parties have adverse tax interests with respect to the allocation.¹⁰⁶

In general, a seller has benefitted if a larger portion of the purchase price is allocable to "pure" capital assets, such as goodwill or going concern value, or (to a lesser extent) to section 1231 assets. If the sale is taxable to the seller, allocations to capital assets would result in tax at the lower capital gains rates, while allocations to ordinary income assets such as inventory would result in tax at ordinary income rates. Amounts allocated to section 1231 assets might result in tax at the preferential capital gains rate, but could produce depreciation recapture income under section 1245 or 1250 or income recognition under other provisions of the Code.

¹⁰³ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 632; S. Rep. 99-313, pp. 251-255; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 208-209 (Conference Report).

¹⁰⁴ *Williams v. McGowan*, 152 F.2d 570 (2d Cir. 1945).

¹⁰⁵ See, e.g., *Ullman v. Comm'r*, 264 F. 2d 305 (2d Cir. 1959), *Comm'r v. Danielson*, 378 F. 2d 771 (3d Cir. 1967) *cert. den.* 389 U.S. 858.

¹⁰⁶ The adversity of the parties' tax interests is deemed to be evidence supporting the validity of the allocation against an Internal Revenue Service challenge. Compare, *Black Industries, Inc.*, 38 TCM 242 (1979) in which the Tax Court concluded that a portion of the price was properly allocable to nondepreciable going concern value even though the parties had specifically allocated all of the price to other assets. The Tax Court observed that the parties did not as a practical matter have adverse tax interests and accordingly, the court was justified in "carefully scrutinizing the merits of the allocation." 38 TCM 242 at 253.

Even if the seller was a liquidating corporation and the sale was governed by section 337, so that no gain or loss was recognized except for recapture and certain other items, the allocation of purchase price could have tax consequences for the seller. The allocation could determine the amount of recapture income recognized and might affect the extent to which other income would be recognized.¹⁰⁷

A buyer, on the other hand, has generally benefitted from an allocation that results in a higher basis for inventory or other assets that would generate ordinary income if resold; to depreciable tangible assets such as buildings and equipment; or to intangible assets having determinable useful lives, which would be amortizable.

The interests of the buyer and seller have not necessarily been adverse in the case of section 1231 assets, since the allocation might result in capital gain (or nonrecognition of gain under sec. 337) to the seller while according depreciable basis to the buyer. In some circumstances, however, the allocation produced recapture income to the seller. In the case of certain intangibles, the parties' interests also may not be adverse because the seller would recognize gain of the same character and in the same amount whether or not the asset was considered amortizable in the hands of the purchaser. Under prior law, this gain would often be either capital gain, or eligible for nonrecognition under section 337.

If the parties to the sale of a going business fail to make an allocation of the purchase price among the assets of the business that is respected for tax purposes, the purchase price (less cash and cash equivalents) must still be allocated among the non-cash assets in proportion to their respective fair market values on the date of the sale.¹⁰⁸ Fair market value has been defined under one formulation as the price arrived at by a willing buyer and a willing seller, neither being under a compulsion to buy or sell. No single method of valuation is regarded as determinative of value in all circumstances. Three commonly accepted methods are the reproduction cost method, the capitalization of earnings method, and the comparable sales method.

The valuation of goodwill and going concern value has generally been recognized as more difficult than the valuation of tangible assets or certain other types of intangibles. The two most commonly used methods to value goodwill and going concern value have been the residual method and the formula method.¹⁰⁹ Under the residual method, the value of the goodwill and going concern value is the excess of the purchase price of the business over the aggregate fair market values of the tangible assets and the identifiable intangible assets other than goodwill and going concern value. Under the formula method, goodwill and going concern value were valued by capitalizing the excess earning capacity of the tangible assets of the business based upon the performance of the business over some period prior to the valuation date. The excess earning

¹⁰⁷ For example, the allocation could affect the amount of income recognized under the tax benefit doctrine or other judicial exceptions to section 337. It could also affect the amount of LIFO recapture with respect to inventory and the amount of additional inventory gain if the bulk sale exception of section 337 did not apply.

¹⁰⁸ See Treas. Reg. sec. 1.167(a)-5.

¹⁰⁹ As described in A.R.M. 34, 2 C.B. 31 (1920), *superseded by* Rev. Rul. 68-609, 1968-2 C.B. 327.

capacity was the excess of the average earnings of the business during this period over an assumed rate of return on the value of its tangible assets.¹¹⁰ These excess earnings, capitalized at an appropriate discount rate,¹¹¹ were deemed to be the value of the unidentified intangibles.

While the Service recognized a formula method as a permissible method of valuing goodwill and going concern value, it also stated the position that the method was appropriate only where there is no better evidence of the value of these intangibles.¹¹² The courts appeared reluctant to apply the formula method because of the subjectivity involved in selecting the appropriate rate of return and capitalization rate. In cases where the value of tangible and identifiable intangible assets could be ascertained with reasonable certainty, the courts generally rejected the formula approach in favor of the residual method.¹¹³

In some cases a taxpayer who purchased a going business at a premium (that is, a price that it determined exceeded the apparent aggregate fair market values of the tangible and intangible assets, including goodwill and going concern value) might take the position that it is entitled to allocate an amount in excess of fair market value to the basis of individual assets. Relying on one interpretation of the judicial and administrative authorities,¹¹⁴ the taxpayer would separately value each of the acquired assets and allocate the premium among all the assets (other than cash and cash equivalents) in proportion to their relative fair market values in a so-called "second-tier allocation."

Proposed and temporary regulations issued by the Treasury Department under section 338 mandate a residual method of allocation (and prohibit a second-tier allocation) in determining the basis of assets acquired in a qualified stock purchase for which a section 338 election is made or is deemed to have been made, i.e., a stock purchase which is treated as a purchase of assets for tax purposes.¹¹⁵ Under these regulations, the deemed purchase price of

¹¹⁰ This assumed rate of return is the rate prevailing on the valuation date in the industry in which the business is classified, adjusted to reflect the risk involved in the particular business.

¹¹¹ Here, too, the rate must reflect the riskiness of the particular business.

¹¹² Rev. Rul. 68-609, *supra*.

¹¹³ *E.g.*, *Banc One Corp. v. Comm'r*, 84 T.C. 476 (1985); *Jack Daniel Distillery v. United States*, 379 F.2d 569 (Ct.Cl. 1967); *Black Industries, Inc. v. Comm'r*, 38 T.C.M. 242 (1979). Compare *Concord Control Inc. v. Commissioner*, 78 T.C. 742 (1982) (in which the Court stated that it was rejecting the residual method of valuation because of the difficulty of ascertaining other fair market values, but nevertheless based its approach on a finding of such values). The residual method is also applied in computing the value of goodwill under generally accepted accounting principles. A.P.B. Opinion Nos. 16 and 17 (November 1, 1970).

¹¹⁴ Some taxpayers referred to Rev. Rul. 77-456, 1977-2 C. B. 102, although that ruling did not involve a purchase for a price other than the value of all the assets. The ruling involved a purchase price that was stated to represent the fair market value of all the corporate assets at the time of purchase, and addressed only the issue of allocating basis under section 334(b)(2) when there were post-acquisition changes in asset value occurring prior to the liquidation of the acquired target. See also *United States v. Cornish*, 348 F.2d 175 (9th Cir. 1965), a case involving the valuation of partnership assets in the context of a sale of partnership interests. The court there found that a "premium" had been paid, but was able to identify the items to which it was attributable—one, the value of certain partners' future services, and the other, the value of an interest element in a deferred purchase price that the law at the time did not require be accounted for as interest. It nevertheless allowed amounts attributable to these items to be allocated to other assets apparently because it concluded that the partners' services were not an "asset" that was purchased, and that it had no mechanism to treat the interest element as interest.

¹¹⁵ Prop. and Temp. Treas. Reg. sec. 1.338(b)-2T.

the assets is first reduced by cash and items similar to cash, and is then allocated sequentially to two defined classes of identifiable tangible and intangible assets; any excess is allocated to assets in the nature of goodwill and going concern value. After the reduction for cash items, no amount may be allocated to any asset in the next two classes in excess of its fair market value.¹¹⁶

Reasons for Change

Congress was aware that the allocation of purchase price among the assets of a going business had been a troublesome area of the tax law. Purchase price allocations had been an endless source of controversy between the Internal Revenue Service and taxpayers, principally because of the difficulty of establishing the value of goodwill and going concern value. The Service lacks the resources to challenge allocations to goodwill or going concern value in all or even a substantial portion of the cases in which it would otherwise assert that the value of those assets are misstated.

Congress believed that it is appropriate to treat the "premium" involved in second-tier allocations as a payment for assets in the nature of goodwill or going concern value, rather than a payment in excess of the total value of the purchased assets. Congress therefore required taxpayers to apply the residual method in allocating basis to goodwill and going concern value in all purchases of a going business. The mandatory application of the residual method is also warranted in view of the difficult and uncertain assumptions that are demanded by the application of the formula method and the excessive amount of conflict generated between taxpayers and the Service concerning its application.

The method adopted by the Act is identical to that provided in the regulations under section 338 for allocating purchase price to assets following a stock purchase. Thus, the Act will not only tend to reduce controversies between the Service and taxpayers, it will also eliminate disparities between asset purchases and stock purchases treated as asset purchases under section 338 insofar as purchase price allocations are concerned.

In adopting the basis allocation rules as prescribed by the section 338 regulations, Congress intended no inference as to the propriety under prior law of methods of allocation in asset acquisitions other than the residual method.

Congress was also concerned about the potential for abuse inherent in the sale of a going business where there is no agreement between the parties as to the value of specific assets. In many instances the parties' allocations for tax reporting purposes have been inconsistent, resulting in a whipsaw of the government. Congress expected that requiring both parties to use the residual method for allocating amounts to nonamortizable goodwill and going concern value may diminish some of this "whipsaw" poten-

¹¹⁶ The proposed and temporary regulations apply to all stock acquisitions occurring after August 31, 1982. However, the Internal Revenue Service has amended the regulations to provide an election for acquisitions occurring before January 30, 1986. A taxpayer making this "transitional allocation election" may allocate basis according to the allocation rules applicable on the acquisition date when a group of assets are acquired for a lump-sum purchase price. See Temp. and Prop. Reg. sec. 1.338(b)-4T (June 27, 1986).

tial. Congress recognized that the repeal of preferential capital gains rates and of the so-called *General Utilities* doctrine (which allowed nonrecognition of corporate level gain in liquidating sales or distributions) would reduce the number of situations in which the parties might have adverse tax interests. However, in such cases, Congress intended to provide a mechanism to assist the IRS in identifying situations, for example, where an unusually low amount may have been allocated to nondepreciable goodwill and going concern value. Congress authorized the Treasury Department to require reporting by parties to the sale of a business, so that information reporting may be required regarding amounts allocated to goodwill and going concern value and to any other categories of assets or specific assets, and such other information as the Secretary deems necessary or appropriate.

Explanation of Provision

The Act requires that, in the case of any "applicable asset acquisition," both the buyer and the seller must allocate purchase price in the manner prescribed in section 338(b)(5). Thus, both parties must use the residual method as described in the regulations under section 338. See Temp. Treas. Reg. sec. 1.338(b)-2T.¹¹⁷ An applicable asset acquisition is any transfer of assets constituting a business in which the transferee's basis is determined wholly by reference to the purchase price paid for the assets. A transaction may constitute an applicable asset acquisition even though section 1031 (relating to like-kind exchanges) applies to a portion of the assets transferred. Both direct and indirect transfers of a business are intended to be covered by this provision, including, for example, a sale of a business by an individual or a partnership, or a sale of a partnership interest in which the basis of the purchasing partner's proportionate share of the partnership's assets is adjusted to reflect the purchase price.¹¹⁸ A group of assets will constitute a business for this purpose if their character is such that goodwill or going concern value could under any circumstances attach to such assets. For example, a group of assets that would constitute an active trade or business within the meaning of section 355 will in all events be considered a business for purposes of this provision. Moreover, businesses that are not active businesses under section 355 will also be subject to this rule.

In requiring use of the residual method, the Congress did not intend to restrict in any way the ability of the Internal Revenue Service to challenge the taxpayer's determination of the fair market value of any asset by any appropriate method and to take into account all factors, including any lack of adverse tax interests between the parties. For example, in certain cases it would be reasonable for the Service to make an independent showing of the

¹¹⁷ Congress intended to endorse the use of the residual method and generally to apply the same method regardless of whether the transfer took the form of a stock transfer or an asset transfer. It did not intend to preclude the Treasury Department from making changes to the final regulations, not inconsistent with the statutory purpose.

¹¹⁸ Thus, Congress intended the residual method to be used in determining the fair market value of partnership assets for purposes of applying the provisions of section 755 of the Code dealing with basis allocation in partnership transactions.

value of goodwill or going concern value as a means of calling into question the validity of the taxpayer's valuation of other assets.

The Act also authorizes the Treasury Department to require information reporting by the parties to an applicable asset acquisition. This may include information regarding amounts allocated to goodwill or going concern value, as well as any other categories of assets or specific assets, and such other information as it deems necessary or appropriate.

Effective Date

The provision is effective for transactions after May 6, 1986, unless pursuant to a binding contract in effect on that date and at all times thereafter.

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$58 million in 1987, \$57 million in 1988, \$67 million in 1989, \$76 million in 1990, and \$82 million in 1991.

I. Related Party Sales (Sec. 642 of the Act and secs. 453, 707 and 1239 of the Code)¹¹⁹

Prior Law

Installment sale treatment is not available for gain on a sale of property to a related party if the property is depreciable in the hands of the transferee, unless it is established to the satisfaction of the Internal Revenue Service that tax avoidance was not a principal purpose of the sale. Gain on sales of depreciable property between related parties is treated as ordinary income. In the case of certain related party partnership transactions, ordinary income treatment is also required if the property is not a capital asset in the hands of the transferee.

Under prior law, related parties for these purposes included a person and all entities which are at least 80 percent owned, (or more than 80 percent, for some purposes) directly or indirectly, with respect to that person. Specified attribution rules applied.

Reasons for Change

Congress determined that a more comprehensive definition of related parties was appropriate. In the case of installment sales of depreciable property between related parties, Congress also determined that the so-called "open transaction" cost-recovery method of reporting (see, *Burnet v. Logan* 283 U.S. 404 (1931)) should not be permitted and that the purchaser should not increase its basis in the property by any amount before the seller includes such amount in income.

Explanation of Provision

The Act modifies the definition of the related parties to which the present law rules apply. Under the Act, related parties include a person and all entities more than 50 percent owned, directly or indirectly, by that person. Related parties also include entities more than 50 percent owned, directly or indirectly, by the same persons.¹²⁰ The attribution and relationship rules are generally based on present law rules that apply to limit losses on sales between related parties. For example, there is attribution between parents and children.

As under prior law, in the case of an installment sale of depreciable property between related parties, the installment method of

¹¹⁹ For legislative background of the provision, see: Senate floor amendment, 132 Cong. Rec. S 8216-8 (June 24, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), p. 210 (Conference Report).

¹²⁰ Congress intended the provisions denying installment sale treatment, as well as the provisions denying capital gains treatment, to apply to transactions between partnerships that have a relationship described in section 707(b)(2)(B). A technical amendment may be needed so that the statute reflects this intent with respect to installment sales.

reporting may not be used but the seller must include all payments to be received in income in the year of the disposition. Contingent payments must also be included in the seller's income in the year of disposition. The Act requires that in the rare and extraordinary case in which the fair market value of contingent payments may not be reasonably ascertained, basis shall be recovered ratably. The so-called "open transaction" cost-recovery method of reporting sanctioned in *Burnet v. Logan*, 283 U.S. 404 (1931) may not be used. Congress intended no inference as to the viability of the cost-recovery method under prior law.

In addition, in the case of an installment sale of depreciable property between related parties, the purchaser may not increase basis by any amount until the seller has included such amount in income.¹²¹

The provision applies to sales after October 22, 1986, (the date of the enactment of the Act) unless made pursuant to a binding contract in effect on August 14, 1986 and at all times thereafter.

Revenue Effect

This provision is estimated to increase net fiscal year budget receipts by \$4 million in 1987, and by \$5 million in each of 1988, 1989, 1990 and 1991.

¹²¹ This basis provision applies not only to contingent payments as to which the fair market value may not be reasonably ascertained but also to any other amount in an installment sale of depreciable property between related parties. A technical correction may be needed so that the statute reflects this intent. Such a correction was included in H.Con.Res. 395 as passed by the House and Senate in the 99th Congress.

J. Amortizable Bond Premium (Sec. 643 of the Act and sec. 171 of the Code)¹²²

Prior Law

Normally a debt instrument is issued for a price that approximates the amount that will be received by the lender at maturity, and the return to the lender is entirely in the form of periodic interest payments. If a debt instrument is issued at a premium, the issue price is more than the amount to be repaid to the lender. Generally, a premium is paid when the stated rate of interest on a debt instrument exceeds prevailing interest rates.

The holder of an instrument acquired at a premium could elect to amortize the premium over the term of the debt instrument. Amortizable bond premium, which was allowed as an ordinary deduction, effectively reduced the stated rate of interest on a debt instrument (by offsetting interest income).

An election to amortize premium was effective for all bonds held or acquired at or after the beginning of the first taxable year for which the election was made.

Reasons for Change

The Congress concluded that the deduction for premium generally should be treated as interest, because premium serves to adjust interest income with respect to a debt instrument.¹²³ Further, the Congress was concerned that taxpayers could acquire obligations at a premium to generate tax deductions to defer tax liability.

For example, it was understood that taxpayers purchased bonds at a premium in one year, with the first interest payment falling in the following year, and deducted a portion of the premium in the first year against other income. The Congress appreciated that deferring the deduction until the related interest was includible in income would involve administrative complexity. The Congress concluded that treating amortizable bond premium as interest would reduce tax-shelter transactions, because the deduction would be subject to the investment interest limitations.

Explanation of Provision

The Act provides that the deduction for amortizable bond premium is treated as interest, except as otherwise provided by regulations.¹²⁴ Thus, for example, bond premium is treated as interest for purposes of applying the investment interest limitations.

¹²² For legislative background of the provision, see: Senate floor amendment, 132 Cong. Rec. S8286 (June 24, 1986); and H. Rep. 99-841, Vol. II (September 18, 1986), p. 211.

¹²³ See also sec. 1803 of the Act (which conforms the calculation of bond premium to that of original issue discount, consistent with the treatment of bond premium as interest).

¹²⁴ See also sec. 132 of the Act (amortizable bond premium is not subject to the two-percent floor applicable to miscellaneous itemized deductions).

Effective date

The provision is effective for obligations acquired after October 22, 1986 (the date of enactment of the Act). For taxpayers who had elections in effect as of October 22, 1986, such elections will apply to obligations issued after that date only if the taxpayer so chooses (in such manner as may be prescribed by the Secretary).¹²⁵

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$2 million in 1986, \$3 million in 1988, \$3 million in 1989, \$3 million in 1990, and \$3 million in 1991.

¹²⁵ See sec. 1803 of the Act.

K. Certain Entity Not Taxed as a Corporation (Sec. 646 of the Act)¹²⁶

Prior Law

Entities that are organized as trusts under local law may be subject to Federal income tax as corporations, rather than trusts, if they possess certain corporate characteristics. Such entities must pay corporate level tax in addition to the tax at the beneficiary level.

A certain trust (Great Northern Iron Ore Trust) was held to be taxable as a corporation due to the existence of certain business powers.

Reason for Change

Congress believed that a certain trust (Great Northern Iron Ore Trust) should not be taxed as a corporation if specified conditions are satisfied including non-exercise of certain powers contained in its trust instrument.

Explanation of Provision

Under the Act, a certain trust (Great Northern Iron Ore Trust) will not be taxed as a corporation if, among other things, it makes an election and agrees not to exercise business powers contained in its trust instrument.

Effective Date

The provision is effective for taxable years beginning after October 22, 1986 (the date of enactment of the Act) and after the taxable year in which the election is made, provided that all conditions of the Act continue to be satisfied.

Revenue Effect

This provision is estimated to have no significant revenue effect on fiscal year budget receipts.

¹²⁶ For legislative background of the provision, see: Senate floor amendment, 132 Cong. Rec. S 8216-8218 (June 24, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), p. 249 (Conference Report).

L. Cooperative Housing Corporations (Sec. 644 of the Act and sec. 216 of the Code) ¹

Prior Law

Overview

Under both prior and present law, a tenant-stockholder in a cooperative housing corporation is entitled to deduct amounts paid or accrued to the cooperative to the extent such amounts represent the tenant-stockholder's proportionate share of (1) real estate taxes allowable as a deduction to the cooperative which are paid or incurred by the cooperative with respect to the cooperative's land or buildings, and (2) interest allowable as a deduction to the cooperative, which is paid or incurred by the cooperative with respect to indebtedness contracted in the acquisition of the cooperative's land or in the acquisition, construction, rehabilitation, etc. of the cooperative's buildings (sec. 216(a)). Under prior law, the tenant-stockholder's proportionate share of the cooperative's interest and taxes was that portion of such items that bore the same ratio to the cooperative's total interest and taxes that the portion of the cooperative's stock held by the tenant-stockholder bore to the total outstanding stock of the cooperative (sec. 216(b)(3)).

Under both prior and present law, a cooperative housing corporation generally is a corporation (1) that has one class of stock, (2) each of the stockholders of which is entitled, solely by reason of ownership of stock, to occupy a dwelling owned or leased by the cooperative, (3) no stockholder of which is entitled to receive any distribution not out of earnings and profits of the cooperative, except on a complete or partial liquidation of the cooperative, and (4) 80 percent or more of the gross income for the taxable year of which is derived from tenant-stockholders. Under prior law, a tenant-stockholder generally was only an individual owning fully paid-up stock in the cooperative corporation, the purchase price of which bore a reasonable relationship to the value of the cooperative's equity in its land and buildings that is attributable to the dwelling unit that the individual is entitled to occupy.

Under prior law, for purposes of the above rules, tenant-stockholders generally were limited to individuals. Thus, corporations, trusts, and other similar entities generally did not qualify as tenant-stockholders under prior law. An exception was provided where a person (including a corporation) sells property or leasehold interests to a cooperative and acquires stock in the cooperative

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1405; H.Rep. 99-426, pp. 868-870; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 1703 and 1704; S.Rep. 99-313, pp. 890-892; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 212-213 (Conference Report).

within one year after making such transfer. In such cases, the person selling the property was treated as a tenant-stockholder for a period not exceeding three years from the date of acquisition of the stock. This treatment applied even if, by agreement with the cooperative, such person or its nominee may not occupy the house or apartment without prior approval of the cooperative.

Also under prior law, a bank or other lending institution that obtained stock in a cooperative housing corporation by foreclosure was treated as a tenant-stockholder for up to three years after the date of acquisition (even if the lending institution or its nominee could not occupy the unit without prior approval of the cooperative).

For purposes of the 80-percent test, stock owned, and dwellings leased by governmental entities for the purpose of providing housing facilities, were not taken into account.

Allowance of depreciation deduction

Under both prior and present law, in addition to deductions for rent, interest, and taxes, to the extent a tenant-stockholder uses depreciable property leased from the cooperative in a trade or business or for production of income, the tenant-stockholder is allowed a deduction with respect to the stock that gives him the right to lease the property. This deduction generally is limited to that portion of the taxpayer's adjusted basis for the stock that is allocable to the depreciable property. Prior and present law provide that the allowance of this deduction is not to be construed to limit or deny a depreciation deduction by the cooperative itself with respect to leased property.

Reasons for Change

Proportionate share rule

The Congress believed that the proportionate share rule pursuant to which a housing cooperative's expenses for interest and taxes are allocated among tenant-stockholders may create inequitable results in at least three situations.

The first situation is where a housing cooperative issues equal numbers of shares to all tenant-stockholders regardless of the relative values of the dwelling that each such tenant-stockholder is entitled to occupy (usually to provide each tenant-stockholder with an equal say in matters of corporate governance), but the periodic charges payable to the cooperative by each of the tenant-stockholders reflect the differing values of, or the differing costs associated with, their respective dwellings. In this case, the proportionate share rule would allocate equal amounts of interest and taxes to each tenant-stockholder notwithstanding the unequal portions thereof borne by such tenant-stockholders.

The second situation is where a tenant-stockholder prepays all or a portion of the housing cooperative's indebtedness allocable to the tenant-stockholder's dwelling unit and the periodic charges payable to the cooperative by such tenant-stockholder are reduced commensurately with the reduction in the cooperative's debt service. Here, the proportionate share rule would not take into account the reduction in the amount of interest paid by the cooperative attributable

to that particular tenant-stockholder (which may be zero after a complete prepayment).

The third situation is where the housing cooperative is located in a jurisdiction that separately assesses the dwelling units in a cooperative for real estate tax purposes, and the periodic charges payable by each tenant-stockholder directly reflect such separate assessments. Here, the proportionate share rule would allocate the cooperative's taxes among the tenant-stockholders proportionately with their stockholdings, ignoring the differing portions of such taxes borne by such tenant-stockholders.

The Congress believed that the proportionate share rule may not achieve the proper income tax consequences in these and analogous situations and believed that the rule should be modified to account properly for such situations.

Definition of tenant-stockholder

The Congress believed that the tax treatment of corporations, trusts, and other nonindividual entities that own stock in cooperative housing corporations should be the same as that of individuals. To allow cooperatives to maintain control over occupancy of individual units, the Congress believed that this treatment should apply although the cooperative retains the right to approve any individual who occupies a house or apartment as a nominee of an entity owning stock in the cooperative.

Limitation on depreciation deduction

The Congress believed that a tenant-stockholder should not be able to obtain deductions for the capital costs of his cooperative unit more quickly than if he had owned the unit. Accordingly, in connection with the above change, the Act disallows maintenance and lease deductions by tenant-stockholders in situations where the amounts paid are properly chargeable to the capital account of the cooperative.

Explanation of Provision

Proportionate share rule

Under the Act, where a cooperative housing corporation (the "cooperative") charges each tenant-stockholder with a portion of the cooperative's interest or taxes in a manner that reasonably reflects the cost to the cooperative of the interest and taxes attributable to such tenant-stockholder's dwelling unit, then the cooperative may make an election whereby the share of the cooperative's interest and taxes that each tenant-stockholder is permitted to deduct would be the amounts that were so separately allocated and charged.

The Congress intended that this provision is to be availed of in circumstances that will result in an allocation of the cooperative's interest and taxes that more accurately reflects the relative burdens of such items borne by respective tenant-stockholders. The requirement that the allocation reasonably reflect the cost to the cooperative of the interest and taxes attributable to the tenant-stockholder's dwelling unit is intended to assure that a cooperative may not allocate deductible expenses of the cooperative to those tenant-

stockholders for whom the deductions would be most valuable, and the non-deductible expenses of the cooperative to those tenant-stockholders for whom the deductions would be less valuable.

Thus, taxes allocated to a tenant-stockholder's unit will be considered to reasonably reflect the cost of the cooperative if the taxes allocated are based on the amounts separately assessed by the taxing authority. In the case of indebtedness of the cooperative incurred to purchase property, interest allocated to a tenant-stockholder's unit will be considered to reasonably reflect the cost to the cooperative if the amount allocated is based on the cooperative's purchase price of the property, allocated in accordance with the fair market value of the units purchased (including the unit's share of common areas).

Definition of tenant-stockholder

The Act amends the definition of tenant-stockholder to mean any person (rather than any individual) who satisfies the requirements otherwise applicable to tenant-stockholders. Thus, under the Act, corporations, trusts, estates, partnerships, associations, or companies (as well as individuals) may be tenant-stockholders qualifying for pass-through treatment.

If a person other than an individual acquires stock in a cooperative, there shall not be taken into account, for purposes of determining whether the person is a qualifying tenant-stockholder, the fact that, by agreement with the cooperative, such person's nominee may not occupy the house or apartment without the prior approval of the cooperative. This change enables, for example, a corporation owning stock in the cooperative to qualify for pass-through treatment although the cooperative retains the right to approve any individuals who occupy units under arrangements with the corporation.

The Act further provides that, in the case of an original seller of houses or apartments to a cooperative (including individuals or other entities), there shall not be taken into account the fact that, by agreement with the cooperative, the original seller or its nominee may not occupy a house or apartment without prior approval of the cooperative. This rule applies where the original seller acquires stock not later than one year after transferring houses or apartments (or leaseholds therein) to the cooperative.

Also under the Act, where any person acquires stock of a cooperative housing corporation by operation of law (including acquisition by inheritance or foreclosure), for purposes of determining whether such person is a qualifying tenant-stockholder, there shall not be taken into account the fact that, by agreement with the cooperative, such person or his nominee may not occupy the house or apartment without prior approval of the cooperative.

The prior-law rules regarding original sellers and foreclosures by lending institutions are made unnecessary by these changes and, therefore, are repealed.

Limitation on depreciation deduction

Under the Act, a tenant-stockholder using his unit as depreciable property in a trade or business or for the production of income is allowed a deduction as under present law to the extent of that por-

tion of his adjusted basis for his stock that is allocable to such depreciable property. The Act further allows deductions exceeding this basis to be carried over to succeeding taxable years. However, the Act provides that no deduction may be allowed to a tenant-stockholder for any amount paid or accrued to the cooperative (in excess of the tenant-stockholder's proportionate share of interest and real estate taxes) to the extent that, under regulations issued by the Secretary of the Treasury, such amount is properly allocable to amounts chargeable to the cooperative's capital account. Any deduction disallowed under this rule will be applied to increase the stockholder's adjusted basis for his stock. This rule generally prevents a tenant-stockholder (including a corporation) from obtaining deductions for the capital costs of his cooperative unit more quickly than if he had owned the unit.

Effective Date

The provisions of the Act relating to the proportionate share rule, the definition of a tenant-stockholder, and the limitation on the depreciation deduction are effective for taxable years beginning after December 31, 1986. Special rules are provided for two specified limited-profit housing cooperatives relating to the treatment of specified loan refinancings, the treatment of income earned on the reserve fund of such cooperatives in taxable years beginning prior to January 1, 1986, and the treatment of payments made from the respective reserve funds in taxable years beginning after December 31, 1985.

Revenue Effect

The provision is estimated to decrease fiscal year budget receipts by less than \$5 million annually.

M. Definition of Personal Holding Company Income (Sec. 645 of the Act and secs. 543 and 553 of the Code) ²

Prior Law

Personal holding companies

Under both prior and present law, a corporation that is treated as a personal holding company is subject, in addition to the regular corporate tax, to a 50-percent tax on its undistributed personal holding company income for the taxable year. Generally, a personal holding company is a corporation at least 50 percent of the value of the stock of which is held by not more than five individuals, and at least 60 percent of the adjusted ordinary gross income of which is personal holding company income (sec. 542(b)). For the purpose of the stock ownership test, an individual is treated as owning the stock owned directly or indirectly by or for any family members or partners of the individual and also is treated as owning a proportionate share of stock owned by corporations or partnerships in which the individual is a stockholder or partner (sec. 544).

Personal holding company income generally includes passive-type income such as interest, dividends, and certain rents and royalties (sec. 543(a)). Exceptions are provided for certain rents and royalties where the corporation derives most of its income from such rents or royalties, has only limited amounts of other personal holding company income (or distributes most of such income), and incurs deductible expenses in amounts that reflect active business activity rather than the mere collection of passive income. Under prior law, royalties relating to the use of computer software are not eligible for any of such exceptions.

Certain corporations are excepted from the definition of personal holding company. The excepted corporations include tax-exempt organizations, banks, domestic building and loan associations, life insurance companies, surety companies, foreign personal holding companies, lending or finance companies that meet certain active business or gross income tests, foreign corporations with no U.S. shareholders, small business investment companies licensed by the Small Business Administration, and corporations subject to the jurisdiction of the Bankruptcy Court (sec. 542(c)).

Foreign personal holding companies

In general, under both prior and present law, the undistributed foreign personal holding company income of a foreign personal holding company is treated as having been distributed as a divi-

² For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1406; H.Rep. 99-426, pp. 870-875; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1302; S.Rep. 99-313, pp. 708-711; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 247-248 (Conference Report).

dend on the last day of the corporation's taxable year and is included in the income of certain U.S. shareholders (sec. 551). In general, under prior and present law, a foreign personal holding company is a corporation at least 60 percent of the gross income of which is foreign personal holding company income, and that meets a specific stock ownership requirement. Under prior law, the stock ownership requirement was met if more than 50 percent (in value) of the stock of which was owned at any time during the taxable year directly or indirectly by or for not more than five individuals who are citizens or residents of the United States (sec. 552).³

Undistributed foreign personal holding company income generally is the corporation's taxable income with certain adjustments, less the deduction for dividends paid (sec. 556). Under prior law, foreign personal holding company income included royalties without any exception for any royalties related to computer software (sec. 553).

Reasons for Change

Since the prior-law rules defining personal holding company income make no exceptions for any royalty income derived from the licensing of computer software, it is possible that a closely held corporation that is engaged in extensive business activities relating to the development and distribution of computer software could have been subject to the personal holding company tax or the foreign personal holding company provisions unless it distributes its income to shareholders. The Congress believed that it is inappropriate to apply the personal holding company tax or the foreign personal holding company provisions in this situation, and that an exception to the definition of personal holding company income and foreign personal holding company income analogous to those provided for rent and certain other types of royalties for purposes of the personal holding company tax should be provided.

Explanation of Provisions

Overview

Under the Act, certain royalties relating to computer software are not treated as personal holding company income or foreign personal holding company income. To qualify for this treatment, the recipient must (a) be actively engaged in the trade or business of producing, developing, or manufacturing computer software, (b) derive more than half of its income from software royalties, (c) incur substantial trade or business expenses, or research and development expenses, in such trade or business, and (d) distribute most of its passive income other than software royalties.

Active business requirements

Under the Act, personal holding company income or foreign personal holding company income does not include certain computer

³ Under section 1222 of the Act, a corporation would be treated as a foreign personal holding company if either more than 50 percent of its stock, in value or voting power, was held by the requisite number of shareholders, and if the other applicable requirements were met.

software royalties. To qualify for the exception, four conditions must be met.

First, computer software royalties must be received by a corporation engaged in the active conduct of the trade or business of developing, manufacturing, or producing computer software; such computer software (a) must be developed, manufactured, or produced by such corporation (or its predecessor) in connection with such trade or business, or (b) must be directly related to such trade or business (the trade or business test). For this purpose, a predecessor includes a partnership the partners of which developed the computer software for the partnership and transferred their partnership interests to the corporation in exchange for substantially all of the corporation's stock.

Second, computer software royalties that meet the first requirement must make up at least 50 percent of the ordinary gross income (as defined in sec. 543(b)) of the taxpayer for the taxable year (the "50-percent test").

Third, the amount of expenses that are properly allocable to the active business of developing, producing, or manufacturing computer software and that are allowable to the taxpayer under section 162 (relating to trade or business expenses), section 174 (relating to research and development expenses), or section 195 (relating to amortization of start-up expenses), must equal or exceed 25 percent of the ordinary gross income of the taxpayer for the taxable year (the "25-percent test").⁴ Alternatively, the average of such deductions for the period of five taxable years ending with the current taxable year (or such shorter period as the corporation may have been in existence) must equal or exceed 25 percent of the ordinary gross income of the taxpayer for such period.

In computing deductions under section 162, the taxpayer may not take into account payments for personal services rendered by the five shareholders holding the largest percentage (by value) of the outstanding stock of the corporation. In determining the five largest shareholders for this purpose, stock deemed to be owned by a shareholder solely by reason of attribution from a partner (under sec. 544(a)(2)) is not taken into account, and individuals holding less than five percent of the corporation's stock (by value) are not taken into account.

Fourth, the sum of dividends paid during the taxable year (under sec. 562), dividends considered paid on the last day of the taxable year (under sec. 563), and the consent dividends for the taxable year (under sec. 565) must equal or exceed the amount of the corporation's personal holding company income in excess of 10 percent of the ordinary gross income of the corporation. For purposes of this computation, however, personal holding company income does not include the computer software royalties taken into account for the 50-percent test, and also does not include interest income for the five-year period beginning with the commencement of the active computer software business, provided that the 50-percent test and the 25-percent test also are met in this period.

⁴ For purposes of this computation, any deduction specifically allowable under any section of the Code other than section 162 may not be treated as allowable under section 162.

Special rule for affiliated groups

Under the Act, a special rule is provided in the case of computer software royalty income received by a member of an affiliated group. The Act provides that, if a taxpayer who is a member of an affiliated group (within the meaning of sec. 1504(a)) receives royalties in connection with the licensing of computer software and another member of the group meets the trade or business test, the 50-percent test, and the 25-percent test with respect to such software, then the taxpayer is treated as having met such requirements.

Effective Date

The provision is effective for royalties received before, on, or after December 31, 1986. The Act does not allow taxpayers to reopen any taxable years closed by the statute of limitations to claim refunds based on the provision. Certain interest income of a specified broker-dealer in securities is not treated as personal holding company income, effective for interest received on or after the date of enactment (October 22, 1986). Rules similar to those for computer software royalties are provided for royalties derived by a specified toy manufacturer from the licensing of toys, effective for royalties received or accrued in taxable years beginning after December 31, 1981. In addition, the Act excludes from the definition of passive investment income for purposes of subchapter S of the Code, computer software royalties derived by a specified taxpayer, which royalties would not be treated as personal holding company income under the Act, effective for taxable years beginning after December 31, 1984.

Revenue Effect

The provision is estimated to decrease fiscal year budget receipts by \$40 million in 1987, \$10 million in 1988, \$9 million in 1989, \$7 million in 1990, and \$6 million in 1991.

N. Regulated Investment Companies (Secs. 651-657 of the Act and secs. 562, 851-855, 4982, and 7609 of the Code) ⁵

Prior Law

In general, under prior and present law, a regulated investment company ("RIC") is an electing domestic corporation that either meets or is excepted from certain registration requirements under the Investment Company Act of 1940 (15 U.S.C. 80), that derives at least 90 percent of its ordinary income from specified sources commonly considered passive investment income (sec. 851(b)(2)), that has a portfolio of investments that meet certain diversification requirements (secs. 851(b)(4) and 851(e)), that distributes at least 90 percent of its net income to its shareholders annually (sec. 852(a)(1)), and that also meets certain other requirements (secs. 851, 852). Among these other requirements, less than 30 percent of its gross income must be derived from gains from the sale of securities held for less than three months (sec. 851(b)(3)). A RIC generally is subject to the regular corporate tax, but receives a deduction for dividends paid to its shareholders. Thus, a RIC is treated, in essence, as a conduit for Federal income tax purposes. A RIC does not receive a deduction with respect to dividends paid unless the distribution is pro rata with respect to other shares of the same class (sec. 562(c)).

Under prior and present law, RICs are permitted to adopt taxable years other than a calendar year. If a RIC declares a dividend prior to the time that it is required to file its tax return for a taxable year and the dividends are distributed within 12 months following the close of the taxable year (but not later than the date of the first regular dividend payment made after the declaration date), such dividends may be treated for purposes of the RIC's dividends paid deduction as having been paid in that taxable year (sec. 855(a)). Such dividends (commonly called "spillover dividends") are treated as having been received by shareholders in the year of distribution (sec. 855(b)).

A RIC that has long-term capital gain income may designate a dividend as a capital gain dividend in a notice sent to shareholders within 45 days after the end of its taxable year (sec. 852(b)(3)). Shareholders treat such capital gain dividends as long-term capital gain regardless of their holding period of the RIC stock, and the RIC is not required to pay any capital gains tax on the amount so designated.

⁵ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 633; S.Rep. 99-313, pp. 260-262; Senate floor amendment, 132 Cong. Rec. S8206-S8207 (June 24, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 242-246 (Conference Report).

Under prior law, if a RIC, organized as a corporation, had several "series" of stock, with each series of stock representing an interest in the income and assets of a particular fund, the RIC generally was treated as a single corporation.⁶ Under prior law, if the RIC was organized as a business trust, it was unclear whether the RIC properly was treated as a single corporation or whether each fund properly is treated as a separate corporation.

Under prior and present law, in the case of certain summonses served upon "third party recordkeepers," certain notice requirements are imposed on the Internal Revenue Service (sec. 7609). Under prior law, third party recordkeepers generally include various types of financial institutions, and others such as attorneys, accountants, and brokers, but do not include RICs. Under prior law, corporations electing to be treated as business development companies under the Investment Company Act of 1940 were not eligible to be RICs.

Reasons for Change

Imposition of excise tax

In the case either of a RIC that has a taxable year other than a calendar year or a RIC that distributes dividends after the close of its taxable year but elects to have the dividends treated as having been paid in the previous taxable year under section 855, significant opportunity is available for deferring recognition of currently earned income by the RIC shareholders. For example, a RIC that has a taxable year ending on January 31, earns \$120 ratably throughout its taxable year ending January 31, 1986. The RIC distributes \$120 of dividends on January 28, 1986. If the RIC's shareholders are individuals who are calendar year taxpayers, the shareholders would include no amounts in income in their taxable years ending December 31, 1985, and would include \$120 in income in their taxable year ending December 31, 1986. The same result is reached if the RIC is a calendar year taxpayer, but pays dividends after the close of the taxable year that it elects to treat as being paid in the prior taxable year (i.e., spillover dividends). As a result, in either situation, no tax is paid either by the RIC or by its shareholders in 1985 on amounts that the RIC may have earned in 1985.

The Congress believed that the deferral of income described above is inconsistent with the conduit treatment that is afforded to RICs. The fundamental premise of conduit treatment is that the RIC's income should be taxed only once at the level of the RIC shareholders, rather than to the RIC. Nevertheless, in either of the cases described above, a substantial portion of the RIC's income may go entirely untaxed in a taxable year. Accordingly, the Congress believed that the ability of RICs to achieve deferral of income for shareholders without penalty should be limited.

The Congress believed that, in general, the mechanism for doing so should be the imposition of an excise tax on those distributions that have the effect of deferring income to the shareholders. In order to assure that the distributions are made promptly, the Con-

⁶ See *Union Trusteed Funds v. Commissioner*, 8 T.C. 1133 (1947), acq. 1947-2 C.B. 4; Rev. Rul. 56-246, 1956-1 C.B. 316.

gress believed that the rate of the excise tax should be set at a level that would be considered to be more than a mere interest charge on the deferral of tax liability, but would be in the nature of a penalty so that RICs would make significant efforts to distribute income promptly and avoid the imposition of the excise tax. The Congress recognized, however, that the due to the heavy volume of transactions that may be undertaken by RICs, it would not be possible, as a practical matter, to accurately determine and timely distribute the precise amounts necessary to eliminate all deferral achieved by RICs. Consequently, the Congress believed that *de minimis* rules should be provided.

Hedging exception

The Congress believed that the requirement that a RIC derive less than 30 percent of its gross income from the sale or other disposition of stock or securities held for less than three months is an appropriate requirement to ensure that a RIC is a passive entity that is appropriately granted pass-through status. Nevertheless, the Congress recognized that this requirement may not necessarily reflect accurately the extent of the active business activities of a RIC where the RIC engages in certain hedging transactions that are otherwise consistent with the passive nature of the RIC. The Congress believed that, in general, in the case of such hedging transactions, both the hedged and the hedging positions properly are considered to be single investment for purposes of applying the 30-percent test.

Other

The Congress believed that it was appropriate to change the definition of securities for purposes of the qualification tests relating to the income that a RIC is permitted to derive. The Congress understood that the definition of securities as is currently used for purposes of the Investment Company Act of 1940 generally represents that type of passive investment appropriate for a RIC, and hence Congress believed that such definition generally is appropriate for this purpose. In addition, the Congress believed that income derived by a RIC from investments in foreign currency related to the RIC's business of investing in securities also should be treated as qualifying income.

The Congress also believed that it was appropriate to resolve uncertainties and inconsistencies in the treatment of series funds. The Congress believed that each such series functions as a separate RIC and, accordingly, the qualification tests for RIC status should be applied separately to each series.

The Congress believed that preferential dividends that reflect only savings in administrative costs attributable to the size of a shareholder's holdings (and not differences in investment advisory fees) are not the type of preferential dividends that were intended not to qualify for the dividends paid deduction. The Congress believed that such preference dividends should be allowed only in cases where the shareholder who receives the preferential dividend was required to make an initial investment of at least \$10 million.

The Congress believed that the period for filing the various notices required for a RIC should be extended from 45 to 60 days. The

Congress also believed that RICs are properly treated as third party recordkeepers. In addition, the Congress believed that corporations electing to be treated as business development companies under the Investment Company Act of 1940 should be eligible to qualify for RIC status.

Explanation of Provisions

Imposition of excise tax

In general

The Act imposes a nondeductible excise tax for any calendar year on any RIC equal to four percent of the excess, if any, of the "required distribution" for the calendar year over the "distributed amount" for such calendar year. The excise tax imposed for any calendar year is to be paid not later than March 15 of the succeeding calendar year.

For these purposes, the term required distribution means, with respect to any calendar year, the sum of (1) 97 percent of the RIC's "ordinary income" for such taxable year, (2) 90 percent of the RIC's capital gain net income (within the meaning of sec. 1222(9)) for the one year period ending on October 31 of such taxable year (as if the one year period ending on October 31 were the RIC's taxable year),⁷ and (3) the excess, if any, of the "grossed up required distribution" for the preceding calendar year over the distributed amount for such preceding calendar year. For this purpose, the term "grossed up required distribution" for any calendar year is the sum of the taxable income of the RIC for the calendar year (determined without regard to the deduction for dividends paid) and all amounts from earlier years that are not treated as having been distributed under the provision.

The RIC's ordinary income for this purpose means its investment company taxable income (as defined in sec. 852(b)(2)) determined (1) by taking into account the net capital gain of the RIC and without taking into account the dividends paid deduction, (2) by not taking into account any gain or loss from the sale of any capital asset, and (3) by treating the calendar year as the RIC's taxable year.

In addition, for these purposes, the term "distributed amount" means, with respect to any calendar year, the sum of (1) the deduction for dividends paid (within the meaning of sec. 561) during such calendar year, (2) amounts on which the RIC is required to pay corporate tax, and (3) the excess (if any) of the distributed amount for the preceding taxable year over the required distribution for such preceding taxable year. The amount of dividends paid for these purposes is determined without regard to the provisions of section 855 and without regard to any exempt-interest dividend (as defined in sec. 852(b)(5)).

Under the Act, for purposes of applying these provisions, any deficiency dividend (as defined in sec. 860(f)) is taken into account at the time it is paid, and any income giving rise to the adjustment is treated as arising at the time the dividend is paid.

⁷ The Congress understood that in applying this rule, the period ending October 31, of each calendar year would be treated as the taxpayer's taxable year for purposes of the capital loss carryover provisions and for purposes of the year-end straddle and mark-to-market rules.

Although the excise tax is imposed only for calendar years beginning after December 31, 1986, the computations that are necessary to determine whether any excise tax is due and the amount so due, will require certain calculations involving income, losses, and distributions with respect to periods before the first calendar year for which the excise tax is imposed. For example, the excise tax for the first calendar year beginning after December 31, 1986, generally must take into account capital gains and losses for the period beginning on November 1, 1986, and ending on October 31, 1987. In addition, in computing the excise tax for the first calendar year beginning after December 31, 1986, computation of the grossed up required distribution and distributed amount for the calendar year ending on December 31, 1986 is required.⁸

Special rule for certain regulated investment companies

The Act provides that RICs that have a taxable year ending on either November 30, or December 31, may make an irrevocable election to use their actual taxable year, rather than a year ending on October 31, for purposes of applying the distribution requirement rules relating to capital gains.

Timing of inclusion of certain dividends

The Act provides that any dividend declared by a RIC in December of any calendar year and payable to shareholders of record as of a specified date in such month, shall be deemed to have been paid by the RIC (including for purposes of sec. 561), and to have been received by each shareholder, on such record date, but only if such dividend is actually paid by the RIC before February 1 of the following calendar year. This provision does not apply for purposes of section 855(a), however.⁹

Earnings and profits

Under the Act, a RIC is treated as having sufficient earnings and profits to treat as a dividend any distribution during any calendar year which distribution is treated as a dividend by such RIC (other than a redemption to which sec. 302(a) applies), but only to the extent that the amount distributed during such calendar year does not exceed the required distribution for such calendar year. The purpose of this provision is to prevent a RIC from failing to meet the requirements for avoiding the imposition of the excise tax where losses incurred by the RIC after October 31, but before the close of its taxable year, otherwise would prevent the RIC from having sufficient earnings and profits for its distributions to be treated as dividends.

⁸ Although the statutory definition of the grossed up required distribution seems to require computations of a RIC's income and distributions beginning with the commencement of the RIC's existence, it is anticipated that RICs will be able to derive the proper grossed up required distribution without taking into account periods prior to the first taxable year of the RIC ending before January 1, 1987. In general, after taking into account the spillover dividend, all income for all taxable years ending before January 1, 1987, would either have been distributed to shareholders or taxed to the RIC, and thus would be treated as distributed amounts under section 4982(c). In calculating these amounts, the Congress intended that proper adjustments will be made for periods in which the corporation did not qualify as a RIC.

⁹ Thus, a RIC that has a taxable year ending on November 30, may treat such dividends as having been paid prior to December under section 855(a).

Treatment of certain capital losses

For purposes of determining the amount of capital gain dividends that a RIC may distribute for a taxable year, the RIC's net capital gain for the taxable year is determined without regard to any net capital loss attributable to transactions after October 31 of such year. For these purposes, any such net capital loss is treated as arising on the first day of the next taxable year. To the extent provided in Treasury regulations, the same rule will apply for purposes of determining the RIC's taxable income.¹⁰

Example

For example, assume that a RIC with a taxable year ending June 30, (a) has ordinary income of \$100 for the period beginning July 1, 1986 and ending December 31, 1986, (b) has capital gain net income of \$50 for the period beginning July 1, 1986, and ending October 31, 1986, (c) has capital gain income of \$30 for the period beginning November 1, 1986, and ending December 31, 1987, (d) distributes a spillover dividend with respect to its taxable year ending June 30, 1986, on December 15, 1986, (e) has ordinary income of \$500 for the 1987 calendar year, and (f) has capital gain net income of \$200 for the period beginning January 1, 1987, and ending October 31, 1987.

In these circumstances, the spillover dividend with respect to the RIC's taxable year ending June 30, 1986, and all other income and distributions with respect to taxable years ending before January 1, 1987, are ignored for purposes of calculating the RIC's required distribution for calendar year 1987. The RIC's required distribution for 1987 will be \$842. This consists of the following amounts: 100% of the \$100 of ordinary income for the period between July 1, 1986, and December 31, 1986, and the \$50 of net capital gain income for the period between July 1, 1986 and October 31, 1986, (these amounts are treated as a prior year shortfall under sec. 4982(b)(2)); 90% of the \$230 net capital gain for the period between November 1, 1986, and October 31, 1987; and 97% of the \$500 of ordinary income for the 1987 calendar year.

Also, for example, assume that a calendar year RIC (a) has ordinary income of \$100 for the 1986 calendar year, (b) has capital gain net income of \$50 for the 1986 calendar year, \$10 of which is attributable to the period after October 31, 1986, (c) has ordinary income of \$100 for the 1987 calendar year, (d) has capital gain net income of \$30 for the period beginning January 1, 1987, and ending October 31, 1987, and (e) distributes a spillover dividend with respect to the 1986 calendar year on March 1, 1987.

In these circumstances, except for the \$10 of capital gain net income earned after October 31, 1986, and the \$10 portion of the spillover dividend attributable to this income, all income and distributions with respect to taxable years ending before January 1, 1987, are ignored for purposes of calculating the RIC's excise tax liability under section 4982. The required distribution for 1987 is \$133. This consists of 97% of the \$100 of ordinary income for the

¹⁰ The Congress intended that any such regulations would prevent avoidance of tax, particularly in circumstances where a RIC takes advantage of the rule in order to pay return of capital dividends in the following taxable year, or to offset the tax that would be incurred on capital gains recognized in the following year.

1987 calendar year and 90% of the \$40 capital gain net income for the period between November 1, 1986, and October 31, 1987. The \$10 portion of the spillover dividend attributable to the RIC's capital gain net income for the period between November 1, 1986, and December 31, 1986 is treated as a distributed amount in 1987.

Hedging exception

The Act modifies the computation of gross income of a RIC for purposes of the requirement of section 851(b)(3) that less than 30 percent of the gross income of the RIC is derived from the sale or exchange of stock or securities held for less than three months.¹¹ Under the Act, for purposes of applying this test, any increase in value on a position that is part of a designated hedge is offset by any decrease in value (whether or not realized) on any other position that is part of such hedge. For this purpose, increases and decreases in value are taken into account only to the extent attributable to increases or decreases in value (as the case may be) during the period of the hedge. This rule applies for purposes of calculating both gains from the sale or other disposition of stock or securities held for less than three months and also the gross income of the RIC for purposes of section 851(b)(3).

For these purposes, there is a designated hedge where the taxpayer's risk of loss with respect to any position in property is reduced by reason of (1) the taxpayer having an option to sell, being under a contractual obligation to sell, or having made (and not closed) a short sale of substantially identical property, (2) the taxpayer being the grantor of an option to buy substantially identical property, or (3) under regulations prescribed by the Secretary of the Treasury, the taxpayer holding one or more other offsetting positions. The Congress intended that a qualified covered call (within the meaning of sec. 1092(c)) may be treated as part of a designated hedge. In addition, the positions that are part of the hedge must be clearly identified by the taxpayer in the manner prescribed by Treasury regulations.

Prior to the issuance of such Treasury regulations, the Congress intended that the identification requirement would be treated as having been satisfied with identification by the close of the day on which the hedge is established either (a) by the placing of the positions that are part of hedge in a separate account that is maintained by a broker, futures commission merchant, custodian or similar person, and that is designated as a hedging account, provided that such person maintaining such account makes notations identifying the hedged and hedging positions and the date on which the hedge is established, or (b) by the designation by such a broker, merchant, custodian or similar person, of such positions as a hedge for purposes of these provisions, provided that the RIC is provided with a written confirmation stating the date the hedge is established and identifying the hedged and hedging positions.

¹¹ The Congress intended that the definition of securities for this purpose would have the same meaning as the definition of securities as clarified for purposes of section 851(b)(2). A technical correction may be necessary to reflect this intention.

Business development companies

The Act provides that a corporation electing to be treated as a business development company under the Investment Company Act of 1940, as amended (15 U.S.C. 80a-1 to 80b-2) may qualify as a RIC.

Preference dividends

The Act provides that differences in the rate of dividends paid to shareholders are not treated as preferential dividends (within the meaning of sec. 562(c)) where the differences reflect savings in administrative costs (but not differences in management fees), provided that such dividends are paid by a RIC to shareholders who have made initial investments of at least \$10 million.

Definition of "securities"

The Act provides a definition of "securities" in section 851(b)(2) by reference to the definition of securities in the Investment Company Act of 1940 and includes in qualifying income certain income derived with respect to the RIC's business of investing in securities. Nevertheless, the Congress did not intend that a RIC's distributive share of income from a partnership interest would be treated as qualifying income derived with respect to the RIC's business of investing in securities without regard to the character of the income derived from the partnership.¹² In addition, permitted income for RICs is defined to include income from foreign currencies, and options and futures contracts, derived with respect to the RIC's business of investing. The Act provides regulatory authority to the Treasury Department, however, to exclude gains from investment in foreign currency where such gains are not ancillary to the company's principal business of investing in stock or securities.

Treatment of "series funds"

The Act also provides that, in the case of RICs that have so-called series funds, each fund is treated as a separate corporation. Tax-free treatment is provided for the deemed formation of the separate corporations that are deemed to be formed under the provision.

Time for filing certain notices

The Act extends the time for filing notices for capital gain dividends and certain other purposes from 45 to 60 days.

Third party recordkeeper provisions

RICs are treated as third party recordkeepers under the Act.

Effective Date

The provisions of the Act relating to the imposition of the excise tax on RICs are applicable for calendar years beginning after December 31, 1986. The provision of the Act relating to treatment of a RIC as a third party recordkeeper is effective for summonses served after the date of enactment (October 22, 1986). The provi-

¹² A technical correction may be necessary to reflect this intention.

sions relating to preferential dividends are effective for dividends distributed after the date of enactment (October 22, 1986). The other provisions of the Act are effective for taxable years of RICs beginning after the date of enactment (October 22, 1986).

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$547 million in 1987, \$915 million in 1988, \$176 million in 1989, \$195 million in 1990, and \$210 million in 1991.

O. Real Estate Investment Trusts (Secs. 661-669 of the Act and secs. 856-859, 4981, and 6697 of the Code) ¹³

Prior Law

Overview

In general, under present and prior law, a real estate investment trust ("REIT") is an entity that receives most of its income from passive real estate related investments and that receives conduit treatment for income that is distributed to shareholders. If an entity meets the qualifications for REIT status, the portion of its income that is distributed to the investors each year generally is taxed to the investors without being subjected to a tax at the REIT level; the REIT is subject to a corporate tax only on the income that it retains and on certain income from property that qualifies as foreclosure property. Thus, the REIT may serve as a means whereby numerous small investors can have a practical opportunity to invest in a diversified portfolio of real estate assets and have the benefit of professional management.

In order to qualify as a REIT and thereby receive conduit treatment, an entity must satisfy four tests on a year-by-year basis: organizational structure, source of income, nature of assets, and distribution of income. These tests are intended to allow conduit treatment in circumstances in which a corporate tax otherwise would be imposed, only if there really is a pooling of investment arrangement that is evidenced by its organizational structure, if its investments are basically in real estate assets, and if its income is passive income from real estate investment, as contrasted with income from the operation of business involving real estate. In addition, substantially all of the entity's income must be passed through to its shareholders on a current basis.

Taxation of REITs

Overview

In general, if an entity qualifies as a REIT by satisfying the various requirements described below, the entity is taxable as a corporation on its "real estate investment trust taxable income" ("REITTI"), and also is taxable on certain other amounts (sec. 857). REITTI is the taxable income of the REIT with certain adjustments (sec. 857(b)(2)). The most significant adjustment is a deduction for dividends paid. The allowance of this deduction is the mechanism by which the REIT becomes a conduit for income tax purposes. Other adjustments to taxable income that are made in arriving at

¹³ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 1431-1438; S.Rep. 99-313, pp. 769-782; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 214-221 (Conference Report).

REITTI are (a) the corporate dividends received deduction is not allowed, (b) adjustments attributable to a change in accounting period are not taken into account, (c) net income from foreclosure property (described below) is excluded,¹⁴ (d) net income (or loss) from prohibited transactions (described below) is excluded (or added), and (e) the amount of tax payable on account of unintentional failure to satisfy the income requirements is deducted.

Capital gains

A REIT that has a net capital gain for a taxable year generally is subject to tax on such capital gain under the alternative capital gains tax regime generally applicable to corporations (sec. 857(b)(3)). However, the REIT may diminish or eliminate its tax liability attributable to such capital gain by paying a "capital gain dividend" to its shareholders (sec. 857(b)(3)(C)). A capital gain dividend is any dividend or part of a dividend that is designated by the payor REIT as a capital gain dividend in a written notice mailed to shareholders. Under prior law, the notice was required to be mailed within 30 days after the end of the taxable year in which the dividend is paid. Shareholders who receive capital gain dividends treat the amount of such dividends as long-term capital gain regardless of their holding period of the stock (sec. 857(b)(3)(C)).

Under prior law, the amount of dividends that a REIT could designate as capital gain dividends could not exceed its REITTI for the taxable year (determined without regard to the dividends paid deduction) (sec. 857(b)(3)(C)). The practical effect of this limitation is that any net operating losses of the REIT would offset the amount of income eligible for capital gain treatment. Such offsetting is the normal rule for corporations that have both capital gains and net operating losses. However, this offsetting resulted in less income receiving capital gains treatment than would be the case if an individual had both capital gains and net operating losses.

Income from foreclosure property

Under prior and present law, in addition to tax on its REITTI, a REIT is subject to tax at the highest rate of tax paid by corporations on its net income from foreclosure property (sec. 857(b)(4)). Net income from foreclosure property is the excess of the sum of gains from foreclosure property that is held for sale to customers in the ordinary course of a trade or business and gross income from foreclosure property (other than income that otherwise would qualify under the 75 percent income test described below) over all allowable deductions directly connected with the production of such income (*id.*).

Foreclosure property is any real property or personal property incident to such real property that is acquired by a REIT as a result of default or imminent default on a lease of such property or indebtedness secured by such property, provided that (unless acquired as foreclosure property), such property was not held by the REIT for sale to customers (sec. 856(e)). Limitations are imposed on the period of time that property may be considered to be foreclo-

¹⁴ The amount of the dividends paid deduction is computed without regard to the the amount of dividends attributable to such income, however.

sure property, and on the ability of REITs to operate foreclosure property other than through an independent contractor.

Income or loss from prohibited transactions

In general, under prior and present law, a REIT must be an entity that is not engaged in any active trade or business and that derives its income from passive sources. Accordingly, in addition to the tax on its REITTI and on its net income from foreclosure property, a 100 percent tax is imposed on the net income of a REIT from "prohibited transactions" (sec. 857(b)(6)). A prohibited transaction is the sale or other disposition of property described in section 1221(1) of the Code (property held for sale in the ordinary course of a trade or business) other than foreclosure property. Thus, the 100 percent tax on prohibited transactions helps to ensure that the REIT is a passive entity and may not engage in ordinary retailing activities such as sales to customers of condominium units or subdivided lots in a development project. Under prior law, net income or net loss from prohibited transactions is determined by aggregating all gains from the sale or other disposition of property (other than foreclosure property) described in section 1221(1) with all losses and other deductions that are directly connected with the sale or other disposition of such property. Under prior law, a safe harbor is provided for certain sales that otherwise might be considered prohibited transactions (sec. 857(b)(6)(C)).

Organizational structure requirements

To qualify as a REIT, an entity must be for its entire taxable year a corporation or an unincorporated trust or association that would be taxable as a domestic corporation but for the REIT provisions, and must be managed by one or more trustees (sec. 856(a)). Under prior law, the beneficial ownership of the entity must be evidenced by transferable shares or certificates of ownership held by 100 or more persons (*id.*).¹⁵ In addition, the entity may not be so closely held by individuals that it would be treated as a personal holding company if all its adjusted gross income constituted personal holding company income (*id.*).¹⁶

Income requirements

Overview

Under prior law, to meet the income requirements, at least 75 percent of the entity's income (excluding gross income from prohibited transactions) must be from rents from real property, interest on obligations secured by mortgages on real property or on interests in real property,¹⁷ gain from the sale or other disposition of

¹⁵ This requirement is considered to be met if it is satisfied for 335 days out of a 12 month taxable year or a proportionate part of a shorter taxable year.

¹⁶ A corporation at least 50 percent of whose stock is held directly or indirectly by or for five or fewer individuals at any time during the last half of its taxable year is treated as a personal holding company if at least 60 percent of its ordinary adjusted gross income for the taxable year comprises personal holding company income (sec. 542). The entity is required to keep records for the purpose of determining actual ownership of interests in the entity for this purpose. See Treas. Reg. sec. 1.857-8.

¹⁷ Commitment fees relating to an agreement to make loans which would be secured by real property also are treated as qualifying income.

real property (including interests in real property and interests in mortgages on real property), dividends or distributions from another REIT, gain from the disposition of interests in a REIT,¹⁸ abatement or refunds of taxes on real property, and income or gain with respect to property that qualifies as foreclosure property (sec. 856(c)(3)(C)).

In addition, under prior and present law, at least 95 percent of the entity's gross income (excluding gross income from prohibited transactions) must be derived from the sources qualifying for the 75 percent test or from other interest, dividends, or gains from the sale of stock or securities (sec. 856(c)(2)). Less than 30 percent of the entity's gross income may be derived from gain from the sale or other disposition of stock or securities held for less than the applicable holding period for long-term capital gain or loss treatment,¹⁹ real property held less than four years (other than foreclosure property, or property subject to an involuntary conversion within the meaning of sec. 1033), and property that is sold or disposed of in a prohibited transaction (sec. 856(c)(4)).

Definition of rents

In general.—For purposes of the income requirements, under prior law, rents from real property generally include rents from interests in real property, charges for services customarily rendered or furnished in connection with the rental of real property, whether or not such charges are separately stated, and rent attributable to personal property that is leased under or in connection with a lease of real property, but only if the rent attributable to such personal property does not exceed 15 percent of the total rent for the year under the lease (sec. 856(d)(1)).²⁰

Under prior law, amounts are not treated as rents from real property, however, if the amount of such rent is determined in whole or in part based on the net income or profits derived by any person from the use of such property (sec. 856(d)(2)(A)). Rents based on a fixed percentage of gross receipts or sales do not violate this requirement, however.²¹ In addition, amounts are not treated as qualifying rent if received from certain parties in which the lessor has an interest of 10 percent or more (sec. 856(d)(2)(B)). Further, where the entity furnishes or renders services to the tenants of rented property, amounts received or accrued with respect to such property are not treated as qualifying rents unless the services are furnished through an independent contractor (sec. 856(d)(2)(C)). In general, an independent contractor is a person who does not own more than a 35 percent interest in the REIT, and in which no more than a 35 percent interest is held by persons with a 35 percent or greater interest in the REIT (sec. 856(d)(3)).

¹⁸ Gains on the sale of interests in a REIT would not qualify if such interests were treated as property held for sale to customers in the ordinary course of business.

¹⁹ *E.g.*, six months for property acquired after June 22, 1984 and before January 1, 1988.

²⁰ The allocation of rent to the real and personal properties under a lease generally is based on the relative adjusted bases of the leased properties. If the rent attributable to personal property under this allocation is greater than 15 percent of the total rent under the lease, then all rent attributable to personal property from the lease will be treated as nonqualifying income.

²¹ Similar rules apply in determining whether interest income is treated as qualifying income.

Customary services.—In general, under prior and present law, services provided to tenants are regarded as customary if, in the geographic market within which the building is located, tenants in buildings that are of a similar class (for example, luxury apartment buildings) are customarily provided with the service. The furnishing of water, heat, light, and air conditioning, the cleaning of windows, public entrances, exits, and lobbies, the performance of general maintenance, and of janitorial and cleaning services, the collection of trash, the furnishing of elevator services, telephone answering services, incidental storage space, laundry equipment, watchman or guard service, parking facilities and swimming pool facilities are examples of services that are customarily furnished to tenants of a particular class of buildings in many geographical marketing areas (Treas. Reg. sec. 1.856-4(b)).

Treatment of shared appreciation mortgages

Under prior law, the treatment of a portion of the income arising from a so-called “shared appreciation mortgage” for purposes of the REIT income requirements was not certain. In general, a shared appreciation mortgage is a debt obligation that is secured by real property, which debt obligation requires the obligor to pay to the holder a portion of any gain realized by the obligor on the sale of real property securing the obligation.

Asset requirements

To satisfy the asset requirements to qualify for treatment as a REIT, under prior law, at the close of each quarter of its taxable year, an entity must have at least 75 percent of the value of its assets invested in real estate assets, cash and cash items, and Government securities (sec. 856(c)(5)(A)). Moreover, not more than 25 percent of the entity’s assets can be invested in securities of any one issuer (other than a government or a REIT), which securities comprise more than five percent of the entity’s assets or more than 10 percent of the outstanding voting securities of such issuer (sec. 856(c)(5)(B)). The term real estate assets is defined to mean real property (including interests in real property and mortgages on real property) and interests in REITs (sec. 856(c)(6)(B)). Interests in real property include fee ownership and co-ownership of land or improvements thereon, leaseholds of land or improvements thereon, options to acquire land or improvements thereon, and options to acquire leaseholds of land or improvements thereon, but do not include mineral, oil, or gas royalty interests (sec. 856(c)(6)(C)).

Distribution requirements

Overview

To satisfy the distribution requirement, under prior law, an entity must distribute as dividends to its shareholders during the taxable year an amount equal to at least the excess of (a) the sum of (i) 95 percent²² of its REITTI other than net capital gain income, and (ii) 95 percent²³ of the entity’s net income from foreclosure

²² This requirement is 90 percent for taxable years beginning before January 1, 1980.

²³ This requirement is 90 percent for taxable years beginning before January 1, 1980.

property less the tax imposed on such income, over (b) the sum of (i) penalty taxes imposed under section 6697 (resulting from the distribution of "deficiency dividends") and (ii) the net loss from prohibited transactions (sec. 857(a)(1)).

Distributions after the taxable year

Certain distributions within 12 months of the end of the taxable year.—Under prior and present law, if a REIT declares a dividend prior to the time for filing its tax return for a taxable year and actually pays such dividend within 12 months of the end of such taxable year (but not later than the date of the next regular payment after the declaration), then the REIT may elect to have the dividend treated as having been paid in the preceding taxable year (sec. 858(a)). Notwithstanding the election, the distributees are treated as having received the dividend in the year in which the distribution is made (sec. 858(b)).

Under prior law, to partially compensate for the deferral of tax liability that may occur where a REIT pays such so-called "spill-over dividends," a nondeductible three percent excise tax is imposed on the amount of such dividends to the extent that 75 percent of the REITTI of the REIT for the preceding taxable year without regard to the dividends paid deduction and certain other adjustments (as reported on the REIT's tax return) exceeds the amount distributed in such year (sec. 4981).²⁴

Other distributions after the end of the taxable year—deficiency dividends.—Under prior and present law, where, as a consequence of an audit by the Internal Revenue Service, there has been a "determination" that an "adjustment" is to be made to REITTI for a taxable year, the entity may pay a deficiency dividend to its shareholders and receive a deduction for such distributions with regard to the taxable year for which the election is made, provided that the adjustment did not occur as a result of fraud or willful failure to file an income tax return (sec. 860). If the proper amount is distributed as a deficiency dividend, the entity is not disqualified as a REIT or subject to tax on the amounts distributed (but is subject to interest and penalties). Interest and penalties relating to amounts distributed as deficiency dividends are based on the amount of the adjustment.²⁵

In addition to other penalties provided under the Code relating to underpayments of tax, under prior law, section 6697 of the Code imposed a penalty equal to the amount of interest attributable to the amount paid by a REIT as a deficiency dividend. The amount of this penalty is limited to one half of the amount of the deficiency dividend.

²⁴ Amounts counted toward the 75-percent requirement are only amounts that qualify for the dividends paid deduction for the current year. Therefore, any spillover dividends or deficiency dividends (which relate only to a prior year) are not counted toward this 75-percent requirement.

²⁵ For this purpose, the amount of the adjustment would include adjustments attributable both to ordinary income and capital gains. However, no interest and penalties are assessed in the event of the late designation of a capital gains dividend where the amount was distributed previously as an ordinary income distribution.

Reasons for Change

The Congress believed that certain aspects of the requirements for qualification and taxation of REITs should be modified. Generally, the modifications are required in order to allow REITs to enter into transactions, or otherwise structure their affairs, in either case consistent with both prevailing market conditions and the general requirement that a REIT is an entity whose primary purpose is to derive most of its income from passive real estate related sources and distribute most of its income to its shareholders.

The Congress understood that certain of the REIT requirements present significant difficulties in connection with the initial election by an entity of REIT status. For example, new corporations that are formed for the purpose of electing REIT status may have difficulty meeting the shareholder diversification requirement in their first year because of delays in the distribution of their shares. The Congress believed that for the first year that an entity otherwise meets the requirements to elect REIT status, failure to meet the shareholder diversification requirement should not result in disqualification.

The Congress also understood that a corporation that is formed for the purpose of becoming a REIT often may initially adopt a fiscal year ending a few months after its incorporation, intending to change its taxable year to the calendar year required of REITs immediately after the end of the first fiscal year. The reason that this is done is that the new corporation would not be able to qualify as a REIT for its first taxable year if the calendar year were elected initially. In this situation, the Congress believed that the entity should be permitted to change its taxable year to a calendar year without permission of the Internal Revenue Service.

The Congress also believed that an entity wishing to elect REIT status for the first time should not be permitted to do so if it has earnings and profits accumulated as a C corporation. Accordingly, the Act provides that any C corporation having accumulated earnings and profits is required to distribute such accumulated earnings and profits in order for it to qualify as a REIT.

The Congress also understood that both newly electing and existing REITs may encounter difficulty meeting the 75 percent income test after they receive a significant amount of new equity capital. For example, such amounts may be received as a result of a public offering of stock, but the process of investing such amounts in appropriate assets producing rents or other income qualifying for the 75 percent income test may take sufficiently long so that the entity may not be able to satisfy the requirement for the year. The Congress recognized the impracticality of requiring REITs to identify their chosen real estate investments prior to raising any new equity capital, and believed that REITs should be afforded some relief from the 75 percent income test for one year after receiving the new equity capital. The Congress similarly believed that analogous relief should be available where a REIT receives new debt capital as a result of a public offering of long term debt securities. The Congress believed, however, that consistent with the general passive nature of the REIT, the relief should be available only to

the extent that the income from the investment of new equity consists of income from either stock or debt instruments.

The Congress understood that, for purposes of limiting liability, separate parcels of real estate commonly are held in separate, but commonly owned, corporations. Since stock in a corporation other than a REIT is not treated as a real estate asset, REITs effectively are prevented from holding their real estate assets in separate corporations. The Congress believed that whether a REIT is considered to meet the asset requirement should be determined by treating assets held by wholly owned subsidiaries as owned directly by the REIT.

The Congress believed that two of the requirements of present law, that are intended to assure that the REIT is more a passive entity than one engaged in an active trade or business, may be overly restrictive and should be liberalized consistent with maintaining the essential passivity of the REIT. First, the Congress believed that REITs should be permitted to perform certain services in connection with the rental of real property without being required to use an independent contractor (to assure that rents from such property are considered to qualify as "rent from real property"). The Congress believed that the same standard should be applied to REITs for the purpose of determining whether amounts being received are from the passive rental of real property or from an active trade or business, that is applied to tax-exempt entities in determining whether amounts are treated as income from an "unrelated trade or business." Second, the Congress believed that the prohibited transaction safe harbor of present law should be liberalized, in part by extending the safe harbor to include any number of transactions so long as the adjusted basis of property sold in such transactions does not exceed a fixed percentage of the adjusted basis of all of the REIT's assets.

The Congress understood that lessors of real property frequently lease property to a prime tenant and agree to accept as rent a fixed amount plus a percentage of the prime tenant's profits from the rental of the property. Since the rent from the prime tenant is based in part on the prime tenant's net profits in such a transaction, the portion based on the net profits would not qualify as rents from real property for the REIT. Nevertheless, if the prime tenant's rent from the property is dependent only on rents received from the property, (including rents based on the gross receipts of the subtenants), then the REIT in this situation is not participating in the profits of any active business other than that pertaining to the rental of its own property. Accordingly, the Congress believed that rents that are based on the net income of the tenant should be treated as qualifying rents for the REIT provided that the tenant's profits are derived only from sources that would be qualifying rent from real property if earned directly by the REIT.

The Congress believed that the treatment of income from shared appreciation mortgages should be clarified for purposes of the REIT income requirements. In general, the Congress believed that for these purposes it was appropriate to treat the income from the shared appreciation provision as gain from the sale of the related real property.

If a REIT sells property in exchange for obligations bearing original issue discount, or enters into deferred rental agreements (within the meaning of sec. 467), the REIT may be required to recognize income in advance of receiving cash, on account of changes to law made by the Deficit Reduction Act of 1984.²⁶ Since the REIT's distribution requirement is based on its REITTI which does not necessarily take into account cash received, a REIT might have to borrow up to 95 percent of the amount of income that it is required to recognize on account of section 467 or section 1274 in order to meet its distribution requirement. A similar situation arises where the REIT enters into a transaction that it believes in good faith to meet the requirements for eligibility as a tax-free exchange under section 1031, but the transaction later is determined not to qualify.

The Congress believed that REITs should be permitted some relief from the distribution requirement in these circumstances. The Congress recognized that the distribution requirement, which is 95 percent, already takes into account the possibility of the REIT having certain amounts of income not accompanied by cash, and that the relief extended should reflect this feature of the requirement. Accordingly, the Act reduces the amount that the REIT otherwise would be required to distribute by the amount that these types of noncash income exceed 5 percent of REITTI. In order that this relief not result in deferral of tax on the related income, the REIT is required pay tax on the undistributed amount.

The Congress believed that a fundamental purpose for permitting conduit treatment for REITs is to enable small individual investors the opportunity to invest in a professionally managed diversified portfolio of real estate assets. Hence, the Congress believed that if a REIT is required to offset its capital gain income with net operating losses, individual investors routinely are denied the benefit of capital gain treatment that they would receive if they were able to hold the real estate assets directly. Thus, the Act provides that REITs may preserve the availability of capital gains treatment even if they have net operating losses. In addition, the Congress believed that the notification procedure for capital gain dividends may be accomplished with less of a burden on the REIT if the REIT were permitted to mail its capital gain notices with its annual report, and the Act so provides.

The Congress believed that the ability of a REIT to pay spillover dividends, (or in the case of REITs that have taxable years other than the calendar year, dividends after the end of a calendar year out of income earned during the calendar year), without penalty should be further restricted in order to prevent the deferral of income recognition that may accompany the payment of such amounts. Accordingly, the Congress believed that the excise tax under section 4981 should be raised to 4 percent, and that REITs should be required to distribute larger amounts of income (both capital gain and ordinary income) than presently required to avoid the imposition of the excise tax.

²⁶ P.L. 98-369.

Finally, the Congress believed that the imposition of interest and penalties relating to deficiency dividends based on the full amount of such dividends adequately compensates the Federal government for the deferral of tax liability that takes place when a REIT distributes less than is required for a taxable year. Accordingly, the penalty tax under section 6697 is repealed under the Act.

Explanation of Provisions

Overview

The Act modifies many of the provisions relating to the requirements for qualification as and the taxation of REITs. The provisions modified relate to the general requirements for qualification as a REIT, the income and asset requirements for qualification as a REIT, the definition of rents and interest, the distribution requirements for qualification as a REIT, the treatment of capital gains, the provisions relating to prohibited transactions, and certain other provisions.

General requirements

Under the Act, as under prior law, an entity generally may not elect REIT status if it would meet the stock ownership test of section 542(a)(2) (i.e., if it would be treated as a personal holding company if all of its income constituted personal holding company income) or if it had fewer than 100 shareholders. Under the Act, however, an entity that otherwise meets the applicable requirements may elect REIT status notwithstanding its meeting the section 542(a)(2) stock ownership test or its having fewer than 100 shareholders, provided that the entity was not a REIT in any prior year. In applying the attribution rules of section 544 for purposes of determining whether the stock ownership requirement of section 542(a)(2) is met for any taxable year, attribution to an individual of stock owned by or for the individual's partner is ignored under the Act.

The Act provides that, in order to elect REIT status, the electing entity must either have been treated as a REIT for all taxable years beginning after February 28, 1986, or must have no earnings and profits accumulated for any year in which the entity was in existence and not treated as a REIT.

The Act also provides that an entity that has not engaged in any active trade or business is permitted to change its annual accounting period to a calendar year without approval of the Internal Revenue Service in connection with electing REIT status. This rule is intended to apply to entities that are newly formed for the purpose of becoming a REIT, and that wish to adopt a calendar year taxable year after an initial period in which, for example, the entity receives the proceeds of a stock offering and temporarily invests such proceeds in passive investments until investment in suitable real estate assets is made.

Income and asset requirements

REIT subsidiaries

Under the Act, all the assets, liabilities, and items of income, deduction, and credit of a "qualified REIT subsidiary" are treated as the assets, liabilities, and respective items of the REIT that owns the stock of the qualified REIT subsidiary. A subsidiary of a REIT is a qualified REIT subsidiary if and only if 100 percent of the subsidiary's stock is owned by the REIT at all times that the subsidiary is in existence.²⁷ If at any time the REIT ceases to own 100 percent of the stock of the subsidiary, or if the REIT ceases to qualify for (or revokes an election of) REIT status, such subsidiary is treated as a new corporation that acquired all of its assets in exchange for its stock (and assumption of liabilities) immediately before the time that the REIT ceased to own 100 percent of the subsidiary's stock, or ceased to be a REIT as the case may be.²⁸

For example, an entity owns 100 percent of the stock of a corporation that holds an office building and receives rental income from the office building. For purposes of determining whether the shareholder entity qualifies for REIT status, the shareholder is treated as owning the office building directly and as receiving the rents therefrom. If the shareholder qualifies as a REIT, the separate existence of the 100 percent owned subsidiary is ignored for all income tax purposes. If the shareholder REIT sells all of the stock in the subsidiary to any purchaser (including another REIT), then the subsidiary is treated as a new corporation that was formed and that received its properties in exchange for its stock, immediately after which it was owned by the purchaser. Hence, the Congress anticipates that the deemed transfer of the assets to the subsidiary in exchange for its stock would not qualify as a tax-free exchange under section 351 in this situation.

The Congress intended that if a REIT purchases all of the stock of a corporation and makes an election under section 338 with respect to the purchased stock, then the corporation that is deemed to be newly formed pursuant to the section 338 election may qualify as a REIT subsidiary as of the time that the newly formed corporation is deemed to come into existence.

New equity or debt capital

Under the Act, if a REIT receives new equity capital, then income derived from stock or debt instruments (i.e., interest, dividends, or gains from the sale of such stock or debt instruments) that is attributable to the temporary investment of the new equity capital is treated, for a one-year period beginning on the date that the REIT receives such capital, as qualifying income for purposes of the "75 percent income test."²⁹ In addition, during such period,

²⁷ The Congress intended that any entity that is treated as a corporation within the meaning of section 7701(a)(3) may qualify as a REIT subsidiary.

²⁸ In the case of the shareholder REIT ceasing to be treated as a REIT, the Congress intended that the transfer would be deemed to take place as of the first day of the first taxable year in which the entity's REIT status ceases.

²⁹ Nevertheless, the REIT would continue to be required to meet the "95 percent income test" including income from the new equity capital. For this purpose, the Congress intended that the term "debt instrument" is to have the same meaning as under section 1275(a)(1).

stock or debt instruments purchased with such capital are treated as "real estate assets" for purposes of the "75 percent asset test." Under the Act, new equity capital is any amount received by the REIT in exchange for stock of the REIT (other than pursuant to a dividend reinvestment plan).

The Act also provides that the investment of the proceeds of the public offering of debt securities that have a maturity of at least five years receives the same treatment as the investment of new equity capital. The Congress intended that debt securities for which there is an intention to call before five years would not be treated as having a maturity of at least five years.

Definition of rents and interest

Independent contractor requirement

Under the Act, amounts received by a REIT in connection with the rental of property do not fail to qualify as rents from real property merely because the REIT performs certain services and does not use an independent contractor for the provision of such services. Under the Act, the services that may be provided without violating the "independent contractor test" are those services the provision of which would not by reason of section 512(b)(3) result in the receipt of "unrelated business income" by an organization subject to tax on such income (sec. 511(a)(2)). Thus, under the Act, amounts received by the REIT in connection with the rental of real property would not fail to be treated as rents from real property if the REIT provides only certain services other than services that are considered rendered to the occupant of the property (Treas. Reg. sec. 1.512(b)-1(c)(5)). The Act does not alter the provision of prior law under which amounts received by a REIT are treated as rents from real property if the REIT provides "customarily furnished services" to its tenants through an independent contractor.

The Congress intended, for example, that a REIT may provide customary services in connection with the operation of parking facilities for the convenience of tenants of an office or apartment building, or shopping center, provided that the parking facilities are made available on an unreserved basis without charge to the tenants and their guests or customers. On the other hand, the Congress intended that income derived from the rental of parking spaces on a reserved basis to tenants, or income derived from the rental of parking spaces to the general public, would not be considered to be rents from real property unless all services are performed by an independent contractor. Nevertheless, the Congress intended that the income from the rental of parking facilities properly would be considered to be rents from real property (and not merely income from services) in such circumstances if services are performed by an independent contractor.

The Congress also intended that a REIT may directly select, hire, and compensate those independent contractors who will provide the customary services that may be provided by a REIT in connection with the rental of real property, rather than hiring an independent contractor to hire other independent contractors.

Rents and interest based on net income

Under the Act, rents or interest that are based on the net income of a tenant or debtor are treated as rent from real property or as interest, respectively, if certain conditions are met. To qualify, the rent (or interest) must be received from a tenant (or debtor) that receives substantially all of its income from the leased property (or the property that secures the loan) from the subleasing (or leasing) of substantially all of such property, and the rent received by the tenant (or debtor) consists entirely of amounts that would be treated as rents from real property (or interest) if received directly by the REIT.³⁰ However, if the tenant (or debtor) receives rents (or interest) from the property a portion of which would qualify as rents from real property (or interest) for the REIT and a portion of which would not, then the same rules that apply under prior law apply under the Act, whereby a proportionate part of the amount received by the REIT would be treated as rent from real property (or interest).³¹

Shared appreciation provisions

The Act provides that for purposes of the income requirements for qualification as a REIT, and for purposes of the prohibited transactions provisions, any income derived from a "shared appreciation provision" is treated as gain recognized on the sale of the "secured property." For these purposes, a shared appreciation provision is any provision that is in connection with an obligation that is held by the REIT and secured by an interest in real property, which provision entitles the REIT to receive a specified portion of any gain realized on the sale or exchange of such real property (or of any gain that would be realized if the property were sold on a specified date). Secured property for these purposes means the real property that secures the obligation that has the shared appreciation provision.

In addition, the Act provides that for purposes of the income requirements for qualification as a REIT, and for purposes of the prohibited transactions provisions, the REIT is treated as holding the secured property for the period during which it held the shared appreciation provision (or, if shorter, the period during which the secured property was held by the person holding such property),³² and the secured property is treated as property described in section 1221(1) if it is such property in the hands of the obligor on the obligation to which the shared appreciation provision relates (or if it would be such property if held by the REIT). For purposes of the prohibited transaction safe harbor, the REIT is treated as having sold the secured property at the time that it recognizes income on account of the shared appreciation provision, and any expenditures

³⁰ Thus, for example, rents based on the net income of a tenant of the REIT who provides services to its subtenants, which services a REIT would be required to provide through an independent contractor in order for the REIT to be treated as receiving rents from real property, could not be treated as rents from real property by the REIT unless the tenant provides such services through a contractor that is independent with respect to the tenant.

³¹ A technical correction may be necessary to achieve this result.

³² The Congress intended that the provisions of section 1223 are to be taken into account for purposes of determining the holding period of the person holding the secured property.

made by the holder of the secured property are treated as made by the REIT.³³

For example, under the Act, if a REIT is the holder of an obligation under which it is paid a fixed percentage of interest on a fixed principal amount, and also is entitled to a payment equal to a portion of the appreciation in the property as of the time the property is sold (or at an earlier specified time), then the additional payment would be treated as gain on the sale of the property secured by the obligation for purposes of section 856(c), with the holding period of the property considered to be the shorter of the REIT's holding period of the obligation or the obligor's holding period for the secured property. This gain would be eligible for the prohibited transaction safe harbor if the applicable requirements are met.

The Congress intended no inference regarding the treatment of any shared appreciation provision for any other purposes of Federal income taxation.

Distribution requirement

Under the Act, the minimum amount that the REIT is required to distribute (i.e., the minimum dividends paid deduction as specified in sec. 857(a)(1)), is reduced by a portion of certain amounts that the REIT is required to include in income in advance of receiving cash. These amounts are (1) the excess of the amounts that the REIT is required to include in income under section 467 with respect to certain rental agreements involving deferred rents, over the amounts that the REIT otherwise would recognize under its regular method of accounting,³⁴ (2) in the case of a REIT using the cash method of accounting, the excess of the amount of original issue discount and coupon interest that the REIT is required to take into account with respect to a loan to which section 1274 applies, over the amount of money and fair market value of other property received with respect to the loan,³⁵ and (3) any income arising from the disposition of a real estate asset, but only in circumstances where the REIT had entered into a transaction with respect to such real estate, had intended in good faith that the transaction qualify as a like-kind exchange under section 1031, the income is recognized as a result of a determination that the transaction did not so qualify, and the failure to meet the requirements of section 1031 was due to reasonable cause and not due to willful neglect. The portion of such amounts by which the REIT's minimum distribution requirement is reduced is the amount by which the sum of these amounts exceeds five percent of the REIT's REITTI of the REIT determined without regard to the REIT's dividends paid deduction and net capital gain.³⁶

³³ The Congress intended that the REIT's holding period of the obligation to which the shared appreciation provision relates (and not the obligor's holding period of the secured property if longer than the REIT's holding period) must be at least four years for the safe harbor to apply.

³⁴ Thus, for example, in the case of a REIT using the accrual method of accounting, the provision would apply in the case of a section 467 rental agreement only to the extent that the income required to be recognized under section 467 exceeded the amount of income that the taxpayer would include under the accrual method if section 467 did not apply.

³⁵ A technical correction may be necessary so that the statute reflects this intent.

³⁶ The computation of REITTI would take into account the change made by the Act, which would permit the deduction of the REIT's net loss from prohibited transactions, as described below.

Capital gains

Under the Act, for purposes of determining the maximum amount of capital gain dividends that a REIT may pay for a taxable year, the REIT would not offset its net capital gain with the amount of any net operating loss, whether current or carried over from a previous taxable year. To the extent that the REIT then elects to pay capital gain dividends in excess of its net income, the REIT would increase the amount of its net operating loss carryover by such amount. For example, a REIT with no net operating loss carryovers incurs a \$100 net operating loss and has a net capital gain of \$50 in 1987. Under the Act, the maximum amount of capital gain dividends that the REIT could distribute is \$50. If the REIT distributed a \$40 capital gain dividend, its net operating loss carryover to the succeeding taxable year would be \$90.

Under the Act, REITs are permitted to mail the required capital gain notices to shareholders with the REIT's annual report rather than within 30 days of the end of the taxable year. The Congress intended that if the REIT does not regularly provide its shareholders with an annual report, then the notice requirement of prior law would continue to apply.

Prohibited transaction rules

The Act makes two modifications to the rules relating to prohibited transactions. First, the Act modifies the safe harbor under which sales by the REIT meeting the conditions of the safe harbor are not treated as prohibited transactions. Under the Act, the number of sales of property that a REIT may make within the safe harbor is increased from five to seven. In addition, the extent of expenditures that the REIT may make within four years of sale that are includible in the basis of the property is increased from 20 percent of the net selling price of the property to 30 percent.

The Act also provides an alternative safe harbor whereby the REIT may make any number of sales during the taxable year, provided that the adjusted basis of the property sold does not exceed 10 percent of the adjusted basis of all of the REIT's assets at the beginning of the REIT's taxable year. For this purpose, the total adjusted basis of all of the REIT's assets (including the property that is sold) is to be computed using depreciation deductions that are used for purposes of computing earnings and profits. A sale is treated as qualifying for the alternative safe harbor, however, only if substantially all the marketing and development expenditures with respect to the property sold were made through an independent contractor. The determination of whether a particular sale qualifies for the prohibited transaction safe harbor is made on a property by property basis. The Congress intended no inference regarding whether sales that qualify under this safe harbor for the REIT are or are not properly considered to be sales of property held for sale to customers.

Second, the Act provides that in determining the amount of net income derived from prohibited transactions, losses from prohibited transactions (and deductions attributable to prohibited transactions in which a loss was incurred) may not be taken into account. The Act does, however, provide that the amount of any net loss from

prohibited transactions may be taken into account in computing REITTI. For example, for a taxable year a REIT has a net gain from a prohibited transaction of \$100 and a net loss from a prohibited transaction of \$50. The REIT has net rental income of \$200 and no other items of income or deduction. Under the Act, the REIT would be subject to a \$100 tax on the gain from its prohibited transaction, and its REITTI would be \$150.

Deficiency dividends

Under the Act, the penalty tax under section 6697 on deficiency dividends is repealed.

Imposition of excise tax

In general

The Act imposes a nondeductible excise tax on any REIT for each calendar year equal to four percent of the excess, if any, of the "required distribution" for the calendar year, over the "distributed amount" for such calendar year. The excise tax must be paid on or before March 15 of the following calendar year.

For these purposes, the term required distribution means, with respect to any calendar year, the sum of (1) 85 percent of the REIT's "ordinary income" for the calendar year, (determined as if the calendar year were the REIT's taxable year), (2) 95 percent of the REIT's capital gain net income (within the meaning of sec. 1222(9)) for such calendar year, (determined as if the calendar year were the REIT's taxable year), and (3) the excess, if any, of the "grossed up required distribution" for the preceding calendar year over the distributed amount for such preceding calendar year. For this purpose, the term grossed up required distribution for any calendar year is the sum of the taxable income of the REIT for the calendar year (without regard to the deduction for dividends paid) and all amounts from earlier years that are not treated as having been distributed under the provision.

The REIT's ordinary income for this purpose means its real estate investment trust taxable income (as defined in sec. 857(b)(2)) determined (1) without taking into account the dividends paid deduction, (2) by not taking into account any gain or loss from the sale of any capital asset, and (3) by treating the calendar year as the REIT's taxable year.

In addition, for these purposes, the term distributed amount means, with respect to any calendar year, the sum of (1) the deduction for dividends paid (within the meaning of sec. 561) during such calendar year, (2) amounts on which the REIT is required to pay corporate tax, and (3) the excess (if any) of the distributed amount for the preceding taxable year over the grossed up required distribution for such preceding taxable year. The amount of dividends paid for these purposes is determined without regard to the provisions of section 858.

Under the Act, for purposes of applying these provisions, any deficiency dividend, (as defined in sec. 860(f)), is taken into account at the time it is paid, and any income giving rise to the adjustment is treated as arising at the time the dividend is paid.

Although the excise tax is imposed only for calendar years beginning after December 31, 1986, the computations that are necessary to determine whether any excise tax is due and the amount so due, will require certain calculations involving income, losses, and distributions with respect to periods before the first calendar year for which the excise tax is imposed. For example, in computing the excise tax for the first calendar year beginning after December 31, 1986, computation of the grossed up required distribution and distributed amount for the calendar year ending on December 31, 1986 is required.³⁷

Timing of inclusion of certain dividends

Under the Act, any dividend declared by a REIT in December of any calendar year and payable to shareholders of record as of a specified date in such month, shall be deemed to have been paid by the REIT, (including for purposes of sec. 561), and to have been received by each shareholder, on such record date, but only if such dividend is actually paid by the REIT before February 1 of the following calendar year. This provision does not apply for purposes of section 858(a), however.

Earnings and profits

Under the Act, a REIT is treated as having sufficient earnings and profits to treat as a dividend any distribution during any calendar year (other than a redemption to which sec. 302(a) applies), which distribution is treated as a dividend by such REIT, but only to the extent that the amount distributed during such calendar year does not exceed the required distribution for such calendar year. The purpose of this provision is to prevent the REIT from failing to meet the requirements for avoiding the imposition of the excise tax where losses incurred by the REIT after December 31, but before the close of its taxable year, otherwise would prevent the REIT from having sufficient earnings and profits for its distributions to be treated as dividends.

Treatment of certain capital losses

The Act provides that, in the case of a REIT that has a taxable year other than the calendar year, for purposes of determining the amount of capital gain dividends, such REIT may distribute for a taxable year, the REIT's net capital gain for the taxable year is determined without regard to any net capital loss attributable to transactions after December 31 of such year. For these purposes, any such net capital loss is treated as arising on the first day of the next taxable year. To the extent provided in Treasury regulations,

³⁷ Although the statutory definition of the grossed up required distribution seems to require computations of a REIT's income and distributions beginning with the commencement of the REIT's existence, it is anticipated that REITs will be able to derive the proper grossed up required distribution without taking into account periods prior to the first taxable year of the REIT ending before January 1, 1987. In general, after taking into account spillover dividends, all income for all taxable years ending before January 1, 1987 would either have been distributed to shareholders or taxed to the REIT, and thus would be treated as distributed amounts under section 4981(c). In calculating these amounts, the Congress intended that proper adjustments will be made for periods in which the corporation did not qualify as a REIT.

the same rule will apply for purposes of determining the REIT's taxable income.³⁸

Effective Date

The provisions of the Act generally are effective for taxable years beginning after December 31, 1986. The provisions relating to the imposition of the excise tax are effective for calendar years beginning after December 31, 1986.

Revenue Effect

The provisions are estimated to increase fiscal budget receipts by \$37 million in 1987, and less than \$5 million annually in 1988 through 1991.

³⁸ The Congress intended that any such regulations would prevent the avoidance of tax, particularly in circumstances where a REIT takes advantage of the rule in order to pay return of capital dividends in the following taxable year, or to offset the tax that would be incurred on capital gains recognized in the following year.

P. Mortgage-Backed Securities (Secs. 671-675 of the Act and secs. 1272, 6049, 7701, and new secs. 860A-860G of the Code) ³⁹

Prior Law

Taxation of alternative methods of owning income producing assets

Overview

Under prior and present law, income-producing assets (such as mortgages on residential property or other debt instruments) can be owned directly, or they can be owned indirectly by means of an equity interest in an intermediary entity. Income generated by property that is owned directly generally is taxed to the owner of the property. Thus, in the case of property owned directly by an individual, income from such property is subject to only one level of taxation. Income from property owned indirectly may be subject to more than one level of taxation, i.e., tax may be imposed both at the level of the intermediary holder and the indirect owner.

Whether more than one level of tax is imposed where income producing property is held indirectly generally depends on whether the intermediary entity is treated for tax purposes (1) as a separate taxable entity (such as a corporation or an association taxable as a corporation), (2) as a complete conduit entity (such as a partnership or S corporation), or (3) as a partial conduit entity (such as a trust or real estate investment trust) under which income is not taxed to the entity to the extent it is currently distributed to the entity's owners.

Direct ownership of income producing assets

Individual ownership

The most basic form of direct ownership of income producing assets is the holding of such assets by an individual. Where an individual owns income producing assets directly, the individual generally includes all income generated by the property, and deducts all items of expense related to the property. When the individual disposes of the property in a taxable transaction, the individual recognizes gain or loss, which may be capital gain or loss.

Grantor trusts

A grantor trust is an arrangement under which legal title to property is transferred to a trustee, but the transferor retains certain powers over, or interests in, the trust so that the transferors

³⁹ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 1441-1445; S.Rep. 99-313, pp. 783-801; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 222-241 (Conference Report).

are treated as retaining direct ownership of such property for Federal income tax purposes (secs. 671-679). Thus, income, deductions, and credits of the grantor trust are attributed directly to the grantors.⁴⁰

Indirect ownership of income producing assets

Separate taxable entities—corporations

One form of indirect ownership of income producing property is the ownership of stock in a corporation that owns such property. Corporations can be used to hold investment property or to engage in the active conduct of a trade or business.

Corporations generally are treated for tax purposes as separate taxable entities, apart from their shareholders.⁴¹ Thus, income earned by a corporation is taxed to the corporation. In addition, when the after-tax earnings of a corporation are distributed to the corporation's stockholders as dividends, generally such earnings also are taxed to the stockholders.⁴²

Interest on debt incurred by a corporation to finance the acquisition of income-producing assets generally is deductible to the corporation incurring the debt. To the extent that income from debt-financed property is paid to the debtholders in the form of interest, the interest deduction offsets any corporate-level tax on such income, resulting in the imposition of only a single tax on the income, which tax is borne by the debtholder.

Complete conduit entities

Partnerships.—Another form of indirect ownership of income producing assets is ownership of an interest in a partnership holding such assets. A partnership generally is treated as a complete conduit for Federal income tax purposes.⁴³ Each partner accounts for his "distributive share" of the partnership's income, loss, deduction, and credit. The liability for income tax is that of the partner, and not of the partnership, without regard to whether the income of the partnership is actually distributed to the partners. Partnership losses, deductions, and credits pass through to the partners and can be used to offset other income. In general, an entity is treated as a partnership if it is an unincorporated organization through, or by means of which, any business, financial operation or venture is carried on, and it is not treated as a corporation, a trust, or an estate.⁴⁴

S corporations.—Income producing property also may be owned indirectly through ownership of stock in an S corporation. Al-

⁴⁰ In some cases, persons other than the transferors are treated as owners of the trust's assets.

⁴¹ Certain corporations may be treated as complete or partial conduit entities, however. See discussion of S corporations and real estate investment trusts, below.

⁴² Under prior law, an individual generally was allowed to exclude from taxable income up to \$100 of dividends per year (\$200 for a joint return) (sec. 116), and corporations were entitled to a dividends received deduction for 85 or 100 percent of dividends received (secs. 243-245). Section 612 of the Act repeals the limited dividend exclusion for individuals, and section 611 of the Act reduces the 85 percent dividends received deduction for corporations to 80 percent.

⁴³ A partnership is treated as an entity separate from its partners for purposes of calculating items of taxable income, deduction, and credit. It also is treated as an entity for purposes of reporting information to the Internal Revenue Service.

⁴⁴ See discussion of entity classification, below.

though S corporations are corporate entities, if a corporation so elects, its shareholders generally may account for a proportionate amount of the corporation's items of income, loss, deduction, and credit under subchapter S of the Code (secs. 1361 *et seq.*). The S corporation itself generally has no tax liability for as long as the election is in effect.⁴⁵

In general, a domestic corporation may elect to be treated under subchapter S if it has 35 or fewer shareholders (none of whom are corporations or nonresident aliens), has not more than one class of stock, and is not a financial institution, a life insurance company, or one of several other types of corporations.

Partial conduit entities

Real estate investment trusts.—Another form of indirect ownership is the ownership of shares or interests in a real estate investment trust ("REIT"). Under the provisions of the Code applicable to REITs (secs. 856 *et seq.*), REITs generally are treated as conduits for Federal income tax purposes to the extent of the amount of its earnings that are distributed currently to shareholders. Conduit treatment is achieved by allowing the REIT a deduction for earnings distributed on a current basis. Thus, income that is currently distributed to shareholders is not taxed at the REIT level; income that is not currently distributed to shareholders is taxed at the REIT level, as in the case of ordinary corporations.

In general, an entity may qualify as a REIT if it is a trust or corporation with at least 100 different freely transferable interests, which trust or corporation would be taxable as an ordinary domestic corporation but for its meeting certain specified requirements. These requirements relate to the entity's assets being comprised substantially of real estate assets and the entity's income being in substantial part realized from certain real estate and real estate related sources.

The ability of a REIT to engage in regular business activities is limited by the requirement that income from the sale or other disposition of stock or securities held for less than 1 year, or real property held less than 4 years, must account for less than 30 percent of the REIT's income. Further, a 100 percent tax is imposed on gains from the sale of property held for sale to customers in the ordinary course of trade or business (other than foreclosure property).

If a corporation meets these requirements and elects to be treated as a REIT, it generally is subject to the regular corporate tax, but receives a deduction for dividends paid provided that the amount of its dividends paid is not less than an amount generally equal to 95 percent of its ordinary income. These dividends must be paid within a short period following the close of the REIT's taxable year and are generally includible as ordinary income to the shareholders.⁴⁶

⁴⁵ An S corporation may be subject to tax at the entity level under certain limited circumstances.

⁴⁶ A deficiency dividend procedure was added to the REIT provisions as part of the Tax Reform Act of 1976 so that a REIT, acting in good faith but failing to satisfy the distribution requirement, could avoid disqualification. In addition, section 668 of the Act imposes an excise tax that is intended to ensure that a REIT distributes most of the income earned in a calendar year during that year.

A REIT that realizes capital gain income may be subject to tax at the corporate level at capital gains rates. If, however, the REIT pays dividends out of such capital gains, the dividends are deductible by the REIT in computing its capital gains tax and are taxable as capital gains to the recipient shareholders.

RICs.—Conduit treatment similar to that granted to REITs also is provided to regulated investment companies (“RICs”). In general, a RIC is an electing domestic corporation that either meets or is excepted from certain registration requirements under the Investment Company Act of 1940 (15 U.S.C. 80), that derives at least 90 percent of its ordinary income from specified sources commonly considered passive investment income, that has a portfolio of investments that meet certain diversification requirements, that distributes at least 90 percent of its income to its shareholders annually, and that also meets certain other requirements.

The ability of a RIC to engage in an active business is limited by a requirement that less than 30 percent of the gross income of the RIC may be derived from gain on the sale or other disposition of stock or securities held for less than three months.

A RIC, like a REIT, generally is subject to the regular corporate tax, but receives a deduction for dividends paid to its shareholders. Rules similar to those applicable for REITs apply to distributions of capital gain dividends, and distributions of deficiency dividends.⁴⁷

Trusts.—Another form of indirect ownership of property is ownership of the beneficial interest of property that is held in a trust. A trust is an arrangement whereby trustees take title to property and become responsible for the protection and conservation of such property on behalf of the persons holding the beneficial interest in the property. A trust generally is treated as a partial conduit for Federal income tax purposes since the trust, although in form a separate taxable entity, is allowed a deduction for amounts distributed to its beneficiaries, which amounts generally are includible in the beneficiaries’ income.

A fixed investment trust is a trust used to hold a diversified portfolio of investments for its beneficiaries. Generally, such a trust is treated as a trust for tax purposes (and not as an association) if the trustee does not have the power to vary the investments of the trust.⁴⁸

Rules for classifying entities

Corporation or partnership

Under prior and present law, Treasury regulations provide that whether a particular entity is classified as an association taxable as a corporation or as a partnership, trust, or some other entity not taxable as a corporation is determined by taking into account the presence or absence of certain characteristics associated with corporations. These characteristics are (1) associates, (2) an objective to carry on business and divide the gains therefrom, (3) continuity of life, (4) centralization of management, (5) liability for entity debts

⁴⁷ In addition, section 651 of the Act imposes an excise tax that is intended to ensure that a RIC distributes most of the income earned in a calendar year during that year.

⁴⁸ See discussion of entity classification, below.

limited to entity property, and (6) free transferability of interests.⁴⁹ These regulations generally are based on the principle stated in *Morrissey v. Commissioner*, 296 U.S. 344 (1935), in which the Supreme Court held that whether an entity is treated as a corporation depends not on the form of its organization, but on whether it more closely resembles a corporate than a noncorporate entity.

Of the characteristics mentioned above, the first two are common to both corporate and partnership enterprises. Consequently, the remaining four factors are determinative of whether the entity is treated as a corporation or as a partnership. Treasury regulations state that the corporate characteristics of an entity must make it more nearly resemble a corporation than a partnership or a trust for the entity to be treated as a corporation.⁵⁰ Under this test, the Treasury regulations provide that most limited partnerships formed under the Uniform Limited Partnership Act are not treated as corporations since these entities generally do not possess continuity of life and also may lack limited liability.

Trust or association

Since both corporations and trusts generally possess centralization of management, continuity of life, free transferability of interests, and limited liability, the Treasury regulations provide that the determination of whether a particular unincorporated entity is treated as a trust or as an association taxable as a corporation depends on whether there are associates and an objective to carry on business and divide the gains therefrom.⁵¹ Generally, if the purpose of an arrangement is to grant to trustees exclusive responsibility for the protection and conservation of trust property, and the persons with the beneficial interest in the property cannot share in the discharge of that responsibility, there are no associates or an objective to carry on business. Such an arrangement generally will be treated as a trust.⁵² On the other hand, if a trust is used for carrying on a profit-making business that ordinarily would be carried on through a business organization such as a corporation or partnership, it will not be treated as a trust.⁵³ However, a trust that is used to hold income-producing assets may be treated as a trust if there is no power under the trust agreement to vary the investment.⁵⁴

In May, 1984, the Treasury Department issued proposed regulations addressing the treatment of trusts that have more than one class of ownership interest. Final regulations were issued by the Treasury Department in March, 1985 (Treas. Reg. sec. 301.7701-4(c)(1)). Under these regulations, a trust is treated as having one class of ownership if all of the beneficiaries of the trust have undivided interests in all of the trust property. More than one class of ownership may exist where, for example, some beneficiaries are entitled to receive more than their pro rata share of trust distribu-

⁴⁹ Treas. Reg. sec. 301.7701-2(a).

⁵⁰ *Id.*

⁵¹ Treas. Reg. sec. 301.7701-2(a)(2).

⁵² Treas. Reg. sec. 301.7701-4(a).

⁵⁴ Treas. Reg. sec. 301.7701-4(c).

tions in early years and other beneficiaries are entitled to more than their pro rata share in later years.

Under the Treasury regulations, an arrangement having more than one class of ownership interest generally may not be treated as a trust, but is treated as a corporation. Thus, if a trust held a portfolio of mortgages, and interests in the trust assets were divided so that one class of beneficiaries were to receive all principal collected by the trust and a specified rate of interest thereon, until the trust had collected a specified amount of principal on the mortgages, and another class of beneficiaries were to receive all remaining amounts collected by the trust, then such trust would be treated as an association taxable as a corporation under these regulations. The Treasury regulations provide a limited exception for certain trusts with multiple classes, where the existence of multiple classes is incidental to the purpose of facilitating direct investment in the assets of the trust. The Treasury regulations apply to interests issued after April 27, 1984.

Taxation of income from debt obligations

The original issue discount rules

Treatment of original issue discount as interest

Under prior and present law, if the borrower receives less in a lending transaction than the amount to be repaid at the loan's maturity, then the difference represents "discount." Discount performs the same function as stated interest, i.e., compensation of the lender for the use of the lender's money.⁵⁵ Code sections 1272 through 1275 and section 163(e) (the "OID rules") generally require the holder of a debt instrument issued at a discount to include annually in income a portion of the original issue discount ("OID") on the instrument, and allow the issuer of such an instrument to deduct a corresponding amount, irrespective of the methods of accounting that the holder and the issuer otherwise use.⁵⁶

Definitions

"Original issue discount" is defined as the excess of a debt instrument's "stated redemption price at maturity" over its "issue price" (provided such excess is not less than a certain de minimis amount).

"Issue price" generally is (1) in the case of a cash loan, the amount borrowed, (2) in the case of a debt instrument that is issued for property where either the debt instrument or the property is publicly traded,⁵⁷ the fair market value of the property, or (3) if neither the debt instrument nor the property exchanged for it is

⁵⁵ *United States v. Midland-Ross Corp.*, 381 U.S. 54 (1965); see also *Commissioner v. National Alfalfa Dehydrating & Milling Co.*, 417 U.S. 134 (1974).

⁵⁶ Prior to 1982, the OID rules applied only to a limited class of obligations. The Tax Equity and Fiscal Responsibility Act of 1982 and the Tax Reform Act of 1984 greatly expanded the number and types of obligations to which the OID rules apply.

⁵⁷ Presently, only stock or securities traded on an established securities market are treated as publicly traded. However, section 1803(a)(10) of the Act grants the Treasury Department authority to issue regulations treating as publicly traded other property "of a kind regularly traded on an established market."

publicly traded, an amount determined using an adequate interest rate.

"Stated redemption price at maturity" includes all amounts payable at maturity excluding any interest based on a fixed rate and payable unconditionally over the life of the debt instrument at fixed intervals no longer than one year.

Operation of the OID rules

The amount of the OID in a debt instrument, if any, is allocated over the life of the instrument through a series of adjustments to the issue price for each "accrual period." The accrual period generally is each six-month or shorter period ending on the calendar day corresponding to the date of the debt instrument's maturity and the date six months prior to the date of maturity.⁵⁸ The adjustment to the issue price for each accrual period is determined by multiplying the "adjusted issue price" (i.e., the issue price increased by adjustments prior to the beginning of the accrual period) by the instrument's yield to maturity, and then subtracting the interest payable during the accrual period.

The adjustment to the issue price for any accrual period is the amount of OID allocated to that accrual period. These adjustments reflect the amount of the accrued but unpaid interest on the debt instrument in each period. The holder is required to include this amount as interest income and the issuer is permitted a corresponding interest deduction. The holder's basis in the obligation is increased by the amount of OID includible in the holder's income.⁵⁹ Under prior law, there was uncertainty about the application of the rules where the maturity of such payments may be accelerated (e.g., based on prepayments on home mortgages that collateralize the obligation).

Gain or loss on disposition or prepayment

In general, the sale or exchange of a debt obligation that is a capital asset results in the realization of a capital gain or loss to the seller. Under section 1271, amounts received by a holder of a debt obligation, other than one issued by an individual, on retirement of such debt obligation is treated as an amount received in exchange for the debt obligation. Thus, subject to certain exceptions discussed below, if a debt obligation not issued by an individual is a capital asset, its satisfaction, either at or in advance of its maturity, generally results in the realization of a capital gain or loss measured by the difference between the amount realized and the basis of the obligation. Since section 1271 does not apply to obligations issued by individuals, repayment of a debt obligation by an

⁵⁸ Under proposed Treasury regulations, different accrual periods may be required. See Prop. Treas. Reg. sec. 1.1272-1(d).

⁵⁹ The premise of the OID rules is that, for Federal income tax purposes, an obligation issued at a discount should be treated like an obligation issued at par requiring current payments of interest. Accordingly, the effect of the OID rules is to treat the borrower as having paid semiannually to the lender the interest accruing on the outstanding principal balance of the loan, thereby permitting the borrower to deduct as interest expense and requiring the lender to include in income such interest which has accrued but is unpaid. The lender then is deemed to have lent the accrued but unpaid interest back to the borrower, who in subsequent periods is deemed to pay interest on this amount as well as on the principal balance. This concept of accruing interest on unpaid interest is commonly referred to as the "economic accrual" of interest, or interest "compounding."

individual (including prepayment) is not treated as a sale or exchange, and thus may not give rise to capital gain or loss.⁶⁰

Capital gain treatment also is unavailable if an obligation has original issue discount and, at the time of original issue, there was an intention to call the obligation before maturity. In general, in such a case, any gain realized on the sale or exchange (including retirement by the issuer) of the obligation is treated as ordinary income to the extent that the gain does not exceed the amount of unamortized original issue discount (sec. 1271(a)(2)). There is no authority that directly addresses the application of this provision to corporate debt obligations that are issued with original issue discount and that are called prior to maturity upon the prepayment of mortgages in a pool that collateralizes the debt obligation.

The market discount rules

The availability of capital gain treatment on the sale or exchange of a debt obligation also may be limited pursuant to the so-called "market discount" rules. In general, under the market discount rules (secs. 1276-1278), gain on the disposition of a debt obligation that was issued after July 18, 1984, generally is treated as interest income to the extent of accrued market discount. Market discount is defined as the excess of the stated redemption price of an obligation over its basis immediately after acquisition, (provided that such excess is not less than a certain *de minimis* amount). In the case of a bond that has original issue discount, for purposes of the market discount rules, its stated redemption price is treated as the sum of its issue price and the amount of original issue discount that would have been includible in the income of an original holder.

Accrued market discount on an obligation generally is the amount that bears the same ratio to the market discount on such obligation as the number of days the taxpayer holds the obligation bears to the number of days after the taxpayer acquired the obligation until its maturity (sec. 1276(b)(1)). However, the holder may elect to accrue the market discount on an obligation using a constant interest rate.⁶¹ A holder also may elect to include accrued market discount in income annually (sec. 1278(b)). Under prior law, the method of allocating market discount among principal payments on an obligation where such principal is paid in multiple installments was uncertain.

If indebtedness is incurred to purchase or carry obligations that have market discount, interest on such indebtedness in excess of the amount of interest includible in income with respect to such obligation is deductible only to the extent that such interest exceeds the market discount allocable to the taxable year (sec. 1277). Any interest expense disallowed under this provision is allowable as a deduction in the year that the obligation is disposed of. This limitation on interest deductions is not imposed if the holder elects to include market discount in income currently.

⁶⁰ See sec. 1271(b)(1). In addition, obligations issued before July 2, 1982, by an issuer other than a corporation or a government (or political subdivision thereof) do not qualify for capital gains treatment. See sec. 1271(b)(2).

⁶¹ The constant interest rate method results in smaller amounts being treated as accrued market discount in the earlier years.

The coupon stripping rules

The separation of ownership of the right to receive any payment of principal or interest on a debt obligation generally results in the application of the "coupon stripping" rules (sec. 1286). Under these rules, the holder of a debt obligation who disposes of the right to receive certain payments on the obligation, (other than a pro rata share of all payments), must allocate, (on the basis of fair market value), his basis in the obligation between the portion of the debt obligation that is disposed of and the portion retained, for purposes of recognizing gain or loss.

Following such a disposition, for purposes of the treatment of the holder, the retained portion is treated as a debt obligation having original issue discount equal to the excess of the amount that will be received upon payment of amounts due at maturity of such retained portion over the amount of basis allocated thereto. Similarly, a purchaser of the disposed of portion of the debt obligation is treated as having purchased a debt obligation having original issue discount equal to the excess of the amount payable upon maturity of such portion over the amount paid therefor. The original issue discount rules then govern the amount that the respective holders must include in income annually.

Withholding on interest paid to foreign taxpayers

In general, a 30-percent withholding tax is imposed on portfolio interest paid to foreign taxpayers (secs. 871, 881, 1441, and 1442).⁶² However, the withholding tax is not imposed on interest paid on certain obligations issued after July 18, 1984 (secs. 871(h) and 882(c)). Although obligations issued by individuals generally are not eligible for the exception,⁶³ most mortgage-backed securities issued after July 18, 1985, are eligible for the exception.⁶⁴ This is true even if the mortgage-backed security is in the form of a participation certificate in a grantor trust, in which case, the holder is for all other purposes treated as holding a proportionate share of the underlying mortgages. In such a case, however, the withholding tax is applied to the extent that the underlying mortgages were issued on or before July 18, 1984.⁶⁵

Other

Certain thrift institutions are permitted to deduct a percentage of their taxable income as a bad debt deduction provided that a specified portion of the institution's assets are "qualifying assets," including "qualifying real property loans" (secs. 593, 7701(a)(19)). Debt obligations that are secured by real property mortgage loans are not treated as qualifying real property loans.

Issuers of debt instruments that have original issue discount are required to report to certain holders, the amount of interest payments and the annual accrual of OID (sec. 6049).

⁶² A lower rate of tax may be imposed pursuant to a treaty.

⁶³ Temp. Treas. Reg. sec. 35a.9999-5(a) (Q & A 1).

⁶⁴ Temp. Treas. Reg. sec. 35a.9999-5(d) (Q & A 20).

⁶⁵ *Id.*

Reasons for Change

The Congress recognized the increasing extent to which real estate mortgages are traded on secondary markets and the increasing extent to which multiple-class arrangements are used in the "packaging" of mortgages. Further, the Congress understood that considerable uncertainty exists concerning several aspects of the Federal income tax treatment of these types of securities. Accordingly, the Congress wished to provide rules to clarify the treatment of such securities. The Congress believed that the best method for doing so is to provide a new type of vehicle for the issuance of such multiple class securities, and to provide rules that are as comprehensive as possible for the taxation of all transactions relating to the use of such vehicles.

The Congress believed that this vehicle should be the exclusive vehicle (accompanied by exclusive tax consequences) relating to the issuance of multiple class mortgage-backed securities, and that availability of other vehicles should be limited to the extent possible. Nevertheless, the Congress believed that the vehicle provided should be the exclusive vehicle only after a reasonable transition period. The purpose of this transition period is to enable Congress to ascertain whether the vehicle provided is an appropriate and serviceable one.

The Congress believed that there should be some relief from two levels of taxation (i.e., at the entity level and at the shareholder level) where an entity with multiple classes of interests holds only a pool of real estate mortgages and related assets, has no powers to vary the composition of its mortgage assets, and has other powers generally consistent with the preservation of trust status, provided that satisfactory rules are prescribed for the taxation of the multiple interests.⁶⁶

The Congress believed that the new vehicle provided by the Act, since it is intended to be the exclusive one for the issuance of multiple class securities backed by real property mortgages, should be flexible enough to accommodate most legitimate business concerns while preserving the desired certainty of income tax treatment. Accordingly, the Congress believed that the provisions of the Act should apply to any multiple class entity used for packaging interests in mortgages, regardless of the legal form used, provided that the interests satisfy the specified substantive requirements.

Although the Congress believed that no separate corporate level tax should be imposed on a fixed pool of mortgages with multiple classes of interests, the Congress was nevertheless concerned that the provision of a flexible vehicle without the imposition of a separate corporate level tax could lead to certain systematic opportunities to avoid taxation on a portion of income derived from the pool of mortgages through the use of tax-exempt entities, foreign persons, and taxpayers with net operating loss carryovers. Accordingly, the Congress believed that to prevent such opportunities, a portion of the income from the pool of mortgages should be treated as

⁶⁶ In absence of the provision of adequate rules for the taxation of the various interests, the Congress believed that the treatment of multiple class trusts provided by Treas. Reg. sec. 301.7701-4(c) is an appropriate treatment of such entities.

unrelated business income for tax-exempt entities, as subject to the full statutory withholding rate for foreign persons, and should not be eligible to be offset by net operating losses. The Congress believed, however, that because of the hardship being experienced by the thrift industry, an exception should be made for net operating losses of thrift institutions.

The Congress recognized that, in order to measure income as accurately as possible, an essential feature of providing satisfactory rules for the taxation of the multiple classes of interests is the clarification of the application of the OID rules and related issues as applied to mortgages and mortgage-backed securities. Given the uncertainty created by the unknown timing of prepayments on mortgages, the Congress believed that the OID rules adopted by the Act provide a reasonable approximation of the economic accrual of income, recognizing that the amount of OID accrued in a particular accrual period under the Act, may be either greater or less than the amount that would be accrued if there were perfect advance knowledge of the timing of prepayments.

Explanation of Provisions

Overview

In general, the Act provides rules relating to "real estate mortgage investment conduits" or "REMICs." In general, a REMIC is a fixed pool of mortgages with multiple classes of interests held by investors. The Act provides rules prescribing (1) the Federal income tax treatment of the REMIC, (2) the treatment of taxpayers who exchange mortgages for interests in the REMIC, (3) the treatment of taxpayers holding interests in the REMIC, and (4) the treatment of disposition of interests in the REMIC.

In general, if the specified requirements are met, the REMIC is not treated as a separate taxable entity. Rather, the income of the REMIC is allocated to, and taken into account by, the holders of the interests therein, under specified rules. Holders of "regular interests" generally take into income that portion of the income of the REMIC that would be recognized by an accrual method holder of a debt instrument that had the same terms as the particular regular interest; holders of "residual interests" take into account all of the net income of the REMIC that is not taken into account by the holders of the regular interests. Rules are provided that (1) treat a portion of the income of the residual holder derived from the REMIC as unrelated business income for tax-exempt entities or as subject to withholding at the statutory rate when paid to foreign persons, and (2) prevent such portion from being offset by net operating losses, other than net operating losses of certain thrift institutions.

The Act also contains provisions relating to the application of the OID rules to certain debt instruments the timing of whose maturities is contingent upon the timing of payments on other debt instruments. In addition, the Act imposes certain new information reporting requirements.

Further, the Act treats as a corporation any entity or other arrangement, referred to as a "taxable mortgage pool," that is used primarily to hold mortgages, where maturities of debt instruments

that are issued by the entity in multiple classes, are tied to the timing of payments on the mortgages.

Requirements for qualification as a REMIC

Under the Act, any entity, including a corporation, partnership, or trust, that meets specified requirements would be permitted to elect to be treated as a REMIC. In addition, a segregated pool of assets also may qualify as a REMIC as if it were an entity meeting the requirements. To elect REMIC status, requirements relating to the composition of assets and the nature of the investors' interests must be satisfied, and an election to be treated as a REMIC must be in effect for the taxable year, and if applicable, all prior taxable years.

The asset test

Under the Act, in order to qualify as a REMIC, substantially all of the assets of the entity or segregated pool, as of the close of the third calendar month beginning after the startup day and as of the close of every quarter of each calendar year thereafter, must consist of "qualified mortgages," and "permitted investments." The Congress intended that the term substantially all should be interpreted to allow the REMIC to hold only de minimis amounts of other assets.

A "qualified mortgage" is any obligation (including any participation or certificate of beneficial ownership interest therein) that is principally secured by an interest in real property, and that either (1) is transferred to the REMIC on or before the "startup day," or (2) is purchased by the REMIC within the three-month period beginning on the startup day.⁶⁷ A qualified mortgage also includes a "qualified replacement mortgage." A qualified replacement mortgage is any property that would have been treated as a qualified mortgage if it were transferred to the REMIC on or before the startup day, and that is received either (1) in exchange for a defective qualified mortgage⁶⁸ within a two year period beginning on the startup day, or (2) in exchange for any other qualified mortgage within a three month period beginning on the startup day. In addition, any regular interest in another REMIC that is transferred to the REMIC on or before the startup day is treated as a qualified mortgage. The startup day is any day selected by the REMIC that

⁶⁷ The Congress intended that stripped coupons and stripped bonds (within the meaning of sec. 1286) may be treated as qualifying mortgages if the bonds (within the meaning of sec. 1286) from which such stripped coupons or stripped bonds arose would have been qualified mortgages. The Congress also intended that interests in grantor trusts would be treated as qualified mortgages, to the extent that the assets of the trusts that holders of the beneficial interest therein are treated as owning, would be treated as qualifying mortgages. In addition, the Congress intended that interests in qualifying mortgages in the nature of the interests described in Treas. Reg. sec. 301.7701-4(c)(2)(Example 2), and loans principally secured by stock of a tenant-stockholder of a cooperative housing corporation would be treated as qualifying mortgages. Nevertheless, except for regular interests in a REMIC, Congress did not intend that debt obligations that are secured primarily by other debt obligations would be treated as qualified mortgages even where such other debt obligations are secured primarily by interests in real property. A technical correction may be necessary to reflect this intention.

⁶⁸ For this purpose, the Congress intended that a defective qualified mortgage generally would have the same meaning as that used for purposes of determining the ability of a grantor trust that holds mortgages to substitute those mortgages without losing its status as a grantor trust for Federal income tax purposes. Thus, for example, a defective qualified mortgage is a qualified mortgage with respect to which there is a default or threatened default by the obligor.

is on or before the first day on which interests in the REMIC are issued.

"Permitted investments" are "cash flow investments," "qualified reserve assets," and "foreclosure property."

"Cash flow investments" are any investment of amounts received under qualified mortgages for a temporary period before distribution to holders of interests in the REMIC. The Congress intended that these are assets that are received periodically by the REMIC, invested temporarily in passive-type assets, and paid out to the investors at the next succeeding regular payment date. The Congress intended that these temporary investments are to be limited to those types of investments that produce passive income in the nature of interest. For example, the Congress intended that an arrangement commonly known as a "guaranteed investment contract," whereby the REMIC agrees to turn over payments on qualified mortgages to a third party who agrees to return such amounts together with a specified return thereon at times coinciding with the times that payments are to be made to holders of regular or residual interests, may qualify as a permitted investment.

"Qualified reserve assets" are any intangible property held for investment that is part of a "qualified reserve fund." A qualified reserve fund is any reasonably required reserve that is maintained by the REMIC to provide for payments of certain expenses and to provide additional security for the payments due on regular interests in the REMIC that otherwise may be delayed or defaulted upon because of defaults (including late payments) on the qualified mortgages.⁶⁹ In determining whether the amount of the reserve is reasonable, the Congress believed that it is appropriate to take into account the creditworthiness of the qualified mortgages and the extent and nature of any guarantees relating to the qualified mortgages. Further, amounts in the reserve fund must be reduced promptly and appropriately as regular interests in the REMIC are retired.

Under the Act, a reserve is not treated as a qualified reserve unless for any taxable year (and all subsequent taxable years) not more than 30 percent of the gross income from the assets in such fund for the taxable year is derived from the sale or other disposition of property held for less than three months. For this purpose, gain on the disposition of a reserve fund asset is not taken into account if the disposition of such asset is required to prevent default on a regular interest where the threatened default resulted from a default on one or more qualified mortgages.

"Foreclosure property" is property that would be foreclosure property under section 856(e) if acquired by a real estate investment trust, and which is acquired by the REMIC in connection with the default or imminent default of a qualified mortgage. Property so acquired ceases to be foreclosure property one year after its acquisition by the REMIC.

⁶⁹ Congress intended that property would not fail to be considered to be held for investment, solely because the REMIC holds the property for these reasons.

Investors' interests

In order to qualify as a REMIC under the Act, all of the interests in the REMIC must consist of one or more classes of "regular interests" and a single class of "residual interests."

Regular interests.—A regular interest in a REMIC is an interest in a REMIC whose terms are fixed on the startup day, which terms (1) unconditionally entitle the holder to receive a specified principal (or similar) amount, and (2) provide that interest (or similar) payments, if any, at or before maturity are based on a fixed rate (or to the extent provided in Treasury regulations, a variable rate). An interest in the REMIC may qualify as a regular interest where the timing (but not the amount) of the principal (or similar) payments are contingent on the extent of prepayments on qualified mortgages and the amount of income from permitted investments.

The Congress intended that regular interests in REMICs may be issued in the form of debt, stock, partnership interests, interests in a trust, or any other form permitted by state law. Thus, if an interest in a REMIC is not in the form of debt, the Congress understood that the interest would not have a specified principal amount, but that the interest would qualify as a regular interest if there is a specified amount that could be identified as the principal amount if the interest were in the form of debt. For example, an interest in a partnership could qualify as a regular interest if the holder of the partnership interest were to receive a specified amount in redemption of the partnership interest, and that the amount of income allocated to such partnership interest were based on a fixed percentage of the specified outstanding redemption amount.

The Congress intended that an interest in a REMIC would not fail to be treated as a regular interest if the payments of principal or interest (or similar) amounts with respect to such interest are subordinated to payments on other regular interests in the REMIC in the event of defaults on qualified mortgages. Thus, the Congress intended that regular interests in a REMIC may resemble the types of interests described in Treas. Reg. sec. 301.7701-4(c)(2)(Example 2).⁷⁰

The Congress intended that an interest in a REMIC may not qualify as a regular interest if the amount of interest (or similar payments) is disproportionately high relative to the specified principal amount. For example, if an interest is issued in the form of debt with a coupon rate of interest that is substantially in excess of prevailing market interest rates (adjusted for risk), the Congress intended that the interest would not qualify as a regular interest. Instead, the Congress intended that such an interest may be treated either as a residual interest, or as a combination of a regular interest and a residual interest. Congress intended that interests issued at a discount may qualify as a regular interests.

Residual interests.—In general, a residual interest in a REMIC is any interest in the REMIC other than a regular interest, and which is so designated by the REMIC, provided that there is only one class of such interest, and that all distributions (if any) with

⁷⁰ The status of an interest as a regular interest in this case does not depend on whether the subordinated regular interest is sold or retained.

respect to such interests are pro rata. For example, the residual interest in a mortgage pool that otherwise qualifies as a REMIC is held by two taxpayers, one of whom has a 25 percent interest in the residual and the other of whom has a 75 percent interest. Except for their relative size, the interests of the two taxpayers are identical. Provided that all distributions to the residual interest holders are pro rata, the mortgage pool would qualify as a REMIC because there is only one class of residual interest. If, however, the holder of the 25 percent interest is entitled to receive all distributions to which residual holders combined are entitled for a specified period (or up to a specified amount) in return for the surrender of his interest, then the mortgage pool would be considered to have two classes of residual interests and would not qualify as a REMIC.

The Congress intended that an interest in a REMIC could qualify as a residual interest regardless of its value. Thus, for example, an interest need not entitle the holder to any distributions in order to qualify as a residual interest. Nevertheless, the treatment of a holder of a residual interest may depend on the value of the residual interest relative to all of the interests in a REMIC.⁷¹

Where the REMIC's qualified mortgages are stripped coupons or stripped bonds (within the meaning of section 1286), Congress did not intend that any other stripped coupons or stripped bonds arising from the same debt instruments as the qualified mortgages would be treated as a second class of residual interest in the REMIC. In addition, the Congress intended that the right to receive payment from the REMIC for goods or services rendered in the ordinary operation of the REMIC would not be considered to be an interest in the REMIC for these purposes.

Inadvertent terminations

The Act provides regulatory authority to the Treasury Department to issue regulations that address situations where failure to meet one or more of the requirements for REMIC status occurs inadvertently, and disqualification of the REMIC would occur absent regulatory relief. The Congress anticipated that the Treasury regulations would provide relief only where the failure to meet any of the requirements occurred inadvertently and in good faith. The Congress also intended that the relief may be accompanied by appropriate sanctions, such as the imposition of a corporate tax on all or a portion of the REMIC's income for the period of time in which the requirements are not met.

Formation of the REMIC

Under the Act, no gain or loss is recognized to the transferor upon the transfer of property to a REMIC in exchange for regular or residual interests in the REMIC. Upon such a transfer, the adjusted bases of the regular or residual interests received in the transaction are to be equal in the aggregate to the aggregate of the adjusted bases of the property transferred. The aggregate basis of the interests received is allocated among the regular or residual in-

⁷¹ See text accompanying nn. 84-87, *infra*.

terests received in proportion to their fair market values.⁷² The basis of any property received by a REMIC in exchange for regular or residual interests in the REMIC is equal to the aggregate fair market value of the regular or residual interests at the time of transfer (or earlier time provided by Treasury regulations).⁷³

The Congress intended that any properly allocable costs of acquiring the regular or residual interests would be capitalized and added to the basis of the regular or residual interest. Upon a subsequent sale or exchange of any regular or residual interest, gain or loss is recognized.

The Congress intended that the Federal income tax consequences of forming a REMIC should be the same regardless of whether regular and or residual interests were issued in exchange for qualified mortgages and followed by a sale of some or all of the interests issued, or whether such interests were issued for cash or other property and followed by a purchase of qualified mortgages. The Congress expected that the step transaction doctrine would be applied so that the formation of a REMIC in the latter fashion would be recharacterized as a contribution of mortgages to the REMIC in exchange for regular and residual interests followed by a sale of all or a portion of those interests by the transferor of the mortgages.⁷⁴

In the case of a REMIC that is not formed as a separate entity, but rather as a segregated pool of assets, the Congress intended that the transfer is deemed to occur and the REMIC is deemed to be formed only upon the issuance of regular and residual interests therein.

Federal income tax treatment of the REMIC

Pass-through status

In general, the Act provides that a REMIC is not a taxable entity for Federal income tax purposes. The income of the REMIC generally is taken into account by holders of regular and residual interests in the REMIC as described below. Nevertheless, the REMIC is subject to tax on prohibited transactions, and may be required to withhold on amounts paid to foreign holders of regular or residual interests.⁷⁵

The pass-through status of the REMIC provided by the Act applies regardless of whether the REMIC otherwise would be treated

⁷² The Congress intended that a holder of a mortgage should not be permitted to recognize loss where mortgages are indirectly transferred to a REMIC. Thus, the Congress intended that no gain or loss would be recognized, for example, if pursuant to a plan, mortgages are sold by one taxpayer to another, and the buyer transfers the purchased mortgages to a REMIC in which interests are purchased by the initial seller of the mortgages.

⁷³ The Congress intended that the Treasury regulations may provide that the basis of qualified mortgages held by the REMIC in certain circumstances may be determined based on the fair market value of such mortgages at a reasonable time prior to transfer to the REMIC where such mortgages were purchased by the transferor solely for the purpose of transfer to the REMIC.

⁷⁴ Thus, for example, if a REMIC is formed by issuing regular and residual interests for cash and the REMIC subsequently purchases qualified mortgages from a holder of a residual interest, such holder would be treated as transferring the qualified mortgages to the REMIC in exchange for regular and residual interests and then having sold all the interests other than those held at the time of the sale. Moreover, the allocation of basis between the regular and residual interests should reflect the relative fair market values of such interests as if the formation had actually taken place by transferring mortgages in exchange for the regular and residual interests.

⁷⁵ Withholding also may be required with respect to certain amounts without actual payment to foreign holders, however. See text accompanying nn. 86-87, *infra*.

as a corporation, partnership, trust, or any other entity. The Congress intended that where the requirements for REMIC status are met, that the exclusive set of rules for the treatment of all transactions relating to the REMIC and of holders of interests therein are to be those set forth in the provisions of the Act. Thus, for example, in the case of a REMIC that would be treated as a partnership if it were not otherwise a REMIC, the provisions of subchapter K of the Code would not be applicable to any transactions involving the REMIC or any of the holders of regular or residual interests.⁷⁶

Prohibited transactions

Under the Act, a REMIC is required to pay a tax equal to 100 percent of the REMIC's net income from prohibited transactions. For this purpose, net income from prohibited transactions is computed without taking into account any losses from prohibited transactions or any deductions relating to prohibited transactions that result in a loss. Prohibited transactions for the REMIC include the disposition of any qualified mortgage other than pursuant to (1) the substitution of a qualified replacement mortgage for a defective qualified mortgage, (2) the bankruptcy or insolvency of the REMIC, (3) a disposition incident to the foreclosure, default, or imminent default of the mortgage, or (4) a qualified liquidation (described below). In addition, the disposition of a qualified mortgage is not a prohibited transaction if such disposition is required to prevent default on a regular interest where such default on the regular interest is threatened on account of a default on one or more qualified mortgages. Other prohibited transactions include the disposition of any cash flow investment other than pursuant to a qualified liquidation, the receipt of any income from assets other than assets permitted to be held by the REMIC, and the receipt of any compensation for services.⁷⁷

Taxation of the holders of regular interests

In general

Under the Act, holders of regular interests generally are taxed as if their regular interest were a debt instrument to which the rules of taxation generally applicable to debt instruments apply, except that the holder of a regular interest is required to account for income relating to such interest on the accrual method of accounting regardless of the method of accounting otherwise used by the holder.⁷⁸ In the case of regular interests that are not debt instruments, the amount of the fixed unconditional payment is treated as the stated principal amount of the instrument, and the periodic payments (i.e., the amounts that are based on the amount of the fixed unconditional payment), if any, are treated as stated interest payments. In other words, generally consistent with the pass-

⁷⁶ For purposes of subtitle F of the Code (relating to certain administrative matters) the REMIC is treated as a partnership in which residual interests are the partnership interests, however. The Congress intended that the initial election of REMIC status is to be made on the first partnership information return that the REMIC is required to file.

⁷⁷ The Congress intended that payment by the obligor on a debt instrument is not to be considered to be a disposition of such debt instrument for these purposes.

⁷⁸ The Congress intended that periodic payments of interest (or similar amounts) are to be treated as accruing pro rata between the dates that such interest (or similar amounts) is paid.

through nature of the REMIC, the holders of regular interests generally take into account that portion of the REMIC's income that would be taken into account by an accrual method holder of a debt instrument with terms equivalent to the terms of the regular interest.⁷⁹

The Congress intended that regular interests are to be treated as if they were debt instruments for all other purposes of the Internal Revenue Code. Thus, for example, regular interests would be treated as market discount bonds, where the revised issue price (within the meaning of section 1278) of the regular interest exceeds the holder's basis in the interest. Moreover, the Congress intended that the REMIC is subject to the reporting requirements of section 1275 with respect to the regular interests. In addition, the Congress intended that regular interests are to be treated as evidences of indebtedness under section 582(c)(1), so that gain or loss from the sale or exchange of regular interests by certain financial institutions would not be treated as gain or loss from the sale or exchange of a capital asset. In addition, any market premium on a regular interest could be amortized currently under section 171.

The issue price of regular interests in the REMIC are determined under the rules of section 1273(b). In the case of regular interests issued in exchange for property, however, the issue price of the regular interest is equal to the fair market value of the property,⁸⁰ regardless of whether the requirements of section 1273(b)(3) are met. A holder's basis in the regular interest generally is equal to the holder's cost therefor, but in the case of holders who received their interests in exchange for property, then as discussed above, the holder's basis is equal to the basis of the property exchanged for the REMIC interest. Where property is transferred in exchange for more than one class of regular or residual interest, the basis of the property transferred is allocated in proportion to the fair market value of the interests received.

Regular interests received in exchange for property

Under the Act, where an exchange of property for regular interests in a REMIC has taken place, any excess of the issue price of the regular interest over the basis of the interest in the hands of the transferor immediately after the transfer is, for periods during which such interest is held by the transferor (or any other person whose basis is determined in whole or in part by reference to the basis of such interest in the hands of the transferor), includible currently in the gross income of the holder under rules similar to the rules of section 1276(b) (i.e., the holder of such an interest is treated like the holder of a market discount bond for which an election under section 1278(b) is in effect). Conversely, the excess of the basis of the regular interest in the hands of the transferor immediately after the transfer over the issue price of the interest is treated for such holders as market premium that is allowable as a deduction under rules similar to the rules of section 171. The Con-

⁷⁹ In the event that the amount so determined exceeds the income of the REMIC, however, there is no diminution of the required inclusions for such holders.

⁸⁰ For this purpose, the Congress intended that the fair market value of the property is to be determined by reference to the fair market value of the regular interests received in exchange.

gress intended that the holder's basis in the regular interest would be properly adjusted to reflect such current inclusions or deductions.

Disposition of regular interests

The Act treats gain on the disposition of a regular interest as ordinary income to the extent of a portion of unaccrued OID with respect to the interest. Such portion generally is the amount of unaccrued OID equal to the excess, if any, of the amount that would have been includible in the gross income of the taxpayer with respect to such interest if the yield on such interest were 110 percent of the applicable Federal rate (as defined in sec. 1274(d) without regard to paragraph (2) thereof) determined as of the time that the interest is acquired by the taxpayer, over the total amount of ordinary income includible by the taxpayer with respect to such regular interest prior to disposition. In selecting the applicable Federal rate, the Congress intended that the same prepayment assumptions that are used in calculating OID are to be used in determining the maturity of the regular interest.

Taxation of the holders of residual interests

In general

In general, the Act provides that at the end of each calendar quarter, the holder of a residual interest in a REMIC takes into account his daily portion of the taxable income or net loss of the REMIC for each day during the holder's taxable year in which such holder held such interest. The amount so taken into account is treated as ordinary income or loss. The daily portion for this purpose is determined by allocating to each day in any calendar quarter a ratable portion of the taxable income or net loss of the REMIC for such quarter, and by allocating the amounts so allocated to any day among the holders (on such day) of residual interests in proportion to their respective holdings on such day.

For example, a REMIC's taxable income for a calendar quarter (determined as described below) is \$1,000. There are two holders of residual interests in the REMIC. One holder of 60 percent of the residual holds such interest for the entire calendar quarter. Another holder has a 40 percent interest, and transfers the interest after exactly one half of the calendar quarter to another taxpayer. As of the end of the calendar quarter, the holder of the sixty percent interest would be treated as receiving \$600 ratably over the quarter. Each holder of the 40 percent interest would be treated as receiving \$200 ratably over the portion of the quarter in which the interest was held.

Distributions from the REMIC are not included in the gross income of the residual holder to the extent that such distributions do not exceed the adjusted basis of the interest. To the extent that distributions exceed the adjusted basis of the interest, the excess is treated as gain from the sale of the residual interest. Residual interests are treated as evidences of indebtedness for purposes of section 582(c).

The amount of any net loss of the REMIC that may be taken into account by the holder of a residual interest is limited to the adjust-

ed basis of the interest as of the close of the quarter (or time of disposition of the interest if earlier), determined without taking into account the net loss for the quarter. Any loss that is disallowed on account of this limitation may be carried over indefinitely by the holder of the interest for whom such loss was disallowed and may be used by such holder only to offset any income generated by the same REMIC.

Except for adjustments arising from the nonrecognition of gain or loss on the transfer of mortgages to the REMIC (discussed below), the holders of residual interests take no amounts into account other than those allocated from the REMIC.⁸¹

Determination of REMIC taxable income or net loss

In general, under the Act, the taxable income or net loss of the REMIC for purposes of determining the amounts taken into account by holders of residual interests, is determined in the same manner as for an individual having the calendar year as his taxable year and using the accrual method of accounting, with certain modifications. The first modification is that a deduction is allowed with respect to those amounts that would be deductible as interest if the regular interests in the REMIC were treated as indebtedness of the REMIC. Second, in computing the gross income of the REMIC, market discount with respect to any market discount bond (within the meaning of sec. 1278) held by the REMIC is includible for the year in which such discount accrues, as determined under the rules of section 1276(b)(2), and sections 1276(a) and 1277 do not apply. Third, no item of income, gain, loss, or deduction allocable to a prohibited transaction is taken into account. Fourth, deductions under section 703(a)(2) (other than deductions allowable under section 212) are not allowed.⁸²

If a REMIC distributes property with respect to any regular or residual interest, the REMIC recognizes gain in the same manner as if the REMIC had sold the property to such distributee at its fair market value. The Congress intended that the distribution is to be treated as an actual sale by the REMIC for purposes of applying the prohibited transaction rules and the rules relating to qualified reserve funds. The basis of the distributed property in the hands of the distributee is then the fair market value of the property.

Adjusted basis of residual interests

Under the Act, a holder's basis in a residual interest in a REMIC is increased by the amount of the taxable income of the REMIC

⁸¹ The Congress understood that the taxable income allocated to holders of residual interests in a REMIC who purchased such interests from a prior holder after a significant change in value of the interest, could be substantially accelerated or deferred on account of any premium or discount in the price paid by such purchaser. Accordingly, the Congress recognized that certain modifications of the rules governing taxation of holders of residual interests may be appropriate where the method of taxation of holders of residual interests prescribed by the Act has such consequences.

⁸² The Congress intended that no gain or loss is recognized to the REMIC on the exchange of regular or residual interests in the REMIC for property. In addition, the Congress understood that the treatment of deductions allowable under section 212 will be addressed in Treasury regulations. In this regard, the Congress intended that such deductions would be allocated to all holders of interests in REMICs that are similar to single-class grantor trusts under present law. However, the Congress intended that such deductions would be allocated to the holders of the residual interests in the case of other REMICs.

that is taken into account by the holder. The basis of such an interest is decreased (but not below zero) by the amount of any distributions received from the REMIC and by the amount of any net loss of the REMIC that is taken into account by the holder. In the case of a holder who disposes of a residual interest, the basis adjustment on account of the holder's daily portions of the REMIC's taxable income or net loss is deemed to occur immediately before the disposition.

Special treatment of a portion of residual income

Under the Act, a portion of the net income of the REMIC taken into account by the holders of the residual interests may not be offset by any net operating losses of the holder. The Act provides a special exception from this rule in the case of certain thrift institutions, on account of the difficulties currently being experienced by the thrift industry.

In addition, the Act provides that the same portion of the net income of the REMIC that may not be offset by net operating losses, is treated as unrelated business income for any organization subject to the unrelated business income tax under section 511, and is not eligible for any reduction in the rate of withholding tax (by treaty or otherwise) in the case of a nonresident alien holder.

The portion of the income of the residual holder that is subject to these rules is the excess, if any, of the amount of the net income of the REMIC that the holder takes into account for any calendar quarter, over the sum of the daily accruals with respect to such interest while held by such holder. The daily accrual for any residual interest for any day in any calendar quarter is determined by allocating to each day in such calendar quarter a ratable portion of the product of the adjusted issue price of the residual interest at the beginning of such accrual period, and 120 percent of the long-term Federal rate. The long-term Federal rate used for this purpose is the Federal long-term rate that would have applied to the residual interest under section 1274(d) (without regard to section 1274(d)(2)) if it were a debt instrument, determined at the time that the residual interest is issued. The rate is adjusted appropriately in order to be applied on the basis of compounding at the end of each quarter.

For this purpose (and for purposes of the treatment of gain or loss that is not recognized upon the transfer of property to a REMIC in exchange for a residual interest, as discussed below), the residual interest is treated as having an issue price that is equal to the amount of money paid for the interest at the time it is issued, or in the case of a residual interest that is issued in exchange for property, the fair market value of the interest at the time it is issued. The adjusted issue price of the residual interest is equal to the issue price of the interest increased by the amount of daily accruals for prior calendar quarters, and decreased (but not below zero) by the amount of any distributions with respect to the residual interest prior to the end of the calendar quarter.

In addition, the Act provides that under Treasury regulations, if a REIT owns a residual interest in a REMIC, a portion of dividends paid by the REIT would be treated as excess inclusions for REIT shareholders. Thus, such income generally could not be offset by net operating losses, would constitute unrelated business taxable

income for tax-exempt holders, and would not be eligible for and reduction in the rate of withholding tax in the case of a nonresident alien holder.

The Act provides that to the extent provided in Treasury regulations, in the case of a residual interest that does not have significant value, the entire amount of income that is taken into account by the holder of the residual interest is treated as unrelated business income and is subject to withholding at the statutory rate. In addition, in the case of such a residual, income allocated to the holder thereof may not be offset by any net operating losses, regardless of who holds the interest.⁸³ The Congress intended that the Treasury regulations would take into account the value of the residual interest in relation to the regular interests, and that the Treasury regulations would not apply in cases where the value of the residual interest is at least two percent of the combined value of the regular and residual interests.⁸⁴

The Act provides that the partnership information return filed by the REMIC is to supply information relating to the daily accruals of the REMIC.

Treatment of foreign residual holders

The Act provides that in the case of a holder of a residual interest of a REMIC who is a nonresident alien individual or foreign corporation, then for purposes of sections 871(a), 881, 1441, and 1442, amounts includible in the gross income of such holder with respect to the residual interest are taken into account only when paid or otherwise distributed (or when the interest is disposed of).⁸⁵ The Act also provides that under Treasury regulations, the amounts includible may be taken into account earlier than otherwise provided where necessary to prevent avoidance of tax. The Congress intended that this regulatory authority may be exercised where the residual interest in the REMIC does not have significant value (as described above).⁸⁶

Residual interests received in exchange for property

In the case of a residual interest that is received in exchange for a contribution of property to the REMIC, any excess of the issue price of the residual interest over the basis of the interest in the hands of the transferor of the property immediately after the transfer, is amortized and is included in the residual holder's income on a straight line basis over the expected life of the REMIC. Similarly, any excess of the transferor's basis in the residual interest over the issue price of the interest is deductible by the holder of the interest on a straight line basis over the expected life of the REMIC. In determining the expected life of the REMIC for this purpose, the Congress intended that the assumptions used in

⁸³ I.e., the exception provided for thrift institutions in section 860E(a)(2) would not be available in these circumstances.

⁸⁴ The Congress intended that these regulations may apply in appropriate cases to residual interests issued before regulations are issued.

⁸⁵ The Congress intended that withholding upon disposition of such interests is to be similar to withholding upon disposition of debt instruments that have original issue discount.

⁸⁶ The Congress intended that these regulations may apply in appropriate cases to residual interests issued before regulations are issued.

calculating original issue discount and any binding agreement regarding liquidation of the REMIC are to be taken into account. The Congress intended that the holder's basis in the residual interest would be properly adjusted to reflect such current inclusions or deductions.

Dispositions of residual interests

The Act provides that, except as provided in Treasury regulations, the wash sale rules of section 1091 apply to dispositions of residual interests in a REMIC where the seller of the interest, during the period beginning six months before the sale or disposition of the residual interest and ending six months after such sale or disposition, acquires (or enters into any other transaction that results in the application of section 1091) any residual interest in any REMIC or any interest in a "taxable mortgage pool" (discussed below) that is comparable to a residual interest.

Qualified liquidation

Under the Act, a qualified liquidation is a transaction in which the REMIC adopts a plan of complete liquidation, and sells all of its assets (other than cash) within the 90-day period beginning immediately after the date of the adoption of the plan of liquidation, provided that the REMIC distributes or otherwise credits in liquidation all of the sale proceeds plus its cash (other than amounts retained to meet claims) to holders of regular and residual interests within the 90-day period.⁸⁷ A holder of a regular or residual interest recognizes gain or loss on the liquidation of the REMIC. Sales of the REMICs assets pursuant to a qualified liquidation are not treated as prohibited transactions.⁸⁸

Other provisions

Compliance provisions

The application of the OID rules contemplated by the Act requires calculations that are based on information that would not necessarily be known by any holder, and is more readily available to the issuer than any other person. Accordingly, the Act requires broader reporting of interest payments and OID accrual by the REMIC, or any issuer of debt that is subject to the OID rules of the Act. The Act specifies that the amounts includible in gross income of the holder of a regular interest in a REMIC are treated as interest for purposes of the reporting requirements of the Code (sec. 6049), and that the REMIC or similar issuer is required to report interest and OID to a broader group of holders than required under prior law. The holders to whom such broader reporting is required include corporations, certain dealers in commodities or securities, real estate investment trusts, common trust funds, and certain other trusts. In addition to reporting interest and OID, the REMIC or similar issuer is required to report sufficient information to allow holders to compute the accrual of any market discount or

⁸⁷ The Congress intended that the treatment of a holder to whom amounts merely are credited would be the same as if amounts actually were distributed.

⁸⁸ See discussion of prohibited transactions, above.

amortization of any premium in accordance with provisions of the Act.⁸⁹

Treatment of REMIC interests for certain financial institutions and real estate investment trusts

Under the Act, regular and residual interests are treated as qualifying assets for purposes of section 593(d)(1) and section 7701(a)(19), in the same proportion that the assets of the REMIC would be treated as qualifying under those sections.⁹⁰ In the case of residual interests, the Congress intended that the amount treated as a qualifying asset not exceed the adjusted basis of the residual interest in the hands of the holder. Both regular and residual interests are treated as real estate assets under section 856(c)(6), and the income from such interests are treated as interest qualifying under section 856(c)(3)(C),⁹¹ in the same proportion that the assets of the REMIC would be treated as real estate assets for purposes of determining eligibility for real estate investment trust status.⁹²

Foreign withholding

The Congress intended that for purposes of withholding on interest paid to foreign persons, regular interests in REMICs should be considered to be debt instruments that are issued after July 18, 1984, regardless of the time that any debt instruments held by the REMIC were issued. The Congress intended that amounts paid to foreign persons with respect to residual interests should be considered to be interest for purposes of applying the withholding rules.

OID rules

The Act provides rules relating to the application of the OID rules to debt instruments that, as is generally the case with regular interests in a REMIC, have a maturity that is initially fixed, but that is accelerated based on prepayments on other debt obligations securing the debt instrument (or, to the extent provided in Treasury regulations, by reason of other events). The OID rules provided by the Act also apply to OID on qualified mortgages held by a REMIC.

In general, the OID rules provided by the Act require OID for an accrual period to be calculated and included in the holder's income based on the increase in the present value of remaining payments on the debt instrument, taking into account payments includible in the instrument's stated redemption price at maturity received on the regular interest during the period. For this purpose, the present value calculation is made at the beginning of each accrual period (1) using the yield to maturity determined for the instrument at the time of its issuance (determined on the basis of com-

⁸⁹ See sec. 1803(a)(13) of the Act.

⁹⁰ If 95 percent of the assets of the REMIC would be treated as qualifying assets at all times during a calendar year then the entire regular or residual interest is so treated for the calendar year.

⁹¹ A technical correction may be necessary to clarify the treatment of income from a REMIC taken into account by a REIT.

⁹² If 95 percent of the assets of the REMIC would be treated as real estate assets at all times during a calendar year, then the entire regular or residual is so treated for the calendar year.

pounding at the close of each accrual period and properly adjusted for the length of the accrual period), calculated on the assumption that, as prescribed by Treasury regulations, certain prepayments will occur, and (2) taking into account any prepayments that have occurred before the close of the accrual period.

The Congress intended that the Treasury regulations will provide that the prepayment assumption to be used in calculating present values as of the close of each accrual period, and in computing the yield to maturity used in the calculation of such present values, will be that used by the parties in pricing the particular transaction. The Congress intended that such prepayment assumption will be determined by the assumed rate of prepayments on qualified mortgages held by the REMIC and also the assumed rate of earnings on the temporary investment of payments on such mortgages insofar as such rate of earnings would affect the timing of payments on regular interests.⁹³

The Congress intended that the Treasury regulations will require these pricing assumptions to be specified in the first partnership return filed by the REMIC. In addition, the Congress intended that appropriate supporting documentation relating to the selection of the prepayment assumption must be supplied to the Internal Revenue Service with such return. Further, the Congress intended that the prepayment assumptions used must not be unreasonable based on comparable transactions, if comparable transactions exist.⁹⁴

The Congress intended that unless otherwise provided by Treasury regulations, the use of a prepayment assumption based on a recognized industry standard would be permitted. For example, the Congress understood that prepayment assumptions based on a Public Securities Association standard currently is such an industry recognized standard.

The Congress intended that in no circumstances, would the method of accruing OID prescribed by the Act allow for negative amounts of OID to be attributed to any accrual period. If the use of the present value computations prescribed by the Act produce such a result for an accrual period, the Congress intended that the amount of OID attributable to such accrual period would be treated as zero, and the computation of OID for the following accrual period would be made as if such following accrual period and the preceding accrual period were a single accrual period.

Regulatory authority

The Act grants the Treasury Department authority to prescribe such regulations as are necessary or appropriate to implement the provisions relating to REMICs. The Congress expected that, among

⁹³ In computing the accrual of OID (or market discount) on qualified mortgages held by the REMIC, only assumptions about the rate of prepayments on such mortgages would be taken into account.

⁹⁴ The Congress intended that in the case of publicly offered instruments, a prepayment assumption will be treated as unreasonable only in the presence of clear and convincing evidence. In addition, the Congress intended that in determining whether a prepayment assumption is reasonable, the nature of the debt instruments on which prepayments are being assumed, and the availability of information about prepayments thereon, will be taken into account. Thus, for example, under currently prevailing conditions, the Congress understood that there should be less tolerance in the evaluation of prepayment assumptions relating to pools of home mortgages than prepayment assumptions relating to pools of commercial mortgages.

other things, such regulations will prevent unreasonable accumulations of assets in the REMIC, and require the REMIC to report information adequate to allow residual holders to compute taxable income accurately (including reporting more frequently than annually). Further, such regulations may require reporting of OID accrual more frequently than otherwise required by the Act.

Treasury study

The Congress was concerned about the impact of the REMIC provisions upon the thrift industry. Accordingly, the Act requests that the Treasury Department conduct a study of the effectiveness of the REMIC provisions in enhancing the efficiency of the secondary market in mortgages, and the impact of these provisions upon thrift institutions.

Taxable mortgage pools

The Congress intended that REMICs are to be the exclusive means of issuing multiple class real estate mortgage-backed securities without the imposition of two levels of taxation. Thus, the Act provides that a "taxable mortgage pool" ("TMP") is treated as a taxable corporation that is not an includible corporation for purposes of filing consolidated returns.

Under the Act, a TMP is any entity other than a REMIC if (1) substantially all of the assets of the entity consist of debt obligations (or interests in debt obligations) and more than 50 percent of such obligations (or interests) consist of real estate mortgages, (2) such entity is the obligor under debt obligations with two or more maturities,⁹⁵ and (3) under the terms of such debt obligations on which the entity is the obligor, payment on such debt obligations bear a relationship to payments on the debt obligations (or interests therein) held by the entity.⁹⁶

Under the Act, any portion of an entity that meets the definition of a TMP is treated as a TMP. For example, if an entity segregates mortgages in some fashion and issues debt obligations in two or more maturities, which maturities depend upon the timing of payments on the mortgages, then the mortgages and the debt would be treated as a TMP, and hence as a separate corporation. The TMP provisions are intended to apply to any arrangement under which mortgages are segregated from a debtor's business activities (if any) for the benefit of creditors whose loans are of varying maturities.

The Act provides that no domestic building and loan association (or portion thereof) is to be treated as a TMP.

Special rule for REITs

The Congress intended that an entity that otherwise would be treated as a TMP may, if it otherwise meets applicable requirements, elect to be treated as a REIT. If so, the Act provides that

⁹⁵ For this purpose, the Congress intended that debt instruments that may have the same stated maturity but different rights relating to acceleration of that maturity, are to be treated as having different maturities. In addition, the Act provides that to the extent provided in Treasury regulations, equity interests of varying classes that correspond to differing maturity classes of debt are to be treated as debt for these purposes.

⁹⁶ For example, certain arrangements that are commonly known as "Owners' Trusts" would be treated as TMPs under the Act.

under Treasury regulations, a portion of the REIT's income would be treated in the same manner as income subject to the special rules provided for a portion of the income of a residual interest in a REMIC. The Congress intended that this calculation is to be made as if the equity interests in the REIT were the residual interest in a REMIC and such interests were issued (i.e., the issue price of interests is determined) as of the time that the REIT becomes a TMP.⁹⁷

The Congress intended that the Treasury regulations would provide that dividends paid to the shareholders of a REIT would be subject to the same rules provided for a portion of the income of holders of residual interests in a REMIC. Thus, for example, the Congress intended that the Treasury regulations would provide that to the extent that dividends from the REIT exceed the daily accruals for the REIT (determined in the same manner as if the REIT were a REMIC) such dividends (1) may not be offset by net operating losses (except those of certain thrift institutions⁹⁸), (2) are treated as unrelated business income for certain tax-exempt institutions, and (3) are not eligible for any reduction in the rate of withholding when paid to foreign persons. The Congress also intended that the Treasury regulations would require a REIT to report such amounts to its shareholders.⁹⁹

Effective Date

The provisions of the Act are effective with respect to taxable years beginning after December 31, 1986.¹⁰⁰ The amendments made by the Act to the OID rules apply to debt instruments issued after December 31, 1986. The provisions relating to taxable mortgage pools do not apply to any entity in existence on December 31, 1991, unless there is a substantial transfer of cash or property to such entity (other than in payment of obligations held by the entity) after such date. For purposes of applying the wash sale rules provided by the Act, however, the definition of a TMP is applicable to any interest in any entity in existence on or after January 1, 1987.

Revenue Effect

The provisions are estimated to decrease fiscal budget receipts by \$5 million in 1987, \$17 million in 1988, \$36 million in 1989, \$59 million in 1990, and \$79 million in 1991.

⁹⁷ If a portion of a REIT is treated as a TMP, such portion may qualify as a REIT subsidiary (see sec. 662 of the Act).

⁹⁸ But see section 860E(a)(2).

⁹⁹ If the REIT has a REIT subsidiary that is a TMP, then the Congress intended that the portion of the REIT's income that is subject to the special rules is determined based on calculations made at the level of the REIT subsidiary.

¹⁰⁰ The Congress intended that in the case of REMICs issued after December 31, 1986, such REMICs and the holders of interests therein would be governed by the provisions of the Act regardless of the taxable years of the holders.

TITLE VII—MINIMUM TAX PROVISIONS

Minimum Tax on Corporations and Individuals (Secs. 701-702 of the Act and secs. 53 and 55-59 of the Code)¹

Prior Law

Corporate minimum tax

Under prior law, corporations paid a minimum tax on certain tax preferences. The tax was in addition to the corporation's regular tax. The amount of the minimum tax was 15 percent of the corporation's tax preferences, to the extent that the aggregate amount of these preferences exceeded the greater of the regular income tax paid or \$10,000 (Code sec. 56).

Tax preference items

The tax preference items included in the base for the minimum tax for corporations were:

(1) For real property, the excess of accelerated over straight-line depreciation, applying the useful life or recovery period prescribed for regular tax purposes (in the case of property eligible for ACRS, 19 years);

(2) For certified pollution control facilities, the excess of 60-month amortization over the amount of depreciation otherwise allowable;

(3) In the case of certain financial institutions, the excess of the bad debt deductions over the amount of those deductions computed on the basis of actual experience;

(4) Percentage depletion to the extent in excess of the adjusted basis of the property; and

(5) 18/46 of the corporation's net capital gain.

For personal holding companies, accelerated depreciation on leased personal property, mining exploration and development costs, circulation expenditures, research and experimental expenditures, and excess intangible drilling costs were also preferences.

When a corporation had a regular tax net operating loss attributable to minimum tax preference items in excess of \$10,000, no immediate add-on minimum tax liability was incurred with respect to those preference items. Minimum tax liability was incurred with respect to those preference items when the "preferential" portion of the net operating loss was used to offset regular taxable income, treating this portion as used only after nonpreferential net operating losses had been exhausted.

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 501; H.Rep. 99-426, pp. 302-328; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1101; S.Rep. 99-313, pp. 515-540; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 250-284 (Conference Report).

Cutback in certain preferences

In addition to imposing an add-on minimum tax, prior law (sec. 291) imposed a cutback in the use of certain corporate tax preferences for regular tax purposes. Adjustments were made to the corporate minimum tax to prevent the combination of that tax and the cutback provision from unduly reducing the tax benefit from a preference. The cutback applied, with differing percentage reductions, to the following items: (1) certain excess depletion for coal and iron ore, (2) the portion of bad debt reserves deducted by financial institutions that exceeded deductions allowable under the experience method, (3) certain interest deductions of financial institutions that were allocable to purchasing or holding certain tax-exempt obligations, (4) a foreign sales corporation's (FSC) exempt foreign trade income, (5) the reduction of recapture, under section 1250, for depreciation deductions relating to real estate, (6) for pollution control facilities, the excess of the amortization deductions allowed over the depreciation deductions that would otherwise apply, (7) intangible drilling cost deductions of integrated oil companies, and (8) the expensing of mineral exploration and development costs.

Individual minimum tax

Under prior law, individuals were subject to an alternative minimum tax which was payable, in addition to all other tax liabilities, to the extent that it exceeded the individual's regular tax owed.² The tax was imposed at a flat rate of 20 percent on alternative minimum taxable income in excess of the exemption amount. However, the amount so determined was reduced by the foreign tax credit and the refundable credits.

Alternative minimum taxable income generally was equal to regular tax adjusted gross income, as increased by certain tax preferences and decreased by the alternative tax itemized deductions. The exemption amount, which was subtracted from alternative minimum taxable income before applying the 20 percent rate, was \$40,000 for joint returns, \$20,000 for married individuals filing separately, and \$30,000 for single returns.

Tax preference items

The tax preference items that were added to the adjusted gross income base for purposes of the alternative minimum tax on individuals were:

(1) Dividends excluded from gross income under section 116, which permitted individuals to exclude dividends received in an amount not to exceed \$100 (\$200 for a joint return);

(2) For real property, the excess of accelerated over straight-line depreciation, applying the useful life or recovery period prescribed for regular tax purposes (in the case of property eligible for ACRS, 19 years);

² A taxpayer's regular tax meant the taxes imposed by chapter 1 of the Code (other than the alternative minimum tax, the investment credit recapture tax (sec. 47), the taxes applicable in some instances for annuities (sec. 72(m)(5)(B) and 72(q)), lump sum distributions from qualified pension plans (sec. 402(e)), individual retirement accounts (sec. 408(f)), and certain trust distributions (sec. 667(b)), reduced by all nonrefundable credits including the foreign tax credit.

(3) For leased personal property, the excess of accelerated depreciation over depreciation calculated under the straight-line method, with the latter being determined, in the case of property eligible for ACRS, by applying useful lives or recovery periods of five years for three-year property, eight years for five-year property, 15 years for 10-year property, and 22 years for 15-year public utility property;

(4) For certified pollution control facilities, the excess of 60-month amortization over the amount of depreciation otherwise allowable;

(5) For mining exploration and development costs (other than those relating to an oil or gas well) that were expensed, the excess of the deduction claimed over that allowable if the costs had been capitalized and amortized ratably over a 10-year period;

(6) For circulation expenditures (relating to newspapers, magazines and other periodicals) that were expensed, the excess of the deduction claimed over that allowable if the amounts had been capitalized and amortized ratably over a three-year period;

(7) For research and experimentation expenditures that were expensed, the excess of the deduction claimed over that allowable if the amounts had been capitalized and amortized ratably over a 10-year period;

(8) Percentage depletion to the extent in excess of the adjusted basis of the property;

(9) For net capital gains, the portion (i.e., 60 percent) deducted from gross income under section 1202, except that gain from the sale or exchange of the taxpayer's principal residence was not taken into account;

(10) For incentive stock options, the excess of the fair market value received through the exercise of an option over the exercise price; and

(11) For intangible drilling costs (relating to oil, gas, and geothermal properties) that were expensed, the amount by which the excess portion of the deduction (i.e., the excess of the deduction claimed over that allowable if the costs had been capitalized and amortized ratably over a 10-year period) exceeded the amount of net oil and gas income.

For certain of these preferences, individuals could elect for regular tax purposes to take a deduction ratably over 10 years (three years in the case of circulation expenditures) and thereby to avoid treatment of the item subject to the election as a minimum tax preference. The preferences, in addition to circulation expenditures, with respect to which such an election could be made were research and experimental expenditures, intangible drilling and development costs, and mining exploration and development costs. In addition, the ACRS provisions themselves allowed certain similar elections.³ In general, a principal reason for making such an election was to preserve for later years the value of an otherwise preferential deduction that would not benefit the taxpayer in the year

³ Moreover, in the case of intangible drilling costs, a taxpayer (other than a limited partner or a passive subchapter S shareholder) could elect to forego the expense deduction and claim five-year ACRS and the investment tax credit instead. A taxpayer making this election was not subject to the minimum tax on these items.

when the election was made, because the taxpayer was subject to the alternative minimum tax.

Alternative tax itemized deductions

Certain of the itemized deductions allowable in calculating regular taxable income were allowable as well for purposes of calculating alternative minimum taxable income. The alternative tax itemized deductions were:

(1) Casualty or theft losses, and gambling losses to the extent not in excess of gambling gains;

(2) Charitable deductions, to the extent allowable for regular tax purposes;

(3) Medical deductions, to the extent in excess of 10 percent of adjusted gross income;

(4) Qualified interest expenses, which were limited to (a) qualified housing interest (i.e., interest incurred to acquire, construct, or rehabilitate a primary residence or other qualified dwelling used by the taxpayer), plus (b) other interest expenses deducted by the taxpayer, but only to the extent not in excess of qualified net investment income for the year;⁴ and

(5) Deductions for estate tax attributable to income in respect of a decedent.

Other regular tax itemized deductions, such as those for state and local taxes paid and for certain investment expenses, were not allowed for minimum tax purposes.

Credits and NOLs

In calculating minimum tax liability, no nonrefundable credits were allowed except for the foreign tax credit. The limitation on the foreign tax credit applying for regular tax purposes (which, in general, prevented use of the credit to offset a greater percentage of one's tax liability than the percentage of taxable income that is foreign source income) applied for minimum tax purposes as well, but was recalculated to reflect the percentage of minimum taxable income coming from foreign sources. Credits that did not benefit the taxpayer due to the imposition of minimum tax liability could be carried back or forward to other taxable years.

Individuals with net operating losses were allowed to deduct such losses against alternative minimum taxable income. However, for years beginning after 1982 the losses were computed, for minimum tax purposes, by reducing the regular tax net operating losses by the amount of the items of tax preference.

Reasons for Change

Congress concluded that the minimum tax should serve one overriding objective: to ensure that no taxpayer with substantial economic income can avoid significant tax liability by using exclusions, deductions, and credits. Although these provisions may provide incentives for worthy goals, they become counterproductive

⁴ Since this limitation applied only to itemized deductions for interest expenses, it generally had no effect on interest deductions that were claimed "above-the-line," such as business interest and interest attributable to the production of rents and royalties. Interest to carry limited partnership interests and S corporation stock was treated as an itemized deduction, however.

when taxpayers are allowed to use them to avoid virtually all tax liability. The ability of high-income taxpayers to pay little or no tax undermines respect for the entire tax system and, thus, for the incentive provisions themselves. In addition, even aside from public perceptions, Congress concluded that it is inherently unfair for high-income taxpayers to pay little or no tax due to their ability to utilize tax preferences.

In particular, Congress concluded that both the perception and the reality of fairness have been harmed by instances in which corporations paid little or no tax in years when they reported substantial earnings, and may even have paid substantial dividends, to shareholders. Even to the extent that these instances may reflect deferral, rather than permanent avoidance, of corporate tax liability, Congress concluded that they demonstrated a need for change.

Congress viewed the minimum taxes under prior law as not adequately addressing the problem, principally for two reasons. First, the corporate minimum tax, as an add-on rather than an alternative tax, was not designed to define a comprehensive income base. Second, the prior law minimum taxes did not sufficiently approach the measurement of economic income. By leaving out many important tax preferences, or defining preferences overly narrowly, the individual and corporate minimum taxes permitted some taxpayers with substantial economic incomes to report little or no minimum taxable income and thus to avoid all liability.

Certain of the tax preferences under prior law applied only to individuals, or only to individuals and personal holding companies. Congress concluded that, in most cases where both individuals and corporations can benefit from a preference for regular tax purposes, the preference should be included in minimum taxable income by both.

With regard to the preference relating to the expensing of research and experimentation expenditures, however, Congress concluded that, for incentive reasons, corporations, including personal holding companies, should not be required to treat such expensing as a preference. At the same time, Congress concluded that such expensing should continue to be treated as a preference for individuals, because of the use of such expensing in tax shelters.

With respect to certain items that constituted tax preferences, at least for some taxpayers, under prior law, Congress concluded that the previous definitions of the preferences were inadequate. In the case of accelerated depreciation on real and personal property, Congress concluded that the useful lives of items of real and personal property generally are longer than the useful lives applying under prior law for minimum tax purposes. Thus, application of such useful lives gave rise to mismeasurement of economic income. At the same time, for incentive reasons, Congress concluded that in most cases taxpayers should not be required to use the straightline method for minimum tax purposes, so long as the method used is not more preferential than that generally applying for regular tax purposes.

With respect to intangible drilling costs, Congress concluded that taxpayers should not be permitted to use the preference to offset all net oil and gas income before being required to include it in the minimum tax base. However, for incentive reasons relating to the

financial hardships currently being experienced by the oil and gas industry, Congress concluded that the preference should not be includable in minimum taxable income in full; i.e., the net income offset should be retained in part.

In addition, Congress concluded that certain items, not presently treated as preferences, must be added to the minimum tax base in order for it to serve its intended purpose of requiring taxpayers with substantial economic incomes to pay some tax. The items as to which Congress reached this determination include tax-exempt interest on newly issued private activity bonds (other than those issued on behalf of a section 501(c)(3) organization), use of the completed contract method of accounting, untaxed appreciation deducted with respect to charitable contributions of appreciated property, use of the installment method by certain taxpayers, and the use of tax-favored capital construction funds by shipping companies.

In order to prevent individuals with substantial economic incomes from avoiding liability through the use of tax shelters, Congress concluded that the use of net losses from passive business activities should be limited for minimum tax purposes under rules similar to those applying for regular tax purposes. Both specific minimum tax preferences and limitations on the use of passive losses were considered necessary to ensure that individuals with substantial economic incomes would pay tax whether they used preferences to offset tax on income from a single business activity, or used losses from one activity to offset income from another.

In the case of farming losses of individuals not materially participating in the farming business, Congress concluded that an additional and stricter rule should apply for minimum tax purposes, preventing any loss with respect to a passive farming activity from offsetting other income of the taxpayer prior to disposition. Congress concluded that such a rule was needed, in addition to the general passive loss rules applying for regular and minimum tax purposes, in light of the harm to taxpayers active in the farming business that has resulted from the proliferation of tax shelter farming activities exploiting the competitive cost advantage of passive investors who can use tax losses derived from farming to offset unrelated income.

With respect to corporations, Congress concluded that the goal of applying the minimum tax to all companies with substantial economic incomes cannot be accomplished solely by compiling a list of specific items to be treated as preferences. In order to achieve both real and apparent fairness, Congress concluded that there must be a reasonable certainty that, whenever a company publicly reports significant earnings, that company will pay some tax for the year.

For the years from 1987 through 1989, Congress concluded that this goal should be accomplished by means of a preference based upon financial statement or book income reported by the taxpayer pursuant to public reporting requirements or in disclosures made for nontax reasons to regulators, shareholders, or creditors. Congress concluded that it was particularly appropriate to base minimum tax liability in part upon book income during the first three years after enactment of the Act, in order to ensure that the Act will succeed in restoring public confidence in the fairness of the tax system.

For taxable years beginning after 1989, Congress concluded that the book income preference should be replaced by the use of a broad-based system that is specifically defined by the Internal Revenue Code. Congress intended that this system should generally be at least as broad as book income, as measured for financial reporting purposes, and should rely on income tax principles in order to facilitate its integration into the general minimum tax system.

Congress concluded that the definition of earnings and profits applying for certain regular tax purposes (and amended in several respects by the Act) provided an appropriate starting point in this regard. However, Congress concluded that the definition of earnings and profits required adjustment, for minimum tax purposes, in the interest both of clarification and of conformity to policy objectives of the Internal Revenue Code, including the minimum tax and the book income preference in particular.

Clarification regarding the meaning of earnings and profits, for this statutory purpose, was viewed as necessary due to the lack of legal authorities resolving numerous issues regarding the scope of earnings and profits under present law. In all cases where such clarification is provided, Congress intended that no inference be drawn regarding the scope of earnings and profits under present law or for other statutory purposes.

Moreover, Congress concluded that guidance was needed regarding the treatment of items arising prior to the effective date of the preference, both to assist taxpayers that have not previously computed earnings and profits on an annual basis and in order to conform the preference more closely to the scope of the book income preference, which applies to property placed in service prior to the effective date. Congress viewed it as inappropriate to permit taxpayers to claim deductions for purposes of the preference that are duplicative of deductions claimed for regular or minimum tax purposes in years when the preference did not apply.

In general, Congress concluded that conforming the measurement of earnings and profits to the policy purposes of the Internal Revenue Code requires disallowing deductions that are disallowed for regular tax purposes (e.g., bribes). In addition, in light of the purpose of the preference to include income that otherwise would escape current taxation, Congress concluded that (on a cumulative basis) the income base for the preference should never be narrower than that otherwise applying for minimum tax purposes. In certain circumstances where income is defined more broadly for financial reporting purposes than for any tax purposes, Congress concluded that financial reporting definitions should apply, in order to prevent the avoidance of taxation by companies that report earnings to regulators, shareholders, or creditors.

A further change that Congress viewed as necessary relates to the use of investment tax credits to offset minimum tax liability. In general, under the Act as well as prior law, incentive credits are not permitted to offset such liability, since their allowance would be inconsistent with the goal of taxing economic income. In the case of investment tax credits, however, Congress concluded that some transitional relief was desirable, in order to assist corporations whose investment tax credits might otherwise expire unused due to the newly enacted corporate minimum tax.

In addition, Congress concluded that a change was necessary with regard to the use of net operating losses, foreign tax credits, and investment tax credits to avoid all U.S. tax liability. Absent a special rule, a U.S. taxpayer with substantial economic income for a taxable year potentially could avoid all U.S. tax liability for such year so long as it had sufficient such credits and losses available. While Congress viewed allowance of the foreign tax credit and net operating loss deduction, along with the transitional relief relating to the investment tax credit, as generally appropriate for minimum tax purposes, it was considered fair to mandate at least a nominal tax contribution from all U.S. taxpayers with substantial economic income.

Finally, Congress concluded that it was desirable to change the underlying structure of the minimum tax in certain respects. In particular, to the extent that tax preferences reflect deferral, rather than permanent avoidance, of tax liability, some adjustment was considered necessary with respect to years after the taxpayer has been required to treat an item as a minimum tax preference, and potentially to incur minimum tax liability with respect to the item. Absent such an adjustment, taxpayers could lose altogether the benefit of certain deductions that reflect costs of earning income.

Explanation of Provisions

1. Overview

The Act repeals the prior law add-on minimum tax for corporations beginning in 1987, creates a new alternative minimum tax on corporations, and expands the alternative minimum tax on individuals.

Corporations.—Generally, the tax base for the alternative minimum tax on corporations is the taxpayer's taxable income,⁵ increased by the taxpayer's tax preferences for the year and adjusted by determining the tax treatment of certain items in a special manner which negates the deferral of income resulting from the regular tax treatment of those events. The resulting amount, called alternative minimum taxable income, then is reduced by an exemption amount and is subject to tax at a 20-percent rate. The amount so determined may then be offset by the minimum tax foreign tax credit, and to a limited extent by investment tax credits. These rules are designed to ensure that, in each taxable year, the taxpayer generally must pay tax equalling at least 20 percent of an amount more nearly approximating its economic income (above the exemption amount). The exemption amount is \$40,000, reduced (but not below zero) by 25 percent of the amount by which alternative minimum taxable income exceeds \$150,000.

The net minimum tax, or amount of minimum tax due, is the amount by which the tax computed under this system (the tenta-

⁵ Where a corporation's tax base is measured by something other than taxable income, such as unrelated business taxable income, real estate investment trust taxable income, or life insurance company taxable income, alternative minimum taxable income is determined using that tax base. A technical correction may be appropriate to clarify this result.

tive minimum tax) exceeds the taxpayer's regular tax.⁶ Although the minimum tax is, in effect, a true alternative tax, in the sense that it is computed by applying an alternative rate to an alternative income base and then paying it if and only if it exceeds the regular tax, technically the taxpayer's regular tax continues to be imposed, and the net minimum tax is added on.

Individuals.—The structure for the alternative minimum tax on individuals generally is the same as under prior law, except that adjustments are made to reflect the fact that certain deferral preferences (such as accelerated depreciation) cannot be treated simply as add-ons if total income is to be computed properly over time.⁷ For such preferences, the minimum tax deduction may in some instances exceed the regular tax deduction (e.g., in the later years of an asset's life), thus ensuring that basis will be fully recovered under both the regular and the minimum tax systems. The alternative minimum tax on individuals differs from that applying to corporations in several respects. For example, the rate is 21 percent and there are some differences between the preferences applying to individuals and those applying to corporations. In addition, certain itemized deductions that individuals can claim for regular tax purposes are not allowable under the minimum tax. While the exemption amounts for individuals under prior law generally are retained, they are reduced (but not below zero) by 25 percent of the amount by which alternative minimum taxable income exceeds \$150,000 (\$75,000 for married taxpayers filing separately and trusts, and \$112,500 for single taxpayers).

Minimum tax credit.—When a taxpayer pays alternative minimum tax, the amount of such tax paid (i.e., the net minimum tax) is allowed as a credit against the regular tax liability of the taxpayer in subsequent years. However, this credit (known as the minimum tax credit) cannot be used to reduce tax below the tentative minimum tax in subsequent years. The minimum tax credit applies only to minimum tax liability incurred due to deferral preferences (such as accelerated depreciation), i.e., preferences for which the timing, rather than the amount over time, of a deduction or inclusion gives rise to its treatment as a tax preference.

Normative elections.—Taxpayers generally may elect to have the minimum tax treatment of certain expenditures apply for regular tax purposes. When an election is made, no preference is added or treated as an adjustment for minimum tax purposes.

Incentive credits.—Nonrefundable credits (such as the investment tax credit) generally cannot be used to reduce regular tax liability to less than the tentative minimum tax. Credits that cannot be used by the taxpayer due to the effect of the alternative minimum tax can be carried over to other taxable years under the rules generally applying to credit carryovers. In order to provide transition

⁶ A taxpayer's regular tax means the regular tax liability as defined in section 26(b) reduced by the foreign tax credit. It does not include the tax on lump sum distributions under section 402(e) or the recapture taxes under sections 42 and 47. In addition, it is intended that the regular tax be reduced for this purpose by the possessions tax credit under section 27(b) since income eligible for the credit is not in the minimum tax base. A technical correction will be needed to achieve this result.

⁷ As a technical matter, alternative minimum taxable income is computed by making adjustments to taxable income, rather than adjusted gross income, as under prior law, in order to conform the structure of the individual minimum tax with the corporate minimum tax.

relief, corporations are permitted to use regular investment tax credits to offset up to 25 percent of minimum tax liability.

Separate computation of foreign tax credits and net operating losses for minimum tax purposes.—In general, foreign tax credits and net operating losses are allowed for minimum tax purposes under rules similar in effect to those applying for regular tax purposes. As under the prior law alternative minimum tax on individuals, the amounts of these items are separately computed for regular and alternative minimum tax purposes, respectively. Thus, the amount of such credits or losses accruing to or used by the taxpayer in a particular year may differ under the two systems.

Limitation on use of credits and losses to offset minimum tax liability.—Under the Act, net operating losses, foreign tax credits, and investment tax credits cannot be used to offset, in the aggregate, more than 90 percent of the minimum tax liability that otherwise would be imposed (disregarding the reduction of such liability by the amount of the taxpayer's regular tax liability).

Structure of minimum tax as an alternative system.—For most purposes, the tax base for the new alternative minimum tax is determined as though the alternative minimum tax were a separate and independent income tax system. Thus, for example, where a Code provision refers to a "loss" of the taxpayer from an activity, for purposes of the alternative minimum tax the existence of a loss is determined with regard to the items that are includable and deductible for minimum tax, not regular tax, purposes.⁸

In certain instances, the operation of the alternative minimum tax as a separate and independent tax system is set forth expressly in the Code. With respect to the passive loss provision, for example, section 58 provides expressly that, in applying the limitation for minimum tax purposes, all minimum tax adjustments to income and expense are made and regular tax deductions that are items of tax preference are disregarded.

In other instances, however, where no such express statement is made, Congress did not intend to imply that similar adjustments were not necessary. Thus, for example, for minimum tax purposes it was intended that section 1211 (limiting capital losses) be computed using minimum tax basis, that section 263A (requiring the capitalization of certain depreciation deductions to inventory) apply with regard to minimum tax depreciation deductions, and that section 265 (relating to expenses of earning tax-exempt income) apply with regard only to items excludable from alternative minimum taxable income.⁹

⁸ However, "structural" issues such as whether there has been a taxable event, or whether a particular nonrecognition provision applies, generally are determined identically for regular tax and minimum tax purposes (disregarding, e.g., the situation where a nonrecognition applies only to gains, or only to losses, and a gain or loss, as the case may be, exists only for regular tax, or only for minimum tax, purposes).

⁹ Due to the complexity and additional recordkeeping burdens that may result in some cases from such alternative computations, the Treasury may find it appropriate to prescribe regulations that ease compliance. Congress intended that the Treasury have some flexibility in prescribing regulations in this area, to the extent consistent with the intended substantive results.

2. Preferences and adjustments applying to both individuals and corporations

Depreciation

Depreciation on real and personal property to which the new ACRS system applies (generally, property placed in service after 1986) is calculated by using the alternative depreciation system, as described in the depreciation section of this explanation. Generally alternative depreciation is calculated using the applicable ADR midpoint life (forty years in the case of real property).¹⁰ Instead of making an adjustment for each item of property in the amount (if any) by which the regular tax deduction exceeds the normative deduction (as under prior law), the alternative depreciation deduction is substituted for the regular tax ACRS deduction. The principal effect of this system is that it permits "netting", that is, to the extent that an alternative deduction relating to an item of property exceeds the regular tax deduction for that year, a negative adjustment to regular taxable income results.¹¹

For minimum tax purposes, as opposed to other purposes for which the alternative depreciation system is relevant, depreciation for certain property is calculated using the 150 percent declining balance method (switching to straightline in the year necessary to maximize the allowance), rather than the straightline method. The 150 percent declining balance method is used with respect to property other than (1) section 1250 property and (2) property with respect to which the taxpayer elects or is required to use a straightline method (over any useful life) for regular tax purposes.

As an exception to the general rule treating ACRS on post-1986 property as a preference, no adjustment is made for minimum tax purposes with respect to property described in paragraph (1), (2), (3), or (4) of section 168(f) (e.g., property depreciated under the units of production method or the income forecast method, etc.).¹²

For all depreciable property to which minimum tax adjustments apply, alternative minimum tax depreciation is controlling for all minimum tax purposes with respect to which the amount of depreciation claimed is relevant. Thus, the adjusted basis of property may differ for regular and minimum tax purposes, giving rise to differing amounts of gain as between the two systems upon the disposition of such property. Similarly, the amount of depreciation that is capitalized to inventory under the uniform capitalization rules (described in Title VIII of this Part) may differ for regular and minimum tax purposes. Further, the restoration of deferred gain or loss for property subject to depreciation under the consolidated return regulations (Treas. Reg. sec. 1.1502-13(d)) may differ for purposes of computing taxable income and alternative minimum taxable income.

¹⁰ The alternative depreciation system applies with respect to property leased by a taxable entity to a tax-exempt entity, property placed in service outside of the United States, in measuring depreciation for purposes of determining earnings and profits, and under an election to use the system for regular tax purposes.

¹¹ Alternative deductions typically exceed ACRS deductions in the later years of the useful life of an item of property for which ACRS is allowed; i.e., at such time the ACRS deduction typically is understated because it has been overstated in prior taxable years.

¹² Property placed in service after 1986 to which the anti-churning rules of section 168(f)(5) apply is subject to the new minimum tax depreciation rules.

Consider, as an example of the depreciation adjustment that does not reflect the actual details of the ACRS and alternative depreciation systems, the case of a taxpayer who was permitted to deduct fully a \$10 expense in the year that the property to which the expense related was placed in service, but who was required to amortize the expense over two years for purposes of the alternative depreciation system. For that taxpayer, assuming there were no other differences between the taxpayer's regular and alternative minimum taxable income, regular taxable income would be \$5 less than alternative minimum taxable income for the year in which the property was placed in service. In the following taxable year, however, the taxpayer's regular taxable income would be \$5 greater than alternative minimum taxable income (because no further regular tax deduction would remain with respect to the property, whereas the taxpayer would still be entitled to deduct the last \$5 of basis under the alternative system). If the taxpayer also had a separate preference in the amount of \$5 in the second year, the taxpayer's regular and alternative minimum taxable incomes would be equivalent in that year (whether or not that second item related to depreciation).

ACRS depreciation with respect to property placed in service prior to 1987 (unless, pursuant to section 201 of the Act, the taxpayer elects the new ACRS system for regular tax purposes) is treated as a preference only to the extent that it constituted a preference under the rules applying under prior law. Thus, for example, for pre-1987 personal property (other than property with respect to which the new ACRS system is elected for regular tax purposes), ACRS depreciation is a corporate tax preference only in the case of leased personal property in the hands of a personal holding company. In addition, prior law rules generally apply to the measurement of depreciation preferences relating to pre-1987 property. Thus, for example, prior law rules for measuring the amount of accelerated depreciation that constitutes a preference continue to apply to pre-1987 property, and preferences relating to such property continue to be measured on an item-by-item basis, rather than under the netting system described above.¹³

Amortization of certified pollution control facilities

In the case of any certified pollution control facility placed in service after 1986, the taxpayer is required to use the alternative recovery system for minimum tax purposes.

Mining exploration and development costs

Mining exploration and development costs, incurred after 1986, that are expensed (or amortized under section 291) for regular tax purposes are required to be recovered through ten-year straight

¹³ As a transition rule, property grandfathered under the depreciation rules (by reason of section 203 or 204 of the Act) is treated for purposes of the depreciation preference as property placed in service prior to 1987. For property that is depreciated under the new ACRS rules during a taxable year of the taxpayer that begins before 1987, it is intended that the new minimum tax depreciation rules apply to measure amount of the preference for such taxable year, but the preference only applies to property to which the prior law rules of section 57(a)(12) applied and the old minimum structure (e.g., no minimum tax credit) continues to apply for such taxable year. A technical correction may be necessary to achieve this result.

line amortization for purposes of the alternative minimum tax. As with depreciation, the minimum tax treatment of mining exploration and development costs involves a separate calculation for all items of income and expense relating to such costs. Thus, for example, in the case of a taxpayer who incurred a one-time mining exploration and development expense in the amount of \$100, the regular tax deduction would be \$100 in the year when the expenditure was incurred, and the minimum tax deduction would be \$10 for each of the ten years beginning in the year when the expenditure was incurred. The basis of property with respect to which such costs were incurred, and the amount of gain or loss upon disposition, likewise may differ for regular and minimum tax purposes, respectively.

Under this approach, any mining exploration and development costs that are included in regular taxable income when the mine reaches the producing stage are not included in minimum taxable income. In addition, when a loss is sustained with respect to a mining property (e.g., the mine is abandoned as worthless, giving rise to a loss under section 165), the taxpayer is permitted to deduct, for minimum tax purposes, all mining exploration and development costs relating to that property that have been capitalized and not yet written off under the minimum tax.

Use of completed contract and other methods of accounting for long-term contracts

In the case of any long-term contract entered into by the taxpayer on or after March 1, 1986, use of the completed contract method of accounting (or any other method of accounting that permits deferral of income during the contract period) is not permitted for purposes of the minimum tax. Instead, the taxpayer is required to apply the percentage of completion method (determined using the same percentage of completion as used for purposes of the regular tax) in determining minimum taxable income relating to that contract. As with depreciation and mining exploration and development costs, this preference is calculated, not by adding an amount to regular taxable income, but by substituting the minimum tax treatment for the regular tax treatment with respect to all items arising with respect to a contract to which the preference relates.

Installment method of accounting

In the case of dispositions of property described in section 1221(1) (relating to dealer property) after March 1, 1986, use of the installment method of accounting is not permitted for purposes of the minimum tax. In addition, other dispositions of property after August 16, 1986, which are subject to proportionate disallowance under the new installment sale rules (i.e., sales of trade or business or rental real property where the purchase price exceeds \$150,000 and certain related party corporate sales) may not be reported on the installment method for purposes of the minimum tax. Instead, all payments to be received under the contract must be reported in the year of sale. This rule does not apply to sales of timeshares and residential lots to which the special rules of new section 453C(e)(4) apply.

In the case of a disposition of dealer property occurring after March 1, 1986, and before January 1, 1987 (in the case of a calendar-year taxpayer), with respect to which the taxpayer reports gain under the installment method for regular tax purposes, the result of the applicable effective date for installment sales is that all gain is treated as recognized for minimum tax purposes in 1986. Since the alternative minimum tax as amended by the Act is not effective until taxable years beginning in 1987, the rule's sole effect on the tax treatment of such a disposition is that amounts relating to the disposition, included in regular taxable income in years beginning after 1986 under the installment method, are not included in alternative minimum taxable income for such years.

Percentage depletion

As under prior law, the excess of the regular tax deduction allowable for depletion over the adjusted basis of the property at the end of the taxable year (determined without regard to the depletion deduction for the taxable year) is treated as a preference. Thus, for example, a taxpayer who claimed a deduction for percentage depletion in the amount of \$50, with respect to property having a basis (disregarding this deduction) of \$10, would have a minimum tax preference in the amount of \$40.

Intangible drilling costs

The preference for intangible drilling costs is generally the same as the prior law preference for individuals, except that it is expanded to apply to all corporations, and only 65 percent, rather than 100 percent, of net oil and gas income may offset the preference. Thus, the amount of excess intangible drilling costs is treated as a preference to the extent that it exceeds 65 percent of the taxpayer's net income from oil, gas, and geothermal properties. Net oil and gas income is determined without regard to deductions for excess intangible drilling costs. Under this rule, for example, a taxpayer with \$100 of net oil and gas income (disregarding excess intangible drilling costs) and \$80 of excess intangible drilling costs would be required to treat such costs as a preference in the amount of \$15 (\$80 excess IDC less \$65 net income offset).

The amount of excess intangible drilling costs is defined as the amount of the excess, if any, of the taxpayer's regular tax deduction for such costs (deductible under either section 263(c) or 291(b)) over the normative deduction, i.e., the amount that would have been allowable if the taxpayer had amortized the costs over 120 months on a straight-line basis or (if the taxpayer so elects) through cost depletion. The preference does not apply to costs incurred with respect to a nonproductive well.

As under prior law, excess intangible drilling costs are computed by reducing the deductible IDC's paid or incurred during the taxable year by the amount of the IDC's paid or incurred in that taxable year which could have been deducted in that year had those costs been capitalized and amortized. Thus, for example, assume an integrated oil company incurs \$1 million of IDC's in 1987, and deducts \$760,000 of those costs in 1987 (in accordance with sections 263(c) and 291(b)), and deducts the remaining costs, \$60,000 per year in years 1988 through 1991 (in accordance with the section

291(b)). Also assume that had these costs been capitalized, a deduction of \$50,000 would be allowed in 1987, \$100,000 in years 1988 through 1996, and \$50,000 in 1997. In this example, the excess intangible drilling costs in 1987 would be \$710,000 (\$760,000 less \$50,000). The remaining costs incurred in 1987 would be disregarded in computing the preference in subsequent years. The amount of excess intangible drilling costs for 1988, for example, would be computed by taking into account only those costs incurred in 1988. As described later, the corporation could elect to capitalize all or a portion of its IDC's and amortize them over a 10-year period for purposes of both the regular tax and minimum tax.

In applying the preference for intangible drilling costs, a taxpayer's property (as under prior law for individuals) is divided into two parts: properties that are geothermal deposits, and all other properties with respect to which intangible drilling costs are incurred. This separation applies for all purposes under the minimum tax. Consider, for example, the case of a taxpayer who has (1) oil wells with net oil and gas income of \$100 and excess intangible drilling costs of \$80, and (2) geothermal deposits with net income of \$100 and excess intangible drilling costs of \$40. This taxpayer has a preference in the amount of \$15 with respect to the oil wells, and no preference with respect to the geothermal deposits.

Tax-exempt interest on private activity bonds

Interest on certain tax-exempt bonds issued after the applicable date is treated as a preference. This rule applies only with respect to private activity bonds (other than qualified 501(c)(3) bonds), the interest on which is exempt from taxation under section 103. Moreover, the preference applies only to such bonds issued on or after August 8, 1986 (on or after September 1, 1986, in the case of bonds that would not have been industrial development bonds (IDB's) under prior law (but using the revised security interest test provided under the Act, other than the 10 percent limit)).

For purposes of this rule, interest on bonds issued exclusively to refund (including a series of refundings) an issue of bonds issued before August 8, 1986 (or September 1, 1986, if applicable) is not a preference item.

In the case of a taxpayer who is required to include in alternative minimum taxable income any interest that is tax-exempt for regular tax purposes, section 265 (denying deductions for expenses and interest relating to tax-exempt income) does not apply, to the extent of such inclusion, for purposes of the minimum tax. Thus, for example, a taxpayer who incurs interest expense with respect to purchasing or carrying a private activity bond issued in 1987, and who is denied a deduction with respect to such expense for regular tax purposes under section 265, is allowed the deduction for minimum tax purposes where the interest is included in alternative minimum taxable income.

For regular tax purposes, however, the application of section 265 to deny certain interest deductions is unaffected by the fact that the related interest income may be includable for minimum tax purposes.

Charitable contributions of appreciated property

In the case of a taxpayer who makes one or more charitable contributions of appreciated capital gain property, an amount equal to the regular tax deduction claimed with respect to such appreciation is treated as a minimum tax preference. Thus, the charitable contribution deduction is generally limited to the taxpayer's adjusted basis in the property. For purposes of this rule, capital gain property has the same meaning as under the rules relating to charitable deductions.

In the case of a contribution of less than the taxpayer's entire interest in appreciated property, the preference shall be computed by applying the principles applicable under section 170(e), relating to contributions of ordinary income property. (See Treas. Reg. 1.170A-4(c)).

The amount of the preference is determined by disregarding any amount that is carried forward to another taxable year for purposes of the regular tax. Thus, when a portion of a charitable deduction is carried forward because it exceeds the applicable percentage limitation on such contributions, the portion so carried forward cannot increase the amount of the minimum tax preference until it is allowed as a deduction for regular tax purposes.

Where a taxpayer makes charitable contributions in excess of those for which a regular tax charitable deduction is allowed during the taxable year, the minimum tax consequences require determining which contributions (or portions thereof) are deducted, and which are carried forward. The minimum tax charitable deduction (net of the preference) is computed by in effect using basis in place of fair market value. Thus, no preference should apply unless the relevant basis of property contributed is less than the amount of the regular tax deduction.

For example, assume that in year 1 a taxpayer with an adjusted gross income of \$100,000 is allowed a charitable deduction of \$30,000. The taxpayer has made a charitable contribution of property having an adjusted basis of \$50,000 and fair market value of \$150,000. In year 1, the taxpayer's minimum tax deduction (net of the preference) equals \$30,000 since the basis of the contributed property exceeds the amount deductible for regular tax purposes. In year 2, if the taxpayer again is allowed to deduct \$30,000 for regular tax purposes and has made no additional charitable contributions, the deduction for minimum tax purposes is limited to \$20,000.

The preference does not apply with respect to charitable contributions made before August 16, 1986. In the case of a contribution made on or after August 16, 1986, and before the beginning of the first taxable year beginning after December 31, 1986, the preference applies only with respect to amounts carried forward to taxable years beginning after December 31, 1986. Thus, for example, in the case of a calendar year taxpayer, the preference applies, with respect to a contribution made on or after August 16, 1986, and before January 1, 1987, to amounts carried forward to the 1987 taxable year or thereafter. In the case of gifts made in 1986, the gifts shall be treated as deductible in the order made in determining the character of carryovers to 1987 and later years. Thus, for

example, if a calendar year taxpayer made a charitable contribution of property having an adjusted basis of \$50,000 and a fair market value of \$100,000 in April, 1986, and made a similar contribution in October, 1986, and was allowed to deduct only \$175,000 in light of his adjusted gross income, the \$25,000 carryover to 1987 is treated as being attributable to appreciation on the October contribution and therefore is a tax preference in 1987 assuming that the \$25,000 is deductible in that year.

3. Additional preferences and adjustments (other than limitations on itemized deductions) applying to individuals

Circulation expenditures

An individual who incurs circulation expenditures described in section 173 is not permitted to expense his post-1986 expenditures for minimum tax purposes. Instead, in computing alternative minimum taxable income, the taxpayer is required to amortize such post-1986 expenditures ratably over a three-year period. However, if the taxpayer realizes a loss with respect to property to which any such expenditures relate, all such expenditures relating to that property but not yet deducted for minimum tax purposes are allowed as a minimum tax deduction. The preference applies to personal holding companies as well as to individuals.

For example, an individual who incurred such expenditures in the amount of \$30 would claim a regular tax deduction for the entire amount in the year when the expenditures were incurred, and would claim alternative minimum tax deductions of \$10 for that year and the two succeeding taxable years. However, if the newspaper to which the expenditures related ceased operations in the second year, the entire \$20 which was not allowed as a minimum tax deduction in the first year would be allowed for minimum tax purposes in the second year.

Research and experimental expenditures

An individual who incurs research and experimental expenditures described in section 174 is not permitted to expense the expenditures for minimum tax purposes. Instead, in computing alternative minimum taxable income, the taxpayer is required to amortize such post-1986 expenditures over a ten-year period. As with certain other items (such as depreciation and mining exploration and development costs), this treatment applies for all minimum tax purposes, rather than as an annual adjustment to regular taxable income. If the taxpayer abandons a specific project to which any such expenditures relate, all such expenditures relating to that property but not yet deducted for minimum tax purposes are allowed as a minimum tax deduction.

For example, an individual who incurred research and experimental expenditures in the amount of \$100 would claim a regular tax deduction for the entire amount in the year when the expenditures were incurred (absent a section 174(b) election), and would claim alternative minimum tax deductions of \$10 for that year and the nine succeeding taxable years. However, if the taxpayer abandoned the specific project to which the expenditures related in the second year, the entire \$90 which was not allowed as a minimum

tax deduction in the first year would be allowed for minimum tax purposes in the second year.

Incentive stock options

As under prior law, in the case of a transfer of a share of stock pursuant to the exercise of an incentive stock option (as defined in section 422A), the amount by which the fair market value of the share at the time of the exercise exceeds the option price is treated as a preference. For purposes of this rule, the fair market value of a share is determined without regard to any restrictions other than one which, by its terms, will never lapse.

For minimum tax purposes, the basis of stock acquired through the exercise of an incentive stock option after 1986 includes the amount of the preference.¹⁴ Assume, for example, that an individual pays an exercise price of \$10 to purchase stock having a fair market value of \$15. The preference in the year exercise is equal to \$5, and the stock has a basis of \$10 for regular tax purposes and \$15 for minimum tax purposes. If, in a subsequent year, the taxpayer sells the stock of \$20, the gain recognized is \$10 for regular tax purposes and \$5 for minimum tax purposes.

Passive farm losses

Any passive farm loss of an individual or personal service corporation (within the meaning of section 469(j)(2)), to the extent not already denied for minimum tax purposes under the rules described above, is not allowed in computing alternative minimum taxable income. A passive farm loss is defined as the excess of the taxpayer's loss for the taxable year from any tax shelter farming activity. The amount of the loss which is otherwise disallowed is reduced, however, by the amount, if any, of the taxpayer's insolvency, as measured using a standard similar to that set forth in section 108(d)(3).

For purposes of this provision, the term "tax shelter farm activity" means (1) a farming syndicate (as defined in section 464(c)), and (2) any other activity consisting of farming which is a passive activity (within the meaning of section of section 469(c)).

Under the passive farm loss rule, deductions allocable to a tax shelter farming activity, to the extent in excess of gross income allocable to the activity, are disallowed for minimum tax purposes. A separate activity is defined consistently with section 469, with the result that generally each farm is treated as a separate activity.

The rules for applying the loss disallowance generally are similar to those for applying the passive loss rule for minimum tax purposes (see below), except that there is no netting between different farming activities. An excess farming loss with respect to any farming activity is disallowed even if there is net income from other farming activities. Thus, for example, an individual who has a net gain of \$50 from one passive farming activity and a net loss of \$50

¹⁴ Because the Act allows a basis adjustment for the amount of the preference, it is intended that the preference apply where there is an early disposition of the stock causing income to be increased in the year of disposition by reason of section 421(b). A technical correction may be appropriate to clarify this result.

from a second passive farming activity has a preference in the amount of \$50.

The passive farm loss rule is applied, in computing alternative minimum taxable income, prior to the passive loss rule. Thus, the only passive farming activities that enter into the passive loss computation (for minimum tax purposes) are those that generate net gain. Such gain can then be offset, for minimum tax purposes under the general passive loss rule, against passive losses that are not from farming activities.

The amount of the deductions allocable to a farming activity is determined after taking account of all preferences and making all adjustments required for the determination of alternative minimum taxable income, other than the preference for excess passive activity losses. In other words, no deduction which is treated as a minimum tax preference, or which is redetermined (as with depreciation) for minimum tax purposes, is "double-counted" by also being considered in the determination of excess farm losses.

To the extent that a loss from a farming activity is disallowed under this rule, the amount is treated, for minimum tax purposes, as a farm loss incurred in the same activity in the succeeding taxable year. Thus, it is allowed as a minimum tax deduction in the succeeding year, to the extent that the taxpayer otherwise has net income from the farm in such year, or upon an appropriate disposition (i.e., a disposition that would qualify under the passive loss rules as triggering the allowance of suspended losses from the activity). Congress generally intended that other aspects of the disposition rules applying with respect to passive losses apply as well for minimum tax purposes with respect to passive farming losses.

Passive activity losses

In computing alternative minimum taxable income, limitations apply to the use of losses from passive activities of the taxpayer to offset other income of the taxpayer. The rule is identical to that applying for regular tax purposes, under section 469 of the Code, except for three differences. First, the rule is fully effective in 1987 for minimum tax purposes, whereas it is phased in for regular tax purposes. Second, solely for minimum tax purposes, the amount of losses that otherwise would be disallowed for the current taxable year under the limitation is reduced by the amount, if any, of the taxpayer's insolvency, as measured using a standard similar to that set forth in section 108(d)(3). Third, in applying the limitations, minimum tax rules (including the passive farm loss rule) apply to the measurement and allowability of all relevant items of income, deduction, and credit. In light of differences between the regular tax and minimum tax treatment of such items, the amount of suspended losses relating to an activity may differ for regular and minimum tax purposes, respectively.

As under the regular tax, the passive loss limitation applies not only to individuals, but also to personal service corporations and closely held corporations (as defined for purposes of section 469). For closely held corporations that are not personal service corporations, the same more limited version of the passive loss rule that applies for regular tax purposes applies for minimum tax purposes;

i.e., passive losses can offset net active income but cannot offset portfolio income.

The passive rule applying for minimum tax purposes functions, in effect, like an adjustment to the regular tax rule. Thus, when a taxpayer has deductions that are limited under the regular tax passive loss rule, such regular tax limitations should be disregarded for minimum tax purposes, with the minimum tax limitation being applied instead. Taxable income is first reduced, by treating as allowable deductions that were suspended under the regular tax passive loss rule, then adjusted, to reflect minimum tax adjustments and other preferences, and then potentially increased by applying the minimum tax passive loss rule.

For example, assume that in 1991 (when the passive loss rules are fully phased in for regular tax purposes) a taxpayer has \$200,000 of salary income and \$50,000 of gross income from passive activities. The taxpayer's deductions with respect to the passive activities equal \$120,000 for regular tax purposes and \$80,000 for minimum tax purposes. For regular tax purposes, the taxpayer has income of \$200,000 and a suspended passive loss in the amount of \$70,000. For minimum tax purposes, the taxpayer has income of \$200,000 and a suspended passive loss of \$30,000.¹⁵

4. Business untaxed reported profits and adjusted current earnings

In general

The Act provides that alternative minimum taxable income of a corporation is increased by a percentage of the amount by which an alternative measurement of income exceeds the amount otherwise determined to be the alternative minimum taxable income for the year. For taxable years beginning in 1987, 1988 and 1989, alternative minimum taxable income is increased by one-half of the amount by which the adjusted net book income of the taxpayer exceeds the alternative minimum taxable income of the taxpayer before any amount is added to alternative minimum taxable income as a result of this preference and before adjustment for any net operating loss carryovers (unadjusted alternative minimum taxable income). For taxable years beginning after 1989, alternative minimum taxable income is increased by seventy-five percent of the amount by which the adjusted current earnings of the corporation exceeds its unadjusted alternative minimum taxable income.

These preferences are determined as a percentage of the excess of adjusted net book income (for taxable years beginning in 1987, 1988, and 1989) or of adjusted current earnings (for later taxable years) over unadjusted alternative minimum taxable income. For this purpose, a positive amount is always considered to be in excess of a negative amount and a smaller negative amount in excess of a larger negative amount.

¹⁵ Under this rule, it is possible for a taxpayer to have a passive loss under one system but not under the other. For example, assume that the above taxpayer's deductions with respect to passive activities equalled \$80,000 for regular tax purposes and \$40,000 for minimum tax purposes. The taxpayer would have regular taxable income of \$200,000, a suspended passive loss of \$30,000 for regular tax purposes, alternative minimum taxable income of \$210,000, and no suspended passive loss for minimum tax purposes.

For example, corporation A has adjusted net book income in 1988 of \$100 and unadjusted alternative minimum taxable income (prior to the inclusion of any amount as a result of this preference) of \$50. Adjusted net book income exceeds the unadjusted alternative minimum taxable income by \$50, one-half of which (\$25) is added to unadjusted alternative minimum taxable income to give an alternative minimum taxable income for the year of \$75.

Corporation B has adjusted net book income of \$100 and unadjusted alternative minimum taxable income of negative \$50 in 1988. In this case, adjusted net book income exceeds unadjusted alternative minimum taxable income by \$150, one-half of which (\$75) must be added to unadjusted alternative taxable income, resulting in alternative minimum taxable income for the year of \$25.

Corporation C has adjusted net book income of negative \$100 (a loss of \$100) and unadjusted alternative minimum taxable income of negative \$200 in 1988. The adjusted net book income exceeds alternative minimum taxable income by \$100, one-half of which (\$50) is added to unadjusted alternative taxable income, resulting in alternative minimum taxable income for the year of negative \$150.

Business untaxed reported profits ("book income")

In general

During the taxable years for which the business untaxed reported profits ("book income") provision is effective, the amount of preference is determined by comparing the adjusted net book income of the taxpayer with its unadjusted alternative minimum taxable income. In general, the book income used in computing the adjusted net book income of a corporate taxpayer is the net income or loss set forth on the taxpayer's applicable financial statement. Certain adjustments are made to conform net income to reflect the activities of the corporation or corporations included in the tax return, to remove the effect of Federal and foreign income taxes, and for other purposes. The Secretary of the Treasury is not empowered to adjust book income except in cases where there is the omission or duplication of an item of income or expense, where the principles of the book income provision otherwise would be avoided through the disclosure of financial information through footnotes or other supplementary statements, or where adjustment is proper under the principles of section 482.

Financial statement income

The starting point for the computation of the book income preference is the net income disclosed on the taxpayer's applicable financial statement. Net income is the amount the taxpayer reports that takes into account all items of revenue, expense, gain and loss attributable to the taxable year according to the taxpayer's method of accounting. Thus, net income can include income that would otherwise be tax-exempt, such as tax-exempt interest or gain from a tax-free reorganization.

Normally, net income will be disclosed as part of an income statement prepared for inclusion in the taxpayer's applicable financial statement. The amount of net income should reconcile with the balance sheet of the corporation and be the same amount used in

any computation of changes in owners' equity. Alternative measures of net income, such as a statement of sources and uses of funds or inflation-adjusted income statements, are not to be considered as determining net income unless the taxpayer determines its asset, liability, and owners' equity balances on its applicable financial statement in accordance with such an approach.¹⁶

The taxpayer's applicable financial statement generally is expected to include an income statement, a balance sheet stating the amount of assets, liabilities, and owners' equity, a statement of changes in owners' equity, and such other information as is determined to be appropriate for disclosure. An income statement by itself may constitute a taxpayer's applicable financial statement where the other materials generally expected to be included are not prepared or used by the taxpayer. However, an income statement that does not reconcile with financial statement materials otherwise issued generally will not be considered as establishing net income for the purpose of computing this preference.

The taxpayer's applicable financial statement is the statement it provides for regulatory or credit purposes, for the purpose of reporting to shareholders or other owners, or for other substantial nontax purposes. In the case of a corporation that has more than one financial statement, rules of priority are provided for the determination of which statement is to be considered as the applicable financial statement for the purpose of determining net book income.

The highest priority is given to financial statements that are required to be filed with the Securities and Exchange Commission. Second in priority are audited financial statements that are certified by a professional accountant and used for credit purposes, for reporting to shareholders or other owners, or for any other substantial nontax purpose. For this purpose, a financial statement is considered to be certified if it is accompanied by an opinion of a professional accountant stating that the financial statement generally is consistent with the taxpayer's accounting principles. Third in priority are financial statements required to be provided to the Federal Government or its agencies (other than the Securities and Exchange Commission), a State government or its agencies, or a political subdivision or its agencies.

In the absence of any of the above, any financial statement or report that is used for credit purposes, for reporting to shareholders or other owners, or for any other substantial nontax purpose is considered the applicable financial statement. Within a category of priority (other than in the case of financial statements filed with the Securities and Exchange Commission or required to be provided to a government or its agencies), a financial statement used for credit purposes has the highest priority, followed by a financial statement provided to shareholders or other owners. A financial statement used for any other substantial nontax purpose has the lowest priority.

In applying these rules of priority, the financial statement actually must be used for reporting for credit purposes, to shareholders,

¹⁶ Financial statement income generally will include the amount of any interest received by the taxpayer that otherwise is exempt from taxation (e.g., interest described in section 103).

or for a substantial nontax purpose. A financial statement that is not so used is not eligible to be considered as the applicable financial statement in the calculation of the book income preference amount. For example, an unregulated corporation may obtain a certified, audited financial statement, but report to creditors and shareholders using an alternative financial statement that is neither audited nor certified. In such an instance, the alternative, unaudited financial statement is the applicable financial statement and the net income stated in it is used in determining the amount of the preference.

An income tax return, franchise tax return or other similar return prepared for the purpose of determining any tax liability that is filed with Federal, State or local authorities is not intended to constitute a financial statement for the purpose of determining what is the applicable financial statement of the taxpayer.¹⁷ For example, a taxpayer files income tax returns with Federal and state authorities, and also prepares a financial statement for credit purposes that is not certified by a professional accountant. The tax returns will not be considered to be financial statements and the uncertified financial statement prepared for credit purposes will be treated as the applicable financial statement for this taxpayer.

Congress anticipated that corporate taxpayers will generally have one or more of the above financial statements. Taxpayers generally are required to maintain books and records. If the books and records of the taxpayer are themselves used for credit, stockholder reporting or other substantial non-tax purposes, they may be summarized to yield a financial statement, that summarization may be used as the applicable financial statement for the purpose of determining the preference amount. In the case where the taxpayer has no applicable financial statement within the meaning of this provision, the net income or loss of the taxpayer for financial reporting purposes will be considered to be equal to the taxpayer's current earnings and profits for the taxable year.

For this purpose, current earnings and profits shall be determined without diminution by reason of distributions or payments of federal or foreign income taxes during the taxable year. Moreover, for purposes of this provision, earnings and profits shall not be determined with regard to the adjusted current earnings calculation applicable for years beginning after 1989. In calculating earnings and profits for an affiliated group of corporations filing a consolidated return, appropriate adjustments will be made, as prescribed by the Secretary of the Treasury, to prevent the double inclusion of earnings and profits through the operation of the consolidated return regulations or otherwise.

A taxpayer that does not file a financial statement with the Securities and Exchange Commission, a government or governmental agency or obtain a certified, audited financial statement may elect to use the earnings and profits for the taxable year in place of the net income disclosed on its applicable financial statement. A taxpayer making such an election is required to continue to use the

¹⁷ A technical correction may be appropriate to clarify this result.

earnings and profits calculation so long as it is eligible for the election.

In certain cases, adjustments may be made to reported financial statement income after the financial statements have been issued. In the case where a higher priority financial statement has been issued that is not adjusted, but a lower priority financial statement is adjusted, the higher priority, unadjusted financial statement will continue to be considered the applicable financial statement.

For example, a corporation obtains a certified, audited financial statement that it provides to its shareholders. Later, it is determined that the results of the corporation would be better reflected by the use of an alternative accounting method as to certain items. A second income statement reflecting the alternative accounting method is prepared for credit purposes, but it is not certified by a professional accountant and the earlier certified statement is not recalled for correction. As the earlier certified statement has a higher priority than the later uncertified statement, the earlier statement will be considered the applicable financial statement and used in determining the preference amount. If the earlier statement had not been certified, the later statement would be the applicable financial statement, since the provision of a statement for credit purposes has priority over a statement issued to shareholders where both or neither are certified.

A similar problem may arise where financial statements are not restated, but supplementary documents are provided to allow the user of the information to determine a different measure of income. If such is the case, the issuance of the supplementary documents will be considered to be the same as the issuance of a restated income statement.

Adjustments

In order to determine properly the amount by which net book income exceeds alternative minimum taxable income, certain adjustments are required to be made.

The book income preference item is determined with regard to the companies included in the taxpayer's income tax return for the year.¹⁸ To the extent that different companies may be included for financial statement purposes, it is necessary to adjust net book income so that it reflects the same companies that are included in the tax return. It is anticipated that this adjustment will be accomplished by removing the net income and any related consolidating eliminations of companies that are included for financial statement purposes but not for Federal income tax purposes, and by adding in the net income and related consolidating eliminations of companies that are excluded for financial statement purposes but included for Federal income tax purposes. In determining the consolidating eliminations of companies included for Federal income tax purposes but not for financial statement purposes, the method of con-

¹⁸ Thus, for example, a consolidated return does not include foreign companies or section 936 corporations, which cannot be consolidated for tax purposes. Corporations that are not included in the taxpayer's consolidated group income tax return may themselves be subject to this preference. In the case of a corporation that is eligible for the section 936 credit, however, book income is adjusted to remove any amount that meets the requirements of section 936(a)(1)(A) or (B), as discussed below.

solidation that the taxpayer normally uses for financial statement purposes will be followed (other than eliminations of minority interest, discussed below).

In order to include the full amount of net book income attributable to companies included in the taxpayer's consolidated income tax return for the year, an adjustment is necessary to eliminate any adjustments to book income for minority interests in such companies. This is the case whether the reduction for the minority interest is disclosed separately in the applicable financial statement (by line item, footnote, or otherwise) or is included with other deductions or eliminations. Where the reduction for the minority interest is stated net of Federal or foreign income tax, the amount of this adjustment is the full amount of net income reduced for the minority interest, without reduction for the minority interest's share of such taxes.

A taxpayer is required to record as an item of net book income the gross amount (i.e., gross of any withholding taxes) of any actual distribution (e.g., an actual dividend and any associated section 78 gross-up dividend) or the amount of any deemed distribution (e.g., a subpart F inclusion from a controlled foreign corporation) from another corporation if the other corporation is not included in the taxpayer's income tax return for the year. If the taxpayer includes its ownership of the other corporation for financial purposes using another method, such as by consolidation or by the equity method, an adjustment to reverse the inclusion of the other corporation is required.

The gross amount of dividends received from a section 936 corporation, like dividends received from other nonconsolidated corporations, are included in the recipient's adjusted net book income. To the extent that the alternative minimum taxable income of the recipient is increased by reason of the inclusion of such dividends in adjusted net book income, a pro rata portion of withholding or income¹⁹ taxes is treated, for minimum tax purposes, as creditable foreign taxes paid by the recipient. The maximum amount of withholding or income taxes that may be treated as creditable foreign taxes is 50 percent of the taxes. However, this amount is reduced on a proportionate basis if a lesser amount of the dividends from the 936 corporation is taken into account in computing adjusted net book income.

Assume, for example, that a corporation receives a dividend in the amount of \$90 from a section 936 corporation from which \$10 of Puerto Rican tax has been withheld. The recipient's adjusted pre-tax book income includes this \$100. If adjusted net book income, disregarding this inclusion, equals or exceeds the unadjusted alternative minimum taxable income of the recipient, then the result of the inclusion is to increase alternative minimum taxable income by \$50 (50 percent of \$100). Accordingly, the amount of foreign taxes potentially creditable for minimum tax purposes by the recipient includes \$5 (50 percent of \$10) of the Puerto Rican withholding tax.

¹⁹ A technical correction may be necessary to achieve this result.

Assume that, in the above example, the recipient's adjusted net book income, disregarding the receipt of the above dividend, is \$20 less than unadjusted alternative minimum taxable income. Accordingly, after inclusion of the dividend, adjusted net book income exceeds unadjusted alternative minimum taxable income by \$80, and the book preference results in a \$40 increase in the amount of alternative minimum taxable income. Since this increase is 40 percent of the full amount of the dividend, the amount of foreign taxes potentially creditable for minimum tax purposes includes only \$4 (40 percent of \$10) of the withholding tax.

Where a corporation is included in the taxpayer's consolidated tax return for the year, but is included in the applicable financial statement measure of net income only when dividends are paid, adjusted net book income includes the net income and related consolidated eliminations of the payee corporation. In this case, the taxpayer's net book income is adjusted to eliminate any dividends from the payee corporation.

The book income preference is a measurement of the amount by which pretax financial statement income of the taxpayer exceeds its unadjusted alternative minimum taxable income. Thus, it is necessary to remove items of financial statement income and expense that relate to federal or foreign income taxes. This includes both items of tax provision that are separately stated and any items of tax expense or benefit that may be included in other items of income or expense. Such other items must be restated separately from their tax components for the purpose of computing adjusted net book income. Any provision for state and local taxes is considered allowable for the purpose of computing adjusted net book income and no adjustment is made to remove these items in determining book income.

If the taxpayer elects to deduct foreign income taxes, rather than claim a credit for these taxes, the taxes are treated in the same manner as state and local taxes. Since taxes paid to Puerto Rico that are attributable to income of a 936 corporation which qualifies for the benefits thereof are neither allowed as a credit or deduction for regular tax purposes, these taxes generally are not deductible for this purpose. Thus the amount of dividends from 936 corporations that is included in adjusted net book income is the gross amount of the dividends. Moreover, foreign taxes which are required to be deducted (and cannot be claimed as a credit) are to be treated in the same manner as state and local taxes.

Any item of Federal or foreign income tax expense or benefit (other than foreign taxes deducted in lieu of being claimed as a credit) attributable to any adjustment of deferred taxes resulting from the corporate tax rate changes of this Act or any subsequent legislation is not included in the computation of adjusted net book income for minimum tax purposes.

In the case of a corporation that uses a different accounting year for financial statement purposes than the taxable year it uses for federal income tax purposes, it is anticipated that an adjustment to net book income will be required in order to conform the financial accounting and taxable years for the purpose of computing adjusted net book income. Generally, the corporation will be required to include a pro rata portion of each financial statement accounting

year that includes the federal income tax taxable year. The use of a 52-53 week year will be considered to be the use of the annual year that ends during the same week as the 52-53 week year ends.

It is anticipated that, if an applicable financial statement for an accounting year that is to be included on a pro rata basis is not available by the time for filing of a taxpayer's federal income tax return (including any extensions), a reasonable estimate of the amount of adjusted net book income to be included will be made, and that the taxpayer's Federal income tax return will be amended to reflect the pro rata amount when the applicable financial statement is available. It is also anticipated that, if an accounting year that must be included on a pro rata basis has not ended by the time for filing of a taxpayer's Federal income tax return (including extensions), the Secretary of the Treasury will prescribe circumstances in which an election will be made available to use adjusted net book income for the accounting year that ends within the taxpayer's taxable year in lieu of making this adjustment. Such an election, once made, would be irrevocable other than with the consent of the Secretary.

Extraordinary items are included in adjusted net book income unless they are items of tax benefit or expense, such as the use of a foreign tax or net operating loss carryforward. Extraordinary items that are stated net of tax must be adjusted to remove any Federal or foreign income tax expense or benefit components before the extraordinary item is included in adjusted net book income.

The Act provides the Secretary of the Treasury with the authority to issue regulations requiring the adjustment of net book income to prevent the omission or duplication of any item. It is anticipated that this grant of authority will be used, for example, to prevent the recording of items directly to the financial statement asset, liability, or equity accounts that are properly included as items of financial statement income or expense. It is also anticipated that this grant of authority will be used to prevent the use of asset, liability or equity accounts to offset items of income or expense that would otherwise not be allowed. In exercising this authority, it is anticipated that the principles of section 482 will also be applied.

For example, an otherwise entirely domestic consolidated group for financial accounting purposes contains a single foreign corporation that is not subject to U.S. Federal income tax. The consolidated group enters into financing arrangements with the foreign corporation that result in the transfer of all the net income of the group to the foreign corporation. Although the usual rules would provide that all of the income attributable to the foreign corporation would not be included in determining the adjusted net book income of the consolidated group for tax purposes, it is expected that the regulations under this provision would reassign such income to the domestic corporations, making it subject to inclusion in the calculation required by this provision.

Another situation in which the exercise of regulatory authority was anticipated may arise where taxpayers restate prior year financial statements rather than making adjustments to the financial statement for the current period (a prior period adjustment). To prevent the manipulation of book income for the purposes of

this provision, it is intended that book income for the current year be adjusted by the cumulative effect of the prior period adjustment on retained earnings or other equity account. However, this adjustment to book income shall be made only to the extent that the prior period adjustment pertains to a period occurring on or after the effective date of this provision.

Other taxpayers might seek to claim depreciation deductions in excess of the basis of the asset, offsetting such additional financial statement depreciation expense with a contra-asset account. It is anticipated that regulations would prevent this type of overstated financial statement expense.

An omission or duplication of an item of income or expense occurs where the item is recognized either not at all or more than once in determining the adjusted net book income of the taxpayer. For example, the exclusion of nontaxable interest income in computing adjusted net book income would constitute an omission of an item of income. The use of unadjusted cost basis in the determination of the gain on the sale of depreciable property in computing adjusted net book income would result in a duplication of an item of expense if depreciation expense had previously been recognized on the property sold.

Congress did not intend otherwise to interfere with the choice of a reasonable accounting method by the taxpayer, to require that certain accounting principles be applied, or to establish the Secretary of the Treasury as an arbiter of acceptable accounting principles.

Congress expected that the Secretary of the Treasury will interfere in the taxpayer's choice of accounting methods only where such methods result in the omission or duplication of items of income or expense. For example, it is anticipated that taxpayers that compute net income for the purpose of their financial statements in accordance with tax accounting rules will be allowed to continue to do so.²⁰

Special rules

In the case of a cooperative to which section 1381 of the Code applies, adjusted net book income is reduced by the amount of patronage dividends and per-unit retain allocations that would constitute a deduction under section 1382(b), to the extent such amounts are not otherwise taken into account in determining adjusted net book income.

In the case of an insurance company whose applicable financial statement is the financial statement prepared for regulatory purposes, Congress intended that the measure of adjusted net book income be the amount of net gain from operations after dividends to policyholders and before federal income taxes, inclusive of capital gains and losses.

Certain Alaska native corporations may calculate book income using the asset bases determined under the Alaska Native Claims

²⁰ The ability to compute adjusted net book income using tax accounting rules is limited by the requirement that there be no duplications or omissions. For example, a taxpayer computing net book income using tax accounting rules would still be required to include as adjusted net book income interest that is exempt from tax under section 103. Otherwise, an omission of income would result.

Settlement Act. Certain amounts paid to other Alaska native corporations may be treated as expenses for book purposes in the same year as the amounts are deductible for tax purposes.

Adjusted current earnings

In general

For taxable years beginning after 1989, alternative minimum taxable income is increased by 75 percent of the amount by which adjusted current earnings exceeds unadjusted alternative minimum taxable income (before this adjustment), whether alternative minimum taxable income and adjusted current earnings are positive or negative amounts. If unadjusted alternative minimum taxable income exceeds the amount of adjusted current earnings, then alternative minimum taxable income is reduced by 75 percent of such difference. However, such reduction cannot exceed the excess of the aggregate amount by which alternative minimum taxable income has been increased as a result of the adjusted current earnings provision in prior taxable years, less the aggregate amount of reductions taken in prior years.

For example, a calendar year corporation has adjusted current earnings of \$400 in 1990, \$300 in 1991, and \$200 in 1992. Unadjusted alternative minimum taxable income is \$300 for each of those years. In 1990, adjusted current earnings exceeds unadjusted alternative minimum taxable income by \$100, 75 percent of which (\$75) must be included as an additional item of alternative minimum taxable income. In 1992, unadjusted alternative minimum taxable income exceeds adjusted current earnings by \$100, creating a potential negative adjustment to alternative minimum taxable income of \$75. As the aggregate increases to alternative minimum taxable income for prior years equals \$75 (the amount added to alternative minimum tax in 1990) and there are no aggregate reductions, the full amount of the potential negative adjustment will reduce alternative minimum taxable income for 1992.

A positive amount is always considered to be in excess of a negative amount and a smaller negative amount in excess of a larger negative amount. Thus, adjusted current earnings of \$20 exceeds alternative minimum taxable income of negative \$20 by \$40, and \$30 (equal to 75% of the excess) would be includible in alternative minimum taxable income. Likewise, alternative minimum taxable income of negative \$20 exceeds adjusted current earnings of negative \$40 by \$20, and \$15 (equal to 75% of the excess) could be used to reduce alternative minimum taxable income if not subject to limitation.

Definition of adjusted current earnings

In general, adjusted current earnings requires the same treatment of an item as used for purposes of computing unadjusted alternative minimum taxable income. Thus, for example, deduction disallowances or limitations that apply for purposes of determining regular taxable income and alternative minimum taxable income also apply for purposes of determining adjusted current earnings (e.g., the disallowance of a deduction for bribes and kickbacks (sec. 162(c)) or for penalties (sec. 162(f)), and the limitation on the deduc-

tion for policyholder dividends (sec. 808(c)(2)). In the case of exclusion items, however, adjusted current earnings requires the same treatment of an item as used for the computation of regular earnings and profits as computed for purposes of Subchapter C. An exclusion item is an item of income or expense that is included in regular earnings and profits but is never included in the computation of either regular or alternative minimum taxable income (e.g., interest on tax-exempt bonds and the portion of dividends not subject to tax by reason of the dividends received deduction). For this purpose, the fact that an item could eventually be included in alternative minimum taxable income on the liquidation or disposal of a business (or similar circumstances) will not prevent exclusion item treatment. Additionally, adjusted current earnings requires different treatment of certain specifically listed items.

An exclusion item that is income for regular earnings and profits purposes is included in adjusted current earnings. Generally, any item of expense that is not allowable for any year for alternative minimum tax purposes solely because it relates to an exclusion item of income will be allowed in computing adjusted current earnings. Thus, interest on all tax-exempt bonds is included in adjusted current earnings, as well as the costs incurred to carry such tax-exempt bonds. However, if such carrying costs would be limited in the computation of taxable income, even if the income to which they relate is fully taxable, then the costs will be similarly limited for adjusted current earnings. Also, the original issue discount and market discount rules will apply to tax-exempt bonds for purposes of computing adjusted current earnings in the same manner as for taxable bonds.

In determining the amount of an item of deduction or loss allowable for adjusted current earnings, no deduction is allowed for an exclusion item of expense or deduction. Thus, the dividends received deduction generally is not allowed for adjusted current earnings. However, an exception is made for deductions allowed under section 243 or 245 for a dividend qualifying for a 100-percent dividends received deduction if the payor and recipient corporation could not be members of the same affiliated group under section 1504 by reason of section 1504(b), to the extent the payor corporation is subject to Federal income tax.

For example, a foreign sales corporation (FSC) is prohibited from inclusion in its parent's affiliated group, but is subject to federal income tax on only a percentage of its income. The portion of any dividend paid from current earnings and profits to the parent equal to the percentage of the FSC's income that is subject to tax will be eligible for exclusion from adjusted current earnings. In the case of dividends received from section 936 corporations, a similar rule is used for adjusted current earnings. In this case, an exclusion from adjusted current earnings will be allowed for the proportionate part of the dividend from the 936 corporation that equals the percentage of income of the 936 corporation that is not sheltered by the section 936 credit (that is, the percentage of the 936 corporation's income that is not eligible for the 936 credit). For that amount of the dividend that is included in adjusted current earnings, the same rule that applies with regard to the computa-

tion of book income (the allowance of a foreign tax credit for a percentage of Puerto Rican withholding and income tax) is provided.

Adjusted current earnings measures pre-tax income without diminution by reason of any distribution made during the taxable year. Thus, the deduction for Federal and foreign income tax expense allowed for regular earnings and profits purposes is not allowed in the computation of adjusted current earnings (except for foreign taxes where the taxpayer elects, or is required, to deduct such taxes rather than claim a credit). Moreover, no deduction is allowed with respect to a dividend paid.

Depreciation is computed for the adjusted current earnings using the slower of the method used for book purposes or the applicable earnings and profits method. The method used for book purposes is the method used in connection with the preparation of the taxpayer's applicable financial statement. What constitutes the taxpayer's applicable financial statement is determined in the same manner as used for determining book income for taxable years beginning in 1987, 1988 and 1989. For property placed in service in taxable years beginning after 1989, the applicable earnings and profits method is straight-line over the ADR midpoint life. For property placed in service after 1986 but before the first taxable year beginning after 1989 and to which the amendments made by section 201 of the Act apply, the applicable earnings and profits method generally provides for depreciation using (1) the adjusted minimum tax basis of property as of the close of the last taxable year beginning before January 1, 1990, (2) the remaining ADR midpoint life of the property at the beginning of the first taxable year beginning after 1989, and (3) the straight line method. For property to which section 168 as in effect on the day before the date of the enactment of this Act applies, the applicable earnings and profits method provides for depreciation using (1) the adjusted regular tax basis of property as of the close of the last taxable year beginning before January 1, 1990, (2) the remaining ADR life as of the beginning of the first taxable year beginning after 1989, and (3) the straight-line method. For property placed in service before 1981, the applicable earnings and profits method is the same method as is used for regular tax purposes.

The determination of whether the method used in connection with the preparation of the taxpayer's applicable financial statement or the applicable earnings and profits method is slower is calculated by comparing the net present values of the deductions provided by each method. In the case of property placed in service in taxable years beginning before 1990, the net present value of deductions is to be determined only with regard to the remaining deductions allowable in taxable years beginning after 1989. In making this determination, the net value of deductions is computed using the same adjusted basis for both methods. It is anticipated that the Secretary of the Treasury will publish interest rates for use in computing the net present value of deductions. In the absence of such published rates, the applicable federal rate (c.f. section 1274(d)) for the period equal to the remaining ADR life of the property may be used.

Intangible drilling and development costs allowable under section 263(c) are capitalized for adjusted current earnings and amor-

tized over the slower of the method used in the preparation of the taxpayer's applicable financial accounting statement or the 60-month period beginning with the month in which production from the well begins. In the case of a taxpayer recovering intangible drilling and development costs through unit of production cost depletion for financial statement purposes, the determination of which method is slower will be done under regulations to be provided by the Secretary of the Treasury, taking into account reasonable estimates of the rate at which the intangible drilling and development costs are recovered or are expected to be recovered for financial accounting purposes. Similar rules apply with respect to mining exploration and development costs in comparing the 120-month period with the method used in the preparation of the taxpayer's applicable financial statement.

No loss is allowed in the determination of adjusted current earnings on the exchange of any pool of debt obligations for another pool of debt obligations having substantially the same effective interest rates and maturities for the purpose of the adjusted earnings and profits method.

Special rules apply to insurers computing adjusted current earnings. In the case of a life insurance company, the acquisition expenses of any policy, for adjusted current earnings purposes, must be capitalized and amortized in accordance with the method generally required at the time such costs are incurred by the Financial Accounting Standards Board (FASB), or, if the FASB has not published such a method, under guidelines issued by the American Institute of Certified Public Accountants that relate to generally accepted accounting principles. Acquisition expenses of life insurance companies are subject to this treatment on a fresh start basis, i.e., in calculating adjusted current earnings, it is assumed that life insurance acquisition expenses have been treated in the same manner as required under this provision for prior years. Acquisition expenses of property and casualty insurance companies are not subject to this treatment, because the unearned premium reserve deduction of property and casualty insurance companies is reduced by 20 percent (10 percent in the case of certain bond insurance) under the regular tax, as a method of addressing mismatching of deductible acquisition expenses and deferred premium income. In computing adjusted current earnings, the small life insurance company deduction under section 806 and the election for small property and casualty insurance companies to be taxed only on investment income under section 831(b) do not apply.

Inside buildup on a life insurance contract (as determined under section 7702(g)) or on an annuity policy (as determined under section 72(u)(2)) is includible in adjusted current earnings, and a deduction is allowed for that portion of any premium that is attributable to insurance coverage.

In the case of a corporation that has experienced a change of ownership after October 22, 1986 (the date of enactment of the Act), the basis of the property of the corporation may not, for adjusted current earnings, exceed the allocable portion of the purchase price paid for the corporation.

Certain other adjustments required by section 312(n) (i.e., under paragraphs 1 through 6) generally are required in determining ad-

justed current earnings, subject to the rules regarding dates that apply for such purposes. For example, in the case of a disposition of property occurring in 1990 or thereafter, use of the installment method is not allowable in determining adjusted current earnings even if the use of such method is otherwise allowable for minimum tax purposes.

For the purposes of section 312(n)(1), which requires the capitalization of construction period carrying charges, the "avoided cost method" under section 263A applies to determine the amount of interest allocable to production. Under section 312(n)(1), the avoided cost method is intended to apply irrespective of whether application of such method (or a similar method) is required, authorized, or considered appropriate under financial or regulatory accounting principles applicable to the taxpayer. Thus, for example, a utility company must apply the avoided cost method of determining capitalized interest under section 312(n)(1) even though a different method is authorized or required by Statement of Financial Accounting Standards No. 34 or the regulatory authority having jurisdiction over the utility. The growing of timber or other crops is not considered construction under section 312(n)(1).

Congress intended that no inference be drawn from the classification of an item as a specifically listed item as to prior or current treatment for regular earnings and profits purposes or as to whether such a specifically listed item is an exclusion item.

In calculating adjusted current earnings for an affiliated group of corporations filing a consolidated return, appropriate adjustments will be made, as prescribed by the Secretary of the Treasury, to prevent the double inclusion of any item of adjusted current earnings through the operation of the consolidated return regulations or otherwise. The determination of whether a consolidated group is eligible to decrease alternative minimum taxable income as a result of alternative minimum taxable income exceeding adjusted current earnings is expected to be made at the consolidated level.

Separate item allocation

Congress understood that reliance on adjusted earnings and profits would have consequences regarding compliance by taxpayers who already must keep records based on the regular tax and general minimum tax systems. It was intended that the adjusted current earnings and general minimum tax systems be integrated regarding recordkeeping to the maximum extent feasible. Congress anticipated that, before the end of 1989, the Secretary of the Treasury will provide guidance through regulations or rulings regarding such integration. The furtherance of such integration should also be considered in the Treasury study regarding book income and earnings and profits that is mandated under the Act.

Study

Congress directed the Secretary of the Treasury to study and to report regarding the book income and adjusted current earnings provisions, including refinements that may be appropriate (e.g., with regard to the application of the separate item allocation election).

The final report is to be submitted, by January 1, 1989, to the House Committee on Ways and Means and the Senate Committee on Finance.

5. Additional preferences and adjustments applying to corporations

Reserves for losses on bad debts of financial institutions

As under the prior law add-on corporate minimum tax, certain excess reserves of a financial institution to which section 585 or 593 applies are treated as a minimum tax preference. The preference is defined as equal to the excess of the reserve for bad debts deducted by the taxpayer over the amount that would have been allowable had the taxpayer maintained its bad debt reserve for all taxable years on the basis of actual experience.

Capital construction funds of shipping companies

Amounts deposited in a capital construction fund established under section 607 of the Merchant Marine Act of 1936 after 1986 are not deductible, and earnings (including gains and losses) on such income are not excludable, in determining alternative minimum taxable income. In light of this minimum tax treatment, other adjustments required by the Merchant Marine Act of 1936 with respect to amounts withdrawn from a capital construction fund (e.g., reduction in basis under section 607(g)) of such Act) do not apply for minimum tax purposes to the extent that such amounts have already been included in alternative minimum taxable income. For this purpose, amounts deposited in or earned by a capital construction fund before 1987 are treated as withdrawn prior to amounts deposited or earned after 1986.

Special deduction for certain tax-exempt insurance providers

The special deduction under section 833 for certain existing Blue Cross/Blue Shield organizations and for new organizations meeting certain requirements with respect to high risk coverages is not allowed in computing alternative minimum taxable income.

6. Alternative minimum tax itemized deductions for individuals

For minimum tax purposes, no deduction is allowed for any miscellaneous itemized deduction (as defined in section 67(b)), for any State or local taxes which are allowed as an itemized deduction for regular tax purposes, for the standard deduction or for the deduction for personal exemptions.²¹ In addition, as under prior law, medical expenses are deductible only to the extent that they exceed 10 percent of a taxpayer's adjusted gross income.

As under prior law, the deduction for investment interest is limited to investment income. However, the investment interest limits for minimum tax purposes are generally conformed to the regular tax limits. Nevertheless, in applying the investment interest limitations of section 163(d), the regular tax phase-in rules do not apply. Also, investment income, for purposes of the minimum tax, in-

²¹ A technical correction may be needed so that the statute reflects this intent. Such a correction was included in H.Con.Res. 395 as passed by the House and Senate in the 99th Congress.

cludes any tax-exempt interest included in alternative minimum taxable income. Because the passive loss rules are not phased in for minimum tax purposes, the reduction in investment income under section 163(d)(4)(e) during the phase-in period of the passive loss rules does not apply for purposes of the minimum tax.

Personal interest is not allowed as a deduction in computing the minimum tax. The phase-in rules applicable to the regular tax do not apply. The definition of qualified residence interest is the same as under prior law except that the residence must also qualify for purposes of the regular tax.²² The Act provides that, for minimum tax purposes, upon the refinancing of a loan, interest paid on the new loan is treated as qualified housing interest to the extent that (1) it so qualified under the prior loan and (2) the amount of the loan was not increased.

Finally the Act provides that a refund of State and local taxes paid, for which no minimum tax deduction was allowed, is not included in alternative minimum taxable income.

7. Tax credits

Minimum tax credit

When a taxpayer pays alternative minimum tax, the amount of such tax paid (i.e., the net minimum tax) generally is allowed as a credit against the regular tax liability (net of other nonrefundable credits) of the taxpayer in subsequent years. However, the minimum tax credit cannot be used to reduce minimum tax liability in subsequent years. The minimum tax credit can be carried forward indefinitely; thus, it is not necessary for the taxpayer to determine which prior year's minimum tax credit is being used in a particular year. The minimum tax credit cannot be carried back.

In the case of an acquisition of assets of a corporation by another corporation to which section 381(a) applies (for example, a statutory merger), any unused minimum tax credits of the acquired corporation are treated as a "tax attribute" that is taken into account by the acquiring corporation. However, for such an acquisition, as well as an acquisition of stock, the availability of the credits may be subject to limitation under the provisions of section 383.

The minimum tax credit is allowed only with respect to net minimum tax liability arising as a result of deferral adjustments and preferences (i.e., adjustments and preferences other than those that result in permanent exclusion of certain income for regular tax purposes). Thus, the amount of the net minimum tax is reduced by the amount of minimum tax liability that would have arisen if the only applicable adjustments and preferences were exclusion items.²³ The exclusion items are those relating to disallowed itemized deductions, depletion, tax-exempt interest, charitable contributions of appreciated capital gain property, and the deduction under section 833 for certain insurance providers.

²² It was intended that only interest qualifying as qualified residence interest for purposes of the regular tax would qualify as such for purposes of the minimum tax. A technical correction may be necessary to achieve this result.

²³ It is intended that pre-1987 preferences deferred under old section 56(b) that reduce minimum tax NOL's are not to be treated as exclusion preferences for this purpose.

For purposes of this rule, the book income adjustment that applies to corporations for the years 1987 through 1989 is treated as a deferral item, notwithstanding that some differences between unadjusted alternative minimum taxable income and adjusted net book income may result from exclusion items (such as tax-exempt interest). For taxable years beginning in 1990 or thereafter, items included by reason of the adjustment for adjusted current earnings that otherwise would be permanently excluded from alternative minimum taxable income (e.g., dividends received and tax-exempt interest) are treated as exclusion items.

Consider, for example, the case of married taxpayers filing a joint return, with (1) no regular taxable income, (2) deferral adjustments and preferences in the amount of \$350,000, and (3) exclusion adjustments and preferences (including disallowed itemized deductions) in the amount of \$250,000. Under the 21 percent alternative minimum tax rate, and in light of the phaseout of the \$40,000 exemption amount, minimum tax liability would equal \$126,000. However, if the taxpayers had had only exclusion adjustments and preferences, minimum tax liability would have equalled \$49,350 (21 percent of \$250,000 as reduced by \$15,000, which is the portion of the \$40,000 exemption amount remaining after application of the phaseout). Thus, the amount of minimum tax available as a carry-forward credit would be \$76,650 (\$126,000 less \$49,350).

In some cases, a taxpayer's accumulated minimum tax credits from prior taxable years may be reduced even though such credits are not used to reduce regular tax liability (or may be reduced to a greater extent than such credits are used to reduce such liability). This occurs in years where both of the following circumstances are present: (1) taking into account solely the deferral items, alternative minimum taxable income is less than regular taxable income, and (2) due to the exclusion items, the taxpayer would incur minimum tax liability for the year if alternative minimum taxable income were treated as equal to regular taxable income with respect to the deferral items.

For example, assume that an individual's regular tax liability is equal to tentative minimum tax in a year in which regular taxable income is \$100,000 greater than alternative minimum taxable income with respect to deferral items.²⁴ The negative adjustment to minimum taxable income has had the effect of reducing tentative minimum tax liability by \$21,000 (assuming that the taxpayer is above the phase-out range of the minimum tax exemption amount). Thus, the minimum tax credit is reduced by \$21,000.

Foreign tax credit

Under the Act, minimum tax liability is defined as the excess of the tentative minimum tax (i.e., 21 percent, or 20 percent in the case of a corporation, of the excess of alternative minimum taxable income over the exemption amount, reduced by the specially computed foreign tax credit using the minimum tax base) over the reg-

²⁴ This can happen, for example, upon the sale of an item of depreciable property with respect to which allowable regular tax depreciation exceeded allowable minimum tax depreciation. For taxable years prior to the year of the sale, by \$100,000, since minimum tax basis for the item exceeds regular tax basis by \$100,000, the taxpayer has \$100,000 more of gain for regular tax than for minimum tax purposes.

ular tax (i.e. regular tax liability reduced by the foreign tax credit). The foreign tax credit is thus, with certain modifications, allowable for purposes of the alternative minimum tax. These modifications involve separate application, for minimum tax purposes, of the section 904 limitations on the amount of the credit, to reflect the differences between regular taxable income and alternative minimum taxable income.

For example, to the extent that preferences allocable to U.S. source income alter the ratio of foreign taxable income to worldwide income for minimum tax purposes, the application of section 904 may lead to different results under the regular and the alternative minimum taxes, respectively. In light of these differences, taxpayers must separately keep track of the amount of foreign tax credit carryforwards allowable for regular and for minimum tax purposes.

If a corporation includes any adjusted net book income in its alternative minimum taxable income, for purposes of applying section 904, the percentage of such income that is treated as from sources within or outside the United States is the same as the percentage applying with respect to all other alternative minimum taxable income of the taxpayer. Thus, in effect, the book income preference does not result in any change in the percentage applying for purposes of the alternative minimum tax section 904 limitation. A similar rule applies in assigning the amount of adjusted net book income that is treated as foreign source to the separate foreign tax credit limitations.

For taxable years beginning in 1990 or thereafter, items included in alternative minimum taxable income by reason of the preference for adjusted current earnings are sourced, for purposes of the section 904 limitation, on an item-by-item basis. Assume, for example, that a taxpayer has includable adjusted current earnings of \$10, \$6 of which results from owning tax-exempt bonds that are not otherwise subject to the minimum tax, and \$4 of which results from the application of slower book depreciation to property producing foreign-source income. Of the \$10 included by reason of the adjusted current earnings preference, \$6 is treated as from sources within the United States, and \$4 is treated as foreign source income.

In addition to being limited by section 904, use of the foreign tax credit is limited for minimum tax purposes by a rule designed to prevent U.S. taxpayers with substantial income from using the foreign tax credit, along with net operating losses and investment tax credits, to reduce U.S. tax liability by more than 90 percent. This rule is described more fully below. Any foreign tax credits that are disallowed under this rule are treated, for carryover purposes, like credits disallowed by reason of section 904. The rule, like the limitation under section 904, is applied prior to comparing the amount of the taxpayer's minimum tax liability with the amount of its regular tax liability.

With regard to years prior to the effective date of the corporate alternative minimum tax, rules apply like those applying in 1982 upon the enactment of the individual alternative minimum tax. Thus, in the case of a corporation, pre-effective date regular tax foreign tax credits carried forward to 1987 are treated as minimum

tax foreign tax credit carryforwards, and minimum tax foreign tax credits are reduced by the amount of any foreign tax credits carried back, for regular tax purposes, to years prior to 1987. Similarly, a taxpayer's election to treat foreign taxes as credits for regular tax purposes rather than deductions is controlling for minimum tax purposes as well.

Incentive tax credits

General rule

Nonrefundable credits other than the minimum tax credit generally are accorded treatment having the same effect as the rules applying under the prior law alternative minimum tax on individuals. However, the rules were revised in one technical respect in the interest of simplicity. Under prior law, nonrefundable credits could be claimed against the regular tax even if they provided no benefit due to the minimum tax (i.e., they reduced regular tax liability to less than the amount of minimum tax liability that was due in any case). To the extent that the credits provided no benefit due to the minimum tax, however, they were allowed as carryovers to other taxable years.

Under the Act, such credits generally can be claimed in the first place only to the extent that the regular tax liability exceeds the tentative minimum tax liability. They cannot be claimed to the extent that they would reduce regular tax liability to the amount of tentative minimum tax liability. Credits that are disallowed by reason of this restriction are allowed as carryovers to other taxable years, under the generally applicable rules for credit carryovers.

Where no minimum tax is due and the minimum tax does not limit the use of incentive credits, the taxpayer is not required to file with his or her tax return a form showing minimum tax computations. For example, a taxpayer with \$100 of regular tax liability (disregarding incentive credits), a targeted jobs tax credit in the amount of \$10, and whose tentative minimum tax equalled less than \$90, would not be required to file a minimum tax form with the Internal Revenue Service.

Exception for regular investment tax credits

As an exception to the general rule denying the use of incentive credits against the minimum tax, regular investment tax credits are permitted, in effect, to reduce minimum tax liability by 25 percent.²⁵ Under this exception, such credits can be claimed to the extent the regular tax liability (net of credits with a lower Code section number) exceeds 75 percent of tentative minimum tax liability, rather than the full amount of such liability. Moreover, such credits can instead be used in an amount equal to 25 percent of the taxpayer's tentative minimum tax liability for the year, where this results in permitting a greater amount of such credits

²⁵ Certain other transitional rules also apply with regard to the minimum tax treatment of investment tax credits. Where relevant in applying these transitional rules, the megawattage of an electric generating unit is determined with reference to the Summary Information Report (NUREG-0871, Vol. No. 4, Issue Date: October 1985), published by the U.S. Nuclear Regulatory Commission.

to be used for the year (i.e., tentative minimum tax liability is greater than regular tax liability).²⁶

In applying this rule, the taxpayer maintains a single investment tax credit account for both regular and minimum tax purposes. The amount of remaining investment tax credit carryovers is reduced, for both regular and minimum tax purposes, by the amount by that such credits are allowed for the taxable year (without regard to whether the taxpayer is liable for the regular or the minimum tax).

The allowance of the additional investment tax credit does not affect the computation of the minimum tax credit. For example, where regular tax liability exceeds tentative minimum tax liability, no minimum tax credit arises by reason of the reduction of regular tax liability, net of investment tax credits, to less than 100 percent of tentative minimum tax liability, in as much as there is no minimum tax imposed in that year.

For example, assume that a corporation has a regular tax liability of \$10 million and a tentative minimum tax liability of \$4 million. The corporation can use up to \$7 million of investment tax credits, reducing its net tax liability to \$3 million. This net liability does not give rise to any minimum tax credit in future years since there is no minimum tax imposed by section 55 in that year. In addition, since investment tax credits are used before minimum tax credits, and since minimum tax credits cannot reduce regular tax liability to less than the tentative minimum tax liability, the corporation cannot use any minimum tax credits from prior taxable years (assuming that it has available at least \$6 million of investment tax credits).²⁷

Where the tentative minimum tax liability exceeds regular tax liability, the allowance of the additional investment tax credit does not result in a corresponding reduction in the amount of the minimum tax credit allowable in later years. The reason for this rule is that, if the minimum tax credit was treated, instead, as reduced in consequence of the use of investment tax credits to offset minimum tax liability, each \$1 of benefit to a taxpayer by reason of the special rule for investment tax credits could, in subsequent years, give rise to a \$2 increase in tax liability (by reducing both the available minimum tax credits and the investment tax credit carryforward by \$1).

Assume that a corporation has a regular tax liability of zero and a tentative minimum tax liability of \$4 million. The corporation can use up to \$1 million of investment tax credits, reducing its net tax liability to \$3 million. The corporation's adjusted net minimum tax for the year is \$4 million and therefore the minimum tax credit allowable in future years is increased by \$4 million in the event that all of its preferences are deferral preferences, since the adjusted minimum tax is measured without regard to the use of the investment tax credit.

²⁶ A technical correction may be appropriate to clarify the computation of the credit limitation (under section 38(c)(3)) where the taxpayer has both regular investment tax credits and other credits included in the general business credit.

²⁷ In the absence of sufficient other tax credits, the corporation could use minimum tax credits arising by reason of the adjusted net minimum tax imposed in prior taxable years to reduce its net tax liability to not less than \$4 million.

Assume that instead the corporation has a regular tax liability of \$3.5 million and a tentative minimum tax liability of \$4 million. The corporation can use up to \$1 million of investment tax credits, reducing its net tax liability to \$3 million. The corporation's adjusted net minimum tax for the year is \$500,000 and therefore the minimum tax credit allowable in future years is increased by that amount, in the event that all of its preferences are deferral preferences.

Allowance of the regular investment tax credit is further limited by the rule, described more fully below, generally preventing the use of such credits, along with foreign tax credits and net operating losses, to reduce the otherwise applicable minimum tax liability (i.e. the amount determined under section 55(b)(1)(A) without regard to the net operating deduction) by more than 90 percent. Thus, for example, assume that a taxpayer would have no regular tax liability, and a tentative minimum tax liability of \$10 million, in the absence of foreign tax credits, net operating losses, and investment tax credits. As described below, foreign tax credits and net operating losses could not be used to reduce the net tentative minimum tax liability to less than \$1 million. To the extent that such losses and foreign tax credits did not so reduce minimum tax liability, investment tax credits could then be used (to the extent allowable consistently with the rules described above) to reduce such liability to \$1 million.

Treatment of income eligible for section 936 credit

In the case of a corporation that is eligible for the possessions tax credit under section 936, alternative minimum taxable income (including the preference for book income or adjusted current earnings) shall not include any amount which meets the requirements of section 936(a)(1)(A) or (B).²⁸ A corporation that qualifies for the section 936 credit may nonetheless be subject to the minimum tax with respect to income not qualifying for the credit.

8. Net operating losses

Under the Act, special rules apply for net operating losses. These rules generally are the same as the prior law rules with respect to the alternative minimum tax for individuals, except that, as described more fully below, the net operating loss deduction may not exceed 90 percent of the taxpayer's alternative minimum taxable income for the year (determined without regard to the NOL deduction).

For purposes of the alternative minimum tax, net operating loss deductions are determined by using a separate computation of alternative minimum tax net operating losses and loss carryovers. Generally, this computation takes into account the differences between the regular tax base and the alternative minimum tax base.

²⁸ As discussed above, a dividend paid by a section 936 corporation to its parent corporation may be included in alternative minimum taxable income, by increasing the amount of the parent's adjusted net book income or adjusted current earnings. In such a case, a certain amount of foreign taxes paid with respect to such dividends and paid by the 936 corporation that are treated as paid by the parent (under the principles of section 902) are allowed to be taken as a foreign tax credit for alternative minimum tax purposes.

The amount of the net operating loss (under section 172(c)) for any taxable year, for purposes of the alternative minimum tax, generally is computed in the same manner as the regular tax net operating loss, with two exceptions. First, the items of tax preference arising in that year are added back to taxable income (or, as with depreciation, adjustments relating to those items are made). Second, for individuals, only those itemized deductions (as modified under section 172(d)) allowable in computing alternative minimum taxable income are taken into account. In computing the amount of deduction for years other than the year of the loss (i.e., carryover years), the recomputed loss is deducted from the alternative minimum taxable income (as modified under section 172(b)(2)(A)) in the carryover year (whether or not the taxpayer is subject to the minimum tax in that year).²⁹

Where, in the case of a corporation, an NOL arises in a taxable year beginning after December 31, 1986, and is carried to another taxable year, the NOL must be reduced by the corporation's taxable income for any taxable year beginning before 1987 to which the NOL was carried back under the regular tax system, notwithstanding that the alternative minimum tax was not applicable in those years. Thus for example, assume that a corporation had an alternative minimum tax NOL of \$100 in calendar year 1987, and had taxable income (before application of NOL carrybacks from taxable years beginning after 1986) of \$25 in 1984, \$40 in 1985 and \$10 in 1986. That corporation's minimum tax NOL deduction in 1988 attributable to the loss in 1987 would be \$25 (\$100 NOL reduced by the \$75 of taxable income).

As an example of the functioning of the rule, if in year one a taxpayer has \$20,000 of income and \$35,000 of deductions in computing taxable income, of which \$10,000 are preference items or adjustments, the alternative minimum tax net operating loss for the year is \$5,000. Thus, in any subsequent (or prior) year to which the loss may be carried, a \$5,000 net operating loss deduction is allowed to reduce alternative minimum taxable income.

Assume that, in year two, the taxpayer has \$20,000 of alternative minimum taxable income (without regard to the net operating loss deduction). The taxpayer reduces his or her alternative minimum taxable income to \$15,000 by the minimum tax net operating loss deduction. The net operating loss deduction for the regular tax is not affected by this computation (i.e., the taxpayer has a loss carryover of \$15,000 from year one to be used under the regular tax).

For corporations, a transition rule generally allows, for purposes of the alternative minimum tax, all pre-effective date regular tax net operating losses to be carried forward as minimum tax NOLs to the first taxable year for which the tax, as amended under the Act, applies (and to subsequent years until used up). For individuals, prior law is retained with respect to the calculation of alternative minimum tax net operating losses for such years.

An adjustment is required in the case of a corporation that, as of the end of the last taxable year beginning before January 1, 1987,

²⁹ Net operating losses that are not allowed in a particular taxable year because they exceed 90 percent of alternative minimum taxable income for the year may be carried over to other taxable years, in accordance with the rules of section 172(b).

had a deferral of add-on minimum tax liability for a year prior to 1987, under section 56(b), due to certain net operating losses. For such a corporation, no add-on minimum tax liability will be imposed after 1986, but the alternative minimum tax net operating loss carried to the first taxable year of the corporation beginning after December 31, 1986, is reduced by the amount of the preferences that gave rise to the liability.

In light of the parallel nature of the regular tax and minimum tax systems, any limitations applying for regular tax purposes to the use by a consolidated group of NOLs or current year losses (e.g., section 1503) apply for minimum tax purposes as well. Moreover, an election under section 172(b)(3)(C) to relinquish the carry-back period applies for both regular tax and minimum purposes.

9. Limitation on the use of foreign tax credits, net operating losses, and investment tax credits

Under the Act, limitations apply to prevent the use of foreign tax credits and regular investment tax credits to offset more than 90 percent of the tentative minimum tax liability (determined without regard to the NOL deduction). Moreover, as described above, the alternative minimum tax net operating loss deduction may not exceed 90 percent of the taxpayer's alternative minimum taxable income for the year determined without regard to the net operating loss deduction.

Foreign tax credits cannot exceed the excess of the pre-foreign tax credit tentative minimum tax over 10 percent of such amount (determined without regard to the NOL deduction). For example, assume that in 1987 a corporation has \$10 million of alternative minimum taxable income. In the absence of net operating losses or foreign tax credits, the taxpayer's tentative minimum tax liability would equal \$2 million. Accordingly, the alternative minimum tax foreign tax credit cannot exceed the amount by which the taxpayer's pre-foreign tax credit tentative minimum tax exceeds \$200,000.

Regular investment tax credits are likewise subject to a rule preventing their use, in conjunction with foreign tax credits, to offset more than 90 percent of minimum tax liability (determined without regard to the NOL deduction). Under this rule, 10 percent of the taxpayer's tentative minimum tax liability (as determined without regard to net operating losses and foreign tax credits) functions, in effect, as a floor, limiting the use of otherwise allowable investment tax credits. Notwithstanding the general rule for regular investment tax credits described above (or any narrower transition rule applying to the use of such credits in relation to the minimum tax), such credits cannot be used in a taxable year to the extent that they would reduce the amount of tax payable by the taxpayer (whether under the regular tax or the minimum tax) to less than this floor.³⁰

For example, assume that a corporation has \$10 million of pre-NOL alternative minimum taxable income for the year, a \$7 million net operating loss deduction, \$350,000 of minimum tax foreign

³⁰ A technical correction may be needed so that the statute properly reflects this intent. Such a correction was included in H.Con.Res. 395 as passed by the House and Senate in the 99th Congress.

tax credits, and \$200,000 of regular investment tax credits. In the absence of the net operating loss deduction, foreign tax credits and regular investment tax credits, tentative minimum tax liability would equal \$2 million. The NOL deduction, the foreign tax credit and the investment tax credit cannot reduce the net income tax imposed to less than 10 percent of this amount, or \$200,000. Net operating losses and foreign tax credits can be used in full, and reduce tentative minimum tax liability to \$250,000 (20 percent of \$3 million, reduced by the \$350,000 foreign tax credits). Assuming that regular tax liability is less than tentative minimum tax liability, only \$50,000 of regular investment tax credits can be used (giving rise to an investment tax credit carryforward of \$150,000).³¹

10. Regular tax elections

In the case of certain expenditures that would give rise to a minimum tax preference if treated under the rules generally applying for regular tax purposes, the taxpayer may make a "normative election," i.e., elect to have the minimum tax rule for deducting the expenditure apply for regular tax purposes. The expenditures to which this rule applies are the following: circulation expenditures, research and experimental expenditures, intangible drilling costs, and mining development and exploration expenditures.³² Elections can be made "dollar-for-dollar"; thus, for example, a taxpayer who incurs \$100,000 of intangible drilling costs with respect to a single well may elect normative treatment for any portion of that amount.

To the extent that such an election applies, the item to which it applies is treated for all purposes, under both the regular and the minimum tax, pursuant to the election. No other deduction is allowed for the item to the extent that such an election applies.

An election made under this rule may be revoked only with the consent of the Secretary. Elections may be made at such time and in such manner as the Secretary by regulations prescribes. In the case of a partnership or S corporation, an election can be made separately by any partner (or shareholder) with respect to such individual's allocable share of any expenditure.

11. Other rules

The Act also contains certain miscellaneous rules affecting the application of the alternative minimum tax. For example, corporations are required to make estimated tax payments with respect to liability under the alternative minimum tax.

Rules are also provided with respect to the application of Code sections suspending losses, such as sections 465, 704(d), 1366(d), and other sections specified in regulations. Since deductions, or the basis of property, relevant to the application of these sections may differ for regular and minimum tax purposes, respectively, it is

³¹ In the absence of this rule, the general transitional rule for investment tax credits would permit the taxpayer to use investment tax credits in the amount of \$62,500, i.e., 25 percent of tentative minimum tax liability (as determined after the use of net operating losses and foreign tax credits).

³² As described in title II of this part, normative elections are also allowed with respect to depreciation.

necessary to recompute, for minimum tax purposes, the amounts that are suspended and carried forward.

For example, assume that a taxpayer has property with respect to which he is at risk in the amount of \$100. For regular tax purposes, deductions relating to the property equal \$110 in year 1 and \$80 in year 2. For minimum tax purposes, such deductions equal \$90 in year 1 and \$90 in year 2. For regular tax purposes, section 465 permits the taxpayer to deduct \$100 in year 1 and zero in year 2, and the taxpayer has \$90 of suspended deductions as of the end of year 2. For minimum tax purposes, the taxpayer is allowed to deduct \$90 in year 1 and \$10 in year 2, and has \$80 of suspended deductions as of the end of year 2.

The Act provides that in the case of an estate or trust, the alternative minimum taxable income of the estate or trust and its beneficiaries shall be determined under the rules generally applicable to trusts and estates by taking into account the adjustments provided in the minimum tax.

The Act provides rules for allocating items that are treated differently for regular and minimum tax purposes, respectively, are also provided with respect to common trust funds, regulated investment companies, and real estate investment trusts.³³ Moreover, rules are provided relating to certain technical issues such as short taxable years and the application of exemption amounts with respect to companies filing consolidated returns.

The Act provides that except as specifically provided in the case of certain preferences such as mining exploration and development costs, for purposes of the corporate minimum tax, the amount of a preference is measured after the application of section 291 (relating to the cutback of certain corporate preferences). Thus, for example, to the extent that a taxpayer's bad debt reserve or percentage depletion for coal or iron ore is reduced for regular tax purposes pursuant to section 291, the amount of such reduction is not "double-counted" by being treated as a minimum tax preference.

Under the Act, the application of the tax benefit rule to the minimum tax is within the discretion of the Secretary of the Treasury. Relief from either the regular or the minimum tax, when the source of the taxpayer's tax liability changes, between taxable years, from one system to the other, is not appropriate solely by reason of the fact that a taxpayer has received no benefit under one of the systems with respect to a particular item. Congress both intended that the regular and minimum taxes constitute separate and parallel tax systems, and anticipated that the source of some taxpayers' liability would change from year to year. Relief from the possible adverse impact of switching from one system to the other (e.g., the denial of deductions with respect to which there are timing differences as between the two systems) was intended to be

³³ For example, if a RIC or REIT distributes all its pre-dividend taxable income in each taxable year, it is intended that the minimum tax adjustments and preferences be apportioned to the shareholders and beneficiaries since the adjustments and preferences either reduced or increased the entity's taxable income and therefore the amount of the dividend. Where any shareholder or beneficiary incurs a minimum tax attributable to deferral items, that shareholder or beneficiary may use the minimum tax credit in future years to offset regular tax under usual rules. Where the RIC or REIT distributes more or less than its taxable income in a taxable year, the Treasury Department is to prescribe regulations providing rules for apportioning the preferences and adjustments.

provided by means of the minimum tax credit, along with the use of adjustments that give rise, in effect, to "negative preferences" with respect to items such as depreciation. Thus, application of the tax benefit rule in this context is not necessary, although the Treasury may, at its discretion, identify particular circumstances where such exercise is appropriate.

Effective Date

These provisions apply to taxable years beginning after December 31, 1986.

Revenue Effect

With respect to individuals, the provision is estimated to increase fiscal year budget receipts by \$848 million in 1987, \$3,904 million in 1988, \$2,251 million in 1989, \$862 million in 1990, and \$334 million in 1991.

With respect to corporations, the provision is estimated to increase fiscal year budget receipts by \$3,087 million in 1987, \$5,378 million in 1988, \$5,072 million in 1989, \$4,466 million in 1990, and \$4,155 million in 1991.

TITLE VIII—ACCOUNTING PROVISIONS

A. Limitations on the Use of the Cash Method of Accounting (Sec. 801 of the Act and sec. 448 of the Code) ¹

Prior Law

Taxpayers using the cash receipts and disbursement method of accounting (the "cash method") under prior and present law generally recognize items of income when actually or constructively received and items of expense when paid. Tax shelters using the cash method of accounting generally may not recognize items of expense prior to economic performance. Taxpayers using an accrual method of accounting generally accrue items as income when all the events have occurred that establish the right to receive the income and the amount of income can be determined with reasonable accuracy. Taxpayers using an accrual method of accounting generally may not deduct items of expense prior to the time of economic performance.

Under prior law, taxpayers could generally elect to use any method of accounting, such as the cash method, an accrual method, or combinations of methods so long as the method clearly reflected income and was regularly used in keeping the taxpayer's books. However, under prior and present law, taxpayers for whom the production, purchase, or sale of merchandise is a material income producing factor are required to keep inventories and to use an accrual method of accounting with respect to inventory items (sec. 471). Also, prior and present law requires certain corporations engaged in agricultural activities with gross receipts exceeding \$1 million to use an accrual method of accounting (sec. 447).

Reasons for Change

In general

The Congress believed that the cash method of accounting frequently fails to reflect accurately the economic results of a taxpayer's trade or business over a taxable year. The cash method of accounting recognizes items of income and expense based on the taxable year in which funds are received or disbursed. This may result in the recognition of income and expense items without regard to the taxable year in which the economic events giving rise to the items occurred and a potential mismatching of income with related expenses. For these reasons, the cash method generally is not in accord with generally accepted accounting principles. The cash

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 902; H. Rep. 99-26, pp. 604-609; H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 321; S. Rep. 99-313, pp. 118-119; and H. Rep. 99-841, Vol. II, (September 18, 1986), pp. 285-289 (Conference Report).

method also produces a mismatching of income and deductions when all parties to a transaction use different methods of accounting.

Exceptions

On the other hand, the Congress also recognized that the cash method generally is a simpler method of accounting and that simplicity justifies its continued use by certain types of taxpayers and for certain types of activities. The Congress believed that small businesses should be allowed to continue to use the cash method of accounting in order to avoid the higher costs of compliance which will result if they are forced to change from the cash method. Similarly, the Congress believed that farming businesses (other than farming tax shelters and certain corporate farming businesses required to use an accrual method under present law) should be able to continue to use the cash method in order to avoid the complexities required to account for growing crops and livestock under other acceptable methods of accounting.

Finally, the Congress believed that individuals, whatever the size of their activities, should be able to continue to use the cash method. Individuals, especially individuals engaged in professional activities, traditionally have used the cash method of accounting in the operation of their trades or businesses. Similarly, the Congress believed that personal service corporations and entities where the income is taxed at the individual level (such as partnerships and S corporations) traditionally have used the cash method of accounting in the operation of their trades or businesses and, accordingly, should be eligible for the continued use of the cash method of accounting.

Tax shelters

The Congress believed that tax shelters should not be allowed to use the cash method of accounting, regardless of the form in which business is conducted and regardless of whether or not the tax shelter satisfies one or more of the exceptions that would otherwise allow use of the cash method. In choosing to conduct business as a tax shelter, the entity has indicated a sufficient sophistication in the use of the tax laws to justify requiring the use of a more difficult method than the cash method. In addition, the use of the cash method itself may assist the tax shelter in obtaining unwarranted benefits under the tax laws.

Nonaccrual of certain items unlikely to be collected

The Congress was concerned that certain taxpayers could be required to accrue income from services with respect to amounts they are unlikely to collect. Where a taxpayer includes accounts receivable, which do not bear interest or a late charge in its income, accrual in income of the full sales price immediately, combined with a bad debt deduction allowed at a later time, will overstate the taxpayer's income because the present value of the bad debt deduction will be less than the present value of the accrued income. Accordingly, the Act provides that taxpayers on an accrual method will not be required to accrue income attributable to that portion of their accounts receivable derived from the performance of services

which are unlikely to be collected. This exception does not apply where the accounts receivable bear interest or a late charge because the face amount of the obligation bearing interest or late payment charges is the present value of the accrued income and, consequently, the present value of the accrued income will not exceed the present value of the later bad debt deduction.

Explanation of Provision

In general

The Act generally provides that the cash method of accounting may not be used by any C corporation, by any partnership that has a C corporation as a partner, or by a tax-exempt trust with unrelated business income. Exceptions are made for farming businesses, qualified personal service corporations, and entities with average annual gross receipts of \$5 million or less for all prior taxable years (including the prior taxable years of any predecessor of the entity). The Act also provides that the cash method of accounting may not be used by any tax shelter.

In determining whether a partnership has a C corporation as a partner, a C corporation that is a qualified personal service corporation (discussed below) is treated as an individual. Thus, partnerships qualifying to retain the use of the cash method are those partnerships in which all of the partnership interests are held by individuals, qualified personal service corporations, S corporations, or other partnerships qualifying to retain the cash method.

The Congress denied the use of the cash method of accounting to a partnership that has a C corporation as a partner in order to prevent entities that themselves could not use the cash method from obtaining the advantages of the cash method through investments in partnerships. Accordingly, if a C corporation which is not a qualified personal service corporation is the beneficial owner of a partnership interest, the partnership may not use the cash method of accounting, unless it meets one or more of the exceptions provided. For example, if two C corporations are partners in a partnership that is in turn a partner in another partnership, neither of the partnerships are intended to be allowed to use the cash method of accounting.²

The use of a hybrid method of accounting which records some, but not all, transactions using the cash method is considered the same as the use of the cash method for these purposes. Any change from the cash method necessitated by the provision is treated as a change in accounting method, initiated by the taxpayer with the approval of the Secretary of the Treasury. The provision does not change the rules of present law relating to what accounting methods clearly reflect income or the authority of the Secretary of the Treasury to require the use of an accounting method that clearly reflects income.

Qualified personal service corporations

A qualified personal service corporation is a corporation that meets both a function test and an ownership test. The function test

² A technical correction may be needed to reflect this intention.

is met if substantially all the activities of the corporation are the performance of services in the field or fields of health, law, engineering (including surveying and mapping), architecture, accounting, actuarial science, performing arts or consulting.

The ownership test is met if substantially all (i.e., 95 percent) of the value of the outstanding stock in the corporation is owned, directly or indirectly, by employees performing services for the corporation in connection with the qualified services performed by the corporation, retired individuals who performed such services for the corporation or its predecessor(s), the estate of such an individual, or any other person who acquired stock by reason of the death of such an employee (for the 2-year period beginning with the death of such employee).

For the purpose of applying the ownership test, stock owned by a partnership, an S corporation or a qualified personal service corporation will be considered as owned by its partners or shareholders. In applying the ownership test, the applicable community property laws of any State are to be disregarded, stock held by any plan described in section 401(a) that is exempt from tax under section 501(a) is treated as held by the employees of the entity and, at the election of the common parent of an affiliated group, all members of such affiliated group may be treated as a single entity for the purpose of applying the ownership test if substantially all of the activities of such affiliated group involve the performance of services in the same qualified field.^{2a}

Any other ownership of stock as a result of any attribution rule of the Code is to be disregarded. For example, stock held by a father is not to be attributed to his children. Thus, the ownership test would not be considered to be met if nonemployee-children owned more than 5 percent of the stock, despite the fact that their father might be an employee of the corporation.

Farming businesses

The Act provides that, for the purpose of determining whether an entity is engaged in a farming business, the definition of farming shall include the raising or harvesting of trees (including evergreen trees that are not subject to the capitalization provisions of section 263A).

Gross receipts test

An entity is considered to meet the gross receipts test and, therefore, is eligible to use the cash method of accounting, if the entity had "average annual gross receipts" of \$5 million or less for all prior taxable years (including the prior taxable years of any predecessor entity) beginning after December 31, 1985. "Average annual gross receipts" are determined by averaging the gross receipts of the three taxable year period ending with such prior taxable year.

For example, a calendar year entity had gross receipts of \$4 million in 1984, \$5 million in 1985, \$6 million in 1986 and \$7 million in 1987. Average annual gross receipts are \$5 million for 1986 and \$6 million for 1987. In calendar year 1987, the entity is not prohibited

^{2a} A technical correction may be needed to reflect this intention.

from using the cash method, since it had "average annual gross receipts" of \$5 million or less for all prior taxable years beginning after December 31, 1985 (i.e., 1986). In 1988, the entity may not use the cash method (unless it meets one of the other exceptions) since "average annual gross receipts" for a prior taxable year (1987) exceed \$5 million.

Any taxable year included in the average annual gross receipts calculation which is a year of less than 12 months must be annualized. If the entity (or any predecessor entity) was not in existence for all three of the taxable years to be used in the calculation, average annual gross receipts is calculated of the period during which such entity (or predecessor) was in existence.

In determining whether a taxpayer has average annual gross receipts in excess of \$5 million, the gross receipts of all related entities are aggregated if such entities would be treated as a single employer under subsection (a) or (b) of section 52 or subsection (m) or (o) of section 414, regardless of whether the entities have any employees.

In determining the gross receipts of entities aggregated under this rule, intercompany receipts of such entities are to be excluded.

Accrual of service income

A taxpayer is not required to accrue as income any amount to be received for the performance of services that, on the basis of experience, will not be collected, as long as unpaid balances do not bear interest or result in a late payment charge. The offering of a discount for early payment of an amount billed does not result in the balance bearing interest or a late charge if the full amount billed is accrued as income and the discount for early payment recorded as an adjustment to income in the year the payment is made.

The amount of accruals that, on the basis of experience will not be collected is equal to the total amount of the accrual, multiplied by a fraction whose numerator is the total amount accrued and determined not to be collectible within the most recent five taxable years of the taxpayer, and whose denominator is the total amount of such accruals within the same five year period. If the taxpayer has not been in existence for the prior five taxable years, the portion of such five year period which the taxpayer has been in existence is to be used.

For example, an accrual-basis taxpayer has accrued \$100,000 of income for the performance of services during the most recent five taxable years. Of the \$100,000 that has been accrued, \$1,000 has been determined to be uncollectible. The amount, based on experience, which is not expected to be collected is equal to 1 percent (\$1,000 divided by \$100,000) of any accrued income for the performance of services that does not bear interest or a late charge, and that is not collected by the close of the taxable year.

A taxpayer that has not recognized income on amounts not expected to be collected must recognize additional income in any taxable year in which payments on amounts not recognized are received. If an amount that would otherwise be accrued as income is determined to be partially or wholly uncollectible, no portion of the loss arising as a result of such determination, that was not recog-

nized as income at the time the receivable was created, is deductible.

The Congress intended that the Secretary of the Treasury be allowed to provide a periodic system of accounting for accruals that, on the basis of experience, will not be collected if the periodic system results in the same taxable income as would be the case if each accrual were recorded separately.

Tax shelters

The Act provides that the cash method of accounting may not be used by any tax shelter. For this purpose, a tax shelter is defined in the same manner as under section 461(i) of prior and present law. Thus, a tax shelter is (a) any enterprise (other than a C corporation) if at any time interests in such enterprise have been offered for sale in any offering required to be registered with any Federal or State agency having the authority to regulate the offering of securities for sale, (b) any syndicate within the meaning of section 1256(e)(3), or (c) any tax shelter within the meaning of section 6661(b)(2)(C)(ii). In the case of an enterprise engaged in the trade or business of farming, a tax shelter is (a) any tax shelter within the meaning of section 6661(b)(2)(C)(ii) or (b) a farming syndicate within the meaning of section 464(c).

The denial of the use of the cash method of accounting to tax shelters applies whether or not the tax shelter is a C corporation. Also, the exceptions to the general rule for farming businesses, qualified personal service corporations, and entities with average annual gross receipts of \$5 million or less do not apply in the case of tax shelters.

A tax shelter may not take advantage of the recurring item exception under section 461(h)(3) to the rule requiring economic performance before an accrual basis taxpayer may deduct an item of expense. In the case of a tax shelter, however, economic performance with respect to the drilling of an oil and gas well will be considered to have occurred if the drilling of the well commences within 90 days of the close of the taxable year.

Certain pre-effective date transactions

Taxpayers may elect to continue to report income from loans, leases, certain real property contracts, and transactions with related parties entered into before September 25, 1985, using the cash method. This rule applies to tax shelters as well as other entities.

Tax-exempt organizations

The Act provides that a tax-exempt organization that is organized as a trust is treated as a corporation with respect to any of its unrelated business income. Therefore, where a tax-exempt trust has gross receipts from its unrelated business activities in excess of \$5 million, the unrelated business taxable income of that trust cannot be computed on the cash method of accounting. Similarly, in the case of a tax-exempt organization organized as a corporation, the Congress intended to require the use of an accrual method only

with respect to the unrelated business taxable income of such an organization.³

Effective Date

The provision is effective for taxable years beginning after December 31, 1986. Any change from the cash method required by this provision is treated as initiated by the taxpayer with the consent of the Secretary of the Treasury. Any adjustment required by section 481 as a result of such change generally shall be taken into account over a period not to exceed four years. It is the intent of the Congress that this apply to all changes resulting from the provision, including any changes necessitated by the rule that certain accrual taxpayers, including taxpayers presently on an accrual method of accounting, need not recognize income on amounts statistically determined not to be collectible.

In the case of a hospital, the adjustment shall be taken into account ratably over a ten-year period. For this purpose, a hospital is a taxable or tax-exempt institution that—

(1) Is accredited by the Joint Commission of Accreditation of Hospitals (JCAH), or is accredited or approved by a program of the qualified governmental unit in which such institution is located if the Secretary of Health and Human Services has found that the accreditation or comparable approval standards of such qualified governmental unit are essentially equivalent to those of the JCAH;

(2) Is primarily used to provide, by or under the supervision of physicians, to inpatients diagnostic services and therapeutic services for medical diagnosis, treatment, and care of injured, disabled, or sick persons;

(3) Has a requirement that every patient be under the care and supervision of a physician; and

(4) Provides 24-hour nursing services rendered or supervised by a registered nurse and has a licensed practical nurse or registered nurse on duty at all times.

In order to qualify as a hospital, an institution is not required to be owned by or on behalf of a governmental unit or by a 501(c)(3) organization or operated by a 501(c)(3) organization.

The Congress intended that the timing of the section 481 adjustment (other than for a hospital) generally will be determined under the provisions of Revenue Procedure 84-74, 1984-2 C.B. 736. In addition, the Congress intended that (1) net operating loss and tax credit carryforwards will be allowed to offset any positive section 481 adjustment; (2) for purposes of determining estimated tax payments, the section 481 adjustment will be recognized in taxable income ratably throughout the year in question; and (3) the timing of a negative section 481 adjustment shall be determined as if the adjustment were positive.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$290 million in 1987, \$595 million in 1988, \$631 million in 1989, \$646 million in 1990, and \$650 million in 1991.

³ A technical correction may be needed to reflect this intention.

B. Simplified Dollar Value LIFO Method for Certain Small Businesses (Sec. 901 of the Act and sec. 474 of the Code) ⁴

Prior Law

In general

Under present and prior law, if the production, purchase or sale of merchandise is a material income producing factor to a taxpayer, a taxpayer is required to keep inventories and to use an accrual method of accounting with respect to the production, purchase or sale of merchandise. Acceptable methods of accounting for inventories include specific identification, first-in first-out (FIFO), last-in first-out (LIFO), and, in certain limited circumstances, average cost.

One method of applying the LIFO method to inventories is the dollar-value method. Under the dollar-value LIFO method, the taxpayer accounts for its inventories on the basis of a pool of dollars rather than on an item-by-item basis. Each pool of dollars includes the value of a number of different types of inventory items. Generally, for wholesalers, retailers, jobbers and distributors, items of inventory are pooled by major lines, types or classes of goods. In the case of manufacturers, all inventory items which represent a natural business unit may be combined into a single pool. Similarly, taxpayers may assign inventory items to one of a number of pools determined by the similarity of the different types of items to each other. A taxpayer with average annual gross receipts of no more than \$2 million for its three most recent taxable years may elect to use a single pool for all items of inventory.

The dollar-value method measures each pool of dollars in terms of the equivalent dollar value of the inventories at the time the portion of the pool of dollars was first added to the inventory account. In order to measure the pool of dollars in terms of equivalent dollar values, the use of the dollar-value LIFO method requires the development of an index which will discount present dollar values back to the equivalent dollar values of the first year the taxpayers uses the LIFO method (called the "base year"). This is normally done by comparing the dollar amount of inventory items measured in present year prices against the dollar amount of the same inventory items in base year prices (the "double-extension" method). If the permission of the Secretary of the Treasury is obtained, however, the index may be developed by comparing the dollar amount of inventory items measured in present year prices against the dollar amount of the same inventory items measured in the immediate prior year's prices. This computation yields an annual index component that, when applied to all prior annual

⁴ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 901; H. Rep. 99-426, pp. 598-604; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 290-292 (Conference Report).

index components, creates a cumulative index which discounts present dollar values back to the equivalent dollar values of the base year (the "link-chain" method).

Instead of using actual inventory prices, a taxpayer may use tables of price changes published by the Bureau of Labor Statistics as part of the "Producers Price Index" and "Consumer Price Index" publications to construct the index necessary to determine equivalent dollar values. Use of these tables requires an index specific to the taxpayer to be constructed by taking a weighted average of price changes for specific categories of inventory. A taxpayer with average annual gross receipts for its most recent three years of no more than \$2 million may use 100% of the constructed index. Taxpayers with greater average annual gross receipts are limited to an index equal to 80% of the constructed index.

Reasons for Change

The LIFO method generally is considered to be an advantageous method of accounting for inventories, particularly when costs are rising. The LIFO method matches the costs of the most recent additions to inventories against sales. When costs are rising, a higher measure of costs of goods sold results and, consequently, a lower measure of taxable income.

The Congress believed, however, that the complexity and greater costs of compliance associated with the LIFO method, including the dollar-value LIFO method, discouraged some smaller taxpayers from using the LIFO method in accounting for their inventories. The Congress believed that the LIFO method should be simplified for smaller taxpayers so that the use of the method will be practical for all taxpayers.

Explanation of Provision

In general

The Act provides an election to certain small businesses to use a simplified dollar-value LIFO method in accounting for their inventories. The simplified dollar-value LIFO method requires inventories to be grouped into pools in accordance with the major categories of the "Producer Prices Indexes" or the "CPI Detailed Report." The change in inventory costs for the pool for the taxable year is determined by the change in the published index for the general category to which the pool relates. The computation of the ending LIFO value of the pool is then made using the dollar-value LIFO method. The indices necessary to compute the equivalent dollar values of prior years are to be developed using the link-chain method.

Eligible businesses

A taxpayer is eligible to use the simplified dollar-value LIFO method if its average annual gross receipts for its three preceding taxable years (or for such part of the previous three years that the taxpayer has been actively engaged in a trade or business) do not exceed \$5 million. In the case of a taxpayer who is a member of a controlled group, all persons who are members of the controlled

group are to be treated as a single taxpayer for the purpose of determining average annual gross receipts. A controlled group consists of all persons who would be treated as a single employer under sections 52 (a) or (b).

The provision of the Act is a replacement for the prior law rule allowing taxpayers with average annual gross receipts of \$2 million or less to elect to use a single inventory pool in accounting for its inventories using the LIFO method (sec. 474 of prior law). Any taxpayer who has in effect a valid election to use the single pool method of section 474 of prior law may continue to account for its inventories using that election, so long as the taxpayer continues to meet the requirements for that election. A taxpayer accounting for its inventories using the single pool election of section 474 of prior law is not eligible to elect to use the simplified dollar-value LIFO method of the Act for any year in which the election under prior law is effective. Under the Act, the election to use the single pool method of section 474 of prior law may be revoked without the consent of the Secretary of the Treasury.

Making the election

A taxpayer may elect to use the simplified dollar-value LIFO method without the consent of the Secretary of the Treasury. The election is to be made at such time and in such manner as the Secretary of the Treasury may prescribe. An election to use the method applies to the year of election and to all succeeding taxable years, unless permission to change to another method is obtained from the Secretary of the Treasury, or the taxpayer becomes ineligible to use the simplified dollar-value LIFO method as a result of having exceeded \$5 million of average annual gross receipts.

If the taxpayer previously has used a method of accounting for its inventories which allows the value of the inventories to be written down below cost, any amount of such writedown must be restored to income in accordance with section 472(d).

If the taxpayer makes an election to use the simplified dollar-value LIFO method, the method must be used for all the inventories of the taxpayer that are accounted for using a LIFO method.

Computation of simplified dollar-value LIFO inventories

In general.—The computation of inventory values using the simplified dollar-value LIFO method generally follows the rules provided for the computation of inventories using the dollar-value LIFO method in present Treas. Regs. sec. 1.472-8. The simplified dollar-value LIFO method differs from these current rules, however, with regard to the manner in which inventory items are to be pooled, the use of published indices to determine an annual index component for each pool, and the technique to be used in computing the cumulative index for a pool for any given year.

The simplified dollar-value LIFO method requires the use of multiple pools in order to avoid the construction of a weighted index specific to the taxpayer. Rather than construct such an index, the annual change in costs for the pool as a whole is measured by the change in the published index for the general category. The percentage change for the year in the published index for the general category determines the annual index for the pool.

The simplified dollar-value LIFO method uses the link-chain approach, rather than the double-extension approach, to compute a cumulative index for the purpose of determining equivalent dollar values in prior years.

Establishment of inventory pools.—The simplified dollar-value LIFO method requires inventory pools to be established based on either the 15 general (2 digit) categories of the "Producers Prices and Price Indexes for Commodity Groupings and Individual Items" (currently "Table 6. Producer prices and price indexes for commodity groupings and individual items, Producers Price Indexes" published monthly by the Bureau of Labor Statistics) or the 11 general categories of the "Consumer Price Index for All Urban Consumers" (currently "Table 3. Consumer Price Index for All Urban Consumers: Food expenditure categories, U.S. city average, CPI Detailer Report" and "Table 5. Consumer Price Index for All Urban Consumers: Nonfood expenditures categories, U.S. city average, CPI Detailed Report" published monthly by the Bureau of Labor Statistics) as set forth in Treas. Regs. sec. 1.472-8(e)(3)(iv).⁵ Retailers using the retail method are to use the CPI categories and all other taxpayers must use the Producers Price Index categories.

Selection of index.—The taxpayer must establish a month within its taxable year and use it to measure the annual change in the index for all pools. Once the choice of month is established, another month may not be used unless advance permission to do so is granted by the Secretary of the Treasury. The annual change is measured from the established month in one calendar year to the same month in the next calendar year. Comparison of different months to measure change is not allowed. If the published index figure which the taxpayer has used to measure annual change in costs for an inventory pool is restated by the Bureau of Labor Statistics after the taxpayer has filed its return for the taxable year in question, the return may not be filed again or amended in order to reflect the restatement. Instead, the change in costs for the pool for the next taxable year will be measured with regard to the index figure which was used to measure the change in costs for the prior taxable year as the return was filed, and not the restated value.

Rules applicable to year of change.—The first year for which the simplified dollar-value LIFO method is used will represent a new base year for the purpose of the dollar-value LIFO computation. The base year dollar value of each pool will be the portion of the beginning inventory value for such first year which is attributable to the inventory items represented by such pool.

The computations necessary to convert a taxpayer's inventories to the simplified dollar-value LIFO method will depend upon the method that was used to account for the inventories prior to the

⁵ The 11 categories in the Consumer Price Index are food and beverages; housing, maintenance and repair commodities; fuels (other than gasoline); house furnishings and housekeeping supplies; apparel commodities; private transportation (including gasoline); medical care commodities; entertainment commodities; tobacco products; toilet goods and personal care appliances; and school books and supplies. The 15 categories in the Producers Price Index are farm products; processed food and feeds; textile products and apparel; hides, skin, leather, and related products; fuels and related products and power; chemicals and allied products; rubber and plastic products; lumber and wood products; pulp, paper, and allied products; metals and metal products; machinery and equipment; furniture and household durables; nonmetallic mineral products; transportation equipment; and miscellaneous products.

year of election. A taxpayer that has been using the FIFO method to value its inventories must establish base year dollar values for each of its pools by assigning the inventory items to their respective pools and combining their values. The combined values of inventory items assigned to a pool constitute the base year layer of the pool for future dollar-value LIFO computations.

A taxpayer changing to the simplified dollar-value method from a method that allows inventories to be stated at less than cost (such as the FIFO method) must restore to income any amounts by which the previous inventories were written down below cost, as required by section 472(d). The base year dollar value of the pools established for dollar-value computations will include any amounts required to be recognized as income by section 472(d).

A taxpayer that has been using a LIFO method must establish values for each of its pools expressed in base year dollars in generally the same manner as does a taxpayer that has been using the FIFO method. In order to preserve pre-existing LIFO layers, however, the entire value of the inventory is not considered as attributable to the base year as is the case for taxpayers that have been using the FIFO method. Instead, the taxpayer is required to restate the prior years' layers in values expressed in base year dollars by comparing the prices at which such goods were added to inventories and determining an index for the layer with reference to the present value of the same inventory item.

Example.—The following example shows the computations required by a taxpayer in the first year in which it uses the simplified dollar-value LIFO method. The example assumes that the taxpayer used the FIFO method to calculate inventories in prior years.

The taxpayer's inventories consist of a chemical, classified in the "Chemicals and Allied Products" general category, and a high school chemistry text book, classified in the "Pulp, Paper and Allied Products" general category. The index numbers for the "Chemicals and Allied Products" general category are 200 for the prior year (the "base year") and 220 for the current year (the "first LIFO year"). The index numbers for the "Pulp, Paper and Allied Products" general category are 142 for the prior year and 150 for the current year. In the prior year, the present dollar value of the taxpayer's ending inventory was \$30,000 for the chemical and \$30,000 for the textbooks. In the current year, the present dollar value of the taxpayer's ending inventory is \$35,000 for the chemical and \$30,000 for the textbooks.

As the two types of inventory items are classified in different general categories, the taxpayer must set up a separate dollar-value LIFO pool for each. The annual index for each pool is determined by taking one plus the percentage change in the index for the general category, as shown in the following table.

Pool	Current year index	Prior year index	Change	Percent change	Index
#1 ...	220	200	20	0.1000	1.1000
#2 ...	150	142	8	0.0563	1.0563

For years after the first year in which the method is used, the annual index would be multiplied by the cumulative index for the prior year to determine the current cumulative index. For the first year in which the simplified dollar-value LIFO method is used, the annual index and the cumulative index are the same.

The present dollar value of the ending inventory for the current year is divided by the cumulative index to restate the ending inventory in its equivalent value in base year dollars. This amount is assigned to the appropriate LIFO inventory layers and multiplied by the cumulative index for the year to which the layer relates in order to find an indexed dollar value for that layer. The sum of the indexed dollar values for the layers is the ending LIFO inventory value for the pool. These computations, for the taxpayer's first year using the simplified dollar-value LIFO method, are shown below.

POOL #1:

Current year dollar value of inventory.....	\$35,000
Divided by index.....	1.100
Inventory in base year dollars.....	\$31,818

LIFO layers	Base year dollar value	Dollar index	Indexed dollar value
Base year	\$30,000	1.0000	\$30,000
First LIFO year	1,818	1.1000	2,000
Ending inventory	\$31,818		\$32,000

POOL #2:

Current year dollar value of inventory.....	\$30,000
Divided by index.....	1.0563
Inventory in base year dollars.....	\$28,401

	Base year dollar value	Index	Indexed dollar value
Base year	\$28,401	1.0000	\$28,401
First LIFO year	0	0	0
Ending inventory	\$28,401		\$28,401

TOTAL ENDING INVENTORY:

Pool #1	\$32,000
Pool #2	28,401
	<u>\$60,401</u>

Effective Date

The provision is effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provision is estimated to decrease fiscal year budget receipts by \$131 million in 1987, \$207 million in 1988, \$317 million in 1989, \$513 million in 1990, and \$807 million in 1991.

C. Installment Sales (Secs. 811 and 812 of the Act and secs. 453, 453A and 453C of the Code) ⁶

Prior Law

In general

Under both present and prior law, gain or loss from a sale of property generally is recognized in the taxable year in which the property is sold. Nonetheless, gain from certain sales of property in exchange for which the seller receives deferred payments is reported on the installment method, unless the taxpayer elects otherwise (sec. 453). Eligible sales include dispositions of personal property on the installment plan by a person who regularly sells or otherwise disposes of personal property on the installment plan (sec. 453A) and other dispositions of noninventory property, including publicly traded property, where at least one payment is to be received after the close of the taxable year in which the disposition occurs (sec. 453(b)(1)). The installment method may not be used where a sale results in a loss.

Under the installment method, in any taxable year, a taxpayer recognizes income resulting from a disposition of property equal to an amount that bears the same ratio to the payments received in that year that the gross profit under the contract bears to the total contract price. Payments taken into account for this purpose generally include cash or other property (including foreign currency and obligations of third parties), marketable securities, certain assumptions of liabilities, and evidences of indebtedness of the purchaser that are payable on demand or are readily tradable (Temp. Treas. Reg. sec. 15A.453-1(b)(3)).

For example, assume property that has a basis of \$50,000 is sold in a transaction eligible for installment reporting. The seller receives \$40,000 immediately in cash and will receive \$60,000 (plus interest at the current market rate) in the next taxable year. Under the installment method, the seller recognizes \$20,000 of gain immediately—\$50,000/\$100,000 (gross profit ratio) times \$40,000 (payments received). The seller recognizes the remaining \$30,000 of gain when the final payment is received—\$50,000/\$100,000 times \$60,000.

Sales under a revolving credit plan

Taxpayers who sell property under arrangements commonly known as revolving credit plans are permitted to treat a portion of the receivables arising from sales on such a plan as installment re-

⁶ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 903; H.Rep. 99-426, pp. 609-615; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 311 and 312; S.Rep. 99-313, pp. 122-132; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 293-301 (Conference Report).

ceivables and report income therefrom on the installment method (Treas. Reg. sec. 1.453-2(d)). In general, those regulations define a revolving credit plan to include a cycle budget account, a flexible budget account, a continuous budget account, and other similar arrangements under which the customer agrees to pay a part of the outstanding balance of the customer's account during each period of time for which a periodic statement of charges and credits is rendered.

Dispositions of installment obligations

Generally, if an installment obligation is disposed of, gain (or loss) is recognized equal to either (a) the difference between the amount realized and the basis of the obligation in the case of satisfaction at other than face value, or sale or exchange of the obligation, or (b) the difference between the fair market value of the obligation at the time of the disposition and the basis of the obligation in the case of any other disposition (sec. 453B). The basis of the obligation is equal to the basis of the property sold plus amounts of gain previously recognized, less the amount of any payments received. In general, under prior law, the mere pledge of an installment obligation as collateral for a loan is not treated as a disposition.⁷

Reasons for Change

Proportionate disallowance rule

In general, the underlying reason for allowing the reporting of gain on the installment method for Federal income tax purposes is that the seller may be unable to pay tax currently because no cash may be available until payments under the obligation are received. The Congress believed that the ability to defer taxation by using the installment method is inappropriate in the case of gains realized by dealers on ordinary income assets, and also with respect to gains realized on certain business or rental property, to the extent that the taxpayer has been able to receive cash from borrowings related to its installment obligations.

The Congress believed that the borrowings of a taxpayer generally are related to its installment obligations in one of two ways. In general, either the taxpayer would not undertake all or a portion of the borrowings but for its extending credit in connection with the sale of its property, or the taxpayer's borrowing ability is enhanced by the presence of the installment obligations among the taxpayer's assets. The Congress recognized, however, that it is extremely difficult to determine with any precision the extent of the nexus between the taxpayer's borrowings and its installment obligations. Hence, the Congress believed it appropriate to adopt a rule which assumes that the borrowings of the taxpayer may be allocated among the taxpayer's assets on a pro rata basis. Nevertheless, the Congress believed that personal use property, as well as indebt-

⁷ See, e.g., *Town and Country Food Co., Inc. v. Commissioner*, 51 T.C. 1049 (1969), acq. 1969-2 C.B. XXV; *United Surgical Steel Company, Inc. v. Commissioner*, 54 T.C. 1215 (1970), acq. 1971-2 C.B. 3.

edness secured primarily by such property, should not be taken into account.

The Congress recognized that arguments may be made that, in certain circumstances, a taxpayer's borrowings may appear to have no nexus whatsoever to its installment obligations, and that, in other circumstances, a taxpayer's borrowings may appear to be so closely related to its installment obligations that the installment obligations could appropriately be treated as having been disposed of.⁸ Nevertheless, rather than making necessary the difficult and subjective inquiry regarding the nexus between the borrowings of a taxpayer and its installment obligations, the Congress believed that imposing a limitation based on a pro rata allocation of the taxpayer's borrowings is an appropriate accommodation of competing concerns.

The Congress believed, however, that it is appropriate to provide elective treatment for installment obligations arising from certain sales of real property or similar interests. These interests generally are "timeshares" and residential lots. The Congress believed that taxpayers making such sales should not be subject to the proportionate disallowance rule if they elect to pay interest to compensate the Federal Government for the the benefit of deferring the payment of their tax liability.

In addition, the Congress believed that an exception should be provided for installment obligations arising from sales by a manufacturer to a dealer, where the term of the dealer's obligation is based on the time that the dealer resells or rents the property, where the seller has the right to repurchase the property after a specified period, and where the amount of the dealer's outstanding installment obligations is a significant percentage of its total sales to dealers. The Congress believed that the taxpayer should not be required to recognize income under the proportionate disallowance rule in such circumstances because this type of arrangement sufficiently resembles a consignment arrangement of the dealer's inventory to warrant an exception from the general rule.⁹

Revolving credit plans and publicly traded property

In addition to the general limitation on the use of the installment method, the Congress believed that two additional limitations should be imposed. First, the Congress believed that sales under a revolving credit plan should not be permitted to be accounted for under the installment method. The Congress believed that such sales more closely resemble the provision of a flexible line of credit accompanied by cash sales by the seller, and therefore is not appropriately afforded the use of the installment method. Second, the Congress believed that the installment method should not be available for sales of certain publicly traded property. Since the taxpayer can easily sell such property for cash in the public market, the Congress believed that such property does not present the same li-

⁸ The Congress intended no change in present law regarding the circumstances under which an installment obligation may be treated as having been disposed of.

⁹ The Congress intended no inference regarding the treatment of any particular transactions as either sales or consignments.

quidity problem that the installment method is intended to alleviate.

Explanation of Provision

In general

In general, the Act limits the availability of the installment method of accounting in three circumstances. First, the Act disallows the use of the installment method with respect to a portion of certain installment receivables, based on the amount of the outstanding indebtedness of the taxpayer. The Act grants an election to taxpayers selling certain "timeshares" and residential lots whereby such taxpayers may elect to pay interest on the deferral of their tax liability and not be subject to the general rules under the Act relating to installment sales. In addition, the Act retains prior law for certain installment obligations the term of which is dependent on the time of resale (or of the renting) of the property whose sale gave rise to the obligation.

Second, the Act prohibits taxpayers from using the installment method for sales pursuant to a revolving credit plan. Third, the Act provides that the installment method cannot be used for sales of certain publicly traded property.

Proportionate disallowance rule

In general

Under the Act, use of the installment method for certain sales by persons who regularly sell real or personal property described in section 1221(1), and for certain sales of business or rental property, is limited based on the amount of the outstanding indebtedness of the taxpayer. The limitation generally is applied by determining the amount of the taxpayer's "allocable installment indebtedness" for each taxable year and treating such amount as a payment immediately before the close of the taxable year on "applicable installment obligations" of the taxpayer that arose in that taxable year and are still outstanding as of the end of the year.¹⁰

"Allocable installment indebtedness"

Definition of "allocable installment indebtedness".—In general, allocable installment indebtedness for any taxable year is determined by (1) dividing the outstanding face amount of the taxpayer's "applicable installment obligations" held at the end of the year by the sum of (a) the outstanding face amount of all installment obligations (i.e., both applicable installment obligations and all other installment obligations)¹¹ and (b) the adjusted basis of all

¹⁰ The provisions of the Act do not affect the treatment of any payment (within the meaning of sec. 453(c)) prior to the close of the taxable year of sale, which payment would be accounted for under the ordinary rules for applying the installment method.

¹¹ Thus, for example, if an installment obligation were issued with an original face amount of \$1,000, and payments of \$400 were actually received on the obligation during the year of sale, the outstanding face amount of the obligation for purposes of applying the provision would be \$600 as of the end of the year of sale. Similarly, if an additional \$400 were paid on the obligation in the subsequent year, then the outstanding face amount of the obligation would be \$200 for purposes of applying the provision as of the end of such subsequent year. Payments deemed to be made under the proportionate disallowance rule do not affect the amounts treated as outstanding, however.

other assets of the taxpayer as of the end of the year (taking into account adjustments affecting basis for such year, including depreciation),¹² (2) multiplying the resulting quotient by the appropriate measure of the taxpayer's indebtedness, and (3) subtracting any allocable installment indebtedness that is attributable to applicable installment obligations arising in previous years. In the case of an individual, this computation does not take into account assets that are personal use property within the meaning of section 1275(b)(3) (including installment obligations arising from the sale of such property).

Definition of "applicable installment obligation".—"Applicable installment obligations" are any installment obligations that arise (1) from the sale after February 28, 1986, of personal property on the installment plan by a person who regularly sells or otherwise disposes of such personal property on the installment plan, (2) from the sale after February 28, 1986, of real property that is held by the taxpayer for sale to customers in the ordinary course of a trade or business, or (3) from the sale after August 16, 1986, of real property used in the taxpayer's trade or business or held for the production of rental income, provided that the selling price of the property exceeds \$150,000, so long as the obligation in any case is held by the seller or a member of the same affiliated group as the seller.¹³ Applicable installment obligations do not include, however, installment obligations arising from the sale of property used or property produced in the the trade or business of farming.¹⁴

The Congress also intended that the term "applicable installment obligation" include any obligation held by any person if the basis of such obligation in the hands of such person is determined (in whole or in part) by reference to the basis of such obligation in the hands of another person and such obligation was an applicable installment obligation in the hands of such other person.¹⁵

Treatment of subsequent payments.—In each subsequent taxable year, the taxpayer is not required to recognize gain attributable to applicable installment obligations arising in any prior year to the extent that the payments in each such subsequent year on the obligations do not exceed the amount of allocable installment indebtedness attributable to such obligations (i.e., the amount of allocable installment indebtedness that has previously been allocated to the applicable installment obligation as reduced in the manner described below). On the receipt of such payments, the allocable installment indebtedness attributable to the obligation on which the payment is received is reduced (but not below zero) by the amount of such payments. Payments on an applicable installment obligation in excess of the allocable installment indebtedness allocable to

¹² Taxpayers may elect to use depreciation deductions as calculated under section 312(k) for purposes of computing the adjusted basis of its assets under this formula.

¹³ Thus, for example, an installment obligation arising from the sale of a parcel of undeveloped land that is held for investment only (and is not held for sale to customers, or for rental, or for use in a trade or business), would not be treated as an applicable installment obligation.

¹⁴ Thus, for example, the proportionate disallowance rule does not apply to installment obligations arising from the sale of crops or livestock held for slaughter.

¹⁵ A technical correction may be necessary so that the statute reflects this intention. Such a correction was included in the versions of H. Con. Res. 395 which passed the House and Senate in the 99th Congress.

such obligation are accounted for under the ordinary rules for applying the installment method.

Treatment of applicable installment obligations arising in prior years.—In general, allocable installment indebtedness for a particular applicable installment obligation is not adjusted after its initial computation, except to reflect the receipt of payments on the installment obligation that do not result in the recognition of any additional gain. However, in order to assure that a proportionate share of a taxpayer's indebtedness is allocated to all installment obligations, additional allocable installment indebtedness may be allocated to installment obligations arising in previous years if the amount of allocable installment indebtedness for a particular taxable year exceeds the amount of applicable installment obligations arising in that year and outstanding at year end. In this situation, the amount of such excess is first allocated to (and treated as a payment on) outstanding applicable installment obligations that arose in the preceding year (but only to the extent that the face amount outstanding exceeds the allocable installment indebtedness for such obligations), and then allocated in a similar fashion to each preceding taxable year until the full amount of the excess is allocated.

Calculation of indebtedness

Under the Act, the taxpayer must compute its indebtedness for the year in order to calculate the amount of its allocable installment indebtedness. In general, the Act provides the calculation of indebtedness is to be made, for this purpose, on a quarterly basis, and the average of the four quarters is used. However, in the case of a taxpayer who has no applicable installment obligations as of the close of the taxable year, other than applicable installment obligations arising from the sale of real property used in the taxpayer's trade or business or held for the production of rental income, then the taxpayer's allocable installment indebtedness is computed by using the taxpayer's indebtedness as of the close of the taxable year rather than the average for four quarters.¹⁶ In either case, in making the calculation, all indebtedness of the taxpayer generally is taken account including (but not limited to) accounts payable and accrued expenses as well as other amounts more commonly considered as indebtedness, such as loans from banks, and indebtedness arising from the issuance of bonds or in connection with the purchase of property by the taxpayer.¹⁷ An exception is made, however, for indebtedness that is secured primarily by personal use property. The Congress recognized that the extent to which indebtedness relating to accrued expenses and similar items is reflected in the computation may be diminished, for example, where a taxpayer regularly pays all of its accrued expenses and similar items

¹⁶ The Treasury Department is given authority to issue regulations that would prevent possible avoidance of the proportionate disallowance rule where the calculation of indebtedness is made on an annual basis.

¹⁷ Where any indebtedness of the taxpayer, or any applicable installment obligation, is subject to the rules of either section 483 or section 1274, and either such section causes a portion of the principal amount of such indebtedness or applicable installment obligation to be recharacterized as interest, then the provisions of the Act are to be applied based on the restated principal amounts.

at month end. However, the Congress intended that any repayments of indebtedness for the purpose of avoiding this limitation be ignored for this purpose.

Commonly controlled groups

Under the Act, all persons treated as a single employer under section 52(a) or section 52(b) (the "controlled group") are treated as one taxpayer for purposes of making the required computations (regardless of whether they have employees). Thus, for purposes of the Act, each member is treated as having all of the assets and liabilities of every other member. Hence, in applying the proportionate disallowance rule to the controlled group, allocable installment indebtedness is determined using the aggregate of all of the assets and all of the liabilities of the members of the controlled group. The total allocable installment indebtedness so determined then is allocated pro rata to the applicable installment obligations held by members of the controlled group (regardless of the amount of any indebtedness that any particular member of the group has outstanding), and the regular provisions of the proportionate disallowance rule then are applied.

The Congress intended that any indebtedness between members of the group generally would be disregarded (as both assets and liabilities) for this purpose. In addition, the Congress intended that the adjusted basis of any asset transferred from one member of the group to another is to be reduced, for this purpose, by the portion of the gain that has not been recognized or otherwise has been deferred as of the time of the computation, either under the consolidated return regulations (*see* Treas. Reg. sec. 1.1504-13) or because the gain on the transfer was eligible to be reported under the installment method.

Regulations

The Act provides authority under which the Treasury Department may issue regulations that disallow the use of the installment method in whole or in part for transactions in which the effect of the proportionate disallowance rule would be avoided through the use of related parties, pass-through entities, or intermediaries. The Congress intended that the meaning of related party is to be construed for these purposes in a manner consistent with carrying out the purposes of the proportionate disallowance rule. Thus, the Congress intended that the regulations may treat any corporation, partnership, or trust as related to its shareholders, partners, or beneficiaries, as the case may be, in circumstances where the proportionate disallowance rule otherwise might be avoided.

The Congress intended that these regulations may aggregate the assets of the related parties for purposes of applying the proportionate disallowance rule. For example, the Congress intended that such regulations may aggregate the assets and indebtedness of a partnership and each of its partners in determining the extent to which each such partner may report gain arising from the installment sale of partnership assets on the installment method.

In addition, the Congress intended that the regulations may treat installment obligations arising from the sale of an interest in one related party by another as applicable installment obligations to

the extent that installment obligations arising from the sale of the assets of the related party the interest in which is sold would be treated as applicable installment obligations.

The Congress intended that these regulations may apply in appropriate cases to all transactions after the general effective date of the provision, but prior to the issuance of the regulations.

Example

The application of the rules of the Act may be illustrated by the following example. The example assumes that the taxpayer is a dealer in real property, uses the calendar year as its taxable year, that its operations began in 1987, and that all of the taxpayer's sales are made at a profit and are accounted for under the installment method.

Calendar year 1987.—During 1987, the taxpayer sells one property¹⁸ for \$90,000, taking back the purchaser's note for the entire purchase price.¹⁹ No payments are received on the obligation in 1987.

The aggregate adjusted basis of the taxpayer's assets, other than the installment obligation,²⁰ is \$310,000 as of the end of 1987. The taxpayer's average quarterly indebtedness for 1987 is \$200,000.

The taxpayer's allocable installment indebtedness for 1987 would be \$45,000. This amount is computed by multiplying (1) the taxpayer's average quarterly indebtedness for 1987 (\$200,000) by (2) the quotient of (a) the total face amount of taxpayer's outstanding applicable installment obligations (\$90,000) and (b) the sum of (i) the total face amount of the taxpayer's installment obligations (\$90,000) and (ii) the adjusted basis of its other assets as of the end of 1987 (\$310,000). The taxpayer would be treated as receiving a payment of \$45,000 on the outstanding installment obligation as of the close of 1987.²¹

Calendar year 1988.—During 1988, the taxpayer sells another property for \$110,000, taking back the purchaser's note for the entire purchase price. No payments are received in 1988 on either the 1987 or 1988 installment obligations held by the taxpayer.

The aggregate adjusted basis of the taxpayer's assets, other than the installment obligations, is \$400,000 as of the end of 1988. The taxpayer's average quarterly indebtedness for 1988 is \$300,000.

¹⁸ All sales referred to in the example are assumed to be of property that is held for sale to customers in the ordinary course of the taxpayer's trade or business. The facts of the example are intended only for purposes of illustrating the provisions of the Act limiting the use of the installment method. The Congress intended no inference regarding the circumstances under which property is properly considered to be held for sale to customers in the ordinary course of a trade or business.

¹⁹ All installment obligations received in this example are assumed not to be payable on demand or readily tradable (within the meaning of sec. 453(f)). In addition, such installment obligations are assumed to have stated interest sufficient to avoid the recharacterization of any portion of the principal amount as interest under section 483 or section 1274. Payments referred to in the example are payments of principal on the obligations.

²⁰ It is assumed that none of the taxpayer's assets in the example other than its applicable installment obligations are installment obligations. If so, these assets would be taken into account at their outstanding face amount rather than their adjusted basis.

²¹ Where the taxpayer has more than one applicable installment obligation outstanding as of the close of the taxable year, the amount of allocable installment indebtedness for the year would be allocated pro rata (by outstanding face amount) to the obligations, and the proportionately allocated amount would be treated as a payment on each respective outstanding obligation.

The taxpayer's allocable installment indebtedness for 1988 would be \$55,000. This amount is computed by multiplying (1) the taxpayer's average quarterly indebtedness for 1988 (\$300,000) by (2) the quotient of (a) the total face amount of the taxpayer's outstanding applicable installment obligations (\$200,000) and (b) the sum of (i) the total face amount of the taxpayer's installment obligations (\$200,000) and (ii) the adjusted basis of its other assets as of the end of 1988 (\$400,000), and (3) subtracting the amount of allocable installment indebtedness allocated to applicable installment obligations that arose prior to 1988 (\$45,000). The taxpayer would be treated as having received a payment of \$55,000 on the installment obligation that arose in 1988, as of the close of 1988.

Calendar year 1989.—In 1989, the taxpayer sells a third property for \$130,000. Also in 1989, the installment obligation that the taxpayer received in 1987 is paid in full. No payments are received on either the obligation that was received in 1988 or the one received in 1989.

The aggregate adjusted basis of the taxpayer's assets, other than its installment obligations, is \$360,000 as of the end of 1989. The taxpayer's average quarterly indebtedness for 1989 is \$500,000.

With respect to the \$90,000 payment that was received on the installment obligation that arose in 1987, the first \$45,000 of the payment would not result in the recognition of any additional gain with respect to the obligation, and would reduce the amount of allocable installment indebtedness that is treated as allocated to that obligation. The next \$45,000 would be treated as an additional payment on the obligation that results in the recognition of additional gain under the installment method.

Taking into account the payment on the 1987 installment obligation, the allocable installment indebtedness allocated to taxable years before 1989, for purposes of computing allocable installment indebtedness for 1989, would be \$55,000 (\$45,000 of allocable installment indebtedness from 1987 plus \$55,000 of allocable installment indebtedness from 1988 minus \$45,000 of allocable installment indebtedness from 1987 returned in 1989).

The taxpayer's allocable installment indebtedness for 1989 would be \$145,000. This amount is computed by multiplying (1) the taxpayer's average quarterly indebtedness for 1989 (\$500,000) by (2) the quotient of (a) the total face amount of the taxpayer's outstanding applicable installment obligations as of the end of 1989 (\$110,000 plus \$130,000, or \$240,000) and (b) the sum of (i) the total face amount of the taxpayer's installment obligations (\$240,000) and (ii) the adjusted basis of its other assets as of the end of 1989 (\$360,000), and (3) subtracting the amount of allocable installment indebtedness allocated as of the close of 1989 to applicable installment obligations that arose prior to 1989 (\$55,000).

Since the taxpayer's allocable installment indebtedness for 1989 (\$145,000) exceeds the amount of applicable installment obligations arising in 1989 and outstanding at the end of the year (\$130,000), the taxpayer is treated as having received a payment, as of the close of 1989, of \$130,000 on the installment obligation that arose in 1989, and a payment of \$15,000 (i.e., the excess of \$145,000 over \$130,000) on the installment obligation that arose in 1988.

Special election for sales of timeshares and residential lots

The Act provides an election under which the proportionate disallowance rule would not apply to installment obligations that arise from the sale of certain types of property by a dealer to an individual, but only if the individual's obligation is not guaranteed or insured by any third person other than an individual.²² The obligation must arise from the sale of a "timeshare," or of unimproved land if the development of such land is not done by the seller of the land or any affiliate of the seller.²³

For these purposes, a timeshare is a right to use a specified parcel of residential real property for a period not exceeding six weeks per year. The Congress intended that where an individual or any related person owns more than one timeshare in a single parcel of residential real property, then all of the timeshares of the individual and the related parties are aggregated for purposes of determining whether the six week test is met.²⁴ In addition, for purposes of the provision, a timeshare may include a right to use campground sites in designated locations over ascertainable periods of time for recreational (not residential) purposes.²⁵

If these conditions are met, then the seller of the property that gave rise to these obligations may elect not to have the general rules of the Act relating to installment sales apply. If the seller so elects with respect to an installment obligation, he is required to pay interest on the portion of any tax for any taxable year (determined without regard to the deduction for such interest) which is attributable to the receipt of payments on such obligation in such year (other than payments received in the year of sale). Interest is computed for the period from the date of sale to the date on which the payment is received. The interest rate used for this purpose is 100 percent of the applicable Federal rate that would apply to the installment obligation received in the sale (without regard to the three-month lookback rule of section 1274(d)(2)).

Exception for certain sales by manufacturers to dealers

The Act provides an exception for installment obligations arising from the sale of tangible personal property by the manufacturer of the property (or an affiliate of the manufacturer) to a dealer,²⁶ but only if the dealer is obligated to make payments of principal only when the dealer resells (or rents) the property, the manufacturer has the right to repurchase the property at a fixed (or ascertainable) price after no longer than a nine month period following the sale to the dealer, and certain other conditions are met. In order to meet the other conditions, the aggregate face amount of the installment obligations that otherwise qualify for the exception must equal at least 50 percent of the total sales to dealers that give rise

²² The Congress intended that any Federal or private insurance relating to the payment of the individual's obligation would prevent the obligation from qualifying for the special election.

²³ The Congress intended that a parcel of land is not to be considered to have been improved or developed if it merely has been provided with the benefits of common infrastructure items such as roads and sewers.

²⁴ For this purpose, an individual and the individual's spouse, parents, children, and grandchildren are treated as related parties.

²⁵ The Congress intended no inference whether income from transactions involving such "campground timeshares" may properly be accounted for on the installment method.

²⁶ I.e., the sale of the property must be intended to be for resale or leasing by the dealer.

to such receivables (the "fifty percent test") in both the taxable year and the preceding taxable year, except that, if the taxpayer met all of the requirements for the exception in the preceding taxable year, then the taxpayer would not be treated as failing to meet the fifty percent test before the second consecutive year in which the taxpayer did not actually meet the test. For purposes of applying the fifty percent test, the aggregate face amount of the taxpayer's receivables is computed using the weighted average of the taxpayer's receivables outstanding at the end of each month during the taxpayer's taxable year. In addition, these requirements must be met by the taxpayer in its first taxable year beginning after the date of enactment of the Act (October 22, 1986). For purposes of this provision, obligations issued before the date of enactment are treated as meeting the applicable requirements if such obligations are conformed to the requirements of the provision within 60 days of the date of enactment of the Act.

Receivables that meet the conditions for the exception are not subject to the provisions of the Act relating only to limitation on the use of the installment method. The Congress intended no inference regarding the treatment of these transactions for Federal income tax purposes.

Revolving credit plans

Under the Act, taxpayers who sell property on a revolving credit plan are not permitted to account for such sales on the installment method. The Act treats such sales as installment sales with respect to which all payments are received in the year of sale. For this purpose, the Congress intended that the term "revolving credit plan" have the same meaning as that under prior law.²⁷

Publicly traded property

Under the Act, taxpayers who sell stock or securities that are traded on an established securities market or, to the extent provided in Treasury regulations, property (other than stock or securities) of a kind regularly traded on an established market, are not permitted to use the installment method to account for such sales. The Act treats such sales as installment sales with respect to which all payments are received in the year of sale.

The Congress intended that, in the case of sales that are made on an established market, where cash settlement of transactions customarily occurs several business days after the date on which a trade is made, that gain or loss would be recognized for Federal income tax purposes by both cash and accrual method taxpayers on the day that the trade is executed.

The Act also provides that, under regulations to be issued by the Secretary of the Treasury (which would be effective as of the time that the provisions of the Act are effective), use of the installment method may be disallowed in whole or in part where the provisions of the Act otherwise would be avoided through use of related parties or intermediaries. In general, the Congress intended that these

²⁷ See Treas. Reg. sec. 1.453-2(d).

regulations are to be similar to those relating to the proportionate disallowance rule.

Effective Date

Proportionate disallowance rule

In general, the proportionate disallowance rule is effective for taxable years ending after December 31, 1986, with respect to sales of property after February 28, 1986. For this purpose, the Congress intended that any sales of property after February 28, 1986, but before the first taxable year of the taxpayer ending after December 31, 1986, (i.e., if the taxpayer has a calendar year as a taxable year, or has a taxable period ending between February 28, 1986, and December 31, 1986), are to be treated as arising in the taxpayer's first taxable year ending after December 31, 1986.²⁸

In the case of installment obligations arising from the sale of real property in the ordinary course of the trade or business of the taxpayer, any gain attributable to allocable installment indebtedness allocated to any such installment obligations that arise (or are deemed to arise) in the first taxable year of the taxpayer ending after December 31, 1986, is taken into account ratably over the three taxable years beginning with such first taxable year; for installment obligations arising in the second taxable year of the taxpayer ending after December 31, 1986, any such gain is taken into account ratably over the two taxable years beginning with such second taxable year.

The Congress intended that the rules of the Act relating to the treatment of subsequent payments on applicable installment obligations are to be applied in this situation as if the provisions were fully effective in the first taxable year ending after December 31, 1986.

In the case of installment obligations arising from the sale of personal property in the ordinary course of the trade or business of the taxpayer, any increase in the tax liability of the taxpayer for the first taxable year of the taxpayer ending after December 31, 1986, on account of the application of the proportionate disallowance rule, is treated as being imposed ratably over the three taxable years beginning with such first taxable year; any increase in tax liability for the second taxable year of the taxpayer ending after December 31, 1986, on account of the proportionate disallowance rule (disregarding the ratable share of the increase in tax liability from the preceding taxable year), is treated as being imposed ratably over the two taxable years beginning with such second taxable year.

The Congress intended that the rules of the Act relating to the treatment of subsequent payments on applicable installment obligations are to be applied in this situation as if the provisions were fully effective in the first taxable year ending after December 31, 1986.

In the case of applicable installment obligations other than installment obligations arising from the sale of real or personal property in the ordinary course of a trade or business of the taxpayer,

²⁸ A technical correction may be appropriate to reflect this intention.

the proportionate disallowance rule is effective for taxable years ending after December 31, 1986, with respect to sales after August 16, 1986. The Congress intended that sales after August 16, 1986, and before the taxpayer's first taxable year ending after December 31, 1986, are to be treated as arising in the first taxable year of the taxpayer ending after December 31, 1986.²⁹

The Act excludes from the definition of applicable installment obligation, installment obligations arising from the sale of units of a specified condominium project. The Act also excludes certain indebtedness of a specified taxpayer from the calculation of the taxpayer's average quarterly indebtedness. In addition, the provisions of the Act are effective for taxable years ending after December 31, 1991, with respect to a specified taxpayer that incurred substantial indebtedness in connection with a specified acquisition.

Revolving credit plans

The provisions of the Act relating to sales pursuant to a revolving credit plan are effective for taxable years beginning after December 31, 1986. Any adjustment resulting from the change in method of accounting is taken into account over a period not exceeding four years. In cases where the adjustment is taken into account over a four year period, the taxpayer would take into account 15 percent of the adjustment in the first taxable year, 25 percent in the second taxable year, and 30 percent in each of the succeeding two taxable years.³⁰ The Congress intended that sales made pursuant to a revolving credit plan would not be subject to the proportionate disallowance rule, prior to the time at which the provisions of the Act relating to the treatment of sales pursuant to a revolving credit plan become effective.³¹

Publicly traded property

The provisions of the Act relating to sales of publicly traded property are effective for sales of property after December 31, 1986.³²

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$1,331 million in 1987, \$1,761 million in 1988, \$1,418 million in 1989, \$1,433 million in 1990, and \$1,472 million in 1991.

D. Capitalization Rules for Inventory, Construction, and Development Costs (Sec. 803 of the Act and new sec. 263A of the Code)³³

Prior Law

In general

Under both present and prior law, producers of property generally may not deduct currently the costs incurred in producing the property. Rather, such costs must be capitalized and recovered through an offset to sales price if the property is produced for sale, or through depreciation or amortization if the property is produced for the taxpayer's own use in a business or investment activity. Under prior law, although substantially all direct production costs were required to be capitalized, the treatment of indirect costs varied depending on the type of property produced. For example, different rules applied depending on whether the property was fungible property held in inventory, nonfungible property held for sale to customers, or property produced under a long-term contract.

Purchasers of goods for resale were subject to more liberal rules, which required only that direct acquisition costs be inventoried.

Inventories

Under both present and prior law, taxpayers must maintain inventories³⁴ and generally must use the accrual method of accounting for purchases and sales for Federal income tax purposes whenever necessary to clearly determine their income (sec. 471). In general, all producers and sellers of goods must maintain inventories under methods prescribed by the Internal Revenue Service that conform to the best accounting practice in the particular trade or business and that clearly reflecting income.

Purchased goods

In the case of purchased goods, a taxpayer was required under prior law to include in inventory the invoice price of the goods less any trade or other discounts. Cash discounts approximating a fair interest rate could be deducted or not at the taxpayer's option, provided a consistent practice was followed. Transportation or other necessary charges incurred in acquiring possession of the goods

³³ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 905; H.Rep. 99-426, pp. 615-638; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 302; S.Rep. 99-313, pp. 133-152; ; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 302-309 (Conference Report).

³⁴ The purpose of maintaining inventories is to assure that the costs of producing or acquiring goods are matched with the revenues realized from their sale. Inventory accounting accomplishes this by accumulating production or acquisition costs in an inventory account as they are incurred rather than allowing an immediate deduction when incurred. When the related goods are sold, these costs are removed from the inventory account and recorded as costs of sale, which reduce taxable income for the year of the sale.

then were added to this adjusted invoice price in determining the total inventory costs.³⁵ Thus, for example, freight-in, brokerage or franchise service fees, and handling charges incurred in connection with a purchase of goods were includible in inventory costs.³⁶ The courts generally held that storage and other costs incurred by the taxpayer while the goods were in its possession were not inventoriable costs, but could be deducted currently.³⁷

Manufactured goods

The Treasury regulations required that all direct and indirect "production costs" (costs incident to and necessary for production or manufacturing operations and processes) be included in an inventory account and not used to reduce taxable income until disposition of the goods to which they related. The determination of which direct and indirect costs constitute production costs was made in accordance with the "full absorption" method.³⁸ Direct production costs required to be included in an inventory account included the costs of materials forming an integral part of the product or consumed in the manufacturing process, and the costs of labor that were directly involved in fabrication of the product. Direct labor costs included not only wages and salaries of production workers and supervisors, but also such items as vacation and holiday pay, payroll taxes, and payments to supplemental unemployment benefit plans paid or incurred on behalf of employees engaged in direct labor.³⁹

Under the full absorption method, indirect production costs were divided into three categories. Costs in Category 1 were required to be included in inventory costs; costs in Category 2 need not be includible in inventory costs regardless of the taxpayer's financial reporting treatment; and costs in Category 3 were required to be included in inventory costs only if they were included in inventory costs for purposes of the taxpayer's financial reports.

Category 1 costs.—Category 1 costs included:

- (1) repair expenses,
- (2) maintenance,
- (3) utilities, such as heat, power, and light,
- (4) rent,
- (5) indirect labor and production supervisory wages, including basic compensation, overtime pay, vacation and holiday pay, sick leave pay, shift differential, payroll taxes, and contributions to a supplemental unemployment benefit plan,
- (6) indirect materials and supplies,
- (7) tools and equipment not capitalized, and
- (8) costs of quality control and inspection to the extent such costs are incident to and necessary for production or manufacturing operations or processes.⁴⁰

Category 2 costs.—Category 2 costs included:

- (1) marketing expenses,

³⁷ See, e.g., *McIntosh-Mills v. Commissioner*, 9 B.T.A. 301 (1927), acq. VII-1 C.B. 21.

³⁸ Treas. Reg. sec. 1.471-11.

³⁹ Treas. Reg. sec. 1.471-11(b)(2).

⁴⁰ Treas. Reg. sec. 1.471-11(c)(2)(i).

- (2) advertising expenses,
- (3) selling expenses,
- (4) other distribution expenses,
- (5) interest,
- (6) research and experimental expenses, including engineering and product development expenses,
- (7) losses under section 165,
- (8) percentage depletion in excess of cost depletion,
- (9) depreciation and amortization reported for Federal income tax purposes in excess of depreciation reported for financial statement purposes,
- (10) income taxes attributable to income received on the sale of inventory,
- (11) pension contributions to the extent they represent past services costs,
- (12) general and administrative expenses incident to and necessary for the taxpayer's activities as a whole rather than to production or manufacturing operations or processes, and
- (13) salaries paid to officers attributable to the performance of services that are incident to and necessary for the taxpayer's activities as a whole, rather than to production or manufacturing operations.⁴¹

Category 3 costs.—Category 3 costs included:

- (1) taxes otherwise allowable as a deduction under section 164 (other than State and local and foreign income taxes) attributable to assets incident to and necessary for production or manufacturing operations,
- (2) depreciation reported on financial statements and cost depletion on assets incident to and necessary for production or manufacturing operations or processes,
- (3) pension and profit-sharing contributions representing current service costs otherwise allowable as a deduction under section 404, and other employee benefits incurred on behalf of labor incident to and necessary for production or manufacturing operations or processes,
- (4) costs attributable to rework labor, scrap, spoilage, and strikes that are incident to and necessary for production or manufacturing operations or processes,
- (5) factory administrative expenses (not including any cost of selling or any return of capital),
- (6) salaries paid to officers attributable to services performed incident to and necessary for production or manufacturing operations or processes, and
- (7) insurance costs incident to and necessary for production or manufacturing operations or processes (e.g., insurance on production machinery and equipment).⁴²

If a taxpayer used a method of accounting for financial reporting purposes that was not allowable for Federal income tax purposes (such as the "prime cost" method, which includes as inventory costs only direct costs), taxes, depreciation, production-related officers' salaries, and insurance costs were among the principal costs

⁴¹ Treas. Reg. sec. 1.471-11(c)(2)(ii).

⁴² Treas. Reg. sec. 1.471-11(c)(2)(iii).

required to be taken into account in inventory. Employee benefit costs and costs attributable to strikes, rework labor, scrap, and spoilage were among the principal costs not required to have been included in inventory costs.⁴³

Indirect production costs required to be treated as inventory costs were allocated to goods in a taxpayer's ending inventory using a method of allocation that fairly apportioned such costs among the goods produced. The Treasury regulations authorized use of either the standard cost method or the manufacturing burden rate method. In general, the standard cost method assigned a predetermined rate (e.g., \$X per direct labor hour) for each element of product cost, including direct materials and labor and fixed and variable overhead. The manufacturing burden rate method was similar to the standard cost method but assigned predetermined rates only to overhead costs.

Self-constructed property and nonfungible property produced for sale

Under present and prior law, the costs of acquiring, constructing, or improving buildings, machinery, equipment, or other assets having a useful life that extends substantially beyond the end of the taxable year are not currently deductible (sec. 263).⁴⁴ Rather, such "capital" expenditures become part of the basis of the acquired, constructed, or improved property. These costs are recoverable over the useful life of the property through depreciation or amortization deductions if the property is used in a business or investment activity and has a determinate useful life, and is therefore subject to an allowance for depreciation or amortization. Otherwise, such costs are recoverable when the property is sold or otherwise disposed of. At the time of sale or other disposition, any unrecovered basis of the asset is offset against the amount realized in computing gain or loss.

A taxpayer that constructs a building or other capital asset for its own use must capitalize all direct construction costs such as direct materials and labor. Moreover, depreciation on the taxpayer's equipment used to construct the property may not be deducted currently but must be capitalized into the basis of the self-constructed property.⁴⁵

The proper tax treatment of many indirect expenses incurred in connection with the self-construction of property, however, was less certain under prior law. One line of cases referred to the authority of section 446(b), which requires use of an accounting method that clearly reflects income, and to the Supreme Court's holding in *Idaho Power Co. v. Commissioner*, in holding that vacation pay, payroll taxes, health and welfare benefits, and general overhead costs and executive salaries attributable to self-construction must be capitalized rather than deducted currently.⁴⁶ Other cases used a

⁴⁴ See also, Treas. Reg. secs. 1.263(a)-2(a); 1.263(a)-1(b); 1.446-1(a)(4)(ii); 1.461-1(a)(2).

⁴⁵ *Idaho Power Co. v. Commissioner*, 418 U.S. 1 (1974).

⁴⁶ See, e.g., *Adolph Coors Co. v. Commissioner*, 519 F.2d 1280 (10th Cir. 1975), cert. denied, 423 U.S. 1087 (1976) (Internal Revenue Service is justified in requiring capitalization of overhead costs of construction); *Louisville & Nashville R.R. Co. v. Commissioner*, 641 F.2d 735, (6th Cir.

facts and circumstances test and ruled that such indirect costs need be capitalized only to the extent they are incremental or variable overhead costs, that is, to the extent they exceed fixed overhead or vary significantly with the level of self-construction.⁴⁷

Under the Treasury regulations, the use of "incremental" costing for indirect costs (in lieu of full absorption costing) was expressly proscribed in the case of inventory, but no such prohibition applied for self-constructed property. In some instances, the Internal Revenue Service acknowledged the deductibility of certain indirect costs incurred during self-construction. In *Idaho Power*, for example, the Service conceded that the taxpayer was entitled to deduct payroll taxes incurred with respect to employees engaged in construction of the property.

Long-term contracts

Under prior law, special accounting rules applied to taxpayers providing goods under certain types of contracts spanning two or more taxable years. A taxpayer with income and expenses from "long-term contracts" could report under the traditional cash or accrual methods which were, subject to the restrictions previously mentioned,⁴⁸ generally available to all taxpayers. At the taxpayer's election, however, income and expenses attributable to long-term contracts could be accounted for under one of two alternative methods — the percentage of completion method or the completed contract method.

A long-term contract for this purpose was a building, installation, construction, or manufacturing contract that was not completed by the end of the taxable year in which it was entered into. A manufacturing contract qualified, however, only if it involved the manufacture of either unique items of a type not normally carried in the finished goods inventory of the taxpayer, or items normally requiring more than 12 months to complete.⁴⁹

Percentage of completion method

Under the percentage of completion method, income was recognized according to the percentage of the contract completed during each taxable year. The determination of the portion of the contract completed during the taxable year could be made by either (1) comparing the costs incurred during the year to the total estimated costs to be incurred under the contract, or (2) comparing the work performed during the year with the estimated total work to be performed.⁵⁰ All costs attributable to the long-term contract were deductible in the year in which they were incurred, although a con-

1981), aff'g, rev'g, and remanding 66 T.C. 962 (1976) (upholding Tax Court's determination that vacation pay and health and welfare benefits were subject to capitalization, but reversing as to payroll taxes); *Variety Construction Co. v. Commissioner*, T.C. Memo 1962-257 (1962) (overhead costs held subject to capitalization).

⁴⁷ *Fort Howard Paper Co. v. Commissioner*, 49 T.C. 275 (1967) (incremental method and full absorption method equally permissible because taxpayer used the method for 35 years and the Internal Revenue Service had previously audited the taxpayer and did not object). See also I.T. 2196, IV-2 C.B. 112 (1925); *Paducah Water Co. v. Commissioner*, 33 F.2d 559 (D.C. Cir. 1929).

⁴⁸ For example, the cash method normally may not be used by a taxpayer required to maintain inventories.

⁴⁹ Treas. Reg. sec. 1.451-3.

⁵⁰ Treas. Reg. sec. 1.451-3(c)(2).

tractor was required to maintain inventories for materials and supplies.

Completed contract method

Under the completed contract method, the entire gross contract price was included in income in the taxable year in which the contract was finally completed and accepted. All costs properly allocable to a long-term contract were deducted in the year of completion.

Regulations adopted in 1976 provided detailed rules for the allocation of costs between contract and non-contract costs. These costing rules essentially paralleled the full absorption rules, except that under the completed contract method most Category 3 costs were required to be treated as contract costs. Thus, unless a contract was subject to the "extended period long-term contract" rules described below, the following costs were not contract costs under prior law: marketing and selling expenses (including the cost of developing bids); advertising expenses; distribution expenses; interest; general and administrative expenses attributable to the performance of services that benefited the contractor's activities as a whole (e.g., payroll, legal, and accounting expenses); research and experimental expenses under section 174; losses under section 165; percentage depletion in excess of cost depletion; depreciation and amortization on idle equipment and facilities; the excess of depreciation or amortization reported for Federal income tax purposes over that reported on financial statements; income taxes attributable to income received from long-term contracts; pension and profit-sharing contributions and other employee benefits (whether representing past or current service costs); costs attributable to strikes, rework labor, scrap, and spoilage; and salaries of officers that benefit the contractor's activities as a whole.

In the Tax Equity and Fiscal Responsibility Act of 1982, P.L. 97-248 (TEFRA), the Congress directed the Treasury Department to modify the rules relating to allocation of costs to long-term contracts. In the case of "extended period long-term contracts"—those not expected to be completed within 24 months from the contract commencement date—certain costs previously not treated as contract costs were to be allocated to the contracts to the extent they either directly benefited or were incurred by reason of such contracts. These costs included:

- (1) bidding expenses on contracts awarded to the taxpayer;
- (2) distribution expenses, such as shipping costs;
- (3) general and administrative expenses properly allocable to long-term contracts under regulations prescribed by the Treasury Department;
- (4) research and development expenses either directly attributable to particular long-term contracts existing when the expenses were incurred, or incurred under an agreement to perform research and development;
- (5) depreciation, capital cost recovery, and amortization for equipment and facilities used in the performance of extended period long-term contracts, in excess of amounts reported for financial accounting purposes;

- (6) pension and profit-sharing contributions representing current service costs, and other employee benefits;
- (7) rework labor, scrap, and spoilage; and
- (8) percentage depletion in excess of cost depletion.

An exception to these rules was provided for contracts for the construction of real property if the contract was expected to be completed within three years, or if the contractor's average annual gross receipts for the three taxable years preceding the year of the contract did not exceed \$25 million. The Treasury regulations as adopted in 1976 continued to apply to these construction contracts and to all other long-term contracts expected to be completed within two years.

The legislative history of TEFRA expressed Congress' intention that the portion of the taxpayer's general and administrative expenses that directly benefited extended period long-term contracts were to be allocated to such contracts, even though the same type of costs also benefited other activities of the taxpayer. However, general and administrative expenses incurred in the operation of the taxpayer's general management or policy guidance functions (for example, salaries of financial officers) were currently deductible.⁵¹

The Treasury Department issued final regulations reflecting the TEFRA modifications and clarifications in January, 1986.⁵² Under these regulations, the principal distinctions between the treatment of long-term contracts and the treatment of extended period long-term contracts involved the deductibility of depreciation (in the case of assets used in the performance of particular long-term contracts, only book depreciation was allocated to contracts in the former, whereas all such depreciation was allocated to contracts in the latter); current-service pension costs (deductible for the former but not the latter); general and administrative expenses (deductible for the former if beneficial to the taxpayer's activities as a whole, but in most instances partially allocable to the contract for the latter) and research and experimental costs (deductible for the former, but treated as contract costs for the latter if directly related to a particular contract or incurred under an agreement to perform research).⁵³ In addition, rework labor, scrap, and spoilage costs were allocated to the contract in the case of extended period long-term contracts, but not for other long-term contracts.

Consistent with the TEFRA legislative history, the Treasury regulations adopted an expansive view of general and administrative expenses that directly benefited extended period long-term contracts and therefore must be allocated to such long-term contracts. Examples of the types of functions the cost of which ordinarily were required to be allocated included administration of manufacturing or construction projects, personnel operations, purchasing operations, materials handling and warehousing operations, accounting and data services operations related to contract activities, data processing, security services, and legal departments providing legal services with respect to contracts. Functions for which alloca-

⁵³ See Treas. Reg. secs. 1.451-3(d)(5), (6).

tion of costs ordinarily were not required include overall management and policy guidance (e.g., services by the board of directors and the chief executive, financial, legal, and accounting officers if no substantial part of their services related to a particular contract), general financial planning and management, financial accounting, tax services, public relations, and internal audit.⁵⁴

Interest and taxes incurred during construction

Under prior law, interest and taxes incurred by a taxpayer during construction or improvement of real property (other than low-income housing) to be used or held for sale in a trade or business or used in an activity for profit generally were required to be capitalized and amortized over 10 years (sec. 189). The construction period commenced with the date on which construction of the building or other improvement began and ended on the date it was ready to be placed in service or held for sale.⁵⁵

The legislative history of amendments to section 189 indicated Congress' intention that the Treasury Department issue regulations allocating interest to expenditures for real property during construction consistent with the method prescribed by Financial Accounting Standards Board Statement Number 34 (FAS 34). Under FAS 34, the amount of interest to be capitalized is the portion of the total interest expense incurred during the construction period that could have been avoided if funds had not been expended for construction. Interest expense that could have been avoided included interest costs incurred by reason of additional borrowings to finance construction, and interest costs incurred by reason of borrowings that could have been repaid with funds expended for construction.⁵⁶

No Treasury regulations were issued under section 189 of prior law.

Reasons for Change

The Congress believed that the rules of prior law regarding the capitalization of costs incurred in producing property were deficient in two respects. First, those rules allowed costs that were in reality costs of producing, acquiring, or carrying property to be deducted currently, rather than capitalized into the basis of the property and recovered when the property was sold or as it was used by the taxpayer. This treatment produced a mismatching of expenses and the related income and an unwarranted deferral of Federal income taxes. Second, different capitalization rules could apply depending on the nature of the property and its intended use. The Congress was concerned that these differences could create distortions in the allocation of economic resources and the manner in which certain economic activity was organized.

The Congress believed that, in order to more accurately reflect income and make the income tax system more neutral, a single, comprehensive set of rules should govern the capitalization of costs of producing, acquiring, and holding property, including interest

⁵⁴ Treas. Reg. sec. 1.451-3(d)(9)(vi).

⁵⁵ See H. Rep. No. 97-760, 97th Cong., 2d Sess. (1982) at p. 485.

⁵⁶ *Id.*

expense, subject to appropriate exceptions where application of the rules might be unduly burdensome.

Explanation of Provisions

Overview

In general, the Act applies a single set of capitalization rules (the “uniform capitalization rules”) to all costs incurred in manufacturing or constructing tangible property. Special rules apply to costs incurred in the trade or business of farming. Costs incurred in the production of timber and certain ornamental trees are exempt from the provisions. Interest costs are subject to capitalization only where the interest is allocable to construction of real property or to production of personal property that is long-lived property or requires an extended period to produce.

The uniform capitalization rules (other than the interest capitalization rule) also apply to costs incurred in purchasing and holding property for resale. However, certain small businesses acquiring property for resale are exempt from the rules, and an elective simplified method is available to other resellers.

Uniform capitalization rules

In general

Under the Act, uniform capitalization rules to be prescribed by the Treasury Department govern the inclusion in inventory or capital accounts of all costs⁵⁷ which are (1) incurred in manufacturing, construction, and other types of activities involving the production of real or tangible⁵⁸ personal property, or (2) incurred in acquiring or holding property (whether tangible or intangible) for resale. Thus, the rules apply to assets or improvements to assets constructed by a taxpayer for its own use in a trade or business or in an activity engaged in for profit and to assets, whether manufactured or purchased, to be held by a taxpayer in inventory or for sale to customers in the ordinary course of business.

The Congress intended that the uniform capitalization rules essentially follow the rules applicable to extended period long-term contracts set forth in the final Treasury regulations issued under section 451. Accordingly, taxpayers subject to the rules are required to capitalize not only direct costs but also an allocable portion of most indirect costs that benefit the assets produced or acquired for resale, including general and administrative and overhead costs and other costs described in section 1.451-3 of the Treasury regulations. The Act specifically exempts from capitalization research and experimental costs deductible under section 174, costs allowable as a deduction under sections 263(c), 616(a), or 617(a) (relating to certain development and other costs of oil and gas wells or other mineral property), costs incurred in producing property

⁵⁷ As described below, special rules apply to interest costs.

⁵⁸ For this purpose, tangible property includes films, sound recordings, video tapes, books, and other similar property embodying words, ideas, concepts, images, or sounds, by the creator thereof. Thus, for example, the uniform capitalization rules apply to the costs of producing a motion picture or researching and writing a book. No inference was intended as to the nature of these properties under prior law or for other provisions of the Act.

pursuant to a long-term contract,⁵⁹ and costs incurred in producing timber, including ornamental evergreen trees more than six years old at the time severed from their roots.⁶⁰ In addition, consistent with the long-term contract regulations under section 451, selling, marketing, advertising, and distribution expenses were not intended to be subject to capitalization under these rules.⁶¹

The Congress recognized that modifications of the cost allocation methods set forth in the long-term contract regulations may be necessary or appropriate to adapt such rules to production not involving a contract, and intended the Treasury Department to have the authority to make such modifications. Under prior law, the long-term contract regulations provided a large measure of flexibility to taxpayers in allocating indirect costs to contracts insofar as they permitted any reasonable method of allocation authorized by cost accounting principles. The Congress intended that a flexible approach be adopted in the Treasury regulations under this provision. Thus, taxpayers may make allocations of costs among numerous items produced or held for resale on the basis of burden rates or other appropriate methods similar to those provided under prior law.⁶² However, in determining the types and amounts of costs which are subject to allocation under these methods, taxpayers shall use the rules applicable to extended period long-term contracts. Such regulations may adopt other simplifying methods and assumptions where, in the judgment of the Secretary of the Treasury, the costs and other burdens of literal compliance may outweigh the benefits.

The uniform capitalization rules are not intended to apply to expenditures properly treated as repair costs under prior law that do not relate to the manufacture, remanufacture, or production of property. Moreover, the Congress did not intend the uniform capitalization rules to affect the valuation of inventories on a basis other than cost. Thus, the rules do not affect the valuation of inventories at market by a taxpayer using the lower of cost or market method. The rules do apply, however, to inventories valued at cost by a taxpayer using the lower of cost or market method.

The Congress did not intend that taxpayers engaged in the resale of natural gas be required under the uniform capitalization rules to allocate any portion of their overhead or other indirect costs to so-called "cushion gas." For this purpose, the term "cushion gas" refers to gas necessary to maintain operating pressures in an underground gas storage facility sufficient to meet expected peak cus-

⁵⁹ Long-term contracts not reported under the percentage of completion method are subject to similar capitalization rules under new section 460 of the Code. (See section 804 of the Act, described in E. "Long-Term Contracts, below.")

⁶⁰ The definition of timber for purposes of this exception is intended to be coextensive with the definition of timber under prior law, and nothing in the definition of timber was intended to be construed as narrowing the types of activities which constitute the growing of timber for purposes of this exclusion from the uniform capitalization rules. Thus, the production of timber remains subject to the capitalization rules applicable to timber under prior law.

⁶¹ For this purpose, distribution expenses are intended to include only external distribution costs, that is, those costs incurred in transporting goods from the taxpayer's warehouse or retail outlet to the customer, or to the customer's agent, a common carrier, or some other intermediary. Distribution expenses do not include costs of moving inventory from a taxpayer's warehouse to its retail store or other internal transportation costs.

⁶² See Treas. Reg. sec. 1.471-11(d) (authorizing use of the manufacturing burden rate method, the standard cost method, or any other method that fairly apportions such costs among items of inventory).

tomer demand. The Congress anticipated that the Treasury Department may issue rules or regulations under which some portion of the so-called "emergency reserve" gas in such facilities also may be exempt from allocations of indirect costs under the capitalization rules of this provision.

Interest expense

Under the Act, interest paid or incurred during the production period of certain types of property that is allocable to the production of the property must be capitalized.⁶³ Property subject to the interest capitalization requirement includes property produced by the taxpayer for use in its trade or business or in an activity for profit, but only if it (1) is real property, (2) has an estimated production period exceeding two years (one year if the cost of the property exceeds \$1 million), or (3) has a class life of 20 years or more under Code section 168 as amended by the Act.⁶⁴ The production period of property for this purpose begins when construction or production is commenced and ends when the property is ready to be placed in service or is ready to be held for sale. For example, in the case of property such as tobacco, wine, or whiskey that is aged before it is sold, the production period includes the aging period. Activities such as planning or design generally do not cause the production period to begin.

The determination of whether interest is allocable to the production of property is made under rules similar to the "avoided cost" principles applicable under section 189 of prior law.⁶⁵ Under those rules, any interest expense that the taxpayer would have avoided if production expenditures had been used to repay debt of the taxpayer is treated as allocable to production of property. Accordingly, under the Act, any debt that can be specifically traced to production expenditures is first allocated to production and interest on such debt is capitalized. If production expenditures exceed the amount of the specifically traceable debt, interest on other debt of the taxpayer must be capitalized to the extent of the excess. For this purpose, the assumed interest rate is an average of the rates on the taxpayer's outstanding debt, excluding debt specifically traceable to production or construction.

The term "production expenditures" for purposes of the interest allocation rule means cumulative production costs required to be capitalized, including interest required to be capitalized as a production cost for prior periods. Where an asset is used in the produc-

⁶³ Section 189 of prior law also required capitalization of real property taxes. Under the Act, taxes that are properly allocable to such property (for example, income taxes) are subject to capitalization (or inclusion in inventory) to the same extent as other types of costs. Capitalization of interest is not required in the case of property acquired for resale (i.e., inventory held by a dealer).

⁶⁴ Where property is constructed by another for a taxpayer under a contract, interest could be subject to capitalization by the taxpayer under the rule that treat the taxpayer as the producer of the property.

⁶⁵ The avoided cost method of determining the amount of interest allocable to production was intended to apply irrespective of whether application of such method (or a similar method) is required, authorized, or considered appropriate under financial or regulatory accounting principles applicable to the taxpayer. Thus, for example, a regulated utility company must apply the avoided cost method of determining capitalized interest even though a different method is authorized or required by Financial Accounting Standards Board Statement 34 or the regulatory authority having jurisdiction over the utility. No inference was intended that the avoided cost method was not required in such circumstances under section 189 of prior law.

tion of property, interest on the entire cost of that asset must be capitalized as part of the production costs of that property whether or not the entire cost of the asset previously has been reflected in the property account.

The interest allocable to that cost is to be determined under the general rules for allocating debt (i.e., the "specific tracing allocation method" on debt directly allocable to the asset and the "avoided cost allocation method" on other debt).⁶⁶ Where an asset is used for other purposes in addition to the production of property, only an allocable portion of the allocable interest costs must be capitalized as part of the production costs of the property.

In the case of partnerships or other flow-through entities, the allocation rules are applied first at the entity level and then (to the extent the entity has insufficient debt to support the full amount of the production expenditures) at the partner or beneficiary level.⁶⁷

The Treasury Department is authorized to issue regulations to prevent the avoidance of these rules through the use of related parties, pass-through entities, or intermediaries. For example, such regulations could provide that where a subsidiary corporation is owned by two 50-percent parent corporations, and the subsidiary is engaged in constructing long-lived property for its own use, but has no outstanding debt, each 50-percent parent is required to capitalize interest expense as if each had directly incurred one-half of the construction expenditures incurred by the subsidiary.

If a taxpayer has property produced for it by another under a contract, the taxpayer is treated as producing the property for purposes of the uniform capitalization rules, including the interest capitalization rule. Thus, the portion of the taxpayer's interest expense allocable to costs required to be capitalized (including progress payments, advances to the contractor, and an allocable portion of the general and administrative expenses of the taxpayer) must be charged to a capital account.⁶⁸

The Act exempts from the interest capitalization rule interest that is qualified residence interest within the meaning of section 163(h), as amended by the Act.

Pension costs

Under the uniform capitalization rules, contributions to a pension, profit-sharing, or stock bonus plan and other employee benefit expenses are considered indirect costs that must be capitalized to the same extent as other indirect costs, unless such contributions relate to past-service costs. It was intended that, in the case of a contribution to a qualified plan, the determination of whether the contribution relates to past or current services will be made independently of any allocation between "normal cost" and "past-service cost" required under the minimum funding standards (sec. 412)

⁶⁶ A technical correction may be necessary to reflect this intention.

⁶⁷ Interest of the partner (beneficiary) that must be capitalized under this rule may be recovered by the partner (beneficiary), under regulations issued by the Secretary of the Treasury, at the same time and to the same extent as if the interest had been paid or incurred directly by the partnership.

⁶⁸ The contractor in such circumstances is required to capitalize interest only with respect to the excess of its accumulated contract costs over the accumulated payments received during the year.

or under the plan's benefit formula. The Congress anticipated that the Treasury Department will publish guidelines for making this determination, and that such determination may be based, in whole or in part, on any actuarial funding methods that may be utilized by qualified defined benefit plans.

Any allocation of employee benefit costs (and any other costs) between production (or inventory, in the case of purchased goods) costs and period costs will be made after application of any other relevant limitations provided in the Code. For example, in the case of a qualified defined benefit pension plan that is subject to the minimum funding standard, an employer will first calculate his liability under the minimum funding standards (using the applicable funding method and actuarial assumptions); next, calculate the limit on deductions for such contributions (pursuant to section 404 of the Code); and finally, allocate the otherwise deductible amount between production costs and other costs applying the uniform capitalization rules. In applying these rules, the allocation of the otherwise deductible amount between past- and current-service costs will be made independently of the allocation made in the first step of the calculation, under rules published by the Treasury Department.

Similarly, in the case of a plan that is not subject to the minimum funding standards (e.g., a profit-sharing plan), an employer must compute the otherwise allowable deduction limit pursuant to section 404 and then allocate that amount between production or inventory costs and other costs.

Special rules for farmers and ranchers

Capitalization rules generally

Under the Act, the uniform capitalization rules, including those requiring capitalization of interest, generally apply to crops and livestock produced by the farmer-taxpayer having a preproductive period of more than two years. Nonetheless, except for persons or entities required to use an accrual method of accounting under section 447 or 448, the uniform capitalization rules do not apply to animals held for slaughter. For this purpose, the preproductive period of plants is deemed to begin when the plant or seed is first planted or acquired by the taxpayer, and to end when the plant produces a marketable crop (if there will be more than one yield) or is sold (if there will be a single yield). The preproductive period of animals begins at the time of acquisition, breeding, or embryo implantation. In the case of an animal that will have more than one yield, the preproductive period ends when the animal has its first yield. In the case of an animal that has a single yield, the preproductive period ends at the time of disposition. Thus, for example, the preproductive period of a cow to be used for breeding or dairy purposes would begin when that cow is conceived and end when it drops its first calf.

The preproductive period of a plant grown in the United States is determined on the basis of the national average preproductive period for the particular crop. It is expected that the Treasury Department periodically will publish a list of the preproductive peri-

ods of various plants based on a weighted average for products produced in the United States in commercial quantities.⁶⁹

The Act directs the Treasury Department by regulations to permit the taxpayer to use reasonable inventory valuation methods to compute the amount of costs required to be capitalized in the case of a plant or animal. The Congress intended that taxpayers may determine the costs required to be capitalized by using methods similar to one of the simplified inventory valuation rules of present law (e.g., the farm-price or unit-livestock-price method) in lieu of capitalizing actual costs.

Persons or entities required to use an accrual method of accounting under sections 447 or 448 are required to capitalize preproductive period costs without regard to whether the preproductive period is more than two years. Consistent with the generally applicable uniform capitalization rules, such taxpayers are required to capitalize taxes and, to the extent the preproductive period exceeds two years, interest incurred prior to production. The Congress intended that sugar growers properly using the annual accrual method of accounting under section 447(g) will be allowed to continue to use that method.

The special rule of prior law permitting expensing of amounts incurred in replanting a grove, orchard, or vineyard after loss or damage due to freezing temperatures, disease, drought, pests, or casualty (sec. 278(c)) is modified. Under the Act, such expensing is allowed only in the case of plants that produce an edible crop for human consumption of the same type as the lost or damaged crop. For purposes of this provision, crops are edible if they are normally eaten or drunk by humans. Thus, for example, jojoba beans production does not qualify for treatment under this special rule. In addition, the provision allows expenditures in connection with replanting or maintaining a field other than the field in which the damage occurred to qualify for expensing, provided the acreage of the new field does not exceed that of the field to which the damage occurred and the new field is located in the United States.

Further, the Act expands this relief provision to include otherwise eligible costs that are incurred by persons other than the person who suffered the loss, provided two conditions are met. First, the taxpayer who owned the property at the time of the loss or damage must have an equity interest of more than 50 percent in the property. Second, the additional persons incurring the costs must hold part of the remaining equity interest in the property and must materially participate in the planting, cultivation, maintenance, or development activities that give rise to the costs. The determination of whether an individual materially participates in an activity is made under section 2032A(e)(6) (relating to current use valuation of farm property).⁷⁰

⁶⁹ The Treasury Department may make reasonable distinctions among different varieties of plants, and may weight the average using such factors as it deems appropriate.

⁷⁰ It is anticipated that a technical correction will be made clarifying that relief is not limited to expenses incurred by the minority participants during the four-year period beginning with the taxable year in which the loss or damage occurred; rather, the relief applies to all expenses of such taxpayers that would otherwise be subject to capitalization.

Election to deduct preproductive period expenses

The Act provides an exception to the rules requiring capitalization of preproductive period expenses for certain taxpayers engaged in a farming business. Such taxpayers may elect to deduct currently all preproductive costs of plants and animals that may be deducted under prior law. If the election is made, gain from disposition of the product is recaptured (that is, taxed as ordinary income) to the extent of prior deductions that otherwise would have been required to be capitalized. In addition, the electing taxpayer must use the alternative depreciation system for all farm assets used in any farming business placed in service in taxable years for which the election is in effect.⁷¹

For this purpose, the term "farming business" includes, in addition to the production of agricultural crops, the operation of a nursery or sod farm and the raising or harvesting of trees bearing fruit, nuts, or other crops, ornamental trees (other than those having a growing period in excess of six years, which are exempt from the capitalization rules), as well as agricultural crops. Taxpayers engaged in a farming business that are required to use the accrual method of accounting under section 447 or 448 and producers of pistachio nuts are not eligible to elect to be excluded from the uniform capitalization rules.

The election to deduct preproductive period costs currently does not apply with respect to any item of cost which is attributable to the planting, cultivation, maintenance, or development of any citrus or almond grove which is incurred before the close of the fourth taxable year beginning with the taxable year in which the grove was planted.⁷² If a citrus or almond grove is planted in more than one taxable year, the portion of the grove planted in any one taxable year is treated as a separate grove for purposes of determining the year of planting. In addition, the election to deduct preproductive period costs does not apply to tax shelters (as defined in section 6161(b)(2)(C)(ii)) or farming syndicates (as defined in section 464(c)).

The election to deduct preproductive period costs is irrevocable and may not be revoked except with the consent of the Commissioner of Internal Revenue. In the case of a partnership or S corporation, the election must be made at the partner or shareholder level. The election may be made only for the first taxable year that begins after December 31, 1986, and during which the taxpayer is engaged in the farming business.

The Congress intended that taxpayers making the election be allowed to estimate the amount of preproductive period expenses subject to recapture using methods similar to one of the simplified inventory methods permitted to accrual method farmers under present law.

⁷¹ An election by a person related to the taxpayer also binds the taxpayer to use the alternative depreciation system. For this purpose, a related person includes the spouse and all minor children of the taxpayer and on any entity in which the taxpayer owns a 50 percent or more interest (applying the attribution rules of section 318(a)).

⁷² Thus, the election does not apply to the same persons who were subject to section 278 of prior law.

Special rules for retailers and wholesalers

In general, the uniform capitalization rules apply to taxpayers who acquire property for resale in the same manner as they apply to producers. However, the Act provides an exception for resellers whose average annual gross receipts⁷³ do not exceed \$10 million, who are subject to prior-law inventory rules.

Examples of the types of costs resellers are required to treat as inventory costs are the following: costs incident to purchasing inventory (e.g., wages or salaries of employees responsible for purchasing); repackaging, assembly, and other costs incurred in processing goods; costs of storing goods (e.g., rent or depreciation, insurance premiums, and taxes attributable to a warehouse, and wages of warehouse personnel);⁷⁴ and the portion of general and administrative costs allocable to these functions.⁷⁵

The Congress intended that, in the case of a taxpayer engaged in a retail sales business, however, only off-site storage costs—that is, costs of storing goods in a facility distinct from the facility in which the taxpayer conducts retail sales of these goods—must be treated as inventoriable costs under this provision.

Elective simplified method for allocating indirect costs

The Act directs the Treasury Department to provide a simplified method for applying the uniform capitalization rules in the case of taxpayers acquiring property for resale.

The simplified method is to be applied separately to each trade or business of the taxpayer. Taxpayers not electing to use the simplified method must apply the uniform capitalization rules to property acquired for resale under the same procedures and methods applicable to manufacturers. The Treasury Department may modify the simplified method or permit the use of other methods by rules or regulations. Once a taxpayer has chosen either the simplified method or the capitalization methods applicable to manufacturers, the taxpayer may not change its method without obtaining the permission of the Commissioner of Internal Revenue.

In applying the simplified method, taxpayers first must calculate their inventory balances without regard to the uniform capitalization rules. Then the amounts of additional costs required to be capitalized under the new rules (under the procedures described below) must be determined, and such amounts, together with the amounts of additional costs contained in beginning inventory balances where appropriate, added to the preliminary inventory balances to determine their final balances. Thus, a taxpayer using the last-in, first-out (LIFO) method makes the calculation of a particular year's LIFO index without regard to the uniform capitalization rules.

⁷³ The test is applied for the three-taxable year period ending with the taxable year preceeding the year in question.

⁷⁴ The Congress intended that storage costs incurred by a manufacturer following completion or substantial completion of the manufacturing process with regard to a product (as well as those incurred during the manufacturing process) will likewise be subject to capitalization under these rules. Thus, the Act overrules any case law holding to the contrary (without inference as to the validity of such cases under prior law). See, e.g., *Heaven Hill Distilleries, Inc. v. U.S.*, 476 F.2d 1327 (Ct.Cl. 1973) (holding that storage costs incurred by the manufacturer of whisky during the aging process were currently deductible), and *Van Pickerill & Sons, Inc. v. U.S.*, 445 F.2d 918 (7th Cir. 1971).

⁷⁵ No inference is intended regarding the deductibility of such costs under prior law.

However, costs capitalized under these rules are added to the LIFO layers applicable to the various years for which the costs were accumulated. Likewise, in the case of a taxpayer on the first-in, first-out (FIFO) method that does not sell its entire beginning inventory during the year, a proportionate part of the additional costs capitalized into the beginning inventory under these rules is included in ending inventory.

In general, four categories of indirect costs are allocable to inventory under the simplified method:

(1) off-site storage and warehousing costs (including, but not limited to, rent or depreciation attributable to a warehouse, property taxes, insurance premiums, security costs, and other costs directly identifiable with the storage facility);⁷⁶

(2) purchasing costs such as buyers' wages or salaries;

(3) handling, processing, assembly, repackaging, and similar costs, including labor costs attributable to unloading goods (but not including labor costs attributable to loading of goods for final shipment to customers, or labor at a retail facility);⁷⁷ and

(4) the portion of general and administrative costs allocable to these functions.

Effective Dates

Inventories

In general

The uniform capitalization rules apply to inventories for the taxpayer's first taxable year beginning after December 31, 1986. Application of these rules is a change in the taxpayer's method of accounting for purposes of section 481. Taxpayers must spread the section 481 adjustment over a period not exceeding four years, in accordance with the rules applicable to a change in method of accounting initiated by the taxpayer and approved by the Internal Revenue Service. Accordingly, taxpayers must revalue inventory on hand as of the effective date to reflect the greater absorption of production costs under the new rules. Normally, the revaluation must be done by valuing the items included in inventory on the effective date as if the new absorption rules had been in effect during all prior periods. The difference between the inventory as originally valued and the inventory as revalued will be the amount of adjustment required by section 481.

However, the Congress recognized that, in some circumstances, particularly where the taxpayer is considered as holding in inventory items which were acquired for resale, produced, or manufactured a number of years prior to the effective date of the Act, the information necessary to calculate the section 481 adjustment using the precise method may not be available. Such a situation may arise, for example, if the taxpayer has items of inventory that

⁷⁶ Off-site storage and warehousing costs generally include the costs of a facility which function in the storage or warehousing of goods.

⁷⁷ Any reasonable method of apportioning labor costs between inventoriable and noninventoriable functions may be used. The Congress did not intend that detailed records establishing the time spent by an employee performing a particular function generally will be required to substantiate an allocation by the taxpayer. However, if such records are available, they generally should be used in making allocations.

it no longer produces, or if the taxpayer is using the LIFO method of accounting. The Congress expected that the Treasury Department will issue regulations or rulings permitting a taxpayer in this situation to estimate the amount by which the inventory must be revalued by using available data, as illustrated by the examples below.

The Congress intended that net operating loss and tax-credit carryforwards will be allowed to offset any positive section 481 adjustment and that, for purposes of determining estimated tax payments, the section 481 adjustment will be recognized ratably throughout the taxable year of the adjustment.

FIFO method

The computation of the section 481 adjustment for a taxpayer using the FIFO method of accounting for inventories can be illustrated as follows: Assume that the taxpayer maintains inventories of bolts, two types of which it no longer produces. Bolt A was last produced in 1984, for which year the taxpayer determines a revaluation of inventory costs resulting in a 20 percent increase. A portion of the inventory of bolt A, however, is attributable to 1983 for which the taxpayer does not have sufficient data for revaluation. Bolt B was last produced in 1982 and no data exists which would allow revaluation of the inventory cost of bolt B pursuant to the new absorption rules. The inventories of all bolts other than bolts A and B are attributable to 1984 and 1985 production, for which revaluation using available data results in an average 15 percent increase in inventory cost. With respect to bolt A, the 20 percent increase determined for 1984 also may be applied to the 1983 production as an acceptable estimate. With respect to bolt B, the overall 15 percent increase for the inventory as a whole may be used in valuing the costs of bolt B.

LIFO method

Taxpayers using the LIFO method of valuing inventories also may have difficulty in assembling sufficient data to restate their inventory costs. Taxpayers using the dollar-value LIFO method may have particular problems since the valuation of each year's LIFO layer is dependent upon prior year's cost data in situations where the double extension method is used.

The Congress expected that taxpayers using the specific goods LIFO method to value their inventories generally will be allowed to use the same type of estimating techniques as FIFO taxpayers. Thus, the percentage change obtained in revaluing those inventory layers for which sufficient data is available may be applied to revalue all preceding years' layers.

Example 1.—For example, assume a manufacturer produces two different parts. Work-in-process inventory is recorded in terms of equivalent units of finished goods. The manufacturer's specific goods LIFO inventory records show the following at the end of 1986:

Product and layer	Number	Cost	LIFO carrying values
Product #1:			
1983.....	150	\$5.00	\$750
1984.....	100	6.00	600
1985.....	100	6.50	650
1986.....	50	7.00	350
			<u>\$2,350</u>
Product #2:			
1983.....	200	4.00	\$800
1984.....	200	4.50	900
1985.....	100	5.00	500
1986.....	100	6.00	600
			<u>\$2,800</u>
Total of carrying value of Products #1 and #2.....			<u>\$5,150</u>

Data available to the taxpayer allows it to revalue the unit costs of product #1 under the uniform capitalization rules to \$7.00 in 1984, \$7.75 in 1985 and \$9.00 in 1986, and to revalue the unit costs of product #2 to \$6.00 in 1985 and \$7.00 in 1986. The available data for product #1 results in a weighted average percentage change for product #1 of 20.31 percent.⁷⁸ The available data for product #2 results in a weighted average percentage change for product #2 of 18.18 percent.⁷⁹

The weighted average increase estimation does not affect the revaluation of costs for those years in which actual revaluation is possible. The revalued inventory of the taxpayer would be as follows:

Product and layer	Number	Cost	LIFO carrying values
Product #1:			
1983.....	150	\$6.02	\$903
1984.....	100	7.00	700
1985.....	100	7.75	775
1986.....	50	9.00	450
			<u>\$2,828</u>

⁷⁸ This is computed as follows: $[(100 \times (\$7.00 - \$6.00)) + (100 \times (\$7.75 - \$6.50)) + (50 \times (\$9.00 - \$7.00))]$ divided by $[(100 \times \$6.00) + (100 \times \$6.50) + (50 \times \$7.00)]$.

⁷⁹ This is computed as follows: $[(100 \times (\$6.00 - \$5.00)) + (100 \times (\$7.00 - \$6.00))]$ divided by $[(100 \times \$5.00) + (100 \times \$6.00)]$.

Product and layer	Number	Cost	LIFO carrying values
Product #2:			
1983	200	4.73	\$946
1984	200	5.32	1,064
1985	100	6.00	600
1986	100	7.00	700
			\$3,310
Total of carrying value of Products #1 and #2 under new absorption rules			\$6,138

A taxpayer using the specific goods LIFO method also may have inventories for which new costs have not been incurred for several years and, consequently, a weighted average increase for those particular inventory items may not be available for estimation purposes. In such a case, the taxpayer may take the weighted average increases for all its revalued inventory items and determine an overall percentage increase, weighted by the value of each inventory item included in the calculation, to estimate the revaluation necessary for such items.

The Congress anticipated that the Treasury Department will develop rules to permit taxpayers using the dollar-value LIFO method who lack sufficient data to revalue all of their LIFO layers under the uniform capitalization rules to compute the percentage change in the current costs of their inventory as a result of the rules for the LIFO layers accumulated during the three most recent years that the taxpayer has sufficient information. (These rules will apply to taxpayers acquiring property for resale, as well as taxpayers producing or manufacturing property.) Taxpayers then will apply that percentage to restate the costs of the beginning LIFO inventory value of the entire pool for the year of change. For purposes of determining future indexes, the year prior to the year of change will then be considered as a new base year and the current costs for that year are to be used for extension purposes to future taxable years. The increase in the beginning balance in the LIFO inventory as a result of this change will represent the section 481 adjustment amount.

Example 2.—For example, assume a calendar year taxpayer first adopted the dollar value LIFO method in 1981, using a single pool and the double extension method. The taxpayer's beginning LIFO inventory for the year of change is as follows:

	Base year costs	Index	LIFO carrying value
Base layer	\$14,000	1.00	\$14,000
1981 layer	4,000	1.20	4,800
1982 layer	5,000	1.30	6,500
1983 layer	2,000	1.35	2,700
1984 layer	0	1.40	0
1985 layer	4,000	1.50	6,000
1986 layer	5,000	1.60	8,000
Total	\$34,000		\$42,000

The taxpayer is able to recompute inventoriable cost under the new absorption rules for the ending LIFO layers for three preceding taxable years as follows:

Year	Current cost as recorded	Current cost as adjusted	Weighted percentage change
1984	\$35,000	\$45,150	0.29
1985	43,500	54,375	.25
1986	54,400	70,720	.30
Total	\$132,900	\$170,245	.28

Applying the average revaluation factor of .28 to each layer, the inventory is restated as follows:

	Base year costs	Index	LIFO carrying value
Base layer	\$17,920	1.00	\$17,920
1981 layer	5,120	1.20	6,144
1982 layer	6,400	1.30	8,320
1983 layer	2,560	1.35	3,456
1984 layer	0	1.40	0
1985 layer	5,120	1.50	7,680
1986 layer	6,400	1.60	10,240
Total	\$43,520		\$53,760

The section 481 adjustment is the difference between the revalued LIFO carrying value under the new absorption rules and the LIFO carrying value as originally reported. In this example, the section 481 adjustment is \$11,760 (\$53,760 — \$42,000). The section 481 adjustment also may be found by multiplying the LIFO carry-

ing value as originally reported by the average percentage change determined in the first step described above. In this example, that procedure also would determine the amount of the section 481 to be \$11,760 ($\$42,000 \times .28$).

The year prior to the year of change will be treated as a new base year for the purpose of determining the index in future years. This requires that layers in years prior to the base year be restated in terms of the new base year index. In the example above, the restated inventory would be as follows:

	Restated base year costs	Index	LIFO carrying value
Old base layer	\$28,672	0.625	\$17,920
1981 layer	8,192	.75	6,144
1982 layer	10,234	.813	8,320
1983 layer	4,095	.844	3,456
1984 layer	0	.875	0
1985 layer	8,188	.938	7,680
New base layer (1986)	10,240	1.00	10,240
Total	\$69,621		\$53,760

For taxpayers not possessing sufficient data to revalue all of their LIFO layers under the new absorption rules, the most recent three years prior to the year of change for which the taxpayer has sufficient information may be used in determining the average revaluation factor. Where the taxpayer possesses sufficient information to use additional years in determining the average revaluation factor, such additional years may be used at the option of the taxpayer, as long as the additional years are consecutive years prior to the year of change. For example, assume a calendar year taxpayer has sufficient information to revalue years 1981 through 1986. The average revaluation factor may be determined on the basis of all six years. On the other hand, a taxpayer with sufficient information to revalue 1980 through 1982 and 1984 through 1986 would use only the 1984 through 1986 years in determining the average revaluation factor, since the years 1980 through 1983 are not consecutive to the year of change.

The use of the average revaluation factor based upon current costs to estimate the revaluation of older inventory layers may result in an increase in the value of inventories representing costs which did not exist in the affected year. To the extent that a taxpayer can show that costs which contributed to the determination of the average revaluation factor could not have affected a prior year, the average revaluation factor as applied to that year may be adjusted by an appropriate amount.

Self-constructed and noninventory property produced for sale

In the case of self-constructed property, the uniform capitalization rules apply to costs incurred after December 31, 1986, unless incurred with respect to property on which substantial construc-

tion occurred before March 1, 1986. The Congress intended that construction of an asset which began after February 28, 1986, will be considered within this transitional rule if the asset is an integral part of an integrated facility with respect to which substantial construction occurred before March 1, 1986. An asset generally will be considered an integral part of a facility only if such asset will be placed in service at essentially the same time as other assets comprising the facility.

In the case of noninventory property produced for sale, the rules are effective for costs paid or incurred after December 31, 1986. No restatement of beginning balances and no section 481 adjustment is required.⁸⁰

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$4,354 million in 1987, \$7,674 million in 1988, \$8,185 million in 1989, \$8,556 million in 1990, and \$6,775 million in 1991.

⁸⁰ See, e.g., *W.C. & A.N. Miller Development v. Commissioner*, 81 T.C. 619 (1983).

E. Long-term Contracts (Sec. 804 of the Act and new sec. 460 of the Code) ⁸¹

Prior Law

In general

Under prior law, special accounting rules applied to taxpayers providing goods under certain types of contracts spanning two or more taxable years. A taxpayer with income and expenses from "long-term contracts" could report under the traditional cash or accrual methods which were, subject to the restrictions previously mentioned,⁸² generally available to all taxpayers. At the taxpayer's election, however, income and expenses attributable to long-term contracts could be accounted for under one of two alternative methods—the percentage of completion method or the completed contract method.

Under prior and present law, a long-term contract is defined as a building, installation, construction, or manufacturing contract that is not completed by the end of the taxable year in which it is entered into. A manufacturing contract is within the definition, however, only if it involves the manufacture of either unique items of a type not normally carried in the finished goods inventory of the taxpayer, or items normally requiring more than 12 months to complete.

Percentage of completion method

Under the percentage of completion method of prior law, income was recognized according to the percentage of the contract completed during each taxable year. The determination of the portion of the contract completed during the taxable year could be made either by (1) comparing the costs incurred during the year to the total estimated costs to be incurred under the contract, or (2) comparing the work performed during the year with the estimated total work to be performed.⁸³ All costs attributable to the long-term contract were deductible in the year in which they were incurred, although a contractor was required to maintain inventories for materials and supplies.

Completed contract method

Under the completed contract method of prior law, the entire gross contract price was included in income in the taxable year in

⁸¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 904; H.Rep. 99-426, pp. 615-638; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 301; S.Rep. 99-313, pp. 133-152; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 310-313 (Conference Report).

⁸² For example, the cash method normally may not be used by a taxpayer required to maintain inventories.

⁸³ Treas. Reg. sec. 1.451-3(c)(2).

which the contract was finally completed and accepted. All costs properly allocable to a long-term contract were deducted in the year of completion.

Regulations adopted in 1976 provided detailed rules for the allocation of costs between contract and non-contract costs. These costing rules essentially paralleled the full absorption rules applicable to manufacturers of inventory,⁸⁴ except that, under the completed contract method, most Category 3 (financial conformity) costs had to be treated as contract costs. Thus, unless a contract was subject to the "extended period long-term contract" rules described below, the following costs were not contract costs: marketing and selling expenses (including the cost of developing bids); advertising expenses; distribution expenses; interest; general and administrative expenses attributable to the performance of services that benefit the contractor's activities as a whole (e.g., payroll, legal, and accounting expenses); research and experimental expenses under section 174; losses under section 165; percentage depletion in excess of cost depletion; depreciation and amortization on idle equipment and facilities; the excess of depreciation or amortization reported for tax purposes over that reported on financial statements; income taxes attributable to income received from long-term contracts; pension and profit-sharing contributions and other employee benefits (whether representing past or current service costs); costs attributable to strikes, rework labor, scrap, and spoilage; and salaries of officers that benefit the contractor's activities as a whole.

In the Tax Equity and Fiscal Responsibility Act of 1982, P.L. 97-248 (TEFRA), the Congress directed the Treasury Department to modify the rules relating to allocation of costs to long-term contracts. In the case of "extended period" long-term contracts—those not expected to be completed within 24 months from the contract commencement date—certain costs previously not treated as contract costs were to be allocated to the contracts to the extent they either directly benefited or were incurred by reason of such contracts. These costs included:

- (1) bidding expenses on contracts awarded to the taxpayer;
- (2) distribution expenses, such as shipping costs;
- (3) general and administrative expenses properly allocable to long-term contracts under regulations prescribed by the Treasury Department;
- (4) research and development expenses either directly attributable to particular long-term contracts existing when the expenses were incurred, or incurred under an agreement to perform research and development;
- (5) depreciation, capital cost recovery, and amortization for equipment and facilities used in the performance of extended period long-term contracts, in excess of amounts reported for financial accounting purposes;
- (6) pension and profit-sharing contributions representing current service costs, and other employee benefits;
- (7) rework labor, scrap, and spoilage; and
- (8) percentage depletion in excess of cost depletion.

⁸⁴ Treas. Reg. sec. 1.471-11. (For a discussion of these rules, see Title VIII., Part C, *supra*.)

An exception to these rules was provided for contracts for the construction of real property if the contract was expected to be completed within three years, or if the contractor's average annual gross receipts for the three taxable years preceding the year of the contract did not exceed \$25 million. The regulations as adopted in 1976 continued to apply to these construction contracts and to all other long-term contracts expected to be completed within two years.

The legislative history of TEFRA expressed Congress' intention that the portion of the taxpayer's general and administrative expenses that directly benefited extended period long-term contracts must be allocated to such contracts, even though the same type of costs also benefited other activities of the taxpayer. However, general and administrative expenses incurred in the operation of the taxpayer's general management or policy guidance functions (for example, salaries of financial officers) were to remain currently deductible.⁸⁵

The Treasury Department issued final regulations reflecting the TEFRA modifications and clarifications in January, 1986.⁸⁶ Under the regulations, the principal distinctions between the treatment of long-term contracts and the treatment of extended period long-term contracts involved the deductibility of depreciation (in the case of assets used in the performance of particular long-term contracts, only book depreciation was allocated to contracts in the former, whereas all such depreciation was allocated to contracts in the latter); current-service pension costs (deductible for the former but not the latter); general and administrative expenses (deductible for the former if beneficial to the taxpayer's activities as a whole, but in most instances partially allocable to the contract for the latter); and research and experimental costs (deductible for the former, but treated as contract costs for the latter if directly related to a particular contract or incurred under an agreement to perform research).⁸⁷

In addition, rework labor, scrap, and spoilage costs were allocated to the contract in the case of extended period long-term contracts, but not for other long-term contracts.

Consistent with the TEFRA legislative history, the regulations adopted an expansive view of general and administrative expenses that directly benefited extended period long-term contracts and therefore had to be allocated to such long-term contracts. Examples of the types of functions the cost of which ordinarily were required to be allocated included administration of manufacturing or construction projects, personnel operations, purchasing operations, materials handling and warehousing operations, accounting and data services operations related to contract activities, data processing, security services, and legal departments providing legal services with respect to contracts. Functions for which allocation of costs ordinarily were not required include overall management and policy guidance (e.g., services by the board of directors and the chief executive, financial, legal, and accounting officers if no substantial part

⁸⁵ S. Rep. 97-530, 97th Cong., 2d Sess. (1982), p. 547.

⁸⁶ Treasury Decision 8067, 51 Fed. Reg. 376 (January 6, 1986).

⁸⁷ See Treas. Reg. sec. 1.451-3(d)(5), (6).

of their services related to a particular contract), general financial planning and management, financial accounting, tax services, public relations, and internal audit.⁸⁸

Reasons for Change

The Congress believed that the completed contract method of accounting for long-term contracts permitted an unwarranted deferral of the income from those contracts. The Congress noted that the Study of 1983 Effective Tax Rates on Selected Large U.S. Corporations by the Joint Committee on Taxation indicated that some corporations had large deferred taxes and low effective tax rates as a result of their use of the completed contract method for tax purposes. Annual reports for certain large defense contractors reflected negative tax rates due to net operating loss carryforwards generated through use of the completed contract method in prior years.

The Congress believed it was appropriate to limit the tax deferral obtainable through use of the completed contract method by requiring that a portion of the income from long-term contracts be reported on a percentage of completion method. However, the Congress recognized that use of the percentage of completion method may produce harsh results for taxpayers in some cases, for example, where an overall loss is experienced on the contract, or where actual profits are significantly less than projected. The method was also subject to manipulation by taxpayers. In order to address these deficiencies in the percentage of completion method under prior law, the Congress adopted a modified version of the method, applicable whether the taxpayer uses the percentage of completion method for all or only a portion of a long-term contract. Under this modified percentage of completion method, variances between the estimated and the actual completion during each year of the contract are accounted for at the end of the contract through an interest charge or credit to the taxpayer.

The Congress also believed that, with respect to the portion of a long-term contract reported under the completed contract method (or an inventory method of accounting), income would be more clearly reflected if certain costs reimbursed under a contract, but not treated as contract costs under prior law, were subject to capitalization.

Finally, the Congress believed it was desirable to resolve (retroactively as well as prospectively) a controversy between taxpayers and the Internal Revenue Service concerning the treatment of independent research and development costs.

Explanation of Provisions

In general

Under the Act, taxpayers engaged in long-term contracts must compute income from such contracts under one of two methods: (1) the percentage of completion method or (2) the "percentage of completion-capitalized cost method". The term "long-term contract" is

⁸⁸ Treas. Reg. sec. 1.451-3(d)(9)(vi).

defined in the same manner as under the section 451 regulations of prior law.

Taxpayers using the percentage of completion method prior to the enactment of this provision are required to continue to use such method, unless such taxpayers obtain the consent of the Commissioner of Internal Revenue to change their method of accounting. Similarly, taxpayers using the completed contract method of accounting (or an inventory method of accounting for long-term contracts) are required to use the percentage of completion-capitalized cost method described below, unless such taxpayers obtain the consent of the Secretary of the Treasury to change their method of accounting.

Percentage of completion method

Under the percentage of completion method, the taxpayer must include in gross income for the taxable year an amount equal to the product of (1) the gross contract price and (2) the percentage of the contract completed during the taxable year. The percentage of the contract completed during the taxable year is determined by comparing costs incurred with respect to the contract during the year with the estimated total contract costs.⁸⁹

The contract costs taken into account in determining the percentage of completion are those for which capitalization is required under the extended period long-term contract rules, as modified by the Act (see discussion of "capitalizable contract costs," below, for description of these modifications). The physical completion method for determining the percentage of a contract completed during the year allowed under of prior law (Treas. Reg. sec. 1.451-3(c)(2)) is not permitted.

Costs incurred with respect to the long-term contract are deductible in the year incurred, subject to general accounting principles and limitations imposed under prior law, which continue to apply.⁹⁰

In the taxable year in which the contract is completed, a determination is made whether the taxes paid with respect to the contract in each year of the contract were more or less than the amount that would have been paid if the actual gross contract price and the actual total contract costs, rather than the anticipated contract price and costs, had been used to compute gross income. Under this "lookback" procedure, interest must be paid by the taxpayer if there is an "underpayment" by the taxpayer with respect to a taxable year. Similarly, under the "lookback" method, interest will be paid to the taxpayer by the Internal Revenue Service if there is an "overpayment." The rate of interest for both underpayments and overpayments is the rate applicable to overpayments of tax under section 6621. For purposes of the "lookback" method, the contract price shall reflect all amounts received under the contract, including amounts received after the contract comple-

⁸⁹ This calculation is done on a cumulative basis. Thus, the amount included in gross income in a particular year is that proportion of the expected contract price that the amount of costs incurred through the end of the taxable year bears to the total expected costs, reduced by amounts of gross contract price included in gross income in previous taxable years.

⁹⁰ See, e.g., Treas. Reg. sec. 1.451-3(c)(3).

tion date as a result of disputes, litigation or settlements relating to the contract.

Percentage of completion-capitalized cost method

Under the percentage of completion-capitalized cost method, the taxpayer must take into account 40 percent of the items with respect to the contract under the percentage of completion method. The remaining 60 percent of the items under the contract are to be taken into account under the taxpayer's normal method of accounting. Thus, 60 percent of the gross contract income will be recognized, and 60 percent of the capitalizable contract costs will be deducted, at the time required by the taxpayer's method. For example, if the taxpayer uses the completed contract method of accounting, these items would be taken into account upon completion of the contract. Similarly, if the taxpayer uses the accrual shipment method, such contract items would be taken into account at the time of shipment.

The look-back method is applied to the 40 percent portion of the contract reported on the percentage of completion method. Thus, interest is paid to or by the taxpayer on the difference between the amount actually taken into account by the taxpayer for each year of the contract and the amount the taxpayer would have taken into account recomputing the 40-percent portion under the look-back method.

Capitalizable contract costs

Under the Act, capitalizable contract costs include all costs required to be capitalized under the extended period long-term contract regulations of prior law and, in some cases, interest. In addition, in the case of a cost-plus long-term contract or a contract with the Federal government, any costs identified by the taxpayer (or a related person) pursuant to the contract or Federal, state, or local law or regulation as being attributable to the contract are subject to capitalization. Independent research and development expenses, expenses for unsuccessful bids and proposals, and marketing, selling, and advertising expenses, however, are not subject to capitalization under this provision.

Independent research and development costs are defined as any expenses incurred in the performance of independent research and development other than (1) expenses directly attributable to a long-term contract in existence when the expenses are incurred, and (2) any expenses under an agreement to perform research and development.⁹¹

In addition, the Act provides that the contractual arrangement regarding independent research and development costs and their allocation to the contract shall not be severed, for Federal income tax purposes, from the long-term contract in such a manner as to render such costs ineligible for treatment as costs of a long-term contract, or to accelerate the recognition of any income pertaining to such costs in comparison to the recognition of income which

⁹¹ The Congress intended that any costs that qualify as independent research and development costs under the Federal Acquisition Regulations System, 48 C.F.R. sec. 31.205-18 (1985), will qualify under this provision.

would otherwise occur under the taxpayer's method of accounting.⁹²

Exception for small construction contracts

Under the Act, the required use of either the percentage of completion-capitalized cost method or the percentage of completion method does not apply to certain small construction contracts. Contracts within this exception are those contracts for the construction or improvement of real property if the contract (1) is expected to be completed within the two-year period beginning on the commencement date of the contract, and (2) is performed by a taxpayer whose average annual gross receipts for the three taxable years preceding the taxable year in which the contract is entered into do not exceed \$10 million. Contracts eligible for this exception remain subject to the rules of prior law (i.e., the regulations applicable to non-extended period long-term contracts). Since such contracts involve the construction of real property, they are subject to the interest capitalization rules without regard to their duration.

Effective Date

The provisions of the Act are effective for contracts entered into after February 28, 1986.

For purposes of accounting for long-term contracts, the treatment of independent research and development costs (as includible in contract price but not includible in capitalizable contract costs) applies to all open taxable years of taxpayers.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$2,889 million in 1987, \$3,297 million in 1988, \$2,278 million in 1989, \$969 million in 1990, and \$609 million in 1991.

⁹² The Congress was aware that the treatment of independent research and development was a subject of controversy between taxpayers and the Internal Revenue Service. Under the Act, the position of the Internal Revenue Service in several recent technical advice memoranda was expressly overruled.

F. Reserve for Bad Debts (Sec. 805 of the Act and sec. 166 of the Code)⁹³

Prior Law

Prior law permitted taxpayers to take a deduction for losses on business debts using either the specific charge-off method or the reserve method. The specific charge-off method allows a deduction at the time and in the amount that any individual debt is wholly or partially worthless. The reserve method allows the current deduction of the amount that is necessary to bring the balance in the bad debt reserve account as of the beginning of the year, adjusted for actual bad debt losses and recoveries, to the balance allowable under an approved method as of the end of the year. The deduction taken under the reserve method is required to be reasonable in amount, determined in light of the facts existing at the close of the taxable year.

Worthless debts are charged off, resulting in a deduction under the specific charge-off method, or an adjustment to the reserve account under the reserve method, in the year in which they become worthless. In the case of a partially worthless debt, the amount allowed to be charged off for Federal income tax purposes cannot exceed the amount charged-off on the taxpayer's books. No such requirement is applicable to wholly worthless debts.

Prior law required an actual debt be owed to the taxpayer in order to support the creation of a reserve for bad debts. An exception to this rule was provided for dealers who guarantee, endorse, or provide indemnity agreements on debt owed to others if the potential obligation of the dealer arises from its sale of real or tangible personal property.

Reasons for Change

The Congress believed that the use of the reserve method for determining losses from bad debts resulted in the deductions being allowed for tax purposes for losses that statistically occur in the future. Thus, the Congress believed that the use of the reserve method for determining losses from bad debts allowed a deduction to be taken prior to the time that the loss actually occurred. This treatment under prior law was not consistent with the treatment of other deductions under the all events test. If a deduction is allowed prior to the taxable year in which the loss actually occurs, the value of the deduction to the taxpayer is overstated and the overall tax liability of the taxpayer understated.

⁹³ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 906; H. Rep. 99-426, pp. 638-641; H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 303; S. Rep. 99-313, pp. 153-158; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 314-316 (Conference Report).

Explanation of Provision

The Act repeals the availability of the reserve method in computing the deduction for bad debts for all taxpayers, other than commercial banks whose assets do not exceed \$500 million, and thrift institutions. Thus, taxpayers (other than certain financial institutions) are required to use the specific charge-off method in accounting for losses on bad debts. The Act also repeals the reserve method for dealers who guarantee, endorse, or provide indemnity agreements with respect to debt obligations arising out of the sale by the dealer of real or tangible personal property in the ordinary course of business (sec. 166(f) of prior law). In determining whether a debt is worthless, the fact that a utility is required to continue to provide services to a customer whose account has otherwise been determined to be uncollectible will not be considered as evidence that the debt is not worthless for Federal income tax purposes.

The Congress has directed the Secretary of the Treasury to study and to issue a report regarding appropriate criteria to be used to determine if a debt is worthless for Federal income tax purposes. It is anticipated that the report will consider under what circumstances a rule providing for a conclusive or rebuttable presumption of the worthlessness of an indebtedness is appropriate.

The final report is to be submitted, by January 1, 1988, to the House Committee on Ways and Means and the Senate Committee on Finance.

Effective Date

The provision of the Act is effective for taxable years beginning after December 31, 1986. Any change from the reserve method of accounting for bad debts is treated as a change in method of accounting initiated by the taxpayer with the consent of the Secretary of the Treasury. The balance in any reserve for bad debts as of the effective date is generally to be included in income ratably over a four-year period. The amount to be included in income is the full balance of the reserve account, without offset for any anticipated amounts that will not be currently accrued as income under the rules allowing accrual basis service providers to exclude from income amounts that are statistically determined not to be collectible until such amounts are actually collected. (see VIII. A., *supra*). In the case of a bad debt reserve for guarantees, the amount of the reserve subject to inclusion is first reduced by the remaining balance in any suspense account established under section 166(f)(4) of prior law.

It was intended that (1) net operating loss and tax credit carry-forwards will be allowed to offset any positive section 481 adjustment; and (2) for purposes of determining estimated tax payments, the section 481 adjustment will be recognized in taxable income ratably throughout the year in question.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$1,209 million in 1987, \$1,913 million in 1988, \$1,837 million in 1989, \$1,852 million in 1990, and \$1,043 million in 1991.

G. Taxable Years of Partnerships, S Corporations, and Personal Service Corporations (Sec. 806 of the Act and secs. 706, 1378, 441, and 267 of the Code) ⁹⁴

Prior Law

Partnerships.—Prior law required a partnership adopting or changing a taxable year to use the same taxable year as all of its principal partners (or the calendar year, if all of the partnership's principal partners do not have the same taxable year and the partnership is adopting a taxable year), unless the partnership established to the satisfaction of the Secretary of the Treasury a business purpose for selecting a different taxable year (sec. 706). A partnership that adopted its taxable year prior to April 2, 1954, was not required to change its taxable year regardless of whether the taxable year adopted is the same as the taxable year of all of the principal partners (Treas. Reg. sec. 1.706-1(b)(6)).

In 1972, the Internal Revenue Service announced in Revenue Procedure 72-51 (1972-2 C.B. 832) that requests by a partnership to adopt or change to an accounting period differing from that of the principal partners generally will be approved where the adoption of such change would result in the deferral of income to the partners of three months or less.

S corporations.—Prior law required a corporation that made an election to be taxed as an S corporation, or an S corporation that changed its taxable year to adopt a "permitted year" (sec. 1378). A permitted year is a calendar year or any other accounting period for which the S corporation establishes a business purpose to the satisfaction of the Secretary of the Treasury. A corporation that was an S corporation for a taxable year that includes December 31, 1982 (or that was an S corporation for a taxable year beginning in 1983 by reason of an election made on or before October 19, 1982) was allowed to retain a taxable year that is not a permitted year. However, if more than 50 percent of the stock of such an S corporation is newly owned stock, the S corporation was required to change its taxable year to a permitted year. Revenue Procedure 83-25 (1983-1 C.B. 689) provides procedures that the Internal Revenue Service will follow in approving a request by a corporation electing S corporation status that desires to change, adopt, or retain a taxable year other than a calendar year. Revenue Procedure 83-25 provided that requests will be approved where the taxable year results in the deferral of income to shareholders of three months or less.

⁹⁴ For legislative background of the provision, see: H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 304; S. Rep. 99-313, pp. 163-167; Senate floor amendment, 132 Cong. Rec. S 8190 (June 23, 1986); and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 317-320 (Conference Report).

Personal service corporations.—A personal service corporation generally was allowed to adopt any taxable year on its first Federal income tax return that conformed with its annual accounting period. A personal service corporation desiring to change its taxable year was generally required to first obtain the consent of the Secretary of the Treasury.

Deferral of income.—Under present law, partners in a partnership take into account their allocable share of income, gain, loss, deduction or credit of the partnership for their taxable year in which the partnership's taxable year ends. The items of income, gain, loss, deduction or credit are computed at the partnership level and reflect the partnership's (not the partner's) taxable year. To the extent that the partner's and the partnership's taxable years are not the same, a deferral of income can result. For example, assume a partnership has a taxable year ending in June, while an individual partner has a calendar year. The partner will include in his income tax return for the current calendar year his distributive share of partnership items that arose in the first six months of the current calendar year and his share of such items that arose in the last six months of the prior calendar year. Partnership items arising in the last six months of the current calendar year will not be included in the partner's return until the following calendar year. Thus, the recognition of six months' of partnership income has been deferred by the partner until the following taxable year.

A similar deferral may be accomplished through the use of a personal service corporation. For example, assume a personal service corporation with a taxable year ending in January pays its calendar year employee-owners a minimal salary during the year and, immediately prior to the close of the corporation's taxable year (during January), declares a bonus to the employee-owners equal to the profits of the corporation. The corporation obtains a deduction for the bonus paid (reducing its current year taxable income to zero) and the employee-owners report the bonus income as part of their income for the taxable year that ends eleven months later. The effect is to defer taxation on eleven months of income earned in one year until the following year.

Reasons for Change

The Congress believed that the prior law allowed an improper deferral of income for certain partners, shareholders in S corporations, and owners of personal service corporations. Where prior law allowed income earned by a partnership, S corporation or personal service corporation to be subjected to Federal income tax in a taxable year later than that in which it was earned, the value of the income earned is understated. This deferral of income was normally available only to certain types of taxpayers, resulting in preferential treatment of certain taxpayers at the overall expense of others. The Congress believed that requiring a partnership, S corporation, or personal service corporation to change its taxable year would impose less of a burden on the taxpaying public than other methods of eliminating the deferral.

Explanation of Provision

In general, the Act requires that all partnerships, S corporations, and personal service corporations conform their taxable years to the taxable years of their owners. An exception to the rule is made in the case where the partnership, S corporation, or personal service corporation establishes to the satisfaction of the Secretary of the Treasury a business purpose for having a different taxable year. The deferral of income to owners for a limited period of time, such as the three months or less rule of present law, is not to be treated as a business purpose.

The Act provides that a partnership may not have a taxable year other than the taxable year of the partners owning a majority interest in partnership profits and capital. If partners owning a majority of partnership profits and capital do not have the same taxable year, the partnership must adopt the same taxable year as its principal partners. If the principal partners of the partnership do not have the same taxable year and no majority of its partners have the same taxable year, the partnership must adopt a calendar year as its taxable year unless a different taxable year is provided by regulations. In each case, the partnership may use a different taxable year if it establishes to the satisfaction of the Secretary of the Treasury a business purpose therefor.

For example, assume a partnership has one principal partner which is a fiscal year corporation owning an interest of 10 percent in partnership profits and capital. The remainder of the partners are individuals on a calendar taxable year; none of these individuals owns a sufficient interest in the partnership to be a principal partner. Under prior law, the partnership would have been required to adopt the fiscal taxable year of the corporate partner (i.e., the taxable year of its principal partner). Under the Act, the partnership is required to adopt a calendar taxable year (i.e., the taxable year of the majority of its partners).

The Congress intended that a partnership not adopt the taxable year of the partners owning a majority interest in partnership profits and capital, unless partners with the same taxable year have owned a majority interest in partnership profits and capital for three consecutive taxable years of the partnership. This rule is to be phased-in over a three year period. In applying this rule, ownership in taxable years beginning before 1987 is not taken into account. If the taxable year of a partnership is determined by the taxable year of the partners owning a majority interest in partnership profits and capital, the Congress did not intend that a further change in the taxable year of the partnership be required for either of the two taxable years of the partnership following the year of change.⁹⁵

An S corporation must adopt a calendar year, regardless of when the corporation elected to be taxed as an S corporation. Also, a personal service corporation must adopt a calendar year.

For purposes of this provision, a personal service corporation is a corporation the principal activity of which is the performance of personal service if services are substantially performed by employ-

⁹⁵ A technical correction may be required to accomplish this result.

ee-owners. An employee-owner is any employee of the corporation who owns any of the outstanding stock of the corporation. In determining whether an employee owns stock in the corporation, the constructive ownership rules of section 318 apply, except that the attribution of stock owned by a corporation to the employee is applied without regard to any requirement that the employee own a certain percentage of the value of the stock of that corporation. For the purpose of this provision, a corporation that has elected S corporation status will not be considered a personal service corporation.

A corporation was not intended to be considered a personal service corporation for the purpose of this provision unless more than ten percent of the stock (by value) in such corporation is held by employee-owners.⁹⁶

The Congress intended that a corporation engaged in the rendering of personal services be excluded from this definition only if the personal services rendered by owner-employees do not materially contribute to the revenue of the corporation. Review of other employees work by an owner-employee in his professional capacity constitutes contribution by the owner-employee with regard to the work reviewed.

The Congress intended that in the case of a corporation that is a member of an affiliated group filing a consolidated return, all members of such group are taken into account in determining whether or not such corporation meets the definition of a personal service corporation. For example, a corporation may be treated as a personal service corporation where the owner-employees rendering the requisite services are owners of the parent, but employees of a subsidiary. In determining if the principal activity of the corporation is the provision of personal services, the activities of all members of the consolidated group are to be considered.⁹⁷

An exception to the rules requiring a certain taxable year is provided in each case where the partnership, S corporation, or personal service corporation establishes to the satisfaction of the Secretary of the Treasury a business purpose for having a different taxable year.

The Congress intended that any partnership that received permission to use a fiscal year-end (other than a year-end that resulted in a three-month or less deferral of income) under the provisions of Rev. Proc. 74-33, 1974-2 C.B. 489, be allowed to continue the use of such taxable year without obtaining the approval of the Secretary of the Treasury. Similarly, any S corporation that received permission to use a fiscal year-end (other than a year-end that resulted in a three-month or less deferral of income), which permission was granted on or after the effective date of Rev. Proc. 74-33, shall be allowed to continue the use of such taxable year without obtaining the approval of the Secretary of the Treasury.

Moreover, any partnership, S corporation, or personal service corporation may retain a taxable year, under procedures established by the Secretary of the Treasury, if the use of such year meets the requirements of the "25% test" as described in Rev.

⁹⁶ A technical correction may be required to accomplish this intent.

⁹⁷ A technical correction may be required to accomplish this intent.

Proc. 83-25, 1983-1 C.B. 689 (i.e., 25% or more of the taxpayer's gross receipts for the 12-month period in question are recognized in the last two months of such period and this requirement has been met for the specified three consecutive 12-month periods).

In addition, the Secretary of the Treasury may prescribe other tests to be used to establish the existence of a business purpose, if, in the discretion of the Secretary of the Treasury, such tests are desirable and expedient towards the efficient administration of the tax laws. It was not the intent of the Congress that a partnership, S corporation or personal service corporation that does not meet the "25% test" be automatically denied the use of a taxable year other than the taxable year otherwise mandated by this provision. It is anticipated that the applications of all taxpayers will be considered based on each taxpayer's facts and circumstances.

The Congress intended that (1) the use of a particular year for regulatory or financial accounting purposes; (2) the hiring patterns of a particular business, e.g., the fact that a firm typically hires staff during certain times of the year; (3) the use of a particular year for administrative purposes, such as the admission or retirement of partners or shareholders, promotion of staff, and compensation or retirement arrangements with staff, partners, or shareholders; and (4) the fact that a particular business involves the use of price lists, model year, or other items that change on an annual basis ordinarily will not be sufficient to establish that the business purpose requirement for a particular taxable year has been met. Although the above items are not themselves sufficient to establish a business purpose, they may be considered in connection with other items by the Secretary of the Treasury in determining whether a taxpayer has a business purpose for a particular taxable year. The fact that a particular fiscal year allows deferral of income for a limited period of time under no circumstances establishes a business purpose.

In determining the taxable year to which a taxpayer is required to change by reason of this provision, Congress intended that changes in taxable years of other persons required by the provision to change taxable years be taken into account. Such changes are to be taken into account regardless of the time at which they take place, so long as they are determinable. For example, a partnership that historically used a January fiscal year has partners that are personal service corporations that historically used a June fiscal year. The personal service corporations are required to adopt a calendar year by this provision. Since the taxable year of the personal service corporation partners determines the taxable year of the partnership, the partnership also is required to adopt a calendar year.⁹⁸ The fact that the partners will be changing their taxable years is immaterial for the purpose of determining whether or not the majority interest test is met.

A partnership, S corporation, or personal service corporation that changes to a taxable year required by this provision will be

⁹⁸ If the change in the taxable year of the partnership did not take into account the change in the taxable year of its personal service corporation owners, the partnership could be considered to be required to first adopt a June year and later, after its partners had been required to adopt a calendar year, adopt the calendar year itself.

treated as having made the change with the consent of the Secretary of the Treasury. In the case of a partnership or an S corporation required by this provision to change taxable years, each partner or owner that would otherwise be required to include items from more than one taxable year of the partnership or S corporation in any one of its taxable years is to take into account the excess of income over expenses for the short taxable year of the partnership or S corporation ratably in each of the first four taxable years of the partner or owner beginning after December 31, 1986, unless the partner or owner elects to include all such income in its taxable year that the short taxable years ends in or within. In the case of a personal service corporation, the taxable income in the short taxable year resulting from the change of taxable year is annualized under section 443.

The rule allowing partners or shareholders of a partnership or S corporation to include items of income from the short year of the partnership or S corporation in each of the partner or shareholder's four taxable years beginning after December 31, 1986 is applicable regardless of what type of entity the partner or S corporation shareholder is. Thus, a personal service corporation that is a partner in a partnership required to adopt a new taxable year as a result of this provision is eligible to include the partner's distributive share of partnership income over four taxable years so long as it would otherwise be required to include the items from more than one taxable year of the partnership in any one of its taxable years. The rule is applicable to income from an S corporation only if such corporation was an S corporation for a taxable year beginning in 1986.

The ratable four year inclusion applies only in cases where the partner or S corporation shareholder would otherwise be required to include items from more than one taxable year of the partnership or S corporation in any one of its own taxable years. For example, a personal service corporation with a June fiscal year is a partner in a partnership that also uses a June fiscal year. Both the personal service corporation and the partnership are required to change to the calendar year. The changes are considered to occur simultaneously. In this case, the personal service corporation will include its share of partnership items from the last full fiscal year of the partnership in its full year ending in June, and its share of partnership items from the short year of the partnership in its short year (which is of equal length as the partnership's short taxable year). As the personal service corporation has not been required to include items from more than one taxable year in any one of its taxable years, the rule providing for ratable inclusion over four years of the excess of its share of partnership income in excess of expenses does not apply.

The Act extends the provisions of section 267 to provide that a personal service corporation and its employee-owners are treated as related taxpayers regardless of the amount of the corporation's stock owned, directly or indirectly, by the employee-owner. Thus, a personal service corporation may not deduct payments made to employee-owners prior to the time that such employee-owner would include the payment in gross income.

The Congress anticipated that the Secretary of the Treasury will promulgate regulations regarding the use of the 52-53 week taxable year to prevent the evasion of the principles of this provision. It is anticipated that the regulations will provide that, for the purpose of determining when taxable income is included by a partner or S corporation shareholder, a 52-53 week taxable year of a partner, shareholder, partnership, or S corporation will be treated as ending on the last day of the calendar month ending nearest to the last day of such 52-53 week taxable year. For example, a calendar year partner will include its share of taxable income from a partnership with a 52-53 week taxable year ending on January 3, 1988, in its 1987 calendar year Federal income tax return. The Secretary of the Treasury may also prescribe similar rules to prevent the evasion of the principles of the provision through the use of a 52-53 week taxable year by personal service corporations and the shareholder-employees of such corporations. It is also anticipated that the Secretary of the Treasury will suspend the operation of Treas. Reg. sec. 1.441-2(c) allowing taxpayers in certain cases to adopt, or change to, a 52-53 week taxable year without the approval of the Secretary of the Treasury.

Some partnerships and S corporations that adopted a taxable year providing a deferral of income to owners of three months or less were required to include the amount of deferral obtained in income over a 10-year period. Any portion of such amount not taken into income as of the effective date of the provision may be used to reduce the income attributable to any short taxable year required by the provision.

The Congress also intended that common trust funds taxed under section 584 of the Code be required to use a calendar year. To the extent a participant in a common trust fund is required to include items from more than one taxable year of the common trust fund in any of its taxable years, the items from the short taxable year of the common trust fund are to be included in income ratably over a four taxable year period, in the same manner as if the common trust fund were a partnership and the participant in the common trust fund were a partner.⁹⁹

Effective Date

The provision is effective for taxable years beginning after December 31, 1986. Entities required to change their taxable years as a result of this provision will be required to file a return for the short taxable year that begins with the first day of their current taxable year beginning after December 31, 1986, and ends in accordance with the taxable year to which the entity changes.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$165 million in 1987, \$467 million in 1988, \$477 million in 1989, \$390 million in 1990, and \$213 million in 1991.

⁹⁹ A technical correction may be required to accomplish this intent.

H. Special Treatment of Certain Items

1. Qualified discount coupons (sec. 823 of the Act and sec. 466 of the Code)¹⁰⁰

Prior Law

Under prior law, issuers of qualified discount coupons using the accrual method of accounting could elect to deduct the cost of redeeming qualified discount coupons outstanding at the close of the taxable year so long as the coupons were received for redemption by the taxpayer within a statutory redemption period following the close of the taxable year (prior law sec. 466). The statutory redemption period was the 6-month period immediately following the close of the taxable year, unless the taxpayer elected a shorter period.

A qualified discount coupon was a coupon which (1) was issued by the taxpayer, (2) was redeemable by the taxpayer, and (3) allowed a discount on the purchase price of merchandise or other tangible personal property. The coupon could not have been redeemable directly by the issuer (i.e., a direct consumer rebate) and could not by itself, or in conjunction with any other coupons, have brought about a price reduction of more than \$5 with respect to any item.

The election was required to be made with respect to each trade or business of the taxpayer and constituted a method of accounting. Revocation of an election could have been made only with permission of the Secretary of the Treasury. In certain situations, a taxpayer was required to establish a suspense account in the year of election in order to limit the bunching of deductions in that year.

Reasons for Change

The Congress believed that the provision of prior law allowing a deduction for discount coupons received for redemption after the close of the taxable year resulted in an incorrect measurement of taxable income. A coupon received during the redemption period was deductible in computing the prior year's income even though it may have related to the sale of a product which took place during the current taxable year and such a mismatch could have occurred even though the coupon was outstanding at the end of the prior taxable year. Thus, a deduction could have been allowed in the year prior to the year in which the income on the product for which the coupon was redeemed was recognized.

The Congress also believed that prior law provided an unwarranted exception to the general rules of tax accounting. An accrual

¹⁰⁰ For legislative background of the provision, see: H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 324; S. Rep. 99-313, pp. 158-159; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 321-322.

basis taxpayer normally is allowed to recognize an expense only when all events establishing its obligation to pay the amount claimed as a deduction have occurred, the amount thereof can be determined with reasonable accuracy, and there has been economic performance with respect to the item. Absent the special provision of prior law for discount coupons, such costs would not have been considered deductible until the coupons actually were redeemed.

Explanation of Provision

The Act repeals the special provision of prior law allowing a deduction for the cost of redeeming qualified discount coupons received during a redemption period after the close of the taxable year (prior law sec. 446). As a result, only those costs of redeeming discount coupons that are actually received for redemption during the taxable year will be allowed as a deduction during that taxable year.

The Act treats any taxpayer who previously had elected to deduct the cost of redeeming qualified discount coupons as having elected to change its method of accounting for discount coupons. The change will be considered to have been initiated by the taxpayer with the consent of the Secretary of the Treasury. Any adjustment which is required to be made by section 481 is reduced by any balance in the suspense account of the taxpayer, and the net amount is to be taken into account over a period not to exceed four taxable years, commencing with the first taxable year beginning after December 31, 1986. It is expected that the concepts of Revenue Procedure 84-74, 1984-2 C.B. 736, generally will apply to determine the actual timing of recognition of income or expense as a result of the adjustments arising from this provision. It also is expected that (1) net operating loss and tax credit carryforwards will be allowed to offset any positive section 481 adjustment; and (2) for purposes of determining estimated tax payments, the section 481 adjustment will be recognized in taxable income ratably throughout the year in question.

Effective Date

The provision is effective for taxable years beginning after December 31, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$16 million in 1987, \$31 million in 1988, \$34 million in 1989, \$35 million in 1990, and \$21 million in 1991.

2. Income attributable to utility services (sec. 821 of the Act and sec. 451 of the Code)¹⁰¹

Prior Law

Under both present and prior law, taxpayers using an accrual method of accounting recognize income at the time all the events have occurred which establish the taxpayer's right to receive the income and the amount of income can be established with reasonable accuracy.

Under prior law, utilities using an accrual method of accounting were allowed to recognize income in the taxable year in which a customer's utility meter was read, providing a similar technique was used for financial accounting purposes (Rev. Rul. 72-114, 1972-1 C.B. 124). Some judicial decisions rendered prior to the enactment of the Act allowed income to be recognized in the taxable year in which a customer's utility meter was read regardless of the technique used for financial accounting purposes. See, e.g., *Orange and Rockland Utilities v. Commissioner*, 86 T.C. No. 14 (1986).

Reasons for Change

The Congress believed that a method of accounting that recognized income in accordance with an event other than the provision of utility services did not accurately measure the taxable income of an accrual basis utility. Methods of accounting that recognized income at the time a customer's utility meter was read or at the time the customer was billed fail to recognize income as it was earned and resulted in a mismatching of income and expense. The continued allowance of such methods of accounting would have provided an unwarranted exception to the rules of accounting applicable to other taxpayers.

In addition, the Congress also was aware that the proper method of accounting for utility services by an accrual basis utility was then a matter of controversy between taxpayers and the Internal Revenue Service. In order to minimize disputes over prior taxable years, the Congress believed that a method of accounting that took into account income from the provision of utility services on the basis of the accounting period in which the customers' meters were read should be accepted for those prior years.

Explanation of Provision

The Act requires accrual basis taxpayers to recognize income attributable to the furnishing or sale of utility services to customers not later than the taxable year in which such services are provided to the customer. The year in which utility services are provided may not be determined by reference to the time the customer's meter is read or to the time that the customer is billed (or may be billed) for such services.

The effect of the provision is to require an estimate of the income attributable to utility services provided during the taxable

¹⁰¹ For legislative background of the provision, see: H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 322; S. Rep. 99-313, pp. 120-121; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 322-324 (Conference Report).

year but after the final meter reading or billing date which falls within the taxable year. It is anticipated that, where it is not practical for the utility to determine the actual amount of services provided through the end of the current year, this estimate may be made by assigning a pro rata portion of the revenues determined as of the first meter reading date or billing date of the following taxable year.

Utility services subject to the provision of the Act are the provision of electrical energy, water or sewage disposal, the furnishing of gas or steam through a local distribution system, telephone and other communications services, and the transportation of gas or steam by pipeline. The Congress anticipated that similar rules also would be applicable to other utility services which might come into existence at some future date. Whether or not a utility service is regulated by a government or governmental agency does not affect its treatment under this provision.

It is expected that taxpayers required to accrue income at the time that utility services are furnished to customers also will be able to accrue at such time any deductions for the related costs of providing the utility services, so long as economic performance has occurred with respect to such costs in the year in question.

The Act provides that, for any taxable year beginning before August 16, 1986, a method of accounting which took into account income from the providing of utility services on the basis of the period in which the customers' meters were read shall be deemed to be proper for Federal income tax purposes. The Congress also intended such a method to be deemed proper for Federal income tax purposes for a taxable year beginning after August 16, 1986 and before January 1, 1987, if the taxpayer used such method for its preceeding taxable year.¹⁰² Such a method is deemed to be proper only if that method was actually used by the taxpayer for the preceeding taxable year. No inference is intended as to whether or not such a method is proper if the method is retroactively adopted by the taxpayer. No inference is intended as to other methods of accounting for utility services (e.g., a method of accounting which takes income into account on the basis of the date the customer is billed for utility services or a hybrid method that combines the recognition of income at the time customers' meters are read with another method). Also, no inference is intended with regard to other questions of law, including but not limited to the treatment of pre-paid income amounts for the provision of utility services at a future date, the treatment of deposits made by utility customers, or the treatment of amounts received by a taxpayer under a "budget-billing" procedure.

Effective Date

The provision is effective for taxable years beginning after December 31, 1986. The amount of any adjustment required to be made as a result of this provision is to be included in income ratably over the first four taxable years for which the provision is effective.

¹⁰² A technical correction may be necessary to reflect this intention.

It also is anticipated that (1) net operating loss and tax credit carryforwards will be allowed to offset any positive section 481 adjustment; and (2) for purposes of determining estimated tax payments, the section 481 adjustment will be recognized in taxable income ratably throughout the year in question.

In the case of a taxpayer that has delayed the deductions of related costs of providing the utility services in order to match such costs with the period in which income is recognized, the change in accounting method required under this provision will include any change in accounting method for the related items of expense or deduction necessary in order to allow the deduction of these items in the same period as the related income is recognized. This change in method of accounting, however, is limited to items of expense or deduction for which economic performance has occurred within the taxable year in question. The net amount of the two changes is taken into income ratably over a 4-year period.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$191 million in 1987, \$356 million in 1988, \$384 million in 1989, \$387 million in 1990, and \$200 million in 1991.

3. Contributions in aid of construction (sec. 824 of the Act and secs. 118(b) and 362(c)(3) of the Code)¹⁰³

Prior Law

Under both present and prior law, the gross income of a corporation does not include contributions to its capital (sec. 118(a)). Under prior law, a corporate regulated public utility that provides electric energy, gas (through a local distribution system or transportation by pipeline), water, or sewage disposal services was allowed to treat contributions received in aid of construction as a contribution to capital not includible in gross income (sec. 118(b)). Such contributions could not have been included in the utility's rate base for rate making purposes. Property received (or purchased with the proceeds of) a contribution to capital had no depreciable basis for Federal income tax purposes and was not eligible for the investment tax credit.

Reasons for Change

The Congress believed that all payments that are made to a utility either to encourage, or as a prerequisite for, the provision of services should be treated as income of the utility and not as a contribution to the capital of the utility. The Congress believed that prior law allowed amounts that represented prepayments for services to be received by corporate regulated public utilities without the inclusion of such payments in gross income. Accordingly, the Act repeals the prior law treatment and requires the recipient utility to include the value of such contributions in income at the time

¹⁰³ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 908; H. Rep. 99-426, pp. 643-645; and H. Rep. 99-841, Vol. II (September 18, 1986), p. 324 (Conference Report).

of their receipt and to depreciate the value of any asset contributed, or purchased with a contribution of cash, over the recovery period of the asset.

Explanation of Provision

The Act repeals the provision of prior law (sec. 118(b)) that provided that contributions in aid of construction received by a corporate regulated public utility be treated as a contribution to the capital of the utility.

Congress intended that the effect of the change be to require a utility to report as an item of gross income the value of any property, including money, that it receives to provide, or to encourage it to provide, services to, or for the benefit of, the person transferring the property to the utility. A utility is considered as having received property to encourage the provision of services if the receipt of the property is a prerequisite to the provision of the services, if the receipt of the property results in the provision of services earlier than would have been the case had the property not been received, or if the receipt of the property otherwise causes the transferor to be favored in any way.

Congress intended that a utility include in gross income the value of the property received regardless of whether the utility had a general policy, stated or unstated, that requires or encourages certain types of potential customers to transfer property, including money, to the utility while other types of potential customers are not required or encouraged to make similar transfers. If members of a group making transfers of property are favored over other members of the same general group not making such transfers, the fact that the contributing members of the group may not be favored over the members of other groups in the receipt of services will not prevent the inclusion of the value of the transfer in the gross income of the utility. For instance, where a utility generally requires developers of multiple tracts of residential housing to transfer property to the utility in order to obtain service, but does not require such a transfer from individual homeowners, the fact that both groups will receive service without preference of one group over the other will not prevent the utility from being required to include in gross income the value of the property received from the developers. Where all members of a particular group make transfers of property to the utility, normally it will be assumed that such transfers are to encourage the provision of services, despite the absence of any formal policy requiring such transfers, unless it is clearly shown that the benefit of the public as a whole was the primary motivating factor in the transfers.

The person transferring the property will be considered as having been benefitted if he is will receive the services, is an owner of the property that will receive the services, is a former owner of the property that will receive the services, or derives any benefit from the property that will receive the services. Thus, a builder who transfers property to a utility in order to obtain services for a house that he was paid to build will be considered as having benefitted from the provision of the services. This is the case despite the fact that the builder may never have had an ownership interest in

the property and may make the transfer to the utility after the house has been completed and accepted.

A transfer of property to the utility from a person benefitting from the services will be deemed to occur under this provision if such treatment is in accordance with the substance of the transaction, regardless of the form in which such transaction is conducted. For example, a transfer of property to the utility may occur even though the person benefitting from the services nominally retains legal title to such property, if the effect of the transaction is to transfer to rights and burdens of ownership to the utility. Similarly, a transfer of property from a real estate developer to obtain services for a tract being developed will be deemed to occur even though such transaction is arranged in the form of a loan from the developer to the utility, unless adequate interest is charged on the moneys lent. Where repayment of a loan to a utility is contingent, it is normally expected that a taxable transfer of property will be considered to have occurred, if the contingent loan is made to allow or to encourage the utility to provide services for the benefit of the person making the contingent loan. To the extent that income is recognized by the utility in such a case, it is anticipated that a deduction will be allowed for repayment in the period in which the repayment is made. The amount of any such deduction should reflect any depreciation deductions that may have previously been taken with regard to the property transferred (or purchased with the proceeds of the transfer).

The value of property transferred to a utility, and thus the amount required to be included in income, is its fair market value. Fair market value is to be determined in the same manner as for the purpose of determining gain or loss when property is received in a sale or exchange. That is, the price at which the property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell. This amount may be different than the cost to the transferor of constructing or acquiring the property transferred. Whether or not the value of the property transferred is allowed to be included in the rate base of the transferee, or the depreciation on the property transferred is allowed as an expense for the purpose of determining if the transferee is earning an adequate return on its rate base, is not intended to be a determinant of the transferred property's value.

A sale of property to a utility at less than fair market value or its lease to a utility for less than a fair market rental is treated as a taxable transfer as a result of this provision.

The provision does not effect transactions that would not have been treated as nontaxable contributions in aid of construction under section 118(b) of prior law. For example, a transaction that qualifies as a like-kind exchange under section 1031, or that qualifies as an involuntary conversion under section 1033 is taxed under those sections and not as a taxable transfer under this provision.

Effective Date

The provision is effective for contributions received after December 31, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$70 million in 1987, \$125 million in 1988, \$110 million in 1989, \$104 million in 1990, and \$103 million in 1991.

4. Cancellation of indebtedness for solvent taxpayers (sec. 822 of the Act and sec. 108 of the Code)¹⁰⁴

Prior Law

Under both present and prior law, gross income includes "income from discharge of indebtedness" (sec. 61(a)(12)). A discharge of indebtedness is considered to occur whenever a taxpayer's debt is forgiven, cancelled, or otherwise discharged by a payment of less than the principal amount of the debt. The amount of indebtedness discharged is equal to the difference between the face amount of the debt, adjusted for any unamortized premium or discount, and any consideration given by the taxpayer to effect the discharge. Both present and prior law contain exceptions to the general rule in cases where the discharge occurs in a case arising under title 11 of the United States Code (relating to bankruptcy) or when the taxpayer is considered to be insolvent.

Prior law also provided an exception where the indebtedness discharged was qualified business indebtedness (sec. 108(a)(1)). Qualified business indebtedness was indebtedness that was incurred or assumed by a corporation or indebtedness that was incurred or assumed by an individual in connection with property used in the individual's trade or business. A taxpayer was required to elect to have the indebtedness treated as qualified business indebtedness (sec. 108(d)(4)).

In the case of a discharge of qualified business indebtedness, the amount of the discharge that would have been included in gross income had the discharge not been of qualified business indebtedness was instead applied to reduce the basis of depreciable property of the taxpayer (sec. 108(c)(1)). An election was available to treat inventory as depreciable property for this purpose. The amount of discharge income that could have been excluded as a discharge of qualified business indebtedness was limited to the basis of the taxpayer's depreciable property. If the amount of discharge income exceeded the basis of depreciable property, the excess was required to be included in gross income for the year in which the discharge occurred.

Reasons for Change

The Congress believed that the prior law treatment of the discharge of qualified business indebtedness was too generous. Income from such a discharge generally was deferred by reducing the basis of depreciable assets, regardless of the capacity of the taxpayer to currently pay the tax. In addition, the provision produced disparate results among taxpayers depending upon the makeup of their de-

¹⁰⁴ For legislative background of the provision, see: H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 323; S. Rep. 99-313, pp. 161-162; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 324-325 (Conference Report).

preciable assets. For taxpayers without sufficient amounts of inventory or depreciable assets, the full benefit of the deferral was not available.

Explanation of Provision

The Act repeals the provision of prior law (sec. 108(a)(1)(C)) which provided for the exclusion from gross income of income from the discharge of qualified business indebtedness. The effect of the Act is to require that any discharge of indebtedness, other than a discharge in title 11 cases and a discharge that occurs when the taxpayer is insolvent, results in the current recognition of income in the amount of the discharge.

The Congress did not intend to change the present law treatment of a discharge of indebtedness that occurs in a title 11 case or when the taxpayer is insolvent.¹⁰⁵ The Congress also did not intend to change the provision of prior and present law (sec. 108(e)(5)) that treats any reduction of purchase-money debt of a solvent debtor as a purchase price adjustment, rather than a discharge of indebtedness.

Effective Date

The provision is applicable to discharges of indebtedness occurring after December 31, 1986.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$60 million in 1987, \$85 million in 1988, \$67 million in 1989, \$57 million in 1990, and \$46 million in 1991.

¹⁰⁵ Sec. 405 of the Act provides special rules for certain solvent farmers for the purpose of determining whether there is income from the discharge of indebtedness. (See Title IV., Part A.4).

TITLE IX—FINANCIAL INSTITUTIONS

A. Reserves for Bad Debts (Sec. 905 of the Act and secs. 585, 586, and 595 of the Code) ¹

1. Commercial banks

Prior Law

In general

Under prior law, all commercial banks² were allowed to use either the specific charge-off method or the reserve method in computing their deduction for bad debts for Federal income tax purposes. A commercial bank using the specific charge-off method takes a deduction for bad debt expense at the time a specific debt becomes partially or totally worthless in the amount of such worthlessness. A commercial bank using the reserve method takes a deduction for bad debt expense at the close of the taxable year. The amount of the deduction is limited to the amount necessary to increase the year-end balance of the bad debt reserve account to an amount computed under either the "bank experience method" or the "percentage of eligible loans method." A commercial bank may switch between the bank experience method and the percentage of eligible loans method of determining the addition to its reserve for losses on loans from one year to another.

Bank experience method

The maximum allowed ending reserve balance for a bank using the bank experience method is the amount of loans outstanding at the close of the taxable year times a fraction, the numerator of which is the sum of actual bad debts for the current and five preceding taxable years, and the denominator of which is the sum of the amount of loans outstanding at the close of the each of those years.

Percentage of eligible loans method

The maximum allowed ending reserve balance for a bank using the percentage of eligible loans method is equal to a specified percentage of the outstanding eligible loans at the close of the taxable

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 801; H. Rep. 99-426, pp. 574-583; H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 801; S. Rep. 99-313, pp. 285-288; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 326-332 (Conference Report).

² A commercial bank is defined as a domestic or foreign corporation, a substantial portion of whose business consists of receiving deposits and making loans and discounts, or of exercising fiduciary powers similar to those permitted national banks, and who are subject by law to supervision and examination by State or Federal authority having supervision over banking institutions (sec. 581). For the purpose of determining the deduction for bad debts, the term "commercial bank" does not include domestic building and loan associations, mutual savings banks, or cooperative nonprofit mutual banks ("thrift institutions").

year, plus an amount determined under the bank experience method for loans other than eligible loans. The specified percentage for taxable years beginning after 1982 is 0.6 percent.³ Eligible loans for this purpose generally are loans incurred in the course of a bank's normal customer loan activities on which there is more than an insubstantial risk of loss.⁴

The availability of the percentage of eligible loans method expires after 1987. For taxable years beginning after 1987, banks are limited to the bank experience method in computing additions to bad debt reserves.

Under both the bank experience method and the percentage of eligible loans method, the ending reserve balance need not be less than the balance at the end of the "base year," providing that the amount of outstanding loans at the close of the current year is at least as great as the balance at the close of the base year.

If the bad debt reserve deduction for the taxable year determined under the above rules exceeds the amount which would have been allowed as a deduction on the basis of actual experience, the deduction is reduced by 20 percent of such excess (sec. 291). Also, 59 and 5/6ths percent of the deductible excess (after the 20-percent reduction) is treated as a tax preference for purposes of computing the corporate minimum tax (sec. 57).

Reason for Change

The Congress believed that the reserve method of accounting for bad debts generally should be repealed for several reasons. First, the use of the reserve method for determining losses on bad debts results in deductions being taken currently for tax purposes for losses that statistically are expected to occur in the future. In this regard, the reserve for bad debts is inconsistent with the treatment of other deductions under the all events test. Second, the use of the reserve method allows deductions to be taken prior to the time that the losses actually occur and, therefore, allows deductions larger than the actual present value of the losses. Finally, the Congress is concerned that many banks, particularly those who are members of large banking organizations, have used the reserve method for determining losses from bad debts to lower substantially their Federal income tax liabilities.

At the same time, the Congress was concerned that the repeal of the reserve method for smaller banks may have a potentially adverse impact. The Congress sought to balance these concerns by providing for the continued availability of reserves for bad debts for smaller banks, as under prior law, while requiring larger banks to compute their losses from bad debts using the specific charge-off method.

³ For taxable years beginning after 1975 and before 1982, the specified percentage was 1.2 percent. For taxable years beginning in 1982, the specified percentage was 1.0 percent.

⁴ Specifically excluded from the definition of an eligible loan are a loan to a bank; a loan to a domestic branch of a foreign corporation which would be a bank were it not a foreign corporation; a loan secured by a deposit in the lending bank or in another bank if the taxpayer bank has control over the withdrawal of such deposit; a loan to or guaranteed by the United States, a possession or instrumentality thereof, or to a State or political subdivision thereof; a loan evidenced by a security; a loan of Federal funds; and commercial paper. Sec. 585(b)(4).

Explanation of Provision

Repeal of reserve method for large banks

The Act repeals the use of reserves in computing the deduction for losses on bad debts in the case of "large banks." A bank is considered a "large bank" if, for the current taxable year or any taxable year beginning after December 31, 1986, the sum of the average adjusted bases of all assets of such bank (or any controlled group of which the bank is a member) exceeds \$500 million. The adjusted basis of an asset generally will be considered to be the tax basis of the asset, adjusted by those amounts allowed as adjustments to basis by section 1016. In determining the sum of the average adjusted bases of all assets of a controlled group, interests held by one member of such group in another member of such group are to be disregarded.

The average adjusted bases of the assets of a bank or controlled group is the average of the adjusted bases of the assets for each period of time falling within the taxable year the bank is required to report for regulatory purposes. This is expected to result in the adjusted bases of the assets of a bank generally to be determined quarterly, at the same time as the quarterly call reports for the bank are prepared, regardless of whether or not the end of any such quarter coincides with the end of the taxable year of the bank.

A controlled group for this purpose is a controlled group of corporations described in section 1563(a)(1). For the purpose of determining the sum of the adjusted bases of the assets of a controlled group, all corporations includible in the group under the ownership tests of section 1563(a) are included, without regard to their status as an "excluded member" of a controlled group as a result of the application of section 1563(b)(2), whether or not the corporation meets the definition of a commercial bank, and whether or not the corporation is a foreign or domestic entity.

Recapture of existing bad debt reserves

Direct recapture inclusion method.—A commercial bank that is determined to be a large bank generally is required to include in income the balance in any reserve for bad debts over a period of four taxable years, beginning with the disqualification year. The disqualification year is the first taxable year beginning after December 31, 1986, for which the bank is considered to be a large bank. Ten percent of the reserve balance is included in income in the disqualification year, 20 percent in the first taxable year following the disqualification year, 30 percent in the second following year, and 40 percent in the third taxable year following the disqualification year. The bank may elect to include in income a greater amount in the first year for which recapture is required. If such an election is made, 2/9ths of the remainder of the reserve balance (after reduction for the amount included in income in the first taxable year) must be included in income in the second taxable year, 1/3rd of the remainder in the third taxable year, and 4/9ths of the remainder in the fourth taxable year.

A bank, that is directly recapturing its existing bad debts reserve by including an amount in taxable income, may suspend the inclu-

sion in income of its bad debt reserve for any year in which it is a "financially troubled bank." Nonetheless, a financially troubled bank may elect to include in income currently all or a portion of the amount of its reserves that otherwise would be recaptured that year.

A bank is a financially troubled bank if the average of its nonperforming loans for the taxable year exceeds 75 percent of the average of its equity capital for the year. Nonperforming loans include (1) loans that are "past due 90 days or more and still accruing," (2) "nonaccrual" loans, and (3) "renegotiated 'troubled' debt" under the existing standards of the Federal Financial Institution Examination Council. Equity capital is assets less liabilities, as those amounts are reported for regulatory purposes. Equity capital does not include the balance in any reserve for bad debts. The average of nonperforming loans and equity capital for the year is to be determined as the average of those amounts at each time during the taxable year that the bank is required to report for regulatory purposes. In the case of a bank that is a member of a controlled group described in section 1563(a)(1), the determination of whether the bank is a financially troubled bank is made with respect to all members of that controlled group.

The inclusion in income of a portion of the bad debt reserve is suspended, not forgiven, during each year in which the bank is considered to be a financially troubled bank. For example, consider a large bank that is financially troubled in the disqualification year, is not financially troubled in the two following years, and then returns to financially troubled status in the fourth year. No portion of the bank's bad debt reserve need be included in income during the disqualification year, since the bank meets the definition of a financially troubled bank. In the second year, the bank must begin the inclusion of its bad debt reserve in income. As the inclusion in income begins in this year, the bank may include in income either 10% of its reserve balance or a greater amount if it so elects. The bank may not elect at this time to use the cut-off method (described below), since it has already tolled the inclusion of the bad debt reserve in income as a financially troubled bank. In the third year, the bank must include in income 2/9ths of the bad debt reserve not included in income in the prior year. The bank returns to troubled status in the fourth year and no portion of the bad debt reserve must be included in income in that year. The bank will be required to include in income the amount it would have included in that year in the next year in which it is not a financially troubled bank.

The provision allowing a financially troubled bank to suspend the inclusion of its bad debt reserve in income does not affect the requirement that a large bank account for its bad debts using the specific charge-off method.

Cut-off method.—In lieu of the recapture of its bad debts reserves by including them in income, the bank may elect to use the cut-off method with regard to its outstanding loans at the time it becomes a large bank. The election to use the cut-off method is made on a taxpayer-by-taxpayer basis. Thus, commercial banks that join in a consolidated Federal income tax return with other commercial banks must follow any election made by the consolidated group to use the cut-off method, and may not independently elect the use of

the cut-off method unless the consolidated group makes such an election. On the other hand, in the case commercial banks which are affiliated but that do not file a consolidated return, each commercial bank can elect the cut-off method regardless of whether other members of the affiliated group also elect the cut-off method.

A commercial bank electing to use the cut-off method is required to segregate its outstanding loans into two accounts. One account consists of loans created on or after the first day of the disqualification year. The specific charge-off method is required to be used in computing the deduction for bad debts attributable to the loans in this account. The second account consists of loans that were outstanding on the last day of the taxable year before the disqualification year. The deduction for bad debts attributable to the loans in this account continues to be determined using the reserve method. All charge-offs and recoveries on loans in the second account are adjustments to the reserve account and not separate items of income and expense. However, if the charge-off of any loan would reduce the balance in any reserve account below zero, the charge-off shall be an adjustment to the reserve account only in the amount necessary to reduce the balance in such account to zero. Any charge-offs in excess of such reserve balance, and any recoveries with regard to such loans, will be items of income and expense in the year of charge-off or recovery, as if the taxpayer had always used the specific charge-off method. Under the cut-off method, no additional deductions in the disqualification year or thereafter are allowable for additions to the reserve for bad debts.

Unless the balance of a reserve account has been reduced to zero by the adjustment required for a charged-off item, the allowable ending balance for the reserve account is computed for year end by taking into account only those debts which were outstanding on the last day of the taxable year before the disqualification year. No additional deductions may be taken for an addition to restore the reserve account to its allowable ending balance.

Effective Date

The provision is effective for taxable years beginning after December 31, 1986.

2. Thrift institutions

Prior Law

General rule

Under both present and prior law, mutual savings banks, domestic building and loan associations, and cooperative banks without capital stock which are organized and operated for mutual purposes and without profit (collectively called "thrift institutions") are allowed to use either the specific charge-off method or the reserve method in computing their deduction for bad debts for Federal income tax purposes. For thrift institutions using the reserve method, the reasonable addition to the reserve for bad debts under prior law was equal to the addition to the reserve for losses computed under the "bank experience" method, the "percentage of eligible loans" method, or, if a sufficient percentage of the thrift insti-

tution's assets constitute "qualified assets," the "percentage of taxable income" method. A thrift institution may switch between methods of determining the addition to its loan loss reserve from one year to another.

Permissible methods

Experience and percentage of eligible loans methods.— The bank experience and percentage of eligible loans methods for thrift institutions generally were the same as for commercial banks (discussed above).

Percentage of taxable income method.— Under the percentage of taxable income method, an annual deduction is allowed for a statutory percentage of taxable income.⁵ The statutory percentage under prior law for tax years beginning after 1978 was 40 percent.

The full 40-percent of taxable income deduction was available only where 82 percent (72 percent in the case of mutual savings banks without capital stock) of the thrift institution's assets were qualified. Where the 82-percent test was not met, the statutory rate was reduced by three-fourths of one percentage point for each one percentage point of such shortfall. For mutual savings banks without capital stock, the statutory rate was reduced by one and one-half percentage points for each percentage point that qualified assets were less than the 72-percent requirement. At a minimum, 60 percent of a thrift institution's assets must have been qualified (50 percent for mutual savings banks without stock) in order for the thrift institution to have been eligible for deductions under the percentage of income method.

Corporate preferences and minimum tax

Under prior law, if the deduction for bad debts for the taxable year determined under the above rules exceeded the amount which would have been allowed as a deduction on the basis of actual experience, the deduction was reduced by 20 percent of such excess (sec. 291). Also, 59 and 5/6ths percent of the deductible excess (after the 20-percent reduction) was treated as a tax preference for purposes of computing the corporate minimum tax (sec. 57).

Small business investment companies

Under prior law, small business investment companies operating under the Small Business Investment Act of 1958 and business development companies were allowed to use the reserve method of computing their deduction for bad debts. The allowable ending balance in the reserve account was determined using the bank experience method (prior law sec. 586).

⁵ For purposes of determining the deduction under the percentage of taxable income method, taxable income is computed without regard to any deduction allowable for any addition to the reserve for bad debts and exclusive of 18/46 of any net long-term capital gain, gains on assets the interest on which was tax-exempt, any dividends eligible for the corporate dividends received deduction and any additions to gross income from the thrift institution's own distributions from previously accumulated reserves.

Reasons for Change

Since the last time that the Congress has reviewed the taxation of thrift institution and other financial institutions,⁶ there have been several changes in regulatory policies that have expanded the activities in which thrift institutions may engage, and at the same time encouraged other institutions to expand their activities in areas which were traditionally serviced by the thrift institutions. These changes have resulted in other financial institutions being in direct competition with thrift institutions, while prior law provided significantly different tax treatment of these financial institutions.⁷ Such policies are not promoted by providing a substantially lower effective tax rate for one competitor than for others.

Accordingly, the Congress believed that the benefit of prior law, which allowed a bad debt deduction to thrift institutions equal to 40 percent of taxable income, should be substantially reduced. The Congress continued to believe that there should be some incentive for thrift institutions to provide residential mortgage loans, and that the provision of a bad debt deduction equal to a reduced percentage of taxable income should be available only to those thrift institutions maintaining a sufficient percentage of qualified assets, including residential mortgage loans.

In reducing, rather than eliminating, the percentage of taxable income method for thrift institutions, the Congress intended to continue to encourage such institutions to continue to hold a significant percentage of the type of assets traditionally held by thrift institutions (i.e., residential mortgage loans) which qualify the institution as a thrift institution while not providing those institutions with a significant competitive advantage over other financial institutions.

The Congress believed that the reasons for preserving a limited deduction for bad debts using the reserve method that was provided for thrift institutions and for commercial banks other than large banks should not be extended to small business investment companies or to small business development companies. These companies do not generally accept, and are not responsible for, the safety of

⁶ Until 1952, thrift institutions were exempt from Federal income tax. In 1952, the Congress repealed the exemption of these institutions and subjected them to the regular corporate income tax. At that time, however, these institutions were allowed a special deduction for additions to bad debt reserves which proved to be so large that thrift institutions remained virtually tax exempt. In 1962, the Congress established an alternative 60-percent of taxable income deduction for bad debts. Savings and loan associations were eligible for the full deduction only if 82 percent of their assets were invested in qualifying assets. Mutual savings banks were not subjected to the 82-percent test. In 1969, the Congress established the basics of the prior law (described above) by providing that a thrift institution could determine its deduction for bad debts under either of the methods allowed commercial banks (the bank experience and the percentage of eligible loans methods) as well as the alternative of the percentage of taxable income method. The 60-percent rate in place at the time of the 1969 legislation was phased down at a rate of 3 percent per year until it reached 40 percent in 1979. The requirement that a percentage of the thrift institution's assets be qualifying assets was extended to mutual savings banks in 1969. In passing the 1969 legislation, the Congress was concerned that the previous bad debt reserve provisions for thrift institutions were unduly generous, allowing a much lower effective rate of tax than the average effective rate for all corporations.

⁷ The effect of the present-law 40-percent deduction, in combination with the 20-percent disallowance for corporate preferences, is to provide a maximum effective tax rate of 31.28 percent to thrift institutions, while other corporations are subject to a maximum effective tax rate of 46 percent. The effect of continuing the 40-percent deduction and the 20-percent disallowance for corporate preferences in combination with the 34-percent maximum corporate rate in the Act would have been to provide a maximum tax rate of 23.12 percent to thrift institutions.

deposits from the general public. The Congress determined, therefore, that small business investment and development companies should be treated the same as those other companies that provide loans from funds other than those deposited by the public (such as finance companies or investment capital companies) that may not use the reserve method of computing losses from bad debts under the Act.

Explanation of Provision

Thrift institutions (mutual savings banks, domestic building and loan associations, and cooperative banks) continue to be able to compute their bad debt deductions using the bank experience method and the percentage of taxable income method. The percentage of eligible loans method is no longer available. In using the percentage of taxable income method, the portion of taxable income which may be deducted as an addition to a reserve for bad debts is reduced from 40 percent to 8 percent. The rules reducing the amount of the percentage of taxable income deduction available to a thrift institution which holds 60 percent of its assets in qualifying assets, but fails to hold a sufficient percentage of qualifying assets to use the maximum percentage of taxable income deduction, are eliminated. Any institution meeting the definition of a thrift institution and holding at least 60 percent of its assets as qualifying assets, is eligible for the full 8 percent of taxable income deduction. The 60-percent test applies to mutual savings banks as well as other types of thrift institutions.

An entity previously treated as a thrift institution that does not meet the new definition of thrift institution (under the 60 percent test) generally is treated as a commercial bank if it otherwise satisfies the definition of section 581. An entity previously treated as a thrift institution now treated as a commercial bank is subject to the tax rules applicable to commercial banks. If the adjusted bases of the assets of the entity (or any controlled group of which the entity is a member) exceed \$500 million, such an entity would be considered a large bank and ineligible to use the reserve method of computing deductions for losses on bad debts. The existing bad debt reserve of such an entity is required to be recaptured using either the direct recapture inclusion method or the cut-off method. If the adjusted bases of the assets of the entity (or any controlled group of which the entity is a member) do not exceed \$500 million, the entity is considered a commercial bank other than a large bank and continues to be eligible to use the reserve method of computing deductions for losses on bad debts under the bank experience method.

Thrift institutions that claim the 8 percent of taxable income deduction allowed by the Act are not to be treated as having a tax preference for purposes of the 20-percent reduction of section 291. The excess of the percentage of taxable income deduction over the deduction that would have been allowable on the basis of actual experience will be treated as a preference item for the purpose of computing the corporate minimum tax (sec. 57).

The provision of prior law (sec. 586) that allowed small business investment companies operating under the Small Business Invest-

ment Act of 1958 and business development companies to use the reserve method of computing losses on bad debts is repealed.

Effective Date

The provisions are effective for taxable years beginning after December 31, 1986.

Revenue Effect of Reserves for Bad Debts

The provisions effecting the bad debts reserves of commercial banks, thrift institutions, and small business investment and development companies are estimated to increase fiscal year budget receipts by \$647 million in 1987, \$1,092 million in 1988, \$1,218 million in 1989, \$1,406 million in 1990, and \$631 million in 1991.

B. Interest on Debt Used to Purchase or Carry Tax-Exempt Obligations (Sec. 902 of the Act and secs. 265 and 291 of the Code) ⁸

Prior Law

In general

Prior and present law (sec. 265(2))⁹ disallow a deduction for interest on indebtedness incurred or continued to purchase or carry obligations the interest on which is exempt from Federal income tax (tax-exempt obligations). This rule applies both to individual and corporate taxpayers. The rule also applies to certain cases in which a taxpayer incurs or continues interest expense and a related person acquires or holds tax-exempt obligations (sec. 7701(f)).¹⁰

Application to taxpayers generally

The Internal Revenue Service (IRS) and the courts have consistently interpreted section 265(2) to disallow an interest deduction only when a taxpayer incurs or continues indebtedness for the purpose of acquiring or holding tax-exempt obligations.¹¹ They have employed various tests to determine whether a taxpayer has the prohibited purpose. In general, when a taxpayer has independent business or personal reasons for incurring or continuing debt, the taxpayer has been allowed an interest deduction regardless of his tax-exempt holdings. When no such independent purpose exists, and when there is a sufficiently direct connection between the indebtedness and the acquisition or holding of tax-exempt obligations, a deduction has been disallowed.

In *Wisconsin Cheeseman, Inc., v. United States*, 388 F. 2d 420 (7th Cir. 1968), an interest deduction was disallowed for a corporation which made short-term bank loans to meet recurrent seasonal needs for funds, pledging tax-exempt securities as collateral. The court held that the taxpayer could not automatically be denied a deduction because it had incurred indebtedness while holding tax-exempt obligations. However, use of the securities as collateral established a sufficiently direct relationship between the loans and the purpose of carrying tax-exempt securities. The court stated further that a deduction should not be allowed if a taxpayer could rea-

⁸ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 802; H. Rep. 99-426, pp. 584-91; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 332-34 (Conference Report).

⁹ The Act redesignates this provision as section 265(a)(2).

¹⁰ In addition to interest deductions, prior and present law (sec. 265(a)(1) as redesignated by the Act) deny a deduction for nonbusiness expenses for the production of tax-exempt interest income, which expenses would otherwise be deductible under section 212. This may include, for example, brokerage and other fees associated with a tax-exempt portfolio. Prior and present law also disallow deductions for certain expenses of mutual funds which pay tax-exempt dividends, and for interest used to purchase or carry shares in such a fund.

¹¹ Legislative history indicates that Congress intended the purposes test to apply. See, e.g., S. Rep. No. 617, 65th Cong., 3d Sess. pp. 6-7 (1918); S. Rep. No. 398, 68th Cong., 1st Sess. p. 24 (1924); S. Rep. No. 558, 73d Cong., 2d Sess. p. 24 (1934).

sonably have foreseen, at the time of purchasing tax-exempt securities, that a loan would probably be required to meet ordinary, recurrent economic needs.

In Rev. Proc. 72-18, 1972-1 C.B. 740, the IRS provided guidelines for application of the disallowance provision to individuals, dealers in tax-exempt obligations, other business enterprises, and banks in certain situations.¹²

Under Rev. Proc. 72-18, a deduction is disallowed only when indebtedness is incurred or continued for the purpose of purchasing or carrying tax-exempt obligations. This purpose may be established either by direct or circumstantial evidence. Direct evidence of a purpose to purchase tax-exempt obligations exists when the proceeds of indebtedness are directly traceable to the purchase of tax-exempt obligations or when such obligations are used as collateral for indebtedness, as in *Wisconsin Cheeseman*, above. In the absence of direct evidence, a deduction is disallowed only if the totality of facts and circumstances establishes a sufficiently direct relationship between the borrowing and the investment in tax-exempt obligations. A deduction generally is not disallowed for interest on an indebtedness of a personal nature (e.g., residential mortgages) or indebtedness incurred or continued in connection with the conduct of an active trade or business. Generally, a purpose to carry tax-exempt obligations will be inferred, unless rebutted by other evidence, if an individual holds tax-exempt indebtedness which is not directly connected with personal expenditures or the conduct of an active trade or business.

Under Rev. Proc. 72-18, when there is direct evidence of a purpose to purchase or carry tax-exempt obligations, no part of the interest paid or incurred on the indebtedness (or on that portion of the indebtedness directly traceable to the holding of particular tax-exempt obligations) may be deducted. In other cases, an allocable portion of interest is disallowed, to be determined by multiplying the total interest on the indebtedness by the ratio of the average adjusted basis during the taxable year of the taxpayer's tax-exempt obligations to the average adjusted basis of the taxpayer's total assets.

Rev. Proc. 72-18 provides specifically that dealers in tax-exempt obligations are denied an interest deduction when they incur or continue indebtedness for the purpose of holding tax-exempt obligations, even if such obligations are held for resale.¹³ When dealers incur or continue indebtedness for the general purpose of carrying on a brokerage business, which includes the purchase of both taxable and tax-exempt obligations, an allocable portion of interest is disallowed. However, the disallowance rule generally does not apply when indebtedness is incurred to acquire or improve physical facilities. The revenue procedure does not specify under what circumstances, if any, a bank is to be treated as a dealer in tax-exempt obligations.

¹² That is, those situations not covered by Rev. Proc. 70-20, 1970-2 C.B. 499, discussed below.

¹³ See, *Leslie v. Commissioner*, 413 F.2d 636 (2d Cir. 1969), cert. den. 396 U.S. 1007 (1970). The court in *Leslie* held specifically that the effective exemption of banks from the disallowance provision (discussed below) did not apply to a brokerage business.

Application to financial institutions

The legislative history of section 265(2) suggests that Congress did not originally intend the disallowance provision to apply to the indebtedness incurred by a bank or similar financial institution to its depositors.¹⁴ The IRS took the position as early as 1924 that indebtedness to depositors was not incurred to purchase or carry tax-exempt obligations, within the meaning of the law. In Rev. Rul. 61-22, 1961-2 C.B. 58, the IRS restated its position that the provisions of the law "have no application to interest paid on indebtedness represented by deposits in banks engaged in the general banking business since such indebtedness is not considered to be 'indebtedness incurred or continued to purchase or carry obligations * * * within the meaning of section 265.'"

Despite this general rule, the IRS attempted under prior law to disallow interest deductions of financial institutions in certain cases. Rev. Rul. 67-260, 1967-2 C.B. 132, provided that a deduction would be disallowed when a bank issues certificates of deposit for the specific purpose of acquiring tax-exempt obligations. The ruling concerned a bank which issued certificates of deposit in consideration of, and in exchange for, a State's tax-exempt obligations, the certificates having approximately the same face amount and maturity dates as the State obligations.

In Rev. Proc. 70-20, 1970-2 C.B. 499, the IRS issued guidelines for application of the disallowance provision to banks holding tax-exempt State and local obligations. Rev. Proc. 70-20 provided that a deduction would not be disallowed for interest paid or accrued by banks on indebtedness which they incurred in the ordinary course of their day-to-day business, unless there were circumstances demonstrating a direct connection between the borrowing and the tax-exempt investment. The IRS would ordinarily infer that a direct connection did not exist (i.e., a deduction would ordinarily be allowed) in cases involving various forms of short-term indebtedness,¹⁵ including deposits and certificates of deposit; short-term Eurodollar deposits and borrowings; Federal funds transactions and similar interbank borrowing; repurchase agreements; and borrowing directly from the Federal Reserve to meet reserve requirements. Within these categories, unusual facts and circumstances outside of the normal course of business could demonstrate a direct connection between the borrowing and the investment in tax-exempt securities; in these cases, a deduction would be disallowed. The IRS would not infer a direct connection merely because tax-exempt obligations were held by the bank at the time of its incurring indebtedness in the course of its day-to-day business.

Under Rev. Proc. 70-20, application of the disallowance provision to long-term capital notes was to be resolved in the light of all the facts and circumstances surrounding the issuance of the notes. A deduction was not to be disallowed for interest on indebtedness created by the issuance of capital notes for the purpose of increasing

¹⁴ See, S. Rep. No. 558, 73d Cong., 2d Sess. p. 24 (1934); S. Rep. No. 830, 88th Cong., 2d Sess. p. 80 (1964).

¹⁵ For purposes of the revenue procedure, "short-term bank indebtedness" meant indebtedness for a term not to exceed three years. A deposit for a term exceeding three years was treated as short-term when there was no restriction on withdrawal, other than loss of interest.

capital to a level consistent with generally accepted banking practices.

Types of borrowings not specifically dealt with by Rev. Proc. 70-20 were to be decided on a facts and circumstances basis. Additionally, Rev. Proc. 72-18, discussed above, was applicable to financial institutions in situations not dealt with in Rev. Proc. 70-20.¹⁶

After the issuance of Rev. Proc. 70-20, several cases and rulings addressed the treatment under prior law of bank deposits or similar arrangements which were secured or collateralized by tax-exempt obligations. These decisions generally refrained from applying the disallowance provision to the facts of those cases.

Rev. Proc. 78-34, 1978-2 C.B. 535, allowed a deduction for interest paid by commercial banks on borrowings of Treasury tax and loan funds when those borrowings were secured by pledges of tax-exempt obligations. The IRS took the position that this type of borrowing was in the nature of a demand deposit.

In *Investors Diversified Services, Inc., v. United States*, 573 F. 2d 843 (Ct. Cl. 1978), the court found that the use of tax-exempt securities as collateral for face-amount certificates¹⁷ was not sufficient evidence of a purpose to purchase or carry tax-exempt obligations and, therefore, allowed an interest deduction. Noting various similarities between banks and face-amount certificate companies, the court held that the rationale for the "bank exception" to the disallowance provision was equally applicable to these companies. The court cited three further grounds for holding the disallowance provision inapplicable: (1) that the sale of certificates (i.e., borrowing) was wholly separate from and independent of the company's investment process, including the acquisition and maintenance of tax-exempt securities; (2) that the essential nature of the company's business was the borrowing of money which had to be invested in order to pay off the certificate holders; and (3) that the company could not reduce its borrowings by disposing of its tax-exempt securities, since only the certificate holders had the power to terminate each certificate.

Further, in *New Mexico Bancorporation v. Commissioner*, 74 T.C. 1342 (1980), the Tax Court permitted a bank a deduction for interest paid on repurchase agreements which were secured by tax-exempt State and municipal obligations. The court concluded that the repurchase agreements were similar to other types of bank deposits, and were not the type of loans or indebtedness intended to be covered by the disallowance provision. Furthermore, the bank's

¹⁶ Rev. Proc. 70-20 was modified by Rev. Proc. 83-91, 1983-2 C.B. 618, to provide that a deduction would generally not be disallowed in the case of repurchase agreements collateralized by tax-exempt securities (as well as agreements collateralized by taxable obligations). This modification was in response to the decision in *New Mexico Bancorporation v. Commissioner*, 74 T.C. 1342 (1980) (discussed below).

¹⁷ Face-amount certificates are certificates under which the issuer agrees to pay to the holder, on a stated maturity date, at least the face amount of the certificate, including some increment over the holder's payments. Prior law (sec. 265(2)) provided that interest paid on face-amount certificates by a registered face-amount certificate company was not to be considered as interest incurred or continued to purchase or carry tax-exempt obligations, to the extent that the average amount of tax-exempt obligations held by such institution during the taxable year did not exceed 15 percent of its average total assets. The *Investors Diversified Services* case involved a face-amount certificate company whose tax-exempt holdings exceeded 15 percent of its total assets.

purpose for offering repurchase agreements was independent of the holding of tax-exempt obligations.¹⁸

20-percent reduction in preference items

Under a provision originally added by the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), and later modified by the Deficit Reduction Act of 1984, the amount allowable as a deduction with respect to certain financial institution preference items was reduced by 20 percent. (The original TEFRA rule provided for a 15-percent reduction.) Under prior law, financial institution preference items included interest on indebtedness incurred or continued by financial institutions¹⁹ to purchase or carry tax-exempt obligations acquired after December 31, 1982, to the extent that a deduction would otherwise be allowable for such interest. Unless the taxpayer (under regulations to be prescribed by the Treasury) established otherwise, the 20 percent reduction applied to an allocable portion of the taxpayer's aggregate interest deduction, to be determined by multiplying the otherwise allowable deduction by the ratio of the taxpayer's average adjusted basis of tax-exempt obligations during the year in question to the average adjusted basis of the taxpayer's total assets. For example, a bank which invested 25 percent of its assets in tax-exempt obligations was denied a deduction for \$5,000 of each \$100,000 of interest paid to its depositors during the taxable year (20 percent x \$25,000 interest allocable to debt used to acquire or hold tax-exempt obligations). For purposes of this provision, interest specifically included amounts paid in respect of deposits, investment certificates, or withdrawable or repurchasable shares, whether or not formally designated as interest.

Reasons for Change

The Congress believed that the prior law treatment of financial institutions for purposes of the interest disallowance rule should be changed for two reasons. First, the prior law rules, by allowing financial institutions to deduct interest payments regardless of tax-exempt holdings, discriminated in favor of financial institutions at the expense of other taxpayers. Second, the Congress was concerned that financial institutions could drastically reduce their tax liability as a result of the prior-law rules. For example, under prior law, a bank often could totally eliminate its tax liabilities by investing as little as one-third or less of its assets in tax-exempt obligations.

To correct these problems, the Act denies financial institutions an interest deduction in direct proportion to their tax-exempt hold-

¹⁸ Rev. Proc. 80-55, 1980-2 C.B. 849, would have disallowed a deduction for interest paid by commercial banks on certain time deposits made by a State and secured by pledges of tax-exempt obligations. The revenue procedure concerned banks that participated in a State program that required the banks to bid for State funds and negotiate the rate of interest, and required the State to leave such deposits for a specified period of time. The IRS took the position that direct evidence of a purpose to purchase or carry tax-exempt obligations existed in such transactions under Rev. Proc. 72-18.

Rev. Proc. 80-55 was revoked by Rev. Proc. 81-16, 1981-1 C.B. 688. However, Rev. Proc. 81-16 stated that the disallowance provision would continue to apply to interest paid on deposits that are incurred outside of the ordinary course of the banking business, or in circumstances demonstrating a direct connection between the borrowing and the tax-exempt obligations.

¹⁹ The provision applied to commercial banks (including U.S. branches of foreign banks), mutual savings banks, domestic building and loan associations, and cooperative banks.

ings. The Congress believed that this proportional disallowance rule is appropriate because of the difficulty of tracing funds within a financial institution, and the near impossibility of assessing a financial institution's "purpose" in accepting particular deposits. Congress believed that the proportional disallowance rule would place financial institutions on approximately an equal footing with other taxpayers.

While desiring to change the prior-law rules, the Congress was concerned about the effect of the new rules on smaller localities which depend on financial institutions to buy tax-exempt bonds for bona fide governmental projects. To limit any potential increased borrowing costs to such localities, the Act provides a permanent "small issuer" exception, allowing up to \$10 million in bonds per local issuer (including subordinate entities) to be exempt from the 100-percent disallowance rule. This exception is limited to bonds for governmental or charitable (i.e., section 501(c)(3) organization) purposes. The Act also exempts from the new disallowance rule tax-exempt obligations acquired pursuant to binding commitments entered into by financial institutions on or before September 25, 1985, to purchase or repurchase such obligations.

Explanation of Provision

100-percent disallowance of financial institution interest expense allocable to tax-exempt obligations

The Act denies banks, thrift institutions, and other financial institutions a deduction for that portion of the taxpayer's otherwise allowable interest expense that is allocable to tax-exempt obligations acquired by the taxpayer after August 7, 1986. The amount of interest allocable to tax-exempt obligations generally is determined as it was for purposes of the 20-percent reduction in preference items under prior law, after taking into account any interest disallowed under the general rules applicable to all taxpayers (sec. 265(2) of prior law and sec. 265(a)(2) under the Act). Thus, a deduction is denied for that portion of a financial institution's otherwise allowable interest deduction that is equivalent to the ratio of (1) the average adjusted basis (within the meaning of sec. 1016)²⁰ during the taxable year of tax-exempt obligations held by the financial institution and acquired after August 7, 1986, to (2) the average adjusted basis of all assets held by the financial institution. For example, if an average of one-third of a financial institution's assets during the taxable year consists of tax-exempt obligations acquired after August 7, 1986, the financial institution is denied one-third of its otherwise allowable interest deduction. This allocation rule is mandatory and cannot be rebutted by the taxpayer.

Under the Act, the 20-percent disallowance rule of prior law continues to apply with respect to tax-exempt obligations acquired between January 1, 1983, and August 7, 1986. Thus, a financial institution reduces its otherwise allowable interest deduction in any year by the sum of (1) 100 percent of interest allocable to tax-exempt obligations acquired after August 7, 1986, and (2) 20 per-

²⁰ This adjusted basis is reduced by the basis of any debt which is used to purchase or carry tax-exempt obligations under section 265(a)(2).

cent of interest allocable to tax-exempt obligations acquired between January 1, 1983, and August 7, 1986, each determined under the formula above. For example, if 25 percent of a bank's assets consists of tax-exempt obligations acquired after August 7, 1986, and an additional 25 percent consists of tax-exempt obligations acquired in 1983, 1984, 1985, or the first portion of 1986 (i.e., before August 8 of that year), the bank would be denied 30 percent of its otherwise allowable interest deduction (i.e., 25 percent attributable to obligations acquired after August 7, 1986, and 5 percent (.20 x 25 percent) attributable to obligations acquired between January 1, 1983, and August 7, 1986).

Financial institutions subject to the rule include any entity which (1) accepts deposits from the public in the ordinary course of its trade or business, and (2) is subject to Federal or State supervision as a financial institution. It is intended that this will include (but not necessarily be limited to) banks, mutual savings banks, domestic building and loan associations, cooperative banks, and any other entities to which the prior law 20-percent disallowance provision (sec. 291) applied. In addition, the 100-percent disallowance rule specifically applies to foreign banks doing business within the United States (sec. 585(a)(2)(B)).

Interest, the deduction of which is subject to the rule, includes amounts paid in respect of deposits, investment certificates, or withdrawable or repurchasable shares, whether or not such amounts are officially designated as interest. Tax-exempt obligations include shares in regulated investment companies (i.e., mutual funds) which distribute exempt-interest dividends during the recipient's taxable year.

For purposes of the disallowance rule, the acquisition date of an obligation is the date on which the holding period begins with respect to the obligation in the hands of the acquiring financial institution. Thus, the acquisition of bonds as part of a tax-free reorganization is not treated as a new acquisition for purposes of this provision.

The Act specifies that, where new section 263A (relating to required capitalization of preproductive expenses including interest and taxes) applies to a portion of the interest expense of a financial institution,²¹ the disallowance of interest allocable to tax-exempt obligations is to be applied before the rules of section 263A. For example, assume that a bank has \$100 million of interest expense, \$25 million of which consists of construction period interest subject to section 263A, and that one-half the bank's assets consist of tax-exempt obligations acquired after 1985. The bank's \$100 million interest expense would first be reduced by one-half under the disallowance rule with respect to tax-exempt obligations. Of the remaining \$50 million of interest expense, \$25 million would be capitalized under section 263A.

The preference for interest income on tax-exempt private activity bonds, for purposes of the individual and corporate minimum taxes, is reduced by the amount of interest expense disallowed under section 265 (see Title VII, above). This includes amounts disallowed

²¹ A description of this provision is found in Title VIII, Part D., above.

under the general rules applicable to all taxpayers (sec. 265(a)) or the 100 percent disallowance rule for financial institutions.

Exception for certain small issuers

The Act provides an exception to the 100-percent disallowance rule for qualified tax-exempt obligations acquired by a financial institution. This exception applies whether the obligation is acquired at the original issuance of the obligation or by a subsequent purchaser.

Under the Act, qualified tax-exempt obligations include any obligation which (1) is not a private activity bond as defined by the Act (*see*, Title XIII, below),²² and (2) is issued by an issuer which reasonably anticipates to issue not more than \$10 million of tax-exempt obligations (other than private activity bonds, as defined above) during the calendar year. For purposes of this computation, all tax-exempt obligations (other than private activity bonds, as defined above) which the issuer reasonably anticipates to issue during the calendar year are taken into account.²³ Qualified tax-exempt obligations must be designated as such by the issuer; not more than \$10 million of obligations may be so designated by any issuer (including subordinate entities, as described below) for any calendar year. Refundings of outstanding bonds qualify for the small issuer exception under the same terms as new issues.

For purposes of the exception for qualified tax-exempt obligations, an issuer and all subordinate entities are treated as one issuer. Subordinate governmental entities include entities deriving their issuing authority from another entity or subject to substantial control by another entity. For example, a sewer or solid waste authority created by a city or county in order to issue bonds for that city or county is considered a subordinate entity. Similarly, an "on behalf of" issuer is treated as a subordinate entity. Under this rule, if a city and all on behalf of issuers reasonably anticipate to issue an aggregate of more than \$10 million in tax-exempt obligations (other than private activity bonds, as defined above) during the calendar year, neither the city nor any of its on behalf of issuers qualify for the exception. An entity is not to be considered subordinate solely because of geographic inclusion in a larger entity (e.g., a city located within a larger county), if the smaller entity derives its powers independently of the larger entity and is not subject to significant control by the larger entity.

Qualified tax-exempt obligations are treated as acquired by the financial institution before August 8, 1986. Interest allocable to such obligations remains subject to the 20-percent disallowance contained in prior law.

²² For purposes of the small issuer exception only, qualified 501(c)(3) bonds (as defined in Title XIII of the Act) are not treated as private activity bonds. In the case of bonds issued on or before August 15, 1986, for purposes of this provision only, bonds are not to be treated as private activity bonds if they are not IDBs, mortgage revenue bonds, student loan bonds, or other private ("consumer") loan bonds for which tax exemption was permitted under prior law.

²³ A technical correction may be needed so that the statute reflects this intent. Such a correction was included in H. Con. Res. 395 as passed by the House and Senate in the 99th Congress.

Repeal of special treatment of face-amount certificate companies

In connection with the changes above, the special rule of prior law relating to face-amount certificate companies is repealed. These companies are therefore subject to the disallowance rules above in the same manner as other financial institutions.

Effective Date

This provision generally is effective in taxable years of financial institutions ending after December 31, 1986. Obligations acquired after August 7, 1986, in taxable years ending during 1986, result in a 20-percent disallowance (under prior law) for the taxable year ending in 1986, but in a 100-percent disallowance in subsequent taxable years.

A transitional exception is provided for tax-exempt obligations acquired after August 7, 1986, pursuant to a direct or indirect written commitment to purchase or repurchase such obligation, which commitment was entered into on or before September 25, 1985. Obligations qualifying for this exception are treated as if acquired before August 8, 1986; interest allocable to such obligations thus remains subject to the 20-percent disallowance contained in prior law.

The Act also provides transitional rules for obligations to finance certain specifically identified projects. Interest allocable to such obligations also remains subject to the 20-percent disallowance rule contained in prior law.

Revenue Effect

This provision is estimated to increase fiscal year budget receipts by \$51 million in 1986, \$50 million in 1987, and \$5 million in 1988, and to decrease fiscal year budget receipts by \$17 million in 1989 and \$34 million in 1990.

C. Special Rules for Net Operating Losses of Financial Institutions (Sec. 903 of the Act and sec. 172 of the Code) ²⁴

Prior Law

Under prior law, commercial banks or thrift institutions (mutual savings banks, domestic building and loan associations, and cooperative banks) may carry net operating losses (NOLs) back to the prior 10 taxable years and forward to the succeeding five taxable years. Under both present and prior law, other taxpayers generally may carry net operating losses back to the prior three taxable years and forward to the succeeding 15 taxable years.

Reasons for Change

The Congress believed that net operating losses incurred by financial institutions, such as commercial banks and thrift institutions, should be treated in the same manner as net operating losses incurred by other taxpayers. However, the Congress was aware that the immediate application of such a change to commercial banks in concert with the repeal of the reserve method of computing a deduction for bad debts could have an unnecessarily adverse impact upon the deferred tax accounts that such taxpayers keep for financial and regulatory accounting purposes. Accordingly, the ten year carryback period of prior law is retained for such taxpayers for taxable years beginning before 1994 for the portion of a net operating loss attributable to deductions for bad debts.

The Congress was concerned that thrift institutions that had incurred large net operating losses in years prior to the Act not be encouraged to engage in overly risky activities or to reorganize with other taxpayers in order to use the net operating losses within the prior law carry forward period. The Congress believed that an extension of the carryforward period by an additional three years is a preferable approach to encouraging overly risky activities or reorganizations that are motivated by tax rather than economic considerations. The Congress believed that an additional three-year carryforward period for such losses was appropriate because the three additional years permit a total carryover period (i.e., 18 years) equal to that available to taxpayers generally. The Congress believed that the potential inability to use net operating losses is most pronounced for losses incurred during taxable years beginning during the period 1982 to 1985, and that it is appropriate to limit the additional carryforward period to those taxable years.

²⁴ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 803; H. Rep. 99-426, p. 592; H.R. 3838 as reported by the Senate Committee on Finance on May 29, 1986, sec. 802; S. Rep. 99-313, pp. 289-290; and H. Rep. 99-841, Vol. II (September 18, 1986), pp. 335-336 (Conference Report).

Explanation of Provision

The Act repeals the special rules permitting financial institutions to carry net operating losses back to the prior 10 taxable years and forward to the succeeding five taxable years. Thus, financial institutions generally are subject to the general rule allowing taxpayers to carry net operating losses back to the preceeding three taxable years and forward to the succeeding 15 taxable years.

Net operating losses incurred by a thrift institution in taxable years beginning after December 31, 1981, and before January 1, 1986, may be carried back to the prior 10 taxable years and carried forward to the succeeding eight taxable years.

A special 10-year carryback provision is provided for commercial banks that are required to compute their deduction for bad debts using the specific charge-off method as a result of the Act. The portion of net operating losses for any taxable year beginning after December 31, 1986, and before January 1, 1994, that is attributable to deductions for bad debts is carried back to the prior 10 taxable years and carried forward to the succeeding five taxable years. The portion of the net operating loss of a commercial bank attributable to deductions for bad debts is the excess of the net operating loss for the taxable year over the net operating loss for such taxable year computed without regard to any deductions for bad debts. The special 10-year carryback provision does not apply to either a commercial bank that continues to compute its deduction for bad debts using the reserve method or to a thrift institution. An entity that was previously treated as a thrift institution now treated as a large commercial bank (and thus not allowed to use the reserve method of computing a deduction for bad debts) is subject to this special 10-year carryback provision.

The special 10-year carryback provision is provided in place of the normal rules requiring a net operating loss to be carried back three years and carried forward 15 years. A commercial bank subject to the special 10-year carryback provision may elect to relinquish the entire carryback period as part of an election to relinquish any carryback for all net operating losses arising within a taxable year.

The availability of criteria of these provisions is determined by the status of the entity in the year in which the net operating loss arises.

Revenue Effect

The provision is estimated to decrease fiscal year budget receipts by \$59 million in 1988, \$93 million in 1989, \$92 million in 1990, and \$77 million in 1991.

D. Repeal of Special Rules for Reorganizations of Financially Troubled Thrift Institutions (Sec. 904 of the Act and secs. 368, 382, and 597 of the Code) ²⁵

Prior Law

In general

Prior law provided special rules designed to provide relief to financially troubled thrift institutions. These provisions, added by the Economic Recovery Tax Act of 1981,²⁶ provided that the continuity of interest requirement was met if the depositors of the financially troubled thrift institution were depositors of the surviving corporation, allowed the carryover of net operating losses of a financially troubled thrift institution where its depositors continued as depositors of the acquiring corporation, and exempted certain payments from the Federal Savings and Loan Insurance Corporation (FSLIC) to financially troubled thrift institutions from income and the general basis reduction requirement of the Internal Revenue Code.

Tax-free reorganization status

Under both present and prior law, in order for a combination of two corporations to be a tax-free "reorganization" within the meaning of section 368(a), a judicially created continuity of interest rule must be satisfied. The continuity of interest rule generally requires that the shareholders of an acquired corporation retain a meaningful ownership interest in the acquiring corporation.²⁷ If the transaction fails to qualify as a tax-free reorganization, the acquired corporation and its shareholders may recognize gain or loss on the transaction, and the acquiring corporation generally takes a cost basis in the acquired corporation's assets. If the transaction qualifies as a tax-free reorganization, the acquired corporation and its shareholders generally recognize no gain and the acquiring corporation assumes the acquired corporation's basis.

It was unclear prior to the 1981 Act whether a merger of an insolvent thrift institution into a solvent thrift institution could comply with the "continuity of interest" rule, especially where one of the institutions was mutually owned. For example, in Rev. Rul. 69-3, 1969-1 C.B. 103, the Internal Revenue Service ruled that a merger of a mutual savings and loan association into another mutual savings and loan association qualified as a tax-free reorganization. Nonetheless, a case decided by the Supreme Court after

²⁵ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 804; H.Rep. 99-426, pp. 593-595; and H.Rep. 99-841, Vol. II (September 18, 1986), p. 336 (Conference Report).

²⁶ Pub. L. 97-34, 97th Cong., 1st Sess. (1981); referred to as the "1981 Act".

²⁷ See *Penellas Ice & Cold Storage Co. v. Commissioner*, 287 U.S. 462, 468-470; Treas. Reg. secs. 1.368-1(b), 1.368-2(a).

the 1981 Act, but relating to facts occurring prior to the 1981 Act, held that a merger of a stock savings and loan into a mutual savings and loan failed to qualify as a tax-free reorganization. The Court held that continuity of interest did not exist because the depositors in the acquired institution (whose savings accounts were converted into accounts in the acquiring institution) received essentially cash plus an insubstantial equity interest.²⁸

Under the 1981 Act, the continuity of interest requirement need not be satisfied in the case of a merger involving a thrift institution, provided certain conditions are met. First, the acquired institution must be one to which section 593 applies, namely, a savings and loan association, a cooperative bank, or a mutual savings bank. Second, the FSLIC or the Federal Home Loan Bank Board (FHLBB) (or, if neither has jurisdiction, an equivalent State authority) must certify that the thrift institution is insolvent, that it cannot meet its obligations currently, or that it will be unable to meet its obligations in the immediate future. Third, substantially all of the liabilities of the transferor institution (including deposits) must become liabilities of the transferee. If these conditions are satisfied, the acquired institution need not receive or distribute stock or securities of the acquiring corporation for the transaction to qualify as a tax-free reorganization (sec. 368(a)(3)(D)). The legislative history of the 1981 amendments made it clear that the provision covered all possible combinations of stock and mutual thrift institutions, including stock acquiring mutual, stock acquiring stock, mutual acquiring mutual, and mutual acquiring stock.

Net operating loss carryovers

Where a tax-free reorganization of two corporations occurs, the acquiring corporation generally succeeds to the tax attributes of the acquired corporation, including its net operating loss carryovers, subject to certain limitations in section 382. Under prior-law section 382, the ability of an acquiring corporation to succeed to the net operating loss carryovers of a corporation acquired in a tax-free reorganization was limited to the extent the owners of the acquired corporation fail to acquire stock in the acquiring corporation representing at least 20 percent of the value of the latter's stock (sec. 382(b)).

The 1981 Act provided that depositors in a thrift institution that had been certified as financially troubled whose deposits carry over to the acquiring corporation would be deemed to have continued an equity interest in the thrift institution to the extent of their deposits. Thus, any losses of the thrift institution were less likely to be reduced under the loss limitation provisions of section 382.

FSLIC contributions

Under both present and prior law, although contributions to capital by nonshareholders are excluded from the income of the recipient corporation (sec. 118), the basis of property normally must be reduced by such contributions (sec. 362(c)). The status of contributions from the FSLIC as either taxable income or as a contribution

²⁸ *Paulsen v. Commissioner*, 105 S. Ct. 627 (1985).

to capital was unclear prior to the 1981 Act. The 1981 Act provided that certain financially troubled thrift institutions need not reduce their basis for money or property contributed by the FSLIC under its financial assistance program, and such amounts were not includible in income (sec. 597).

Reasons for Change

The stated purpose of the special rules in the 1981 Act relating to financially troubled thrift institutions was to provide favorable tax rules to aid those institutions, their depositors, and the institutions that insure their deposits. The Congress believed that these 1981 Act rules were inconsistent with the policies of normal tax rules that otherwise would apply to those institutions. Moreover, the Congress believed that these special rules were unfair since they provided beneficial treatment to a selected class of beneficiaries. Accordingly, the Congress believed that, after a two-year transitional period, financially troubled thrift institutions should no longer receive the preferential tax treatment accorded by the 1981 Act.

Explanation of Provision

The Act repeals the special provisions enacted in the 1981 Act relating to acquisitions of financially-troubled thrift institutions, and the exclusion from income and the basis reduction requirement of FSLIC payments to such thrift institutions, effective after December 31, 1988.²⁹ Accordingly, acquisitions and reorganizations after that date involving financially troubled thrift institutions will be subject to the generally applicable rules.

The Act also provides that no deduction may be disallowed under section 265(a)(1), relating to expenses allocable to tax-exempt income, for any amount paid or incurred by a taxpayer on the ground such amount is allocable to amounts excluded under section 597.

Effective Date

The repeal of the special reorganization rules is effective for acquisitions or mergers occurring after December 31, 1988. The exclusion for certain FSLIC payments is repealed for payments received in taxable years beginning on or after the same date. An exception is provided, however, for payments made pursuant to an acquisition or merger that occurs before January 1, 1989.

Revenue Effect

The provision is estimated to increase fiscal year budget receipts by \$46 million in 1989, \$105 million in 1990, and \$164 million in 1991.

²⁹ For discussion of amendments to Code section 382, see Title VI., Part F., *supra*.

E. Treatment of Losses and Interest on Deposits in Insolvent Financial Institutions (Sec. 905 of the Act and secs. 165 and 451 of the Code) ³⁰

Prior Law

Under prior law, a loss experienced by a taxpayer with respect to a deposit in a financial institution was treated in the same manner as any other bad debt loss. Deduction of the loss was generally allowable only in the year in which it is determined, based on all the facts and circumstances, that there was no prospect of recovery. Unless the deposit in the financial institution was created or acquired in connection with a trade or business of the taxpayer, any loss on the deposit constituted a short-term capital loss (sec. 166(d)). An individual taxpayer generally may deduct short-term capital losses only to the extent of \$3,000 plus his capital gains for the year (sec. 1211).

Reasons for Change

The Congress believed that the circumstances surrounding deposits in financial institutions are different from the circumstances surrounding other debts owed to a taxpayer. Depositors in financial institutions often use such accounts for temporary safekeeping of funds that are needed for food, rent, and other essential items, rather than for investment. In most cases, these funds are deposited with the expectation that they may be withdrawn on demand.

The Congress believed that an individual should be allowed an election to deduct the loss arising from the insolvency of a financial institution at the time that the loss becomes reasonably estimable. Moreover, it felt that the loss is better viewed as a casualty loss than as a short-term capital loss, and should receive the same treatment as a casualty loss for Federal income tax purposes.

In addition, the Congress believed that interest that is credited to a depositor's account in an insolvent financial institution that, due to the institution's insolvency, cannot be withdrawn, should not be includible in the depositor's income (or deductible by the institution) until the interest is subject to withdrawal.

Explanation of Provision

Losses on deposits

The Act allows qualified individuals to elect to deduct losses on deposits in qualified financial institutions as casualty losses in the

³⁰For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 805; H.Rep. 99-426, pp. 596-597; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 803; S.Rep. 99-313, pp. 291-292; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 291-292 (Conference Report).

year in which the amount of such loss can be reasonably estimated.³¹ A qualified individual is any individual other than an owner of one percent or more of the value of the stock of the institution in which the loss was sustained, an officer of such institution, and certain persons related to such owners and officers. Relatives of one-percent owners and officers who are not considered as qualified individuals are siblings (whether by whole or half blood), spouses, aunts, uncles, nephews, nieces, ancestors, and lineal descendants. Other persons are considered to be related to a one-percent owner or officer if they are a related persons under the provisions of section 267(b).

A qualified financial institution is any commercial bank (as defined in sec. 581), any thrift institution (as defined in sec. 591), any insured credit union, or any institution similar to the above which is chartered and supervised under Federal or State law. A deposit for the purposes of this provision is any deposit, withdrawable certificate, or withdrawable or repurchasable share of or in a qualified financial institution.

The amount of loss to be recognized in any year under the election is the difference between the taxpayer's basis in the deposit and the amount which is a reasonable estimate of the amount that will eventually be received with regard to such deposit.³² A reasonable estimate of the amount that will eventually be received might, for example, be based on a determination by an agency having regulatory authority over the financial institution as to the percentage of total deposits that the institution (or its insurer) is likely to honor. If the recognized loss is later recovered, the taxpayer must include the amount thereof in income in the year of such recovery, under normally applicable tax benefit principles.

The election under this provision constitutes an election of a method of accounting with respect to all losses on deposits in the same institution, and may be revoked only with the consent of the Commissioner of Internal Revenue. If the election is made, no bad debt deduction is permitted under section 166.³³

Interest on frozen deposits

The Act also provides that, in certain circumstances, interest earned by a qualified individual on a deposit in a qualified financial institution is not includible in the depositor's taxable income even though credited to the depositor's account.³⁴ Interest on a

³¹ It is anticipated that a technical amendment will be made permitting the taxpayer an alternative election to treat the loss as an ordinary loss under section 165(c)(2) of the Code. This election will be available only if no portion of the deposit is insured under Federal law, and the deduction will be limited in amount to \$20,000 for any taxable year (\$10,000 in the case of a separate return by a married individual) minus the amount of any insurance proceeds that can reasonably be expected to be received with respect to the deposit. Such an amendment was included in the versions of H. Con. Res. 395 which passed the House and the Senate in the 99th Congress.

³² Although basis includes any interest credited to a depositor's account where such interest has been included in income, it does not include any interest on frozen deposits the recognition of which has been deferred under section 451(f) as added by the Act.

³³ The failure of a taxpayer to claim a loss under this provision in the year in which such loss can first be reasonably estimated will not preclude the taxpayer from claiming such loss in a later year, either under this election or as a bad debt under section 166.

³⁴ The terms "qualified individual" and "qualified financial institution" have the same meanings as under section 165(l), relating to the treatment of losses on deposits.

“frozen deposit” is includible in the depositor’s income only to the extent the interest has been actually withdrawn during the calendar year or is subject to withdrawal (disregarding any penalties for premature withdrawal of time deposits). A frozen deposit is one not subject to withdrawal at the end of the calendar year because of the bankruptcy or insolvency (or threatened bankruptcy or insolvency) of the financial institution, or because of any requirement imposed by the State in which the institution is located by reason of the bankruptcy or insolvency of one or more financial institutions in the State.

Interest excluded under this provision is treated as credited to the depositor’s account in the following calendar year, and is includible in that year (unless eligible under this provision for exclusion in that year). The Act also denies an interest deduction to the financial institution with respect to any interest on a frozen deposit excluded under this provision until such interest is includible in gross income.

Effective Date

The provision relating to losses on deposits is effective for taxable years beginning after December 31, 1982.³⁵ The provision relating to exclusion of interest on frozen deposits by a depositor generally applies to taxable years beginning after December 31, 1982. However, the latter provision applies to taxable years beginning after that date and before January 1, 1987, only if the taxpayer elects to have it apply to all such years. In addition, interest paid or incurred by a financial institution on a frozen deposit that is attributable to the period beginning January 1, 1983, and ending December 31, 1987, is not subject to the limitation on deductibility imposed by this provision.

Revenue Effect

The provision is estimated to decrease fiscal year budget receipts by \$3 million in 1987, \$1 million in 1988, \$1 million in 1989, \$1 million in 1990, and \$1 million in 1991.

³⁵ It is anticipated that a technical amendment will be made under which the provision will be effective for taxable years beginning after December 31, 1981. Such an amendment was included in the versions of H. Con. Res. 395 which passed the House and Senate in the 99th Congress.

TITLE X—INSURANCE PRODUCTS AND COMPANIES

A. Insurance Policyholders

1. Interest on installment payments of life insurance proceeds (sec. 1001 of the Act and sec. 101(d) of the Code)¹

Prior Law

Under prior and present law, amounts paid by an insurance company to the beneficiary of a life insurance contract by reason of the death of an insured individual generally are not includible in gross income. Under certain life insurance contracts, the insurer may agree to hold the amounts that it would otherwise pay on the death of the insured and pay such proceeds of the contract at a later date.

If the insurer pays the insurance proceeds to a beneficiary in a series of payments after the death of the insured, a prorated amount of each payment is treated as a nontaxable payment of the death benefit, and the remainder of the payment generally is includible in gross income. Under prior law, the first \$1,000 received by a surviving spouse in any taxable year in excess of the amount treated as a payment of the death benefit was excludable from gross income.

In addition, under prior and present law, the amount held by an insurer with respect to any beneficiary is the amount that equals the value of the agreement, provided in the life insurance contract, to make payments at a date or dates later than the death of the insured. The value of such an agreement was determined as of the date of death of the insured and was discounted on the basis of the interest rate and mortality tables used by the insurer in calculating payments under the agreement. Under prior law, the mortality tables used by an insurer for purposes of valuing the agreement described above could distinguish among individuals on the basis of sex.

Reasons for Change

The amount received by a beneficiary of a life insurance contract in excess of the prorated amount deemed to be a payment of the death benefit represents a payment made by the insurance company for the use of the beneficiary's money, i.e., the unpaid death benefit. Congress believed that this amount is comparable to interest paid by other financial institutions for the use of depositors' money and should be taxed in the same manner.

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1001; H.Rep. 99-426, p. 657; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1001; S.Rep. 99-313, pp. 487-488; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 338-339 (Conference Report).

Congress was also concerned that, if gender-distinct mortality tables were used, the tax system distinguished among individuals on the basis of sex in calculating the amount of any payment that is deemed to be attributable to a death benefit. In most cases under the Internal Revenue Code, gender-neutral mortality tables are prescribed by the Secretary of the Treasury. Congress found it appropriate to direct the Secretary to prescribe a similar gender-neutral table for purposes of valuing the delayed payment of a death benefit.

Explanation of Provision

Under the Act, all amounts paid to any beneficiary of a life insurance policy at a date later than the death of the insured are included in the beneficiary's gross income to the extent that the amount paid exceeds the amount payable as a death benefit. The special exclusion from the gross income of a surviving spouse of the first \$1,000 in excess of the amount payable as the death benefit is repealed.

The Act also requires, for purposes of valuing the portion of any payment deferred beyond the death of the insured that is a nontaxable death benefit, that an insurer use mortality tables prescribed by the Secretary of the Treasury in regulations. Congress expects that such tables will not distinguish among individuals on the basis of sex. An insurer is not permitted to use its own mortality table in determining the portion of any payment attributable to a nontaxable death benefit. As under prior law, the insurer is permitted to use its assumed interest rate in calculating payments under the agreement.

The operation of this rule does not prevent an insurance company from making payments to beneficiaries based on its own mortality tables. Rather, the provision operates to specify the portion of any installment payment that is to be treated as a payment of an excludable death benefit and the portion attributable to interest that is includible in gross income.

Effective Date

The provision applies to amounts received with respect to deaths occurring after October 22, 1986, in taxable years ending after that date.

2. Treatment of structured settlement agreements (sec. 1002 of the Act and sec. 130 of the Code)²

Prior Law

Prior and present law exclude from gross income the amount of any damages received on account of personal injuries or sickness, whether by suit or agreement and whether as a lump sum or as periodic payments (Code sec. 104(a)(2)). The person liable to pay the

² For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1003; H.Rep. 99-426, p. 659; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1002; S.Rep. 99-313, pp. 488-490; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 339-340 (Conference Report).

damages could assign to a third party (a structured settlement company) the obligation to make the periodic payments.

Under prior and present law, the portion of the amount received by the structured settlement company agreeing to a "qualified assignment" that is used to purchase qualified funding assets to fund the liability is not included in the company's income. The basis of a qualified funding asset is reduced by the amount excluded from gross income on account of the purchase of the asset. On disposition of a qualified funding asset, the gain recognized is treated as ordinary income. However, periodic payments made by the structured settlement company to the injured party are deductible. The net effect of the use of a structured settlement agreement is to permit a taxpayer liable for damages to an injured party to deduct the amount of the damages as if they are paid in a lump sum and to permit a structured settlement company to exclude from income the earnings on amounts used to fund its liability to make periodic payments to the injured party.

Under prior law, a qualified assignment included all assignments requiring payments for personal injuries or sickness without regard to whether the payments involved physical injury or sickness.

Reasons for Change

The tax treatment of structured settlements has the overall effect of exempting from taxation investment income earned on assets used to fund the periodic payment of damages.³ Congress believed that this effect is inappropriate where the injury did not involve physical injury or physical sickness. In cases involving personal nonphysical injuries, Congress concluded that the investment income earned on assets used to fund the damage payment should be subject to taxation, whether or not the damages are paid by means of a structured settlement arrangement.

Explanation of Provision

The Act limits "qualified assignments" to those assignments requiring the payment of damages on account of a claim for personal injuries that involve physical injury or physical sickness of the claimant. Thus, the exclusion for structured settlements applies only to those qualifying structured settlement arrangements for payments of damages on account of a claim for personal injuries that involve physical injury or physical sickness of the claimant, including damages on account of a claim for wrongful death arising from physical injury or sickness, provided the arrangements meet all other applicable requirements.

Claims which do not involve physical injury or physical sickness include, for example, defamation of a third party or invasion of privacy.

Congress understood that multiple claims are alleged in many personal injury actions. Congress did not intend that allocation of

³ By contrast, if a party liable for damage payments does not assign the liability in a structured settlement arrangement, then (1) income on amounts used to fund periodic payments of damages is subject to tax, and (2) investment income earned on lump-sum settlements is taxed to the recipient.

damages is necessary among such multiple claims. Rather, if the action has its origin in a physical injury, then all damages that flow therefrom are treated as payments involving physical injury or physical sickness.

Effective Date

The provision is effective for assignments entered into after December 31, 1986, in taxable years beginning after December 31, 1986.

3. Life insurance policyholder loans (sec. 1003 of the Act and sec. 264 of the Code)⁴

Prior Law

Under prior and present law, no deduction is allowed for any amount paid or accrued on indebtedness incurred or continued to purchase or carry certain life insurance, endowment or annuity contracts pursuant to a plan of purchase which contemplates the systematic direct or indirect borrowing of increases in the cash value of the contract, unless the requirements of certain exceptions to this disallowance rule are satisfied (sec. 264). The requirements of one of these exceptions (known as the four-out-of-seven rule) are that no part of four of the annual premiums due during the 7-year period (beginning with the date the first premium on the contract is paid) is paid by means of debt. If the requirements of the four-out-of-seven rule are satisfied, the deduction is not disallowed under section 264.

In addition, no deduction is allowed for any amount paid or accrued on indebtedness incurred or continued to purchase or carry a single premium life insurance, endowment or annuity contract (sec. 264(a)(2)). Single premium contracts include contracts under which substantially all of the premiums are paid within 4 years from the date on which the contract is purchased, or contracts under which an amount is deposited with the insurer for payment of a substantial number of future premiums on the contract. Single premium contracts are not eligible for the four-out-of-seven rule.

Reasons for Change

Interest deduction

Generally, when a policyholder borrows against a life insurance policy, the loan reduces the death benefit by the amount of the borrowing. Congress was concerned that, in the case of business-owned life insurance on the life of an employee, much of the death benefit promised to an employee is illusory if the employer borrows against the policy. The employee is merely depending upon the credit of his employer to the extent of the indebtedness. Congress was also concerned that, unlike most commercial loans, there is no set repayment period for these policy loans. The loan may remain outstanding until the employee's death many years in the future,

⁴ For legislative background of the provision, see: Senate floor amendment, 132 Cong. Rec. S8051 (June 20, 1986), and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 340-341 (Conference Report).

and the employer may never have any obligation to repay the loan. Thus, in order to encourage businesses to provide effective death benefits to employees, the Act provides that the deduction for interest on business-owned life insurance is limited to interest on life insurance related to loans aggregating no more than \$50,000 per officer, employee or person financially interested in a business of the taxpayer.

This provision provides a cap on the deductibility of such interest, rather than phasing out deductibility. The provision was structured in this manner to allow small businesses to use loans on life insurance policies for their employees as a source of short-term capital when necessary. Congress did not intend to allow these loans to be an unlimited tax shelter as under prior law.

Single premium policies

It had also come to the attention of Congress that some practitioners may have been taking the position that some single premium life insurance contracts were eligible for the "four out of seven" exception to the disallowance rule, or that interest on borrowing with respect to a single premium contract was deductible under prior law. Further, the Congress was concerned that some practitioners may have been characterizing a universal life insurance policy as a contract that provides for annual premiums due for purposes of the four out of seven rule. Congress believed it was appropriate to restate and clarify the provision of prior and present law disallowing interest deductions with respect to borrowings incurred or continued in connection with single premium life, endowment or annuity contracts.

Explanation of Provision

Interest deduction

In general, the provision limits the deductibility of interest paid or accrued on debt with respect to life insurance policies covering the life of an officer, employee or individual financially interested in any trade or business carried on by the taxpayer. The limitation applies to the extent the aggregate amount of such debt exceeds \$50,000 per officer, employee or financially interested individual.

In the case of a taxpayer carrying on more than one trade or business, the \$50,000 amount per officer, employee or person who is financially interested in any trade or business of the taxpayer is determined on an aggregate basis for each such person in all trades or businesses of the taxpayer. For example, if an employee of a business of the taxpayer is also an officer in two other businesses of the taxpayer, the \$50,000 of permitted borrowings by the taxpayer with respect to life insurance covering the person is determined by aggregating all policies covering his life subject to this provision and with respect to which the taxpayer has borrowed. In the case of a controlled group of corporations, it is intended that the controlled group is considered to be one taxpayer for this purpose, and all loans with respect to policies covering the life of an officer or employee or person financially interested in, a business of any member of the group are aggregated. Similar principles are intend-

ed to apply in the event of common ownership of unincorporated trades or businesses.

Under the Act, the fact that the proceeds of a loan under a life insurance contract are used in a trade or business does not affect the deductibility of interest paid on the loan. Therefore, for example, if a sole proprietor borrows under a life insurance policy on the sole proprietor's life, the interest paid on the loan (to the extent the loan exceeds \$50,000) is not deductible even though the proceeds of the loan are used in the sole proprietor's trade or business.

Single premium contracts

The Act restates the prior-law rule that no deduction is allowed for any amount paid or accrued on indebtedness incurred or continued to purchase or carry a single premium life insurance, endowment, or annuity contract (sec. 264(a)(2)). Single premium contracts include contracts where substantially all of the premiums are paid within four years from the date on which the contract is purchased, or contracts where an amount is deposited with the insurer for payment of a substantial number of future premiums on the contract. Generally, section 264(a)(2) also applies to contracts other than those under which the nonpayment of premiums would cause the policy to lapse, but no inference is intended that universal life insurance policies are always treated as single premium contracts.

Effective Date

The provision is effective for interest on loans under policies purchased after June 20, 1986, in taxable years ending after that date. Applications for a policy of this sort are often sent after consideration of competing bids, and an application is usually considered to be acceptance of the insurance company's bid; under this provision, therefore, policies are considered purchased for purposes of the effective date once the policy has been applied for. Factual determinations under this provision will be made by the Internal Revenue Service and the courts. A life insurance contract, other than one received in exchange for a life insurance contract issued by the same insurer, received after June 20, 1986, in exchange for an existing contract is considered to have been purchased after June 20, 1986. In the case of a policy purchased before June 21, 1986, minor administrative changes in the policy after June 20, 1986, such as changes in the address of the insurer, the officers of the insurer, or the address of the insured, do not cause the policy to be treated as purchased after June 20, 1986.

4. Deduction for nonbusiness casualty losses (sec. 1004 of the Act and sec. 165(h) of the Code)⁵

Prior Law

Under prior and present law, for property not connected with a trade or business or a transaction entered into for profit, casualty

⁵ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1002; H.Rep. 99-426, p. 658; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 342-343 (Conference Report).

losses are deductible only if they arise from "fire, storm, shipwreck, or other casualty or theft." These personal casualty losses were deductible under prior law only to the extent that each casualty loss exceeded \$100, and to the extent that all casualty losses for the year exceeded 10 percent of the taxpayer's adjusted gross income (sec. 165(h)). Certain courts have ruled that a taxpayer whose loss was covered by an insurance policy could nevertheless deduct the loss if the taxpayer decided not to file a claim under the terms of the insurance policy. See *Hills v. Commissioner*, 691 F.2d 997 (11th Cir. 1982); *Miller v. Commissioner*, 733 F.2d 399 (6th Cir. 1984).

Reasons for Change

The deduction for personal casualty losses should be allowed only when a loss is attributable to damage to property that is caused by one of the specified types of casualties. If the taxpayer has the right to receive insurance proceeds that would compensate for the loss, the loss suffered by the taxpayer is not damage to property caused by the casualty. Rather, the loss results from the taxpayer's personal decision to forego making a claim against the insurance company. Congress concluded that losses resulting from a personal decision of the taxpayer should not be deductible as a casualty loss.

Explanation of Provision

Under the Act, a taxpayer is not permitted to deduct a casualty loss for damages to property not used in a trade or business or in a transaction entered into for profit unless the taxpayer files a timely insurance claim with respect to damage to that property. This requirement applies only to the extent any insurance policy would provide reimbursement for the loss. If a policy would provide compensation for the loss, it is immaterial whether the taxpayer is the primary beneficiary of the policy so long as it is within the control of the taxpayer whether to file a claim.

Effective Date

The provision applies to losses sustained in taxable years beginning after December 31, 1986.

Revenue Effect of Part A (Insurance Policyholders)

These provisions are estimated to increase fiscal year budget receipts by \$2 million in 1987, \$5 million in 1988, \$6 million in 1989, \$7 million in 1990, and \$8 million in 1991.

B. Life Insurance Companies

1. Special life insurance company deduction (sec. 1011 of the Act and former sec. 806(a) of the Code)⁶

Prior Law

Under present and prior law, a life insurance company is taxed at corporate rates on its life insurance company taxable income (LICTI) and certain other income. Under prior law, a life insurance company was allowed a special deduction in computing LICTI equal to 20 percent of the income from insurance businesses that otherwise would be subject to taxation (sec. 806(a)).

Reasons for Change

The 20-percent special life insurance company deduction was enacted in 1984 because it was believed necessary to ameliorate the sudden, substantial increase in the tax liability of life insurance companies. This increase occurred as a result of the change from the three-phase taxable income computation that was in effect previously to a single-phase system consistent with generally applicable corporate tax law. The provision was not intended to tax life insurance companies at generally lower tax rates than other corporations.

In light of the overall reduction of corporate tax rates contained in other provisions of the Act, Congress concluded that the 20-percent special life insurance company deduction was no longer necessary. Despite the elimination of this special deduction, the maximum marginal tax rate applicable to life insurance companies will decline under the Act.

Explanation of Provision

Under the Act, the special life insurance company deduction is repealed. In addition, a special rule is provided in the case of a life insurance company owning the stock of another corporation through a partnership, which stock was acquired on January 14, 1981.

Effective Date

This provision is effective for taxable years beginning after December 31, 1986.

⁶ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1011; H. Rep. 99-426, p. 662; H.R. 3838, as reported by Senate Committee on Finance on May 29, 1986, sec. 1011; S. Rep. 99-313, pp. 491-492; and H. Rep. 99-841, Volume II (September 18, 1986), p. 344 (Conference Report).

2. Tax-exempt organizations engaged in insurance activities (sec. 1012 of the Act and sec. 501(m) of the Code)⁷

Prior Law

In general

Prior and present law (sec. 501(c)) specifies various standards that an organization must meet in order to qualify for exemption from Federal income taxation. These standards vary depending on the basis on which the entity is seeking exemption. Certain insurance activities performed by an organization may make it ineligible for tax exemption.

In addition, an organization that is otherwise exempt from Federal income tax generally is taxed on any income from a trade or business that is unrelated to the organization's exempt purposes. Specific exclusions from unrelated trade or business taxable income are provided for certain types of income, including rents, royalties, dividends, and interest, and certain other income, other than income derived from "debt-financed property."

Charitable organizations

An organization is exempt from Federal income tax if it is a corporation, community chest, fund, or foundation organized and operated exclusively for religious, charitable, scientific, literary, educational, or certain other purposes (sec. 501(c)(3)). An organization is not considered organized or operated exclusively for one or more of the exempt purposes unless it serves a public rather than a private interest.⁸

Under prior law, the providing of insurance benefits by an organization otherwise described in sec. 501(c)(3) generally was considered a commercial activity that did not meet the requirements for tax-exempt status. For example, if two or more unrelated tax-exempt organizations pooled funds for the purpose of accumulating and holding funds to be used to satisfy malpractice claims against the organizations, the organization holding the pooled funds was not entitled to tax exemption because the activity (i.e., the provision of insurance) was inherently commercial in nature.⁹

Nevertheless, at least one major organization, which provides life insurance and annuities to employees of tax-exempt educational institutions, was recognized as a charitable organization by the IRS.

⁷ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1012; H. Rep. 99-426, pp. 662-666; and H. Rep. 99-841, Volume II (September 18, 1986), pp. 344-351 (Conference Report).

⁸ Treas. Reg. sec. 1.501(c)(3)-1(d)(1).

⁹ See, e.g., GCM 39122, CC:EE-36-82 (January 25, 1984); GCM 39003, CC:EE-37-82 (June 24, 1983).

Social welfare organizations

Under prior and present law, an organization is entitled to tax exemption if it is operated exclusively for the promotion of social welfare.¹⁰ At least one major health insurance provider was treated as a tax-exempt social welfare organization under prior law. Other organizations providing insurance were denied tax-exempt status as social welfare organizations. For example, an insurance trust set up to provide group life insurance for members was held not to be tax-exempt because the trust was organized only for the benefit of its members, which was a limited class.¹¹ Further, if the benefit from an organization is limited to that organization's members, except for some minor and incidental benefit to the community as a whole, then, under prior and present law, the organization is not operated exclusively for the promotion of social welfare.¹²

Fraternal beneficiary societies

Under prior and present law, a fraternal beneficiary society, order, or association (sec. 501(c)(8)) is entitled to tax exemption if it operates under the lodge system or for the exclusive benefit of the members of a fraternity itself operating under the lodge system, and provides for the payment of life, sick, accident, or other benefits to the members of such society, order, or association or their dependents.

Reasons for Change

Congress was concerned that exempt charitable and social welfare organizations that engage in insurance activities are engaged in an activity whose nature and scope is inherently commercial rather than charitable; hence, tax-exempt status is inappropriate. Congress believed that the tax-exempt status of organizations engaged in insurance activities provided an unfair competitive advantage to these organizations. Congress further believed that the provision of insurance at a price sufficient to cover the costs of insurance generally constitutes an activity that is commercial.

In addition, the availability of tax-exempt status under prior law allowed some large insurance entities to compete directly with commercial insurance companies. For example, Blue Cross/Blue Shield organizations historically had been treated as tax-exempt organizations described in sections 501(c)(3) or (4). Other tax-exempt charitable and social welfare organizations engaged in insurance activities also had a competitive advantage over commercial insurers who do not have tax-exempt status.

Congress was also concerned that some tax-exempt fraternal beneficiary societies described in section 501(c)(8) of the Code engage in large-scale insurance activities which may be inherently commercial in nature, and that such organizations may derive a competitive advantage from their tax-exempt status.

¹⁰ Sec. 501(c)(4).

¹¹ *N.Y. State Association of Real Estate Boards Insurance Fund v. Comm'r.* 54 TC 1325 (1970).

¹² Rev. Rul. 75-199, 1975-1 CB 160.

Explanation of Provision

Under the Act, an organization described in sections 501(c)(3) and (4) of the Code is exempt from tax only if no substantial part of its activities consists of providing commercial-type insurance. For this purpose, no substantial part has the meaning given to it under present law applicable to such organizations. See, e.g., *Haswell v. U.S.*, 500 F.2d 1133 (Ct. Cl. 1974); *Seasongood v. Comm'r*, 1227 F.2d 907 (6th Cir. 1955); see also sec. 501(h).

In the case of such a tax-exempt organization, the activity of providing commercial-type insurance is treated as an unrelated trade or business (sec. 513) but, in lieu of the usual tax on unrelated trade or business taxable income, the unrelated trade or business activity is taxed under the rules relating to insurance companies (Subchapter L).

For this purpose, commercial-type insurance generally is any insurance of a type provided by commercial insurance companies. The Act provides that the issuance of annuity contracts is treated as providing insurance. The activity of providing insurance or annuities under a qualified pension plan (described in sec. 401(a)) is an activity of providing commercial-type insurance, but is not affected by section 501(m) because such plans are not charitable or social welfare organizations to which the provision applies.

Several exceptions are provided to the definition of commercial-type insurance. Commercial-type insurance does not include insurance provided at substantially below cost to a class of charitable recipients. See, e.g., Rev. Rul. 71-529, 1971-2 C.B. 234 (relating to the meaning of substantially below cost). A class of charitable recipients refers to a group of recipients that would constitute a charitable class under present law. Commercial-type insurance also does not include health insurance provided by a health maintenance organization that is of a kind customarily provided by such organizations and is incidental to the organization's principal activity of providing health care.

The Act is not intended to alter the tax-exempt status of an ordinary health maintenance organization that provides health care to its members predominantly at its own facility through the use of health care professionals and other workers employed by the organization. HMOs provide physician services in a variety of practice settings primarily through physicians who are either employees or partners of the HMO or through contracts with individual physicians or one or more groups of physicians (organized on a group practice or individual practice basis). Similarly, organizations that provide supplemental health maintenance organization-type services (such as dental services) would not be affected if they operate in the same manner as a health maintenance organization.

Similarly, commercial-type insurance does not include arrangements that are not treated as insurance (i.e., in the absence of sufficient risk shifting and risk distribution for the arrangement to constitute insurance).¹³ For example, if a hospital that is exempt

¹³ See *Helvering v. LeGierse*, 312 U.S. 531 (1941). The Internal Revenue Service has ruled that risk shifting and risk distribution are necessary to a valid insurance transaction. See Rev. Rul. 77-316, 1977-2 C.B. 53, and Rev. Rul. 78-338, 1978-2 C.B. 107.

from income tax under section 501(c)(3) establishes a trust to accumulate and hold funds for use in satisfying malpractice claims against the hospital, the arrangement does not constitute insurance and accordingly is not treated as providing commercial-type insurance.

Under the Act, commercial-type insurance does not include property or casualty insurance provided directly or through an organization described in section 414(e)(3)(B)(ii) by a church or convention or association of churches for the church, convention or association. It also does not apply to the provision of retirement or welfare benefits by such organizations directly or indirectly through an organization described in section 414(e)(3)(A) or 414(e)(3)(B)(ii) for the employees of such organizations, or for employees' beneficiaries. This exception is not intended to apply if insurance is provided to persons other than the church or convention or association of churches and their employees.

With respect to fraternal beneficiary societies engaged in insurance activities, Congress reemphasizes the requirement of present and prior law that such tax-exempt organizations maintain an active lodge system. The Act also requires that the Treasury Department audit and study fraternal beneficiary organizations (described in sec. 501(c)(8)) that received gross insurance premiums in excess of \$25,000,000 in taxable year 1984. Congress intends that the use of revenues from the insurance activities of such organizations be studied. The Treasury has authority under the Act to require the furnishing of information necessary to conduct the audit and study. The results of the study, together with recommendations, are to be submitted to the Committee on Ways and Means of the House of Representatives, the Committee on Finance of the Senate, and the Joint Committee on Taxation no later than January 1, 1988, so that Congress may consider the recommendations and take such action regarding the tax treatment of fraternal beneficiary societies engaged in insurance activities as is appropriate.

Certain health insurance providers

The Act provides the following treatment of existing Blue Cross or Blue Shield organizations and other organizations that meet certain requirements and substantially all of whose activities are providing health insurance. Health insurance includes insurance that provides coverage of medical expenses.

The Act provides that such existing Blue Cross and Blue Shield organizations and other organizations eligible for this treatment are subject to tax as stock property and casualty insurance companies under Part II of Subchapter L of the Code, as amended under the Act. Thus, such organizations are generally subject to the provisions applicable to property and casualty insurance companies in the Act, except as otherwise provided.

Certain treatment (described in more detail below) applies to Blue Cross and Blue Shield organizations providing health insurance that (1) were in existence on August 16, 1986; (2) are determined at any time to be tax exempt under a determination that

has not been revoked;¹⁴ and (3) were tax exempt for the last taxable year beginning before January 1, 1987, provided that no material change occurs in the structure or operations of the organization after August 16, 1986, and before the close of 1986 or any subsequent taxable year. Congress intends that the following principles will be applied by the Secretary in determining whether or not a material change in operations or structure has occurred.

Material change in operations or structure

First, the merger or split up of 1 or more existing Blue Cross/Blue Shield organizations, or the conversion to a mutual company status under local law, will not constitute a material change in operation or structure.

Second, if an existing Blue Cross/Blue Shield organization acquires a new line of business or is acquired by another business (other than a health business), the acquisition does not, by itself, constitute a material change in operations or structure of the organization if (1) the assets of the other business are a de minimis percentage (i.e., less than 10 percent) of the assets of the existing Blue Cross/Blue Shield organization at the time of the acquisition, or (2) the taxpayer can demonstrate to the Secretary of the Treasury that, based on all the facts and circumstances, the acquisition does not constitute a material change in operations or structure of the existing Blue Cross/Blue Shield organization.

Third, a material change in operations occurs if an existing Blue Cross/Blue Shield organization drops its high risk coverage or substantially changes the terms and conditions under which high risk coverage is offered by the organization from the terms and conditions in effect as of August 16, 1986. A change in high risk coverage is considered substantial if the effect of the change is to defeat the purpose of high risk coverage. High risk coverage for this purpose generally means the coverage of individuals and small groups to the extent the organization (1) provides such coverage under specified terms and conditions as of August 16, 1986, or (2) meets the statutory minimum definition of high risk coverage for new organizations. A material change in operations does not occur if an existing organization alters its operations to provide high risk coverage that meets the minimum standards under the Act for new Blue Cross/Blue Shield organizations.

For example, if an existing Blue Cross/Blue Shield organization provides open enrollment to all individuals and small groups of less than 5 individuals, the organization could redefine a small group for purposes of this coverage to mean the lesser of 15 individuals or the minimum number of individuals required for a small group under State law. Such a redefinition of a small group (from 5 to 15 individuals) would not be considered a material change in operations because the organization would meet the minimum standard for a new organization with respect to small group coverage.

A material change in operations occurs if the effect is to eliminate coverage for a significant high-risk segment of the plan's busi-

¹⁴ Congress intends that, to the extent such determinations of tax exemption for any taxable year beginning before 1987 were not under audit or in litigation before August 16, 1986, the Internal Revenue Service will not seek to revoke such determinations.

ness. Whether a change in operations constitutes a material change in operations depends on all of the facts and circumstances.

A material change is presumed to occur if an organization, on or after August 16, 1986, ceases to offer coverage for individuals or small groups or conversion coverage for those individuals who leave an employment-based group because of termination of employment. A material change generally occurs if an organization, which on August 16, 1986, offered individual coverage that allowed enrollment regardless of medical condition, modifies enrollment practices for that coverage to exclude certain individuals because of a preexisting medical problem.

A material change in operations does not occur if the plan increases its premium rates to reflect increases in health care costs or makes normal changes in products or services to respond to changes and developments generally in the health care environment. Thus, this material change in operations rule is not intended to prevent a plan from making normal adjustments in their business practices, such as adjustments to reflect new trends in cost containment or adding new coverages.

Any change in business practice that either eliminates coverage of high-risk individuals or small groups or that has the effect of eliminating such coverage, however, is a material change in structure or operation. For example, a premium increase that reflects normal increases in medical costs is not itself treated as a material change. On the other hand, a premium increase that has the effect of making high-risk coverage unavailable because of the cost of such coverage is treated as a material change.

Similarly, a material change generally will occur if an organization after August 16, 1986, ceases offering individual or small group coverage in a defined geographic area due to a concentration of high risk individuals in that area. In addition, a material change generally will occur if an organization institutes, subsequent to August 16, 1986, a procedure to identify particular individuals within the pool of individual enrollment, reassess their individual risk due to excessive utilization, and cancel their coverage.

The material change rule is not intended to prevent existing Blue Cross and Blue Shield organizations from changing their high risk coverage to respond better to the needs of that population. For example, a material change would not occur if the organization introduced a preferred provider arrangement or a managed care product for individual high risk coverage that included financial incentives or requirements to use more cost effective providers or benefits (e.g., home health or hospice care rather than hospitalization). The material change rule also is not intended to prevent existing Blue Cross and Blue Shield organizations from establishing special coverages that recognize health lifestyles. For example, a material change would not occur if smokers were charged a higher premium than non-smokers.

Special deduction

A special deduction is provided to such organizations with respect to their health business equal to 25 percent of the claims and expenses incurred during the taxable year less the adjusted surplus at the beginning of the year. This deduction is calculated by com-

puting surplus, taxable income, claims incurred, expenses incurred, tax-exempt income, net operating loss carryovers, etc., attributable to health business. Claims incurred also include claims under cost-plus contracts. Thus, the deduction is not allowable with respect to such items attributable to, for example, life insurance business. The expenses attributable to health business are those incurred during the taxable year in connection with the administration, adjustment or settlement of claims under health business. The deduction may not exceed taxable income attributable to health business for the year (calculated without regard to this deduction).

For organizations eligible for this deduction in the first taxable year beginning after December 31, 1986, the amount of the adjusted surplus to be applied in the first year for which the deduction is allowable is the surplus reported on the organization's annual statement (i.e., the annual statement approved by the National Association of Insurance Commissioners) at the close of the preceding year, adjusted by not taking into account distributions (such as distributions to shareholders, or contributions or loans to affiliates that reduce surplus, but not including ordinary and necessary expenses or deductible policyholder dividends) after the date of conference action (August 16, 1986). For organizations that first become eligible for the provision in a later taxable year, the amount of the adjusted surplus for the first year of the deduction is the surplus reported on the annual statement at the close of the preceding year.

The initial surplus amount is adjusted under the provision at the close of each taxable year by adding the taxable income or loss¹⁵ of the organization for the year (determined without regard to net operating loss carryovers and without regard to the deduction under this provision), plus net tax-exempt income for the year. Net tax-exempt income means dividends to the extent a dividends received deduction was allowed, and interest that is tax-exempt, less the expenses of earning the tax-exempt interest that were disallowed under sec. 265, and less the adjustment that was made for proration of tax-exempt income under sec. 805(a) or sec. 832(b)(5) (as amended by the Act). If an organization eligible for the deduction under this provision does not take the deduction in any year, adjusted surplus must be calculated for the intervening years between the last year the organization took the deduction and the next year in which it takes the deduction, so as to take account properly of the calculation of the deduction in the later year.

For example, assume a calendar year Blue Cross organization engaged only in health business, the State law surplus (as adjusted) of which was \$100 million on January 1, 1987. In 1987, the organization has health claims and expenses incurred of \$880 million and adjusted taxable income of \$160 million (including net tax-exempt income of \$10 million). In 1987, the organization would be entitled to a special deduction of \$120 million, that is, the excess of \$220

¹⁵ As under present and prior law, insurance loss reserves must be reasonable (see title X; part C.1., below). Generally, it is intended that the loss reserves of organizations eligible for the deduction under this provision also be reasonable, and that they be comparable to the historical loss reserves of the organization in relation to its claims and expenses.

million (25 percent of the 1987 claims and expenses paid) over \$100 million (the 1987 opening surplus).

As a further example, assume that in 1988, the organization has health claims and expenses incurred of \$1.2 billion. Its special deduction for 1988 would be \$40 million, that is, the excess of \$300 million (25 percent of the 1988 health claims and expenses incurred) over the opening 1988 adjusted surplus balance of \$260 million. The opening 1988 surplus is calculated by taking the sum of (a) 1987 opening surplus of \$100 million, plus (b) 1987 adjusted taxable income of \$160 million (including 1987 net tax-exempt income of \$10 million).

The deduction applies only for regular tax purposes. Therefore, the deduction is treated as a preference item for purposes of the corporate minimum tax.

Accounting method

In addition to this special deduction, such organizations are given a fresh start with respect to changes in accounting methods resulting from the change from tax-exempt to taxable status. No adjustment is made under section 481 on account of an accounting method change.

Existing Blue Cross/Blue Shield organizations are required to compute their ending 1986 loss reserves without artificial changes that would reduce 1987 income. This rule as to reserve weakening is to be applied so that the incurred-but-not-paid claims reserve at the end of 1986 will be redetermined using actual paid claims data for 1987. That amount will be used for purposes of determining both the surplus at December 31, 1986, and the opening loss reserve at January 1, 1987. Use of actual experience to determine those amounts will eliminate potential controversy over the proper amount of the surpluses and reserves for 1987 tax purposes. The loss reserve then will be adjusted, as appropriate, by the rules of section 1023 of the Act requiring the discounting of unpaid losses.

Unearned premium reserves

Such organizations are not subject to the treatment of unearned premium reserves generally applicable to property and casualty insurance companies under the Act. Congress determined that during the period such organizations were tax exempt, any mismatching of currently deductible premium acquisition expenses and deferred premiums (resulting from the unearned premium reserve deduction) had no significant tax impact, and therefore it is not appropriate to require these organizations to include in income a portion of the outstanding balance of the unearned premium reserve. To ease the transition from tax-exempt to taxable status, Congress determined that it is appropriate to give such organizations relief from the requirement that 20 percent of the increase in unearned premium reserves be included in income.

Basis of assets

Finally, the basis of assets of such organizations is equal, for purposes of determining gain or loss, to the amount of the assets' fair market value on the first day of the organization's taxable year beginning after December 31, 1986. Thus, for formerly tax-exempt or-

ganizations utilizing a calendar period of accounting and whose first taxable year commences January 1, 1987, the basis of each asset of such organization is equal to the amount of its fair market value on January 1, 1987. The basis adjustment is provided solely for purposes of determining gain or loss upon sale or exchange of the assets, not for purposes of determining amounts of depreciation or for other purposes. The basis adjustment is provided because Congress concluded that such formerly tax-exempt organizations should not be taxed on unrealized appreciation or depreciation that accrued during the period the organization was not generally subject to income taxation.

The foregoing special provisions apply to existing tax-exempt Blue Cross and Blue Shield organizations and to those other organizations that satisfy the additional criteria described below.

Other organizations

Other organizations substantially all of whose activities are providing health insurance, in order to receive the treatment under the provisions described above, must meet certain requirements.

First, at least 10 percent of the health insurance (determined as a percentage of the total number of individuals covered annually) provided by the organization must be provided to individuals and small groups (disregarding Medicare supplemental coverage). A small group is defined as the lesser of 15 individuals or the number of individuals required for a small group under the State law where the covered groups are located.

Second, the organization is required to provide continuous full-year open enrollment for individuals and small groups. Open enrollment is intended to include conversions from group to individual coverage (for example, upon separation from service with an employer who provides group coverage), without a lapse in coverage, provided the individual seeking to convert from group to individual coverage notifies the organization providing group coverage of his conversion request by the date of his separation from service. Conversion includes any change in the type of coverage (e.g., from one type of group to another).

Third, any individual seeking health insurance is required to be offered coverage which includes coverage of pre-existing conditions, and the coverage becomes effective within a reasonable waiting period after the time such coverage is sought. A reasonable waiting period is intended to be not more than three months. Further, health insurance coverage must be provided without regard to the age, income, or employment status of persons under age 65.

Fourth, at least 35 percent of the organization's health insurance premiums are determined on a community-rated basis. This percentage is determined as a percentage of the total number of persons covered on an annual basis. Community rating means that premiums are determined on the basis of the average annual cost of health insurance over the population in the community.

Fifth, the organization must be organized and operated in a manner such that no part of the net earnings inures to the benefit of any private shareholder or individual.

Effective Dates

The provision is effective for taxable years beginning after December 31, 1986. Special rules for Mutual of America and for Teachers Insurance Annuity Association-College Retirement Equities Fund provide that this provision does not apply with respect to that portion of their business attributable to pension business. For this purpose, the Act provides that pension business means the administration of qualified pension plans (sec. 401(a) or 403(a)), tax-sheltered annuities (sec. 403(b)), unfunded deferred compensation plans of State and local governments (sec. 457), and individual retirement arrangements (IRAs).

Additional special rules provide that this provision does not apply to the YMCA retirement fund, to administrative services performed by tax-exempt municipal leagues, and to the Missouri Hospital Plan.¹⁶ No inference is intended, under this provision, as to whether the performance of administrative services by tax-exempt municipal leagues, without more, constitutes commercial-type insurance activities. Generally, however, the performance of administrative services with respect to insurance contracts by tax-exempt organizations may be subject to unrelated business tax.

An exception is also provided for dental benefit coverage by Delta Dental Plans organizations that are members of the Delta Dental Plans Association through contracts with independent service providers so long as the provision of such coverage is the principal activity of such Association.¹⁷

3. Operations loss deduction of insolvent companies (sec. 1013 of the Act)¹⁸

Prior Law

Prior to 1984, life insurance companies were permitted to exclude from taxable income 50 percent of the excess of gain from operations over taxable investment income. In addition, life insurance companies were allowed certain special deductions for nonparticipating contracts and for accident and health insurance and group life insurance contracts. The amounts deducted under these provisions were added to a deferred tax account known as the policyholders surplus account (PSA). The allowance of these special deductions, and the establishment of a PSA, were intended to provide a cushion of assets to protect the interests of the policyholders. The 1984 Act repealed the deduction for additions to a PSA, but continued the deferral on existing amounts in a PSA.

The deferral of tax on existing amounts held in the PSA of a life insurance company is ended if the amounts are distributed to

¹⁶ A technical correction (with respect to the name of the Missouri Hospital Plan) may be needed so that the statute reflects this intent.

¹⁷ A technical correction may be needed so that the statute reflects this intent. Such a correction was included in the versions of H.Con. Res. 395 which passed the House and Senate in the 99th Congress.

¹⁸ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1013; H. Rep. 99-426, pp. 666-667; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1012; S. Rep. 99-313, pp. 492-493; and H. Rep. 99-841, Volume II (September 18, 1986), pp. 351-352 (Conference Report).

shareholders. In certain circumstances, amounts may be required to be distributed from the PSA (i.e., the deferral of tax on such amounts is ended) if the PSA becomes too large in relation to the scope of the company's current operations. The deferral of tax on amounts in the PSA also may end if the company ceases to be taxed as a life insurance company. The amounts included in income as a result of ending deferral on amounts in the PSA cannot be offset by the company's loss from operations or loss carryovers.

Reasons for Change

Congress determined that, in the limited case of a contraction of an insurance company's business due to insolvency on November 15, 1985, and the court-ordered liquidation of the company, it is appropriate to permit the otherwise unusable loss from operations or operations loss carryovers to offset the previously deferred amounts in the PSA. Congress concluded that this exception should be limited to this specific case in order to ensure that the tax otherwise due on a distribution from a PSA is collected.

Explanation of Provision

Under the Act, a life insurance company is permitted to apply its current loss from operations and its unused operations loss carryovers against the increase in its taxable income attributable to the amount distributed from its PSA if certain conditions are satisfied. First, the company must have been insolvent on November 15, 1985. Second, the company must be liquidated pursuant to the order of a court of competent jurisdiction in a title 11 or similar case. Third, as a result of the liquidation, the company's tax liability must be increased due to distributions from the PSA. Under the provision, no carryover of any loss from operations of the company arising during or prior to the year of liquidation may be used in any taxable year succeeding the liquidation year (regardless of whether the amount of the loss exceeds the amount of the distribution from the PSA).

Effective Date

The provision applies to liquidations on or after November 15, 1985.

Revenue Effect of Part B (Life Insurance Companies)

The provisions of Part B are estimated to increase fiscal year budget receipts by \$430 million in 1987, \$787 million in 1988, \$857 million in 1989, \$919 million in 1990, and \$959 million in 1991.

C. Property and Casualty Insurance Company Taxation

1. Inclusion in income of 20 percent of unearned premium reserve (sec. 1021 of the Act and sec. 832(b) of the Code)¹⁹

Prior Law

Under prior and present law, the income of a property and casualty insurance company (whether stock or mutual)²⁰ includes its underwriting income or loss and its investment income or loss, as well as gains and other income items.²¹ Under prior law, underwriting income meant premiums earned on insurance contracts during the year, less losses incurred and expenses incurred (sec. 832(b)(3)). To determine premiums earned, the increase in unearned premiums during the year (as reported as an increase in the unearned premium reserve on the annual statement approved by the National Association of Insurance Commissioners) was deducted from gross premiums (sec. 832(b)(4)(B)). This treatment of unearned premiums generally reflected accounting conventions imposed under applicable law.²²

Unearned premiums of a property and casualty insurance company include its life insurance reserves (including annuity reserves), if any. Generally, the deduction for increases in the reserve for unearned premiums gave rise under prior law to a deferral of the premium income attributable to insurance coverage to be provided in a future taxable year of a property and casualty company.

Under prior and present law, property and casualty insurers can also deduct expenses incurred during the taxable year. Expenses incurred generally mean expenses shown on the annual statement. Expenses incurred are calculated by adding to expenses paid during the year the difference between unpaid expenses at the end of the current year and unpaid expenses at the end of the preceding year. Expenses incurred ordinarily include premium acquisi-

¹⁹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1021; H.Rep. 99-426, pp. 668-670; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1021; S.Rep. 99-313, pp. 495-498; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 354-355 (Conference Report).

²⁰ The use of the term "property and casualty insurance company" is intended to refer to all those taxpayers subject to tax under Part II or III of subchapter L of the Code prior to amendment by the Act, or Part II of subchapter L as amended by the Act.

²¹ Under prior law, mutual companies with certain gross receipts less than \$150,000 were exempt from tax (sec. 501(c)(15)), and other rules set forth special rates, deductions, and exemptions for mutual companies with certain categories and amounts of income (sec. 821 et seq.). In addition, mutual companies were allowed a special deduction for additions to a bookkeeping protection against loss account (sec. 824). (See the separate discussion of the protection against loss account, below.)

²² See National Association of Insurance Commissioners ("NAIC")-approved annual statement form (often called the yellow blank) used by property and casualty insurance companies for financial reporting. The accounting techniques used in preparing this annual statement are referred to as statutory accounting principles (SAP), and generally are more conservative than generally accepted accounting principles (GAAP) and the cash and accrual methods of tax accounting.

tion expenses, including the premium acquisition expenses attributable to unearned premiums. Expenses, to be deductible, must constitute ordinary and necessary trade or business expenses within the meaning of section 162, although this rule does not determine the time when the deduction is allowed.

Reasons for Change

Prior law permitted a deferral of unearned premium income, while the expenses of earning the deferred income (e.g., premium acquisition expenses) were deducted currently. Permitting a deferral of an undiscounted portion of unearned premium income while allowing a current deduction for associated costs of earning the deferred income produced a mismatching of income and expenses, and a resulting mismeasurement of income. Congress concluded that it was necessary to provide a better matching of income and expenses by reducing the current deduction for unearned premiums. This approach is equivalent to denying current deductibility for a portion of the premium acquisition expenses.

Explanation of Provision

General rule

Under the Act, a property and casualty insurance company generally is required to reduce its deduction for increases in unearned premiums by 20 percent. This amount is intended to represent the allocable portion of expenses incurred in generating the unearned premiums. Thus, for taxable years beginning after 1986, only 80 percent of the increase in unearned premiums in each year is deductible. To the extent there is a decrease in the unearned premium reserve for a taxable year beginning after 1986, the resulting inclusion in income of the decrease would be reduced; only 80 percent of the amount would be includible. Thus, if the taxpayer's unearned premium reserve increased in 1987 from \$1,000 to \$1,100, the net deduction for unearned premiums would be \$80 ($\$1,100 - \$1,000 \times 80\%$). Similarly, if the unearned premium reserve declined in 1988 from \$1,100 to \$900, the taxpayer would be required to include \$160, rather than \$200, in income.

Life insurance reserves, as defined in section 816(b), that are included in unearned premium reserves under section 832(b)(4) are not subject to this reduction under the Act. Increases (or decreases) in such life insurance reserves remain deductible (or, to the extent a decrease in unearned premium reserves is attributable to a decrease in life insurance reserves, includible in income) as under prior law. This exception to the 80 percent rule is provided because such life insurance reserves are calculated under the life insurance company tax rules (sec. 807) in a manner intended to reduce the mismeasurement of income resulting from the mismatching of income and expenses.

Reciprocal insurers.—In the case of an interinsurer or reciprocal underwriter (within the meaning of sec. 835 of the Code) that is required under applicable State law to reduce the unearned premium reserve by applicable premium acquisition expenses, the amount of the unearned premium reserve is to be increased (before applica-

tion of this provision) by the amount of such expenses to the extent that the amount of such expenses can be clearly ascertained from the face of the annual statement filed by the reciprocal or interinsurer.²³ The reason for this grossing up of the unearned premium reserve is that, without it, the annual increase in the unearned premium reserve, although already net of such expenses as reported on the annual statement, would again be reduced by an amount (20 percent) considered under this provision to represent the expenses allocable to the unearned premiums.

Application of general rule to outstanding balances

The Act also provides for the inclusion in income of 20 percent of the unearned premium reserve outstanding at the end of the most recent taxable year beginning before January 1, 1987. This income is includible ratably over a six-year period commencing with the first taxable year beginning after December 31, 1986. In each of the first six taxable years during this period, 3⅓ percent of the unearned premium reserve outstanding at the end of the most recent taxable year beginning before January 1, 1987, is included in income.

Special rule

In the case of insurance against default in the payment of principal or interest on securities with a maturity of 5 years or more, the deduction for increases in unearned premiums is reduced by 10 percent, rather than 20 percent. Thus, only 90 percent of the increase in unearned premiums is deductible and 90 percent of any decrease is includible in income. Similarly, 10 percent of the outstanding balance of unearned premiums at the end of the most recent taxable year beginning before January 1, 1987, is included in income. This income is includible ratably over a 6-year period commencing with the first taxable year beginning after December 31, 1986.

Insurance on securities with a maturity of less than 5 years is subject to the general rule reducing the deduction (or inclusion) for a change in unearned premiums by 20 percent, and including 20 percent of the outstanding balance at the end of the first taxable year beginning before January 1, 1987.

Companies that cease to be insurance companies

Under the Act, if a property and casualty insurance company ceases to be subject to part II of subchapter L as amended by the Act (the rules relating to the treatment of unearned premiums), the rule for outstanding unearned premium balances as of the end of the last taxable year beginning before January 1, 1987, is applied to include the remaining amount subject to the rule in income for the taxable year preceding the taxable year in which the company ceases to be subject to tax as a property and casualty insurance company. This rule applies only if a company ceases to be a property and casualty company for a taxable year beginning before January 1, 1993. The rule does not apply to the extent a suc-

²³ A technical correction may be needed so that the statute reflects this intent.

cessor company (which is also a property and casualty insurance company) is subject to the requirements of sec. 381(c)(22).

For example, if a property and casualty insurance company has an outstanding unearned premium balance of \$100 for its taxable year ending December 31, 1986, 20 percent of the unearned premium balance, or \$20, is subject to the ratable inclusion rule. For its taxable year ending December 31, 1987, $3\frac{1}{3}$ percent of \$100, or \$3.33, is included in income. If the company ceases to be a property and casualty insurance company for its taxable year beginning January 1, 1989, then \$16.67 (the difference between the amount to be included (\$20) and the amount previously included (\$3.33)) is includible in income for the company's taxable year ending December 31, 1988.

Congress adopted this rule because the treatment of the outstanding unearned premium balance is designed to avoid a substantial income inclusion in the first taxable year after the effective date. However, if a company ceases to be a property and casualty insurance company during the phase-in period, Congress believed that the phase-in should be accelerated to prevent permanent avoidance of the income inclusion.

Treatment of small companies

The 20-percent inclusion rule may be applied over a different 6-year period, in the case of a company that (1) is exempt from tax under section 501(c)(15) in a taxable year beginning after 1986, and (2) becomes subject to tax under section 831(a) in a taxable year beginning after 1986, and (3) computed taxable income for a year beginning before 1987 taking into account a reserve for the gross amount of unearned premiums. In such a case, 20 percent of the unearned premium reserve outstanding at the end of the most recent taxable year beginning before January 1, 1987, is to be included in income ratably over the six-year period that begins with the first taxable year in which the company is subject to tax under section 831(a).²⁴ In addition, if a company to which the requirement of inclusion in income of a portion of the unearned premium reserve elects to be taxed only on investment income in a taxable year beginning after 1986 and before 1993, then it is not intended that the rule that applies when a company ceases to be taxed as a property and casualty company apply. Rather, it is intended that the amount includible under this provision continue to be includible over the applicable 6-year period. If such a company subsequently becomes subject to tax under section 831(a), it is not intended that the company again become subject to the 6-year inclusion provision.

Effective Date

The provision is generally effective for taxable years beginning after December 31, 1986. The inclusion in income of 20 percent or 10 percent of unearned premium reserves outstanding for the most recent taxable year beginning before January 1, 1987, takes effect

²⁴ A technical correction may be needed so that the statute reflects this intent.

ratably over the 6 taxable years beginning after December 31, 1986, and before January 1, 1993.

The Act provides special treatment of title insurance unearned premium reserves (see item 3, below).

2. Treatment of certain dividends and tax-exempt interest (sec. 1022 of the Act and sec. 832(b)(5) of the Code)²⁵

Prior Law

Under prior and present law, property and casualty companies are generally subject to tax on underwriting income (sec. 832(b)(1) and (3)). Under prior law, in calculating underwriting income, losses incurred (as well as expenses incurred) were deducted from premiums earned. The deduction for losses incurred generally reflected losses paid during the year as well as the increase in reserves for losses incurred but not paid.

Property and casualty insurance companies are also subject to tax on investment income, which generally includes interest, dividends and rents (sec. 832(b)(2)). A property and casualty insurer that includes in its investment income interest exempt from tax (sec. 103) may deduct this interest (sec. 832(c)(7)). Thus, in effect, the section 103 exclusion is available for eligible investment income. In addition, property and casualty companies are allowed the dividends received deduction (sec. 832(c)(12)).

No reduction in the loss reserve deduction was required, under prior law, to take account of the fact that deductible additions to reserves could come out of income not subject to tax. Unlike life insurance companies, property and casualty insurance companies were not required to allocate or prorate investment income (including tax-exempt investment income) so as to take account of the possibility of a double deduction where deductible additions to reserves were funded with tax-exempt income (or with the deductible portion of dividends received). In the case of life insurance companies, the net increase and net decrease in reserves are computed by reducing the ending balance of the reserve items by the prorated policyholders' share of tax-exempt interest (sec. 812).²⁶ This life insurance tax rule is based on the assumption that reserve increases are being funded out of both taxable and tax-exempt income.

Reasons for Change

Congress believed that it was not appropriate to fund loss reserves on a fully deductible basis out of income which may be, in whole or in part, exempt from tax. The amount of the addition to reserves that is deductible should be reduced by a portion of such tax-exempt income to reflect the fact that reserves are generally funded in part from tax-exempt interest or from wholly or partially deductible dividends.

²⁵ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1022; H.Rep. 99-426, pp. 670-672; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 356-357 (Conference Report).

²⁶ Also, the dividends received deduction is reduced by the policyholders' share of the dividends (sec. 805(a)(4)).

Explanation of Provision

Under the Act, the deduction for losses incurred is reduced by 15 percent of (1) the insurer's tax-exempt interest and (2) the deductible portion of dividends received (with special rules for dividends from affiliates). For this purpose, tax-exempt interest includes interest income excludable under section 103 (or deductible under sec. 832(c)(7)), the portion of interest income excludable under section 133, and other similar items. If the amount of this reduction exceeds the amount otherwise deductible as losses incurred, the excess is includible in income.

In the case of dividends from affiliates that are 100 percent deductible,²⁷ the portion which is subject to proration in the hands of the parent property and casualty company is that portion of the dividend which is attributable to tax-exempt interest or non-affiliate dividends (that is, those dividends which would not be eligible for the 100 percent dividends received deduction of the subsidiary). Under the Act, for purposes of the proration rule, dividends are treated as paid first out of current or accumulated earnings and profits attributable to prorated amounts, that is, dividends are treated as paid first out of tax-exempt income of the paying company.

Special rules for dividends from insurance affiliates (whether life or property and casualty) provide that the amount of the reduction in the deduction for losses incurred as a result of proration in the hands of the recipient property and casualty company is offset by the effect of proration as applied to the affiliate. The special rules for proration of dividends from insurance affiliates are similar to rules applicable, under the technical corrections portion of this Act, to the treatment of dividends received by life insurance companies from other life insurance companies.

This provision may be illustrated as follows. Assume that, in 1987, a property and casualty insurer has tax-exempt interest of \$1,000 and receives a dividend of \$100 that is eligible for the 80 percent dividends received deduction. In addition, the company receives from an affiliate a dividend of \$400 (none of which is attributable to amounts subject to proration) that is eligible for the 100 percent dividends received deduction. Under this provision, the deduction of losses incurred would be reduced by \$162 (i.e., 15 percent of \$1,000 plus 15 percent of \$80 (the portion of the \$100 dividend which is deductible)).

The proration rule does not apply to tax-exempt interest and the deductible portion of dividends received or accrued on stock or obligations acquired before August 8, 1986. Stock or obligations acquired after August 7, 1986, are, for this purpose, treated as ac-

²⁷ 100 percent deductible dividends include any dividend if the percentage used for purposes of determining the deduction allowable under sec. 243, 244, or 245(b) is 100 percent. Under the Act, such dividends also include a dividend received by a foreign corporation from a domestic corporation which would be a 100 percent dividend if sec. 1504(b)(3) did not apply for purposes of applying sec. 243(b)(5).

quired on the actual acquisition date, regardless of the holding period of the property determined under section 1223. For example, the transfer of tax-exempt bonds among affiliates after August 7, 1986, is treated as an acquisition of the bonds after August 7, 1986.

In the case of dividends from affiliates, special rules apply to determine the date of acquisition. The portion of dividends received from an affiliate attributable to stock or obligations (the interest on which is tax-exempt) acquired by the affiliate after August 7, 1986, is subject to the proration rule. Further, if an affiliate is acquired after August 7, 1986, each share of stock or obligation (the interest on which is tax-exempt) held by the affiliate (or by its subsidiaries that are affiliates), whenever acquired by the affiliate, is treated, for purposes of applying the proration rule to dividends from the affiliate, as acquired after August 7, 1986. However, 100 percent dividends not attributable to prorated amounts (e.g., tax-exempt interest) will not be prorated even if the affiliate payor was acquired after August 7, 1986.

Effective Date

The provision relating to proration of tax-exempt interest and the deductible portion of dividends received (sec. 1022 of the Act) is effective for taxable years beginning after December 31, 1986.

3. Loss reserves (sec. 1023 of the Act and secs. 807, 832, and new sec. 846 of the Code) ²⁸

Prior Law

In general

Under prior and present law, property and casualty companies are required to include their underwriting and investment income or loss in taxable income (sec. 832(b)). Among the items that are deductible in calculating underwriting income are additions to reserves for losses and expenses incurred. Losses incurred include unpaid losses, the amounts of contested liabilities, and amounts which are estimated (and which therefore could be subject to future change when the amounts could be determined with reasonable accuracy).

The amount of the deduction for losses incurred is required to be reasonable. See Reg. sec. 1.832-4(b) and *Hanover Insurance Co. v. Commissioner*, 598 F.2d 1121 (1st Cir. 1979), *cert. denied*, 444 U.S. 915 (1979). Thus, under prior and present law, the Internal Revenue Service may review, and, if appropriate, adjust the amount of the deduction for unpaid losses and unpaid loss adjustment expenses.

Title insurance

Under prior law, the treatment of title insurance (i.e., insurance to protect the buyer of real property against the risk that a defect in the title or an encumbrance against the property exists at the

²⁸ For legislative background of the provision, see: H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1023; S.Rep. 99-313, pp. 498-510; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 357-367 (Conference Report).

time the property was purchased) was unclear. Under Rev. Rul. 83-174, 1983-2 C.B. 108, as modified by Rev. Rul. 84-107, 1984-2 C.B. 122, for title insurers operating in jurisdictions requiring the maintenance of an unearned premium reserve, the IRS had permitted premiums received by title insurers (to the extent of the reserve required under State law) to be treated as unearned premiums for Federal income tax purposes for years beginning before November 28, 1984; however, the taxpayer could not deduct incurred but unreported losses in addition to unearned premiums for tax years beginning on or after November 28, 1983.

Reasons for Change

The loss reserves taken into account under prior law for tax purposes, and for State regulatory reporting on the annual statement prescribed by the National Association of Insurance Commissioners ("NAIC"), were determined for the most part as the arithmetic sum of anticipated claims payments in future years. Congress concluded that prior law did not accurately measure the income of property and casualty insurers. Unlike other taxpayers, property and casualty insurance companies were permitted to deduct losses prior to the time the loss was paid or accrued. Congress determined that the prior-law treatment of property and casualty companies thereby permitted such companies to overstate the true current cost of the insured loss; the deduction for such losses was overstated by the amount by which the nominal dollar value of a loss exceeded the present value of the insurance company's liability to pay the resulting claim. The longer the period of time involved, the greater the overstatement. In other words, the failure of prior law to reflect the time value of money permitted these companies to understate their income.

Congress recognized that the nature of the business of a property and casualty company affected the extent to which loss deductions are overstated. For example, some types of policies (such as medical malpractice or commercial liability policies) typically give rise to a long deferral period between occurrence of a loss and payment of a claim. These "long-tailed" losses received the greatest benefit from the failure to take into account the time value of money. Congress determined that the tax treatment of loss reserve deductions has contributed to what is referred to as cash flow underwriting, in which a property and casualty company established a premium based on the assumption that investment income (which often is tax exempt) will offset underwriting losses.

Congress concluded that it was necessary to undertake a comprehensive restructuring of the tax treatment of loss reserve deductions for property and casualty insurance companies. The Act modifies the timing and amount of loss reserve deductions to take account partially of the time value of money available currently under the property and casualty taxation provisions.

The Act adopts a pre-tax method of discounting similar to a method proposed by the General Accounting Office to reduce the loss reserve deductions of property and casualty companies. This method of discounting is dissimilar to the rules applicable to other taxpayers under which deductions for losses are allowed when eco-

conomic performance occurs (economic performance rules), and to methods of accounting that produce consequences economically equivalent to the economic performance rules (such as the special rules for nuclear decommissioning expenses contained in sec. 468A). Congress determined, however, that in order to acknowledge the effect of the time value of money, which was not reflected in the prior-law treatment of loss reserves, it was appropriate to adopt a method of discounting for such reserves.

Explanation of Provision

In general

The Act amends the relevant provisions of subchapter L to provide for the discounting of the deduction for loss reserves to take account partially of the time value of money. Thus, the Act limits the deduction for unpaid losses (reported losses that have not been paid, estimates of losses incurred but not reported and resisted claims, and unpaid loss adjustment expenses) to the amount of discounted unpaid losses (new sec. 846 of the Code). Any net decrease in loss reserves results in income inclusion, as under prior law, but the amount to be included is computed on a discounted basis.

This modified treatment of loss reserve deductions is applicable both to loss reserves of property and casualty companies, and to loss reserves of life insurance companies that are not required to be discounted under life insurance reserve rules. In the case of any reserves (including reserves of property and casualty companies) which life insurance company provisions require to be discounted, the applicable life insurance reserve discounting rules apply in lieu of the new discounting rules adopted by the Act.

Special treatment under the Act is provided with respect to (1) certain types of accident and health insurance, including disability insurance, and (2) title insurance.

Scope of discounting

Under the Act, the deduction for losses incurred is computed in the following manner. The amount of losses paid during the taxable year is calculated, and is increased by salvage and reinsurance recoverable (attributable to paid losses) outstanding at the end of the preceding taxable year and is decreased by salvage and reinsurance recoverable (attributable to paid losses) outstanding at the end of the current taxable year. The amount of paid losses is increased by the amount of discounted unpaid losses (as defined in new sec. 846) outstanding at the end of the taxable year and is decreased by the amount of discounted unpaid losses outstanding at the end of the preceding taxable year.

Unpaid losses generally mean the amount of unpaid losses reflected on the annual statement approved by the NAIC that the taxpayer is required to file with insurance regulatory authorities of a State. For purposes of calculating unpaid losses under the Act, unpaid loss adjustment expenses are treated as unpaid losses and are not included in the amount of expenses unpaid (under sec. 832(b)(6)). Unpaid losses are separately defined under the Act to include any unpaid loss adjustment expenses shown on the annual statement; unpaid loss adjustment expenses are not to be taken

into account more than once. Under the Act, the Secretary of the Treasury is directed to provide, in regulations, for the proper treatment of salvage and reinsurance recoverable with respect to unpaid losses.

Lines of business to which discounting rules apply

In general.—The Act requires all property and casualty loss reserves (unpaid losses and unpaid loss adjustment expenses) for each line of business (as shown on the annual statement) to be discounted for tax purposes. The lines of business are categories for the reporting of claims and claim payments, and specifically appear on Schedules O and P of the annual statement for property and casualty companies (technically, the “fire and casualty” annual statement as prescribed by the NAIC).

Short-tail lines.—The lines of business reported on Schedule O of the annual statement relate mostly to “short-tail” coverages, such as auto physical damage, although they also include accident and health coverages some of which involve the payment of claims over extended periods, such as so-called long-term disability coverages. “Short-tail” coverages or lines of business are lines of business in which the period of time between the occurrence of the loss for which coverage is provided and the payment of the claim attributable to that loss is, on average, relatively short.²⁹

Two of the Schedule O lines are denominated “reinsurance” and “international,” respectively, and include amounts that may optionally be reported in those lines or in other Schedule O and P lines to which the reinsurance or international insurance is directly allocable.

Long-tail lines.—The Schedule P lines typically are longer-tail (primarily liability coverage) lines. A “long-tail” line of business is a line in which the time between the occurrence of a loss and the payment of a claim is fairly long. The longer-tail lines of business are denominated in five annual statement categories: auto liability, other liability, workers’ compensation, medical malpractice, and multiple peril (encompassing farm owners’ multiple peril, homeowners’ multiple peril, commercial multiple peril, ocean marine, aircraft (all perils), and boiler and machinery). Under the Act, the multiple peril lines of business are treated as a single line of business for purposes of applying the discounting provisions. Some lines of business, such as workers’ compensation and medical malpractice, have significantly longer tails than the other Schedule P lines, with a large percentage of claims remaining unpaid after 10 years.

Accident and health lines.—In the case of insurers which hold loss reserves for cancellable accident and health coverages and are required by the Act to discount such reserves, the amounts in-

²⁹ Whether a loss has occurred, and the time between occurrence and payment, depends on whether the insurance contract is written on a “loss incurred” or on a “claims made” basis. If insurance is provided on a “loss incurred” basis, coverage is provided with respect to losses that occur during the period of coverage. Alternatively, if a policy is written on a “claims made” basis, coverage is provided with respect to claims reported during the period of coverage. Typically, the time between occurrence of a loss and payment of a claim is shorter if policies are written on a claims made basis.

volved typically are reported on Exhibits 9 and 11 of the NAIC annual statement for life and health companies.

Because of the presence of potentially longer-tail claims in the accident and health lines as well as in the reinsurance and international lines, the Act provides for special treatment with respect to these types of business, as described more fully below.

Discounting Methodology

In general.—To implement the discounting of loss reserves, the Act provides that the deduction for unpaid losses is limited to the annual increase in discounted unpaid losses. The amount of the discounted unpaid losses as of the end of any taxable year attributable to any accident year is the present value of the losses (as of the close of the taxable year) determined by using (1) the gross amount to be subjected to discounting (i.e., the undiscounted loss reserves), (2) the pattern of payment of claims, including the duration in years over which the claims will be paid, and (3) the rate of interest to be assumed in calculating the discounted reserve.

This discounting methodology is applied by line of business and by accident year, as reported on the annual statement filed for the year. Under the Act, the term accident year means the year in which the incident occurs that gives rise to the related unpaid loss. For this purpose, in the case of a claims made policy, the accident year will generally be the year in which the claim is made.

Limit on discounted losses.—The amounts to which the discounting rules are applied under the Act are the undiscounted loss reserves (as reported on the annual statement for the accident year with respect to the line of business to which the discounting applies). The relevant annual statement is the statement filed by the taxpayer for the fiscal year ending with or within the taxable year of the taxpayer.

In some cases (such as workers' compensation) for certain companies, the reserves shown on the annual statement are already discounted and identified as such. Congress intended that, in the case of a loss reserve that is discounted for purposes of annual statement reporting, the loss reserve for annual statement reporting is grossed up and an undiscounted loss reserve is calculated. This grossing up of discounted loss reserves to undiscounted loss reserves for Federal income tax purposes is available only if the discounting for annual statement reporting is identified as such, and the discounting factors that were used are explained on the annual statement. It is not necessary that the disclosure of discounting be required on the annual statement, as long as the taxpayer actually discloses the fact that unpaid loss reserves are discounted and the basis for such discounting with its annual statement. This undiscounted loss reserve amount is used as the amount of unpaid losses from which the loss reserve discounting for tax purposes is computed.

However, Congress was concerned about the potential for abuse when a property and casualty insurance company computes undiscounted unpaid losses by grossing up any annual statement discounted losses. A company could overstate the undiscounted losses (by overstating the amount by which its unpaid losses are discount-

ed). In such a case, the company could effectively negate the application of the discounting requirements.

One way of dealing with this potential problem would be to require that the discounting rules applicable for income tax purposes be applied to the loss reserves reported on the annual statement, whether or not discounted. Congress believed, however, that such an approach would be inequitable because it would understate some companies' deduction compared to other companies that did not discount for financial reporting purposes. Rather than impose this type of detriment on companies that discount on their annual statements, and thereby possibly interfere with the regulatory authority of the States, the Act imposes a limitation on the ability of a property and casualty insurance company to overstate its discounting factors for annual statement reporting by providing that in no event can the amount of discounted loss reserves for Federal income tax purposes exceed the aggregate amount of unpaid losses (and loss adjustment expenses) with respect to any line of business for an accident year as reported on the annual statement. Further, the amount and rate of the discount, for annual statement purposes, for any line of business, must be ascertainable on the basis of information filed on or with the annual statement. It is anticipated that the Secretary of the Treasury will issue regulations that will prevent taxpayers from manipulating taxable income by adopting inconsistent disclosure practices on annual statements for different years.

Discount factors

In general.—Under the Act, the tax reserve discount factors, computed using the assumptions described below (i.e., the interest rate and the loss payment pattern, including the maximum duration of payments), are to be separately developed for and applied to the unpaid loss attributable to each accident year for each line of business. Recognizing that the computations of the discount factors themselves involve a degree of complexity, it is anticipated that the Secretary will annually publish discount factors which taxpayers may use in determining the discounted amounts of their loss reserves.

Once a series of discount factors is applied to an accident year for a line of business, it continues to be used without change as that accident year "ages" (i.e., as the claims for that year are paid out). In effect, each line of business and accident year is vintaged under the discounting provision, and subsequent redeterminations of the interest rate or payment pattern for that vintage based on actual experience of a particular company or the industry are generally neither required nor permitted.

Interest rate.—The interest rate used for purposes of applying the discounting methodology to a line of business is equal to 100 percent of the average of the applicable Federal mid-term rates (as defined in sec. 1274(d) converted to a rate based on annual compounding) effective as of the beginning of each of the calendar months in the base period. The base period means the most recent 60 calendar months ending before the beginning of the calendar year for which the determination is made. However, no calendar month before August 1986 is included in the base period. For accident

years of a company beginning before or in 1987, the rate to be applied is 100 percent of the average of the applicable Federal mid-term rates effective as of the beginning of the 5 last calendar months of 1986.

For example, the rate to be used in computing the discount factors for 1995 is the average of the annual Federal mid-term rates in effect at the beginning of each of the 60 calendar months during 1990-1994. On the other hand, the rate to be used in computing discount factors for 1989 is the average of such applicable rates for the 29-month period ending before January 1, 1989.

Once an interest rate assumption is established with respect to unpaid losses attributable to an accident year, the rate is not subsequently adjusted to reflect changes in the average Federal mid-term rate in later periods. Thus, the interest rate attributable to an accident year is vintaged with respect to that year.

Loss payment pattern.—The Act requires the Secretary of the Treasury to determine a loss payment pattern with respect to each line of business reported on Schedules O and P for a determination year. This loss payment pattern will be determined by reference to the historical loss payment pattern applicable to the line of business and applies to accident years ending with (or within) the determination year and each of the four succeeding years.

The determination year means the calendar year 1987 and each 5th calendar year after 1987. Thus, the Secretary is directed to re-determine and publish the loss payment patterns on an industry-wide basis every 5 years. It is anticipated that Treasury regulations will address the issue of proper application of the discounting rules in the case of taxpayers whose taxable year is not the calendar year (for example, where the taxpayer is a member of an affiliated group filing a fiscal year consolidated return).

Determinations of loss payments patterns are to be made (1) by using the aggregate experience reported on the annual statements of insurance companies to which the discounting provisions apply, (2) on the basis of the most recent published aggregate data from the annual statements relating to loss payment patterns available on the first day of the determination year, (3) by assuming that all losses are paid in the middle of the year, and (4) under certain computational assumptions with respect to the period over which the losses are paid.

At present, the aggregate data derived from the annual statements provides information for the accident year plus 2 years with respect to Schedule O lines of business and the accident year plus 9 years with respect to the Schedule P lines of business. Under the Act, the Secretary is directed to make appropriate adjustments with respect to the duration of payment patterns for future accident years if annual statement data is available for longer periods (e.g., because the period for which reporting is required on the annual statement is changed).

At the current time, aggregate loss payment pattern data is annually published by A.M. Best & Co., summarizing industry payout patterns by line of business and accident year as reported on Schedules O and P of the most recently filed annual statements. Congress intended that, as long as the information is published in its present form and is supplied with respect to at least the same

number of accident years as is supplied as of May 6, 1986, the Secretary is to use the data available in Best's Aggregates and Averages.

Under this provision, loss payment patterns announced for the period 1987-1991 are to make use of the most recent published aggregate data available on January 1, 1987, which is the data for 1985. The factors announced during 1992-1996 are to use the data available on January 1, 1992, which is expected to be 1990 data.

Computational rules.—The computational assumptions prescribed by the Act provide that the loss payment pattern for any line of business is to be based on losses paid (1) during the accident year and the 3 years following the accident year or (2) in the case of any line of business reported in the schedule or schedules of the annual statement relating to auto liability, other liability, medical malpractice, workers' compensation, and multiple peril lines of business (Schedule P lines), during the accident year and the 10 years following the accident year.

In the case of a line of business for which the accident year plus the 3 years following the accident year is used (generally, Schedule O lines), the Act provides that losses paid after the first year following the accident year are treated as paid equally in the succeeding 2 years. In the case of any other line of business, losses paid after the close of the 10-year period after the accident year are generally treated as paid in such 10th year.

The Act provides a special rule for certain long-tail lines of business. If the special rule applies, (1) the 10-year period following the accident year may be extended (but not by more than 5 years) and (2) the amount of losses that otherwise would have been treated as paid in the 10th year following the accident year are treated as paid in such 10th year and each subsequent year in an amount equal to the lesser of (a) the amount of losses paid in the 9th year following the accident year, or (b) the remaining amount of unpaid losses. If, at the end of 5 years following such 10th year, there is a remaining balance of unpaid losses, such losses are treated as if paid in such 5th year without regard to the rule in the preceding sentence.

The special rule to extend the assumed loss payment period for long-tail lines of business applies if the amount of losses that would be treated as paid (under the general rule) in the 10th year following the accident year exceeds the amount of losses treated as paid in the 9th year following the accident year.

As an example of this special rule for long-tail lines of business, assume the following loss payment pattern:

Year	Loss payment pattern (percent)
Accident Year	25
Accident Year + 1	10
Accident Year + 2	8
Accident Year + 3	8
Accident Year + 4	8

Year	Loss payment pattern (percent)
Accident Year + 5.....	7
Accident Year + 6.....	7
Accident Year + 7.....	5
Accident Year + 8.....	5
Accident Year + 9.....	5
Accident Year + 10.....	12

In this example, the amount of losses paid in the 9th year following the accident year are less than the amount of losses treated as paid in the 10th year following the accident year. Accordingly, the special rule applicable to long-tail lines of business applies. Under this special rule, the amount of losses paid in the 10th and later years after the accident year are treated as equaling the amount of losses paid in the 9th year after the accident year. Therefore, under the special rule, the loss payment period is extended for an additional 2 years, as follows:

Year	Special rule loss payment pattern (percent)
Accident Year.....	25
Accident Year + 1.....	10
Accident Year + 2.....	8
Accident Year + 3.....	8
Accident Year + 4.....	8
Accident Year + 5.....	7
Accident Year + 6.....	7
Accident Year + 7.....	5
Accident Year + 8.....	5
Accident Year + 9.....	5
Accident Year + 10.....	5
Accident Year + 11.....	5
Accident Year + 12.....	2

Developing payment patterns.—The Act provides that, if the amount of losses treated as paid in the penultimate year of the payment pattern is zero or negative, then the the average of the amounts treated as paid in the 3 penultimate years of the payment pattern is the amount taken into account for purposes of extending the loss payment pattern by up to an additional 5 years. In the event that the average of the 3 years gives rise to a negative number for any line of business, additional preceding years of the payment pattern should be averaged in successively, until the average is a positive number. This rule applies to the extension of all payment patterns, including those where the taxpayer has elected

to determine its loss payment patterns on the basis of its own historical experience (see the discussion below).

The following example illustrates a methodology that would be appropriate, under Treasury regulations, for determining a payment pattern for a line of business for any given accident year. In the case of an electing taxpayer, the data used would be the annual statement data for the line of business reported on the taxpayer's annual statements; the taxpayer's most recently filed annual statement would be appropriate. Example 1 illustrates the development of a payment pattern for a Schedule P line, and example 2 illustrates the development of a payment pattern for a Schedule O line of business. Congress did not intend to preclude the Treasury Department from prescribing additional methodologies for computing loss payment patterns, and applying the resulting discount factors to the unpaid losses reported on the taxpayer's annual statement, to the extent necessary to carry out the purposes of the discounting provision.

Example 1: payment pattern for a Schedule P line

The development of reserve discount factors for a Schedule P line of business is illustrated in Table X-1. This example is based on the 1985 consolidated industry totals for automobile liability. The 1985 annual statement is used because it contains the most recent loss development data.

Table X-1.—Reserve Discount Factor Development, Automobile Liability

[Discount rate is 7.20 percent per annum]

Years before current year	Year loss incurred	Loss and loss expense payments to date ¹ (thousands)	Total losses and loss expense incurred (thousands)	Cumulative fraction of loss paid ² (percent)	Fraction of loss paid during year ³ (percent)	Fraction of loss unpaid, year-end (percent)	Discounted fraction unpaid, year-end (percent)	Reserve discount factor ⁴ (percent)
AY + 0	1985	\$10,734,519	\$31,281,287	34.3161	34.3161	65.6839	58.5753	89.1776
AY + 1	1984	18,397,279	28,217,053	65.1992	30.8830	34.8008	30.8172	88.5530
AY + 2	1983	20,047,428	24,986,353	80.2335	15.0344	19.7665	17.4699	88.3812

AY + 7	1978	14,534,843	14,766,868	98.4287	.6373	1.5713	1.3071	83.1890
AY + 8	1977	12,853,464	13,027,563	98.6636	.2349	1.3364	1.1580	86.6551
AY + 9	1976	11,389,407	11,506,437	98.9829	.3193	1.0171	.9108	89.5529
AY + 10	Pre-1976	91,306,371	91,545,592	NA	.3193	.6978	.6458	92.5519
AY + 11	NA	NA	NA	NA	.3193	.3785	.3617	95.5694
AY + 12	NA	NA	NA	NA	.3193	.0592	.0571	96.5834
AY + 13	NA	NA	NA	NA	.0592		.0000	96.5834

¹ "Total losses and loss expense incurred" equals "loss and loss expense payments" plus "losses unpaid" plus "loss expense unpaid" as defined in Schedule P.

² "Cumulative fraction of loss paid" equals ratio of "loss and loss expense payments" to "total losses and loss expense incurred".

³ "Fraction of loss paid during year" equals the change in the "cumulative fraction of loss paid" from the previous year for AY + 0 through AY + 9) (see text for computation after AY + 9).

⁴ The reserve discount factor is 96.5834 in AY + 12 and all subsequent years.

Schedule P of the 1985 annual statement itemizes "loss and loss expense payments" and "total losses and loss expense incurred" for the 10-year period 1976-1985 and the total for all years before 1976 (see Table X-1). The number of years that have passed since the accident year through the current year (1985) is shown in the first column of Table X-1; for example, the year 1976 is referred to as AY+9. From these data, the cumulative fraction of loss and loss expense paid through 1985, for losses incurred in 1976-1985, is computed as the ratio of "loss and loss expense payments" to "total losses and loss expense incurred". For AY+0 through AY+9, the fraction of loss and loss expense paid during each accident year is estimated as the change in the cumulative fraction of loss and loss expense paid from the previous accident year. Since unpaid loss and loss expense at the end of AY+9 (1.0171 percent) exceeds the amount of loss and loss expense payments in AY+9 (0.3193 percent), the special rule for long-tail lines is applicable. Under this rule, unpaid loss and expenses at the end of AY+9 are deemed to be paid at a rate of 0.3193 percent in AY+10 through AY+12, and the balance, 0.0592 percent, is deemed to be paid in AY+13.

The reserve discount factors are equal to the ratio of discounted unpaid losses to undiscounted unpaid losses in each accident year. For purposes of discounting, losses are deemed to be paid in the middle of the year. For example, if the discount rate is 7.20 percent, then the discounted unpaid loss in AY+11 is computed as the present value of losses deemed to be paid in AY+12 and AY+13:

$$0.3617 = \frac{0.3193}{1.0720^{\frac{1}{2}}} + \frac{0.0592}{1.0720^{\frac{3}{2}}}$$

Consequently, as shown in Table X-1, the reserve discount factor for AY+11 is 95.5694 percent,³⁰ i.e., the ratio of discounted unpaid losses (0.3617 percent) to undiscounted unpaid losses (0.3785 percent) in AY+11. The reserve discount factor for the year that the last claim is deemed to be paid (AY+13), and for all subsequent years, is the reserve discount factor for the preceding year (96.5834 percent in AY+12).

Example 2: payment pattern for a Schedule O line

The development of reserve discount factors for a Schedule O line of business is illustrated in Table X-2. This example is based on the 1985 consolidated industry totals for fire insurance. The 1985 annual statement is used because it contains the most recent loss development data.

³⁰ To obtain this degree of accuracy in the reserve discount factor, the percent of losses deemed paid in AY+12 (0.319307) and AY+13 (0.0591628) must be carried out to six significant digits.

Table X-2.—Reserve Discount Factor Development. Fire Insurance

[Discount rate is 7.20 percent per annum]

Years before current year	Year loss incurred	Net losses paid in year (thousands)	Unpaid losses beginning year ² (thousands)	Fraction unpaid loss in year ³ (percent)	Fraction of total loss paid in year ⁴ (percent)	Fraction of total loss unpaid, year-end (percent)	Discounted fraction unpaid, year-end (percent)	Reserve discount factor ⁵ (percent)
AY + 0	1985	\$1,182,445	\$2,142,829	55.1815	55.1815	44.8185	42.1262	93.9928
AY + 1	1984	687,222	944,426	72.7661	32.6127	12.2058	11.3929	93.3400
AY + 2	Pre-1984	196,764	462,600	NA	6.1029	6.1029	5.8944	96.5834
AY + 3		NA	NA	NA	6.1029	0	0	96.5834

¹ "Net losses paid in year" equals "losses paid during the year less reinsurance received during the year" less "salvage and subrogation received in the current year" as defined in Schedule O.

² "Unpaid losses, beginning year" equals "net losses paid in year" plus "losses unpaid" as defined in Schedule O.

³ "Fraction unpaid loss paid in year" equals ratio of "net losses paid in year" to "unpaid losses, beginning year".

⁴ "Fraction of total loss paid in year" equals "fraction unpaid loss paid in year" times previous year's "fraction of total loss unpaid, year-end" for AY + 0 and AY + 1 (see text for computation after AY + 1).

⁵ The reserve discount factor is 96.5834 in AY + 2 and all subsequent years.

Schedule O of the 1985 annual statement itemizes "losses paid" and "losses unpaid" for the 2-year period 1984-1985 and the total for all years before 1984 (see Table X-2).³¹ The number of years that have passed since the accident year through the current year (1985) is shown in the first column of Table X-2; for example, the year 1984 is referred to as AY+1. From these data, the fraction of unpaid losses paid in 1985, for losses incurred in 1984 and 1985, is computed as the ratio of "net losses paid in year" to "unpaid losses, beginning year". For AY+0 and AY+1, the fraction of total loss paid in the current year is estimated as the fraction of unpaid losses paid in the current year times the previous year's fraction of total loss unpaid at year-end. The fraction of loss paid during AY+2 and AY+3 is deemed to be one-half of the fraction of total loss unpaid at the end of AY+1 (6.1029 percent equals one-half of 12.2058 percent).

The reserve discount factors are equal to the ratio of discounted unpaid losses to undiscounted unpaid losses in each accident year. For purposes of discounting, losses are deemed to be paid in the middle of the year. For example, if the discount rate is 7.20 percent, then the discounted unpaid loss in AY+1 is computed as the present value of losses deemed to be paid in AY+2 and AY+3:

$$11.3929 = \frac{6.1029}{1.0720^{\frac{1}{2}}} + \frac{6.1029}{1.0720^{\frac{3}{2}}}$$

Consequently, as shown in Table X-2, the reserve discount factor for AY+1 is 93.3400 percent, the ratio of discounted unpaid losses (11.3929 percent) to undiscounted unpaid losses (12.2058 percent) in AY+1. The reserve discount factor for the year that the last claim is deemed to be paid (AY+3), and for all subsequent years, is the reserve discount factor for the preceding year (96.5834 percent in AY+2).

Special rule for international and reinsurance

Under the Act, for loss reserves for the international and reinsurance lines of business that are not specifically allocated to a particular line of business, the discounting provisions are implemented on the basis of composite discount factors derived by combining the payment patterns for all Schedule P lines. Although reinsurance and international lines of business may be reported on Schedule O as short-tail lines of business, Congress was concerned that treating these lines as Schedule O lines for purposes of calculating discounted loss reserve deductions would create a disproportionately favorable effect on unallocated loss reserves for reinsurance and international insurance attributable to long-tail lines of business. If such long-tail lines were accurately reflected, the cur-

³¹ Part 1 of Schedule O contains data on losses; part 2 contains data on loss adjustment expense. In this example, loss adjustment expense is disregarded because the consolidated industry totals for part 2 data are not published. A taxpayer electing its own experience is required to compute reserve discount factors using combined loss and loss expense development data.

rent loss reserve deduction would be lower than if such reinsurance and international insurance is treated as part of a Schedule O line of business, with assumed loss payments over a much shorter period of time.

The Act authorizes the Secretary to issue regulations requiring a company to follow a loss payment pattern that differs from the normal treatment of reinsurance as a composite of all Schedule P lines of business. Congress anticipated, for example, that in the case of a company substantially all of the reinsurance business of which is the reinsurance of medical malpractice insurance, the Secretary is to require such reinsurer to use a loss payment pattern that is an aggregate of all industry experience with respect to medical malpractice, rather than an aggregate of all industry experience for all Schedule P lines of business.

Generally, international and reinsurance business that is allocated to a particular line of business and taken account of as part of that line of business is discounted in accordance with the rules applicable to that line of business, not the general rules applicable to unallocated international and reinsurance business. Thus, for example, reinsurance of accident and health business that is allocated to that line of business as reported on the annual statement of the taxpayer is subject to the discounting rules applicable to that line of business. The Treasury Department may, by regulation, address the treatment of distortions in the loss payment patterns arising where, for example, reinsurance of "short-tail" business is allocated to that line of business and reinsurance of "long tail" business is unallocated, or vice versa.

Special rules for accident and health insurance coverage

Under the Act, the active life reserves held for life insurance and noncancellable accident and health benefits (to the extent subject to the life insurance company reserve rules (sec. 807(d)) are not subject to discounting under the new discounted unpaid loss provisions (sec. 846). Rather, in the case of a property and casualty insurance company subject to the life insurance reserve rules with respect to a particular line of business, the amount of discounted unpaid losses for that line of business is the amount required under the life insurance reserve rules.

Life insurance companies may not deduct loss adjustment expenses that do not meet the all-events test applicable under sec. 461 of the Code. Thus, it is not intended that noncancellable accident and health insurance business currently subject to life insurance reserve rules (sec. 807(d)) be subject to discounting under the property and casualty discounting methodology. Similarly, life insurance companies are not intended to be permitted to deduct loss adjustment expenses by virtue of the application of the property and casualty discounting methodology with respect to cancellable accident and health insurance business, if any, of such companies.

Under the Act, in the case of unpaid losses relating to disability insurance (other than credit disability insurance), the general rules prescribed for the treatment of noncancellable accident and health insurance contracts under the life insurance company reserve provisions (sec. 807(d)) are to apply, adjusted in the following manner: (1) the taxpayer may use its own experience relating to mortality

and morbidity, (2) the prevailing State assumed interest rate to be used is the rate in effect for the year in which the loss occurred rather than the year in which the contract was issued, and (3) the rule limiting the amount of discounted losses to no more than the aggregate amount of unpaid losses as reflected on the annual statement applies. Similar treatment applies to noncancellable accident and health insurance provided by a life or by a property and casualty insurance company.

In the case of life insurance companies and property and casualty companies with respect to the types of accident and health insurance coverage (other than disability insurance) that are not currently subject to the life insurance company reserve requirements (such as cancellable accident and health coverage), such coverage is subject to the discounting provisions for property and casualty companies. It is assumed, for purposes of applying such provisions, that unpaid losses at the end of an accident year are paid in the middle of the year following the accident year. The type of insurance to which this rule applies is primarily medical reimbursement coverage.

Further, one type of accident and health insurance (credit disability) is more in the nature of a property and casualty type of line of business and, under the Act, is treated as a Schedule O line of business. While Congress did not consider it appropriate to treat credit disability in the same manner as life insurance, it concluded that treatment in the same manner as medical reimbursement would not reflect the typical loss payment pattern of such disability coverage. Therefore, credit disability is discounted over the same period as Schedule O lines of business.

Election by company to use its own experience

Under the Act, a taxpayer may elect to apply the general loss discounting rules by reference to the taxpayer's own historical loss payment pattern as of the end of a taxable year (the determination year). The taxpayer, if the election is made, is to use the taxpayer's most recent experience as reported on its annual statement. For each of the 5 years in the determination period, the taxpayer's most recent experience is to be used. Once a determination has been made by a taxpayer with respect to an accident year and line of business, the taxpayer may not redetermine its loss payment pattern to adjust for more recent information. This treatment is consistent with the general vintaging approach used for determining loss payment patterns on the aggregate experience for the industry.

The election by a taxpayer to use its own experience, once made, applies to all accident years and all lines of business of the taxpayer (except international and reinsurance lines, for which no election is permitted), and may not be revoked without the consent of the Secretary. The election may be made with respect to any determination year and applies for that determination year and the 4 succeeding calendar years. As under the general rules, the determination year is calendar year 1987 and each 5th succeeding calendar year after 1987.

Congress intends that the Secretary will permit companies to derive their loss payment patterns based on the information report-

ed on the annual statement. To determine the assumed loss payment pattern for each "vintage" (i.e., accident year for a line of business), the following method may be used. The amount of losses deemed to be paid for the vintage in the current taxable year with respect to any vintage is the total paid losses for the vintage for the taxable year, divided by the total of paid and unpaid losses for the vintage in that taxable year, minus the same calculation for the subsequent vintage done for the taxable year.

For example, assume that a company's annual statement for 1985 shows that, for a line of business with an accident year of 1980 with total incurred losses of \$100, \$65 dollars are paid losses and \$35 are unpaid losses. With respect to accident year 1981, for total incurred losses of \$180, \$60 dollars have been paid and \$120 are unpaid losses. To determine the loss payment pattern for that line of business for the accident year plus 5 (i.e., 1980 is the accident year and 1985 is the accident year plus 5), the percentage of losses deemed paid in the accident year plus 5 (65 divided by 100 or 65 percent) is reduced by the percentage of losses deemed paid in the accident year plus 4 (60 divided by 180 or 33⅓ percent). Therefore, the percentage of incurred losses deemed paid in the accident year plus 5 is 65 percent minus 33⅓ percent or 31⅔ percent.

Under the Act, Treasury regulations may provide that an election under this provision does not apply to a line of business in which the taxpayer does not have sufficient historical experience. Generally, it is intended that the election be available only for those lines of business for which the taxpayer's own historical experience is statistically significant. Thus, if the taxpayer's business in any line of business does not represent a meaningful portion of the total industry-wide business in that line of business, then it is intended that the election not apply with respect to that line of business. Generally, the Treasury Department is directed to develop regulations to carry out this intent. Such regulations might, for example, determine that a meaningful portion would be a portion representing business in at least the 10th percentile of industry-wide reserves for a line of business for the determination year with respect to which the election is made. For example, no election would be permitted for any line of business where 90 percent of taxpayers that have reserves in that line of business, have reserves that are bigger than those of the taxpayer for the line of business for the determination year.

Title insurance reserves

In the case of title insurers, the Act provides that the amount of the taxpayer's unearned premium reserve determined under prior law is subject to discounting at the rate generally applicable to property and casualty insurers unpaid loss reserves (sec. 832(b)(8) of the Code).³² The amount of the unearned premium reserve subject to discounting is the amount shown on the yearly statement filed for State insurance regulatory purposes for the fiscal year ending with or within the taxable year. The loss payment pattern to be

³² No inference is intended with respect to the applicability of Rev. Ruls. 83-174 and 84-107, above.

applied for purposes of discounting these reserve amounts is the period and pattern over which such reserves for that year are to be included in income in accordance with applicable State law. The rate and amount of inclusion in income for statutory accounting purposes is considered to determine the timing of and amount of releases from such reserve which are included in income for income tax purposes. The applicable interest rate is the rate applicable, for the year the premiums are received, under the loss reserve discounting rules applicable to property and casualty insurance companies.

Title insurance case reserves (i.e., known claims reserves) are subject to discounting under the provisions generally applicable to property and casualty insurance loss reserves.

A fresh start for discounting title insurance reserves is provided, calculated in a manner similar to the fresh start for other property and casualty company loss reserves (see the discussion below).

This treatment is provided for title insurance reserves because of the deferral and the consequent failure to acknowledge the time value of money which resulted under prior law with respect to title insurance unearned premium reserves.

Effective Dates

Under the Act, the provisions relating to the treatment of unpaid loss reserve deductions for property and casualty companies apply to taxable years beginning after December 31, 1986.

Under the Act, a transitional rule is provided with respect to the unpaid losses on outstanding business before the effective date of the provision. Under this transitional rule, for purposes of calculating a company's change in unpaid losses with respect to outstanding business, the unpaid losses at the end of the last taxable year beginning before January 1, 1987, and the unpaid losses as of the beginning of the first taxable year beginning after December 31, 1986, are determined as if the discounting provisions had applied to the unpaid losses (and unpaid expenses) in the last taxable year beginning before January 1, 1987. In addition, the interest rate and loss payment pattern assumptions with respect to such outstanding business is to be computed by using the rate and loss payment pattern applicable to accident years ending in 1987.

Further, the Act provides a fresh start with respect to undiscounted loss reserves applicable to the last taxable year beginning before January 1, 1987. Under this fresh start rule, the difference between the amount of undiscounted unpaid loss reserves and unpaid expenses (the recomputed reserves) at the end of the last taxable year beginning before January 1, 1987, and the amount of the discounted balances determined under the transitional rule, are not taken into account for purposes of determining the taxable income of an insurance company after the effective date.³³ The

³³ In the case of an insurance company that first becomes fully taxable (i.e., not exempt under sec. 501(c)(15) and not electing under sec. 831(b) to be taxed only on investment income) in a later taxable year, e.g., 1995, the fresh start adjustment should be made with respect to the company's undiscounted loss reserves at the close of the year immediately preceding such year. A technical correction may be needed so that the statute reflects this intent.

fresh-start rule also applies to differences in reserves attributable to the change in the period for determining loss of companies whose taxable year is not the calendar year.

Such fresh start adjustment is to be taken into account in full in the first taxable year to which the discounting provisions apply (i.e., the first taxable year beginning after December 31, 1986), for purposes of calculating any adjustment to earnings and profits. Reserve strengthening in taxable years beginning after December 31, 1985, is not treated as a reserve amount for purposes of determining the amount of the fresh start. Instead, such reserve strengthening additions to unpaid loss reserves in taxable years beginning in 1986 are treated as changes to reserves in taxable years beginning in 1987, and are subject to discounting. This provision is intended to prevent taxpayers from artificially increasing the amount of income that is forgiven under the fresh start provision. The deduction for reserve strengthening is not to be taken into account twice.

Reserve strengthening is considered to include all additions to reserves attributable to an increase in an estimate of a reserve established for a prior accident year (taking into account claims paid with respect to that accident year), and all additions to reserves resulting from a change in the assumptions (other than changes in assumed interest rates applicable to reserves for the 1986 accident year) used in estimating losses for the 1986 accident year, as well as all unspecified or unallocated additions to loss reserves. Reserve strengthening does not include amounts reported to the insurance company from mandatory state or Federal assigned risk pools, if the amount of the loss reported is not discretionary with the insurance company.

4. Protection against loss account for mutual companies (sec. 1024 of the Act and former sec. 824 of the Code)³⁴

Prior Law

Under prior law, mutual property and casualty insurance companies were permitted a deduction for contributions (which are book-keeping entries) to a protection against loss ("PAL") account (sec. 824). The amount of the deduction was equal to the sum of 1 percent of the underwriting losses for the year plus 25 percent of statutory underwriting income, plus certain windstorm and other losses. In general, contributions to the PAL account were taken into income after a 5-year period. The PAL account thus effected a 5-year deferral of a portion of mutual company underwriting income.

Reasons for Change

The intent of Congress in enacting the PAL provision had been to provide mutual companies with a source of capital to enable them to compete with stock companies, in the event of a catastrophic loss. While stock companies could enter capital markets

³⁴ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1024; H.Rep. 99-426, pp. 676-677; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1023; S.Rep. 99-313, pp. 510-511; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 369-370 (Conference Report).

and issue new stock to raise money in the event of a catastrophic loss, a mutual company, because it does not issue stock, could not do so. The 5-year partial income deferral provided a source of capital not available to stock companies.

In adopting the provisions of the Act, however, Congress expressed the belief that the deduction for contributions to the PAL account was not serving its intended purpose and therefore should be repealed. The PAL rules did not require that any funded account actually be maintained to protect against losses; rather, the only protection was afforded in the form of tax savings. The utility of the PAL was greatest where least needed, in the case of mutual companies with current taxable income that could benefit from deferral. Further, the comparison to the ability of stock companies with catastrophic losses to raise funds in capital markets may not have been entirely appropriate, because any company may not readily be able to raise funds when its financial prospects are dimmed by serious losses.

Explanation of Provision

Code section 824, allowing a deduction for contributions to a PAL account, is repealed. Amounts credited to PAL accounts in taxable years beginning before December 31, 1986, are included in income in accordance with prior law (as if sec. 824 remained in effect).

Effective Date

The repeal of the deduction for contributions to a PAL account is effective for taxable years beginning after December 31, 1986.

5. Special exemptions, rates, and deductions of small mutual companies; combination of Parts II and III of subchapter L (sec. 1024 of the Act and secs. 501, 821, 823 and 831 of the Code)³⁵

Prior Law

Under prior law, mutual property and casualty companies were classified into three categories depending upon the amounts of the company's gross receipts. Mutual companies with certain gross receipts not in excess of \$150,000 were exempt from tax (sec. 501(c)(15)). Companies whose gross receipts exceeded \$150,000 but did not exceed \$500,000 were "small mutuals" and generally were taxed solely on investment income. This provision did not apply to any mutual company that had a balance in its PAL account, or that, pursuant to a special election, chose to be taxed on both its underwriting and investment income. Additionally, small mutuals which were subject to tax because their gross receipts exceed \$150,000 could claim the benefit of a special rule which phased in the regular tax on investment income as gross receipts increased from \$150,000 to \$250,000. Companies whose gross receipts exceeded \$500,000 were ordinary mutuals taxed on both investment and

³⁵ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1025; H.Rep. 99-426, pp. 677-678; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1024; S.Rep. 99-313, pp. 511-512; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 369-370 (Conference Report).

underwriting income. Mutual reciprocal underwriters or interinsurers were generally taxed as mutual insurance companies, subject to special rules (sec. 826).

Like stock companies, ordinary mutuals generally were subject to the regular corporate income tax rates. Mutuals whose taxable income did not exceed \$12,000 paid tax at a lower rate. No tax was imposed on the first \$6,000 of taxable income, and a tax of 30 percent was imposed on the next \$6,000 of taxable income. For small mutual companies that were taxable on investment income, no tax was imposed on the first \$3,000 of taxable investment income, and a tax of 30 percent was imposed on taxable investment income between \$3,000 and \$6,000.

Mutual companies that received a gross amount from premiums and certain investment income of less than \$1,100,000 were allowed a special deduction against their underwriting income (if it was subject to tax). The maximum amount of the deduction was \$6,000, and the deduction was phased out as the gross amount increased from \$500,000 to \$1,100,000.

Reasons for Change

Congress determined that the prior-law rules applicable to small and certain ordinary mutual companies were inordinately complex and should be simplified. Congress concluded that one provision should afford benefits comparable to prior law to small mutual companies. Further, Congress concluded that it was appropriate to eliminate the distinction between small mutual companies and other small companies, and extended the benefit of the small company provision to all eligible small companies, whether stock or mutual.

Explanation of Provision

The Act provides that mutual and stock property and casualty companies are eligible for exemption from tax if their net written premiums or direct written premiums (whichever is greater) do not exceed \$350,000. This provision changes the nature of the ceiling amount for tax exemption from certain gross receipts to direct or net written premiums, and increases the ceiling amount from \$150,000 to \$350,000.

In addition, the Act repeals the special rates, deductions and exemptions for small mutual companies and substitutes a single provision (sec. 831(b) of the Code). The new provision allows mutual and stock companies with net written premiums or direct written premiums (whichever is greater) in excess of \$350,000 but less than \$1,200,000 to elect to be taxed only on taxable investment income. To determine the amount of direct or net written premiums of a member of a controlled group of corporations, the direct or net written premiums of all members of the controlled group are aggregated. In determining whether a taxpayer is a member of a controlled group of corporations for purposes of eligibility for the provision, a 50 percent ownership test applies.

Parts II and III of subchapter L of the Code are consolidated into Part II, under the Act. Part II of subchapter L relates generally to taxation of property and casualty insurance companies.

Effective Date

The provisions are effective for taxable years beginning after December 31, 1986.

6. Study of treatment of property and casualty insurance companies (sec. 1025 of the Act)³⁶

Prior Law

Under prior and present law, property and casualty insurance companies are generally permitted to deduct dividends and similar distributions paid or declared to policyholders in their capacity as such. Stock companies could not, however, fully deduct dividends paid to shareholders. Policyholder dividends and shareholder dividends are treated differently for tax purposes at the distributee level as well as at the company level. Policyholder dividends are generally considered price rebates and are not taxable distributions (unless the insurance premiums were deducted by the policyholder). Dividends paid to shareholders in their capacity as shareholders, on the other hand, constitute ordinary income to the recipient shareholders to the extent of the distributing corporation's earnings and profits. Unlike mutual property and casualty companies, however, mutual life insurance companies reduce the amount of deductible policyholder dividends by an amount intended to reflect the portion of the distribution allocable to the companies' earnings on equity (as distinguished from the proportion which is a policyholder rebate).

Reasons for Change

Congress recognized that there may be inequity arising from the difference in tax treatment of dividend distributions of stock property and casualty companies, and policyholder dividends of mutual companies. It may be appropriate, as in the case of life insurance companies, to treat a portion of mutual property and casualty company policyholder dividends as a distribution of earnings on equity of the company; however, the rule applying this concept in the life insurance area is enormously complex and controversial in application. Therefore, before applying the concept (or another approach, if preferable) to property and casualty insurers, Congress believed it would be preferable to review the results and recommendations of a study to be conducted by the Treasury Department.

Congress also concluded that it is important to monitor the new property and casualty insurance provisions to see that their purpose to measure more accurately the income of property and casualty insurers is being carried out. Similarly, Congress concluded that it is important to monitor the application of the corporate minimum tax (whose purpose is to ensure that all taxpayers pay a minimum amount of tax on their income) to property and casualty insurers.

³⁶ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, secs. 1026 and 1027; H.Rep. 99-426, pp. 678-680; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 368-369 (Conference Report).

Explanation of Provision

The Act requires the Treasury Department to conduct a study of property and casualty company taxation issues covering several areas. One issue is the tax treatment of policyholder dividends by mutual property and casualty insurance companies, including corporate minimum tax issues and regular tax issues relating to the tax treatment of policyholder dividends of mutual property and casualty insurance companies. In addition, the study is to cover the operation and effectiveness of the provisions in the Act relating to the regular and minimum tax of property and casualty insurance companies, and is to examine whether the revenue targets projected for the provisions are met. The Treasury Department has the authority under the Act to require the furnishing of information necessary to conduct the study. The results of the study, together with recommendations, are to be submitted to the Committee on Ways and Means of the House of Representatives, the Committee on Finance of the Senate and the Joint Committee on Taxation no later than January 1, 1989, so that Congress may take such further action as is appropriate.

7. Physicians' and surgeons' mutual protection associations (sec. 1031 of the Act)³⁷

Prior Law

In general, under prior and present law, the gross income of a mutual insurance company (other than a life insurance company) includes gross premiums and other consideration, gross investment income, and gain from the sale or other disposition of property. Prior and present law provide a special deduction for dividends and similar distributions paid to policyholders in their capacity as such.

In the case of corporations, gross income does not include any contribution to capital (sec. 118). However, under prior and present law, the provisions covering the taxation of nonlife mutual insurance companies have no specific provisions regarding paid-in capital or the distribution of such capital.

Premiums for liability insurance in carrying on any trade or business generally are deductible in the year they are paid or incurred if they represent ordinary and necessary business expenses and were not capital expenditures. For example, annual premiums paid by a physician for medical malpractice insurance generally are deductible. No deduction is allowed as an expense paid or incurred during the taxable year for a contribution to capital.

Reasons for Change

Congress determined that it is appropriate to provide for the tax treatment of organizations operating before 1984 as pooled malpractice insurance associations.

³⁷ For legislative background of the provision, see: Senate floor amendment, 132 Cong. Rec. S7956-7958 (June 19, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 371-372 (Conference Report).

Explanation of Provision

Contributions to a pooled malpractice insurance association are currently deductible to the extent they do not exceed the cost of a commercial insurance premium for annual coverage and are included in the association's income. Refunds of such contributions are deductible to the fund only to the extent included in the income of the recipient. The provision applies to associations operating under State law prior to January 1, 1984.

Effective Date

The provision is effective for contributions and refunds after the date of enactment (October 22, 1986).

Revenue Effect of Part C (Property and Casualty Insurance Company Taxation)

The provisions of Part C are estimated to increase fiscal year budget receipts by \$871 million in 1987, \$1,454 million in 1988, \$1,636 million in 1989, \$1,745 million in 1990, and \$1,842 million in 1991.

TITLE XI—PENSIONS AND DEFERRED COMPENSATION; EMPLOYEE BENEFITS; EMPLOYEE STOCK OWNERSHIP PLANS (ESOPs)

A. Limitations on Treatment of Tax-Favored Savings

1. Individual retirement arrangements (IRAs) (secs. 1201-1203 of the Act and secs. 219 and 408 of the Code)¹

Prior Law

IRA deduction limit

Under prior law (sec. 219), an individual who had not attained age 70½ generally was entitled to deduct from gross income (within limits) the amount contributed to an individual retirement arrangement (an IRA). The limit on the deduction for a taxable year generally was the lesser of \$2,000 or 100 percent of compensation (earned income, in the case of income from self-employment).

Prior to the Economic Recovery Tax Act of 1981 (ERTA), deductible IRA contributions were not permitted for any taxable year if an individual, for any part of the taxable year, was an active participant in a qualified pension, profit-sharing, or stock bonus plan (sec. 401(a)), a tax-sheltered annuity program (sec. 403(b)), a qualified annuity plan (sec. 403(a)), or a governmental plan (whether or not tax qualified). Nondeductible IRA contributions were not permitted.

ERTA provided that deductible IRA contributions (within limits) could be made by all individuals, without regard to whether an individual was covered under an employer's retirement plan.

Spousal IRA deduction

Under a spousal IRA, an individual was allowed an additional deduction for contributions to an IRA for the benefit of the individual's spouse if (1) the spouse had no compensation for the year; (2) the spouse had not attained age 70½; and (3) the couple filed a joint income tax return for the year. If deductible contributions were made (1) to an individual's IRA and (2) to an IRA for the non-compensated spouse of the individual (a spousal IRA), then the annual deduction limit on the couple's joint return was increased to the lesser of \$2,250 or 100 percent of compensation includible in gross income. The annual contribution could be divided as the spouses chose, so long as the contribution for neither spouse exceeded \$2,000. If a spouse had a small amount of compensation, in-

¹ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1101; H.Rep. 99-426, pp. 682-85; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 1201-1204; S.Rep. 99-313, pp. 541-547; Senate floor amendment, 132 Cong. Rec. S7931-7932 (June 19, 1986); and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 373-380 (Conference Report).

cluding amounts less than \$250, the spousal IRA deduction was not available under prior law.

Qualified voluntary employee contributions

Prior law allowed an employee who was a participant in a qualified plan, tax-sheltered annuity program, or government plan a deduction for qualified voluntary employee contributions made by or on behalf of the employee to the plan. The deduction allowed for contributions to an IRA was reduced by the amount of deductible voluntary employee contributions to a plan. Thus, the deduction allowed for the total of (1) an employee's contributions to an IRA and (2) the employee's qualified voluntary employee contributions to a plan (or plans) for a year, generally was limited to the lesser of \$2,000 or 100 percent of compensation for the year.

Acquisition of gold and silver coins

Prior and present law provides that the acquisition by an IRA of any collectible is treated as a distribution from the IRA equal to the cost of the collectible and is includible in the IRA owner's income for the year in which the cost is deemed distributed. Under prior law, a collectible included any coin, including a coin issued by the United States.

Reasons for Change

The individual retirement savings provisions of the Code were originally enacted in the Employee Retirement Income Security Act of 1974 (ERISA) to provide a tax-favored retirement savings arrangement to individuals who were not covered under a qualified plan, a tax-sheltered annuity program, or a governmental plan maintained by their employer. At that time, individuals who were active participants in employer plans were not permitted to make deductible IRA contributions.

In the Economic Recovery Tax Act of 1981 (ERTA), Congress eliminated the active participant restriction and extended IRA availability to all taxpayers. At that time, the Congress articulated a concern about the level of savings generally and expressed a desire to provide a discretionary retirement savings arrangement that was uniformly available.

Congress determined that, since 1981, the expanded availability of IRAs had no discernible impact on the level of aggregate personal savings. In addition, many employers had adopted qualified cash or deferred arrangements, which permit employees to make discretionary contributions that are provided with tax-favored treatment essentially equivalent to that accorded to deductible IRA contributions. The limits on elective deferral under cash or deferred arrangements are substantially higher (even after the reductions included in the Act) than the limits on IRA contributions, but are subject to nondiscrimination rules designed to promote participation by lower-paid employees. In addition, many employees of tax-exempt organizations are permitted to make significant elective deferrals under tax-sheltered annuity programs. Congress believed that the wide availability of the option to make elective deferrals under cash or deferred arrangements and tax-sheltered annuities

reduced the prior concern that individuals in employer-maintained plans should be able to save additional amounts for retirement on a discretionary basis.

Further, Congress determined that data had consistently shown that IRA utilization was quite low among lower-income taxpayers who could be the least likely to accumulate significant retirement savings in the absence of a specific tax provision. For example, for the 1984 tax year, only 7.8 percent of returns with adjusted gross income (AGI) under \$30,000 (who represent 76 percent of all taxpayers) made IRA contributions, whereas 59 percent of returns with AGI of \$50,000 or more made IRA contributions. It was clear to Congress, therefore, that utilization of the IRA deduction increased substantially as income increases.

Congress believed that those taxpayers for whom IRA utilization was the largest (i.e., higher-income taxpayers) would generally have saved without regard to the tax incentives. Congress further believed that the substantially lower tax rates provided by the Act, which themselves stimulate additional work effort and saving, eliminate the need for IRA deductions for higher-income taxpayers who participate in other tax-favored retirement plans. Thus, with respect to higher-income taxpayers, Congress found it appropriate to reinstate generally the rules prior to ERTA, which limit IRA deductions to those taxpayers who are not covered by an employer-provided pension plan.

However, Congress also wished to provide a tax incentive for discretionary retirement savings for all taxpayers. Therefore, the Act permits all individuals, including higher-income taxpayers who are covered by an employer's retirement plan, to make nondeductible contributions to an IRA with a continued deferral of tax on the earnings on these nondeductible contributions.

In addition, Congress recognized that the current spousal IRA deduction limit creates anomalous results in the case of a spouse whose compensation is less than \$250 a year. The Act eliminates this anomaly for purposes of determining eligibility to make deductible or nondeductible spousal IRA contributions.

Explanation of Provisions

IRA deduction not available to active participants

In general

The Act generally retains the prior-law IRA provisions for taxpayers who are not active participants in an employer-maintained retirement plan and for taxpayers with adjusted gross income (AGI) below certain levels, and reduces the IRA deduction for active participants with AGI above those levels.

Under the Act, a taxpayer is permitted to make deductible IRA contributions up to the lesser of \$2,000 or 100 percent of compensation (earned income, in the case of a self-employed individual) if:

(1) in the case of a taxpayer who is not married, the taxpayer either (a) has AGI that does not exceed the applicable dollar amount or (b) is not an active participant in an employer-maintained retirement plan for any part of the plan year ending with or within the taxable year;

(2) in the case of married taxpayers filing a joint return, either (a) the couple has AGI that does not exceed the applicable dollar amount or (b) neither spouse is an active participant in an employer-maintained retirement plan for any part of the plan year ending with or within the taxable year; or

(3) in the case of a married taxpayer filing separately, the taxpayer either (a) has AGI that does not exceed the applicable dollar amount, or (b) neither spouse is an active participant in an employer-maintained retirement plan for any part of the plan year ending with or within the taxable year.

The applicable dollar amount is (1) \$25,000, in the case of an unmarried individual, (2) \$40,000, in the case of a married couple filing a joint return, and (3) \$0, in the case of a married taxpayer filing separately. The otherwise applicable IRA dollar limit (i.e., \$2,000) is reduced by an amount that bears the same ratio to such dollar limit as the taxpayer's AGI in excess of the applicable dollar amount (or, in the case of a married couple filing a joint return, the couple's AGI in excess of the applicable dollar amount) bears to \$10,000. Thus, under the Act, in the case of an active participant, the IRA deduction limit is \$0 for (1) unmarried individuals who have AGI equal to or greater than \$35,000, (2) married couples filing a joint return who have AGI equal to or greater than \$50,000, and (3) married taxpayers who have AGI equal to or greater than \$10,000.

For purposes of determining whether an IRA contribution is deductible for a taxable year, a taxpayer is not considered married for a year if the taxpayer and the taxpayer's spouse (1) did not live together at any time during the taxable year, and (2) did not file a joint return for the taxable year.²

Under the Act, the spousal IRA dollar limit is also proportionately reduced for AGI above the applicable dollar amount. Thus, the spousal IRA dollar limit (i.e., \$2,250) is reduced by an amount that bears the same ratio to \$2,250 as the excess of AGI over the applicable dollar amount bears to \$10,000.

The dollar limit is rounded to the next highest \$10 in the case of a limit that is not a multiple of \$10. In addition, the Act provides a \$200 floor on the IRA dollar limit for individuals whose AGI is not above the phaseout range. For example, an individual with AGI of \$34,500 has an IRA dollar limit of \$200 even though the phaseout would otherwise provide an IRA dollar limit of \$100.

Under the Act, the 100 percent of compensation limit on IRA deductions is applied after the phaseout. For example, assume a married couple filing jointly has total AGI of \$45,000, with one spouse having AGI of \$44,000 and the other spouse having AGI of \$1,000. One spouse is an active participant in an employer-maintained retirement plan. Under the phaseout, the \$2,000 dollar limit for each spouse is reduced to \$1,000. Because each spouse has AGI of at least \$1,000, each spouse may make a \$1,000 deductible contribution to an IRA. On the other hand, if one spouse had AGI of \$44,500 and the other spouse had AGI of \$500, then the spouse with

² A technical correction may be needed so that the statute reflects this intent.

AGI of \$44,500 could make a deductible contribution of \$1,000, and the other spouse could make a deductible contribution of only \$500.

AGI, for purposes of determining the IRA dollar limit, is calculated without regard to any deductible IRA contributions made for the taxable year and without regard to the exclusion provided for certain foreign earned income (sec. 911), but with regard to any taxable social security benefits (sec. 86) and with regard to any passive loss limitations (new sec. 469). In other words, AGI is calculated in the following order: (1) for purposes of the limitations on passive loss deductions, (2) for purposes of the amount of social security benefits that are taxable, and (3) for purposes of the IRA deduction limit.

Active participant

Under the Act, an individual is an active participant in an employer-maintained retirement plan with respect to the individual's taxable year if the individual is an active participant for any part of the plan year ending with or within the individual's taxable year. For purposes of this rule, an employer-maintained retirement plan means (1) a qualified pension, profit-sharing, or stock bonus plan; (2) a qualified annuity plan (sec. 403(a)); (3) a simplified employee pension (sec. 408(k)); (4) a plan established for its employees by the United States, by a State or political subdivision, or by any agency or instrumentality of the United States or a State or political subdivision (other than an unfunded deferred compensation plan of a State or local government (sec. 457)); (5) a plan described in section 501(c)(18); or (6) a tax-sheltered annuity (sec. 403(b)).

With certain modifications, the Act generally follows the pre-ERTA rule for determining whether an individual is an active participant in an employer-maintained retirement plan.³

The determination of active participant status is dependent upon the type of plan in which the individual participates or is eligible to participate. In the case of a defined benefit pension plan, an individual is treated as an active participant if the individual is not excluded under the eligibility requirements under the plan for any part of the plan year ending with or within the individual's taxable year. Further, an individual is considered an active participant in a defined benefit plan if the individual is eligible to participate in the plan, even if the individual elects not to participate. Thus, for example, if an individual satisfies the conditions for eligibility under a defined benefit pension plan, but is required to make an employee contribution to accrue any benefit attributable to employer contributions under the plan, the individual is treated as an active participant even if no employee contribution is made and, thus, no benefit is accrued for the plan year.

Under a money purchase pension plan, an individual is an active participant if any employer contribution or forfeiture is required to be allocated to the individual's account with respect to the plan year ending with or within the individual's taxable year, even if the individual is not employed at any time during the plan year (e.g., contributions are continued on behalf of a permanently dis-

³ See Reg. sec. 1.219-2.

abled employee (sec. 415(c)(3)(C)) or the individual's taxable year (e.g., the individual separates from service before the beginning of the taxable year).

An individual is treated as an active participant under a profit-sharing or stock bonus plan if any employer contribution is deemed added or any forfeiture is allocated to the individual's account during the individual's taxable year. A contribution is added to an individual's account on the later of the date the contribution is made or is allocated.

Finally, an individual is treated as an active participant for any taxable year in which the individual makes a voluntary or mandatory employee contribution. An individual is not treated as an active participant if earnings (rather than contributions or forfeitures) are allocated to the individual's account.

For purposes of the active participant rule, elective contributions (such as elective deferrals under a qualified cash or deferred arrangement) are treated as employer contributions.

The determination of whether an individual is an active participant or whether amounts are contributed on the individual's behalf is made without regard to whether the individual's rights to benefits under a plan are nonforfeitable.

Time for contributions

Under the Act, the prior-law rule relating to the time that contributions are required to be made is retained. Therefore, an individual may make IRA contributions for a taxable year up to the due date of the individual's tax return for the taxable year without extensions. Of course, as under prior law, the individual is required to designate the taxable year to which an IRA contribution relates when making the contribution.

Nondeductible contributions permitted to IRAs

In general

The Act permits individuals to make designated nondeductible IRA contributions to the extent that deductible contributions are not allowed due to the AGI phaseout. Thus, an individual may make nondeductible contributions to the extent of the excess of (1) the lesser of \$2,000 (\$2,250 in the case of a spousal IRA) or 100 percent of compensation over (2) the IRA deduction limit with respect to the individual.

In addition, the Act permits a taxpayer to elect to treat deductible IRA contributions as nondeductible. An individual might make such an election, for example, if the individual had no taxable income for the year after taking into account other deductions.

Under the Act, a designated nondeductible contribution means any contribution to an IRA for a taxable year that is designated as a nondeductible contribution in the manner prescribed by the Secretary. The designation is to be made on the individual's tax return for the taxable year to which the designation relates. As with deductible contributions, designated nondeductible contributions may be made up to the due date of the individual's tax return for the taxable year (without extensions).

An individual who files an amended return for a taxable year may change the designation of IRA contributions from deductible to nondeductible or vice versa. Such an amended return is to be treated as a return filed for the taxable year to which the return relates. Of course, under the usual rules, any increased tax liability that the individual may owe as a result of such a change in designation is to accompany the amended return.

Required information

An individual who makes a designated nondeductible contribution to an IRA for a taxable year or who receives a distribution from an IRA during a taxable year is required to provide such information as the Secretary may prescribe on the individual's tax return for the taxable year and, to the extent required by the Secretary, for succeeding taxable years (or on such other form that the Secretary may prescribe). The information that may be required includes, but is not limited to (1) the amount of designated nondeductible contributions for the taxable year, (2) the aggregate amount of designated nondeductible contributions for all preceding taxable years which have not previously been withdrawn, (3) the aggregate balance of all IRAs of the individual as of the close of the calendar year in which the taxable year begins,⁴ and (4) the amount of distributions from IRAs during the taxable year.

If the required information is not provided on the individual's tax return for a taxable year (or other form prescribed by the Secretary), then all IRA contributions are presumed to have been deductible and, therefore, are taxable upon withdrawal from the IRA. The taxpayer can rebut this presumption with satisfactory evidence that the contributions were nondeductible.

IRA withdrawals

Amounts withdrawn from an IRA during a taxable year are includible in income for the taxable year under rules similar to the rules applicable to qualified plans under section 72. Under special rules applicable to IRAs for purposes of section 72, (1) all IRAs of an individual (including rollover IRAs and simplified employee pensions (SEPs), but excluding deductible qualified voluntary employee contributions) are treated as one contract, (2) all distributions that are made during a taxable year are treated as one distribution, (3) the value of the contract (calculated after adding back distributions that are made during the year), income on the contract, and investment in the contract are computed as of the close of the calendar year in which the taxable year begins,⁵ and (4) the aggregate amount of withdrawals excludable from income for all taxable years shall not exceed the taxpayer's investment in the contract for all taxable years. Under this rule, a loss is not recognized until all the individual's IRA accounts are distributed.

⁴ A technical correction may be needed so that the statute reflects this intent. Such a correction was included in the versions of H.Con. Res. 395 which passed the House and the Senate in the 99th Congress.

⁵ A technical correction may be needed so that the statute reflects this intent. Such a correction was included in the versions of H. Con. Res. 395 which passed the House and Senate in the 99th Congress.

The Act provides that, if an individual withdraws an amount from an IRA during a taxable year and the individual has previously made both deductible and nondeductible IRA contributions, then the amount includible in income for the taxable year is the portion of the amount withdrawn which bears the same ratio to the amount withdrawn for the taxable year as the individual's income on the contract (including all IRA contributions) bears to the value of the contract (including both deductible and nondeductible contributions).

In the case of a withdrawal from an IRA, for purposes of the rules relating to withholding on pensions, annuities, and certain other deferred income, the payor is to assume that the amount withdrawn is includible in income. As under prior law, an individual may elect not to have tax withheld.

For example, assume that (1) an individual makes a \$2,000 IRA contribution for the individual's 1987 tax year, \$1,500 of which is deductible, (2) no withdrawals are made from the IRA during the taxable year, (3) the account balance at the end of the taxable year is \$2,200, and (4) no prior IRA contributions have been made. The individual is required to report all such information on the individual's 1987 tax return. For 1988, assume (1) the individual makes a \$2,000 IRA contribution to another IRA account, none of which is deductible, (2) no withdrawals are made from the IRA during the taxable year, and (3) the aggregate account balance at the end of the taxable year for both IRAs is \$4,600. In the individual's 1989 taxable year, no IRA contributions are made and \$1,000 is withdrawn from the IRA to which the individual contributed during the 1987 taxable year. At the end of the 1989 taxable year, the aggregate account balance of both IRAs is \$4,000. The \$1,000 withdrawn from an IRA during the 1989 tax year is treated as partially a return of nondeductible contributions, calculated as the percentage of \$1,000 that the investment in the contract (\$500 plus \$2,000) is of the value of the contract (\$4,000) at the end of the taxable year plus distributions during the year (\$1,000). Thus, $\$2,500/\$5,000$ or $1/2$ of the \$1,000 withdrawal is treated as a return of nondeductible contributions (and, therefore, is not taxable).

Overstatement of nondeductible contributions

Under the Act, an individual who overstates the amount of designated nondeductible contributions made for any taxable year is subject to a \$100 penalty for each such overstatement unless the individual can demonstrate that the overstatement was due to reasonable cause.

Reporting requirement

The trustee of an IRA is required to report certain information to the Secretary and to the individuals for whom an IRA is maintained for each calendar year. This information is to include (1) contributions made to the IRA during the calendar year, (2) distributions from the IRA occurring during the calendar year, and (3) the aggregate account balance as of the end of the calendar year. This information is required to be reported by the January 31 following the end of the calendar year. In the case of a failure to report the required information, as under prior law, the penalty for

the failure is \$50 for each failure, unless it is shown that the failure is due to reasonable cause.

Spousal IRA deduction

Under the Act, the spousal IRA provision is amended to eliminate the requirement that the spouse have no compensation for the year in order to be eligible for the spousal IRA contribution. Therefore, under the Act, the spousal IRA is available either if (1) the spouse has no compensation for the taxable year, or (2) the spouse elects to be treated for the taxable year as having no compensation.

For purposes of this provision, if a spousal IRA deduction is claimed on a couple's tax return for the taxable year, the spouse for whom the deduction is claimed is deemed to have elected to be treated as having no compensation.

Qualified voluntary employee contributions

The Act repeals the deduction allowed for qualified voluntary employee contributions to qualified plans.

Acquisition of gold and silver coins

The Act exempts any gold or silver coin issued by the United States from the rules relating to IRA investment in collectibles.

Effective Dates

The provisions generally are effective for taxable years beginning after December 31, 1986. A taxpayer may make an IRA contribution for the 1986 taxable year up to the due date of the taxpayer's 1986 tax return (without extensions) under the prior-law IRA rules.

The nondeductible IRA provisions are effective for contributions and distributions in taxable years beginning after December 31, 1986.

The spousal IRA provision is effective for taxable years beginning before, on, or after December 31, 1985.

The repeal of the deduction for qualified voluntary employee contributions is effective for taxable years beginning after December 31, 1986. As under prior law, individuals may make such contributions for the 1986 calendar year if the contribution is made by April 15, 1987, or such earlier time as is provided by the plan.

The provision relating to acquisition of gold or silver coins by an IRA is effective for acquisitions after December 31, 1986.

Revenue Effect

The provisions are estimated to increase fiscal year budget receipts by \$1,708 million in 1987, \$4,962 million in 1988, \$5,203 million in 1989, \$5,694 million in 1990, and \$6,207 million in 1991.

2. Qualified cash or deferred arrangements (secs. 1105 and 1116 of the Act and secs. 401(k), 402, and 4979 of the Code)⁶

Prior Law

In general

Under prior and present law, if a tax-qualified profit-sharing or stock bonus plan (or an eligible pre-ERISA money purchase pension plan) meets certain requirements described below (a "qualified cash or deferred arrangement"), then an employee is not required to include in income any employer contributions to the plan merely because the employee could have elected to receive the amount contributed in cash.

Nondiscrimination requirements

Under prior and present law, special nondiscrimination tests apply a limit on elective deferrals that may be made by the group of highly compensated employees. This limit depends (in part) on the level of elective deferrals by nonhighly compensated employees. Under prior law, an employee was considered highly compensated, for this purpose, if the employee was one of the most highly compensated 1/3 of all employees eligible to defer under the arrangement. These nondiscrimination tests provided that the special treatment of elective deferrals was not available unless the cash or deferred arrangement did not disproportionately benefit highly compensated employees.

A cash or deferred arrangement met these special nondiscrimination requirements of prior law for a plan year if (1) the actual deferral percentage for the highly compensated employees was not greater than 150 percent of the actual deferral percentage for the other eligible employees, or (2) the actual deferral percentage for the highly compensated employees did not exceed the lesser of (a) the actual deferral percentage for the other eligible employees plus 3 percentage points or (b) 250 percent of the actual deferral percentage for the other eligible employees. In calculating these deferral percentages, contributions by the employer could be taken into account as elective deferrals by employees if they (1) were nonforfeitable when made, (2) satisfied the withdrawal restrictions applicable to elective deferrals, and (3) separately satisfied the general nondiscrimination rules (sec. 401(a)(4)).

Withdrawal restrictions

Under prior law, a participant in a qualified cash or deferred arrangement was not permitted to withdraw elective deferrals (and earnings thereon) prior to death, disability, separation from service, retirement, or (except in the case of a pre-ERISA money purchase pension plan) the attainment of age 59½ or the occurrence of a hardship. Under proposed regulations, an employee would be treated as having incurred a hardship only to the extent that the

⁶ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, secs. 1102, 1111, and 1112; H.Rep. 99-426, pp. 685-694; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, secs. 1205 and 1216; S.Rep. 99-313, pp. 547-559; and H.Rep. 99-841, Vol II (September 18, 1986), pp. 380-392 (Conference Report).

employee had an immediate and heavy bona fide financial need and did not have other resources reasonably available to satisfy the need.⁷

Limit on elective deferrals

Under present and prior law, elective deferrals under a qualified cash or deferred arrangement are subject to the overall limits on contributions to a defined contribution plan (sec. 415(c)). Thus, the sum of an employee's elective deferrals and any other annual additions on behalf of the employee under all defined contribution plans maintained by the employer generally cannot exceed the lesser of \$30,000 or 25 percent of the participant's nondeferred compensation.

Reasons for Change

Congress was concerned that the rules relating to qualified cash or deferred arrangements under prior law encouraged employers to shift too large a portion of the share of the cost of retirement savings to employees. Congress was also concerned that the prior-law nondiscrimination rules permitted significant contributions by highly compensated employees without comparable participation by rank-and-file employees.

Congress recognized that individual retirement savings play an important role in providing for the retirement income security of employees. Congress also believed that excessive reliance on individual retirement savings (relative to employer-provided retirement savings) could result in inadequate retirement income security for many rank-and-file employees.

In particular, Congress believed that qualified cash or deferred arrangements should be supplementary retirement savings arrangements for employees; such arrangements should not be the primary employer-maintained retirement plan. Therefore, Congress believed that the extent to which employers can shift the burden of retirement saving to employees should be reduced. Moreover, Congress found it necessary to restrict the extent to which employers can condition the receipt of other benefits on employees' elections to defer under a qualified cash or deferred arrangement.

Another way of reducing the shifting of the burden of retirement savings to employees was to limit the number of employers that can maintain cash or deferred arrangements. Thus, Congress believed it was necessary to preclude the availability of qualified cash or deferred arrangements to State and local governments and tax-exempt employers.

In addition, Congress believed that the prior-law nondiscrimination rules for qualified cash or deferred arrangements permitted excessive tax-favored benefits for highly compensated employees without ensuring that there was adequate saving by rank-and-file employees. Because Congress believed that a basic reason for extending significant tax incentives to qualified pension plans was the delivery of comparable benefits to rank-and-file employees who may not otherwise save for retirement, Congress concluded that it

⁷ Prop. Reg. sec. 1.401(k)-1(d)(2).

was appropriate to revise the nondiscrimination rules for qualified cash or deferred arrangements in order to more closely achieve this goal.

Finally, Congress believed that it was necessary to restrict the availability of hardship withdrawals under a qualified cash or deferred arrangement to ensure that the favorable tax treatment for retirement savings is limited to savings that are, in fact, used to provide retirement income.

Explanation of Provisions

Limit on elective deferrals

In general

Under the Act, the maximum amount that an employee can elect to defer for any taxable year under all cash or deferred arrangements in which the employee participates is limited to \$7,000. This \$7,000 limit is adjusted for inflation at the same time and in the same manner as the indexing of the dollar limit on benefits under section 415(d). The \$7,000 limit applies to the employee's taxable year, regardless of the employer's taxable year or the plan year applicable to the cash or deferred arrangement.

Because, under the Act, the \$7,000 limit applies only to elective deferrals, each employer may make additional contributions on behalf of any employee to the extent that such contributions, when aggregated with elective deferrals and after-tax contributions made by the employee under the employer's plans during the limitation year, do not exceed the limits on contributions and benefits (sec. 415).

Whether or not an employee has deferred more than \$7,000 a year is determined without regard to any community property laws.

Unlike the limits on annual additions, which apply separately to amounts accumulated under plans of different employers, the \$7,000 cap limits all elective deferrals by the employee. Thus, the \$7,000 limit is coordinated with elective deferrals under simplified employee pensions (SEPs). In addition, the benefits under an unfunded deferred compensation plan of a State or local government or tax-exempt entity (sec. 457) and a plan described in section 501(c)(18) are coordinated with the limits on elective deferrals under a qualified cash or deferred arrangement or a SEP. Moreover, for purposes of determining an individual's cap on elective deferrals for a year, the \$7,000 cap is reduced by the amount of the contributions made on behalf of an individual to a tax-sheltered annuity contract to the extent that the contributions are made pursuant to a salary reduction agreement. The \$7,000 limit is also coordinated with elective deferrals under the Federal Thrift Savings Plan.

To ease the administrative burden on employees, employers, and the IRS, the elective deferral arrangements maintained by any single employer may preclude an employee from making elective deferrals under such arrangements for a taxable year in excess of \$7,000.

Treatment of excess deferrals

If, for any taxable year, the total amount of elective deferrals contributed on behalf of an employee exceeds \$7,000 to all qualified cash or deferred arrangements and other plans subject to the limit in which the employee participates, then the amounts in excess of \$7,000 (the excess deferrals) are included in the employee's gross income for the taxable year to which the deferral relates. In addition, with respect to any excess deferrals, by March 1 after the close of the employee's taxable year, the employee may allocate the excess deferrals among the qualified cash or deferred arrangements and other plans subject to the limit in which the employee participates and notify the administrator of each plan of the portion of the excess deferrals allocated to that plan. Not later than April 15 after the close of the employee's taxable year, each plan may (but is not required to) distribute to the employee the amount of the excess deferrals (plus income attributable to the excess deferrals) allocated to the plan.

This distribution can be made notwithstanding any other provision of law. In addition, any distribution made prior to the close of the first plan year for which amendments are required to be made under the Act (see Part E.5., below) are to be treated as made in accordance with the provisions of the plan. Whether or not distributed, excess deferrals will not disqualify the plan or cash or deferred arrangement by virtue of being excess deferrals.

Excess deferrals (and earnings thereon) distributed by the required date are not subject to the additional income tax on early withdrawals from qualified plans (sec. 72(t)), or the 15-percent tax on excess distributions (sec. 4981A).⁸ Deferrals are not subject to the 10-percent excise tax on nondeductible contributions (sec. 4972) merely because they are excess deferrals. In addition, it is intended that a plan distributing excess deferrals is not to be required to obtain the consent of the participant or the consent of the participant's spouse with respect to the distribution of excess deferrals (and earnings thereon). Further, a distribution of excess deferrals is not to be treated as violating an outstanding qualified domestic relations order (within the meaning of sec. 414(p)).

Excess deferrals that are not distributed by the applicable April 15 date are not treated as employee contributions upon subsequent distribution even though such deferrals had been included in the employee's income. Thus, when subsequently distributed, such excess deferrals will be subject to any applicable income tax.

Whether or not distributed by the applicable April 15 date, excess deferrals are treated as elective deferrals for purposes of applying the special nondiscrimination test for qualified cash or deferred arrangements, except to the extent provided under rules prescribed by the Secretary. The Secretary is to prescribe rules preventing use of this rule to increase artificially the actual deferral percentage of nonhighly compensated employees.

The following example illustrates the application of the elective deferral limitation. Assume that, in 1987, employee A (whose taxable year is the calendar year) makes elective deferrals of \$5,000

⁸ A technical correction may be needed so that the statute reflects this intent.

under employer X's qualified cash or deferred arrangement, and \$3,000 under employer Y's qualified cash or deferred arrangement. For 1987, employee A may exclude from gross income only \$7,000 of the total \$8,000 of elective deferrals. The \$1,000 excess deferral (plus income) may be withdrawn from X's plan or Y's plan, or partially from both plans. For example, A can request that \$750 (plus income allocable to \$750) be distributed from X's plan and that \$250 (plus income allocable to \$250) be distributed from Y's plan.

If either of the plans fails to make the requested distribution by April 15, 1988, then the excess deferrals are to remain in the qualified cash or deferred arrangement, subject to the general withdrawal restrictions applicable to elective deferrals under such arrangements. In addition, notwithstanding that A included the excess deferrals in gross income for 1987, A will not be treated as having any investment in the contract on account of the excess deferrals that were not distributed. Thus, the full amount of the excess deferrals not distributed will be included in income when actually distributed from the arrangement. Whether or not distributed by April 15, 1988, the excess deferrals are to be treated by X and Y as elective deferrals for purposes of applying the special non-discrimination test for qualified cash or deferred arrangements, except to the extent provided under rules prescribed by the Secretary.

Any distribution of less than the entire amount of excess deferrals plus income attributable to such deferrals is treated as a pro rata distribution of excess deferrals and income. For example, assume an employee has excess deferrals of \$1,000 and the income attributable to such deferrals is \$100. By the applicable April 15 date, the plan distributes \$1,000 to the employee; \$909 is treated as a distribution of excess deferrals, and \$91 is treated as a distribution of earnings. With respect to amounts remaining in the account, \$91 is treated as an elective deferral and, because it was not distributed by the required date, will be subject to income tax upon distribution as well as in the year of deferral. Losses are allocated to excess deferrals in the same manner that income is allocated.

The employer's withholding obligations with respect to excess deferrals are determined in accordance with the generally applicable rules regarding withholding. Under these rules, if an employee has excess deferrals in a plan or plans of a single employer, then the employer will generally be liable for withholding and applicable penalties for failure to withhold because the employer will have reason to believe that the excess deferrals are includible in income. On the other hand, if the excess deferrals result solely because deferrals were made to plans of more than one employer, then the employer will generally not be liable for withholding or applicable penalties for failure to withhold, because the employer will not generally have reason to believe that the deferrals are includible in income. In any event, the employee may be liable for failing to make estimated tax payments as a result of excess deferrals.

Nondiscrimination requirements

In general

The Act modifies the special nondiscrimination test applicable to qualified cash or deferred arrangements by redefining the group of highly compensated employees and by modifying the special percentage tests.

Definition of highly compensated employees

The Act provides a uniform definition of highly compensated employees for purposes of the nondiscrimination rules for qualified plans and employee benefit plans. (See the description in Part B.7., below.)

Modification of nondiscrimination test

Under the Act, the special nondiscrimination test applicable to qualified cash or deferred arrangements is satisfied if the actual deferral percentage under a cash or deferred arrangement for eligible⁹ highly compensated employees for a plan year is equal to or less than either (1) 125 percent of the actual deferral percentage of all nonhighly compensated employees eligible to defer under the arrangement, or (2) the lesser of 200 percent of the actual deferral percentage of all eligible nonhighly compensated employees or the actual deferral percentage for all eligible nonhighly compensated employees plus 2 percentage points. Under the Act, if a cash or deferred arrangement satisfies the special nondiscrimination test, it is treated as satisfying the general nondiscrimination rules (sec. 401(a)(4)) with respect to the amount of deferrals. As under prior law, the employees eligible to participate in the arrangement are required to satisfy the provisions of section 410(b)(1).

Under the Act, if a highly compensated employee participates in more than 1 qualified cash or deferred arrangement of an employer, the employee's actual deferral percentage for purposes of testing each arrangement under the special nondiscrimination test is to be determined by aggregating the employee's elective deferrals under all of the arrangements of the employer.

The Act provides that, for purposes of applying the special nondiscrimination test, under rules prescribed by the Secretary, employer matching contributions that meet the vesting and withdrawal restrictions applicable to elective deferrals under a qualified cash or deferred arrangements and qualified nonelective contributions may be taken into account. It is intended that employers may take employer matching contributions and qualified nonelective contributions into account even though the Secretary has not prescribed rules relating to taking such contributions into account. Qualified nonelective contributions are defined to mean employer contributions (other than matching contributions) with respect to which (1) the employee may not elect to have the contributions paid to the employee in cash in lieu of being contributed to the plan and (2) the vesting and withdrawal restrictions applicable to elective deferrals under a qualified cash or deferred arrangement

⁹ A technical correction may be needed so that the statute reflects this intent.

are satisfied. Employer matching contributions and qualified non-elective contributions do not meet the applicable withdrawal restrictions if such contributions (or earnings thereon) may be distributed on account of hardship.

In calculating the actual deferral percentages, an employee's compensation is determined in accordance with the new uniform definition of compensation (sec. 414(s), see Part B.1., below). In addition, for plan years beginning after December 31, 1988, compensation cannot exceed the new limit on includible compensation (sec. 401(a)(17), see Part D.1., below).

Excess contributions

If the special nondiscrimination rules are not satisfied for any year, the Act provides that the qualified cash or deferred arrangement will not be disqualified if the excess contributions (plus income allocable to the excess contributions) are distributed before the close of the following plan year. In addition, to the extent provided in regulations, instead of receiving an actual distribution of excess contributions, an employee may elect to have the excess contributions treated as an amount distributed to the employee and then contributed by the employee to the plan on an after-tax basis. Such recharacterization is not permitted in the absence of regulations. It is intended that such regulations will permit the plan to provide that the employee is required to make such an election as a condition of plan participation.

Distribution of the excess contributions may be made notwithstanding any provision of the plan until the first plan year for which plan amendments are required (see Part E.5., below) and notwithstanding any other provision of law. The amount distributed is not subject to the 10-percent additional income tax on early withdrawals (sec. 72(t)), or the 15-percent tax on excess distributions (sec. 4981A).¹⁰ Contributions are not subject to the 10-percent tax on nondeductible contributions (sec. 4972) merely because they are excess contributions. In addition, Congress intended that a plan is not required to obtain the consent of the participant or the participant and spouse to distribute an excess contribution.

Excess contributions mean, with respect to any plan year, the excess of the aggregate amount of elective deferrals paid to the cash or deferred arrangement and allocated to the accounts of highly compensated employees over the maximum amount of elective deferrals that could be allocated to the accounts of highly compensated employees without violating the nondiscrimination requirements applicable to the arrangement. To determine the amount of excess contributions and the employees to whom the excess contributions are to be distributed, the Act provides that the elective deferrals of highly compensated employees are reduced in the order of their actual deferral percentages beginning with those highly compensated employees with the highest actual deferral percentages. The excess contributions are to be distributed to those highly compensated employees for whom a reduction is made

¹⁰ A technical correction may be needed so that the statute reflects this intent.

under the preceding sentence in order to satisfy the special nondiscrimination test.

The amount of income attributable to excess contributions is that portion of the income on the participant's account balance for the year that bears the same ratio to the total income as the excess contributions bear to the total account balance. As with excess deferrals, any distribution of less than the entire amount of excess contributions plus income attributable to such contributions is treated as a pro-rata distribution of excess contributions and income.

In addition, it is intended that the Secretary will prescribe rules relating to the coordination of an employee's excess deferrals (i.e., amounts in excess of the annual limit on elective deferrals) and the excess contributions and that, generally, the excess deferrals are to be calculated and distributed first and then the excess contributions are to be allocated among the highly compensated employees and distributed.

Excise tax on excess contributions

Under the Act, an excise tax is imposed on the employer making excess contributions to a qualified cash or deferred arrangement (sec. 4979). The tax is equal to 10 percent of the excess contributions (but not earnings on those contributions) under the arrangement for the plan year ending in the taxable year. However, the tax does not apply to any excess contributions that, together with income allocable to the excess contributions, are distributed or, in accordance with regulations prescribed by the Secretary, recharacterized as after-tax employee contributions no later than 2½ months after the close of the plan year to which the excess contributions relate.

Excess contributions (plus income) distributed or recharacterized within the applicable 2½-month period are to be treated as received and earned by the employee in the employee's taxable year in which the excess contributions, but for the employee's deferral election, would have been received as cash. For purposes of determining the employee's taxable year in which the excess contributions are includible in income, the excess contributions are treated as the first contributions made for a plan year. Of course, distributions of excess contributions (plus income) within the applicable 2½-month period are not taxed a second time in the year of distribution.

Withdrawal restrictions

In general

Under the Act, no withdrawals generally are permitted under a qualified cash or deferred arrangement prior to death, disability, separation from service, bona fide plan termination or (except in the case of a pre-ERISA money purchase pension plan) the attainment of age 59½. However, a cash or deferred arrangement (other than a pre-ERISA money purchase pension plan) may permit hardship withdrawals from elective deferrals (but not from income on the elective deferrals). For purposes of these rules, the prior-law definition of hardship continues to apply.

In addition, as described below, withdrawals may be made from a cash or deferred arrangement on account of certain corporate events. As under prior law, distributions from a pre-ERISA money purchase pension plan are not permitted on account of hardship or the attainment of age 59½.

Under the Act, employer matching contributions and qualified nonelective contributions (to the extent taken into account for purposes of the special nondiscrimination test) and income on such matching or nonelective contributions may not be distributed on account of hardship. Employer matching contributions and nonelective contributions not taken into account for purposes of the special nondiscrimination test are subject to the normal qualification rules relating to distributions. For example, employer matching contributions that are part of a profit-sharing plan and that are not taken into account for purposes of the special nondiscrimination test applicable to elective deferrals may be withdrawn after a stated number of years in excess of 2.

There is no special exception to the 10-percent additional income tax on early withdrawals (sec. 72(t)) for amounts distributed from a qualified cash or deferred arrangement. Thus, for example, amounts distributed from such an arrangement on account of hardship or due to termination of the arrangement are subject to the tax unless they meet one of the exceptions to the tax specified in section 72(t).

Withdrawals on account of plan termination, etc.

The Act permits distributions from a qualified cash or deferred arrangement upon (1) plan termination without the establishment of a successor plan; (2) the date of the disposition¹¹ by a corporation of substantially all of the assets (within the meaning of sec. 409(d)(2)) used by the corporation in a trade or business if the employee continues employment with the corporation acquiring the assets; or (3) the date of the disposition¹² by a corporation of the corporation's interest in a subsidiary (within the meaning of sec. 409(d)(3)) if the employee continues employment with the subsidiary. Under the Act, a distribution upon any of the 3 events described above is permitted only if it constitutes a total distribution of the employee's balance to the credit in the cash or deferred arrangement determined under the lump-sum distribution rules (but without regard to the requirements of clauses (i)-(iv) of sec. 402(e)(4)(A) and without regard to secs. 402(e)(4)(B) and (H)).¹³

Other restrictions

Conditioning other benefits on elective deferrals

Under the Act, a cash or deferred arrangement is not qualified if any contributions or benefits (other than matching contributions) are conditioned (either directly or indirectly) upon an employee's elective deferrals. Thus, elective deferrals under a qualified cash or deferred arrangement may not be taken into account for purposes

¹¹ A technical correction may be needed so that the statute reflects this intent.

¹² A technical correction may be needed so that the statute reflects this intent.

¹³ A technical correction may be needed so that the statute reflects this intent.

of determining whether another plan meets the coverage requirements (sec. 410(b)), the general nondiscrimination rules (sec. 401(a)(4)), or other qualification rules. This provision does not apply for purposes of applying the average benefit percentage requirement (sec. 410(b)(2)(A)(ii)) under the coverage requirements (but does apply for purposes of the present-law classification requirement that is part of the average benefit test (sec. 410(b)(2)(A)(i)).

Under this rule, if an employee's participation in a defined benefit pension plan depends upon whether the employee makes elective deferrals under a cash or deferred arrangement, then the arrangement is not a qualified cash or deferred arrangement. Similarly, under the Act, a floor-offset defined benefit pension plan may not provide for offsets attributable to elective deferrals under a qualified cash or deferred arrangement.

In addition, a plan may not provide that voluntary after-tax employee contributions may not be made until an employee makes a specified amount of elective deferrals under a qualified cash or deferred arrangement. This provision also precludes the use of elective deferrals to satisfy the minimum contribution required on behalf of non-key employees in a top-heavy plan.

The prohibition on conditioning benefits on elective deferrals is not limited to benefits provided under a qualified plan. For example, the employer could not condition the availability of health benefits upon the employee's making elective deferrals under a cash or deferred arrangement.

Eligibility to participate

The Act provides that a qualified cash or deferred arrangement cannot require, as a condition of participation in the arrangement, that an employee complete a period of service greater than 1 year with the employer maintaining the plan. This special eligibility rule does not apply to employer matching and nonelective contributions, regardless of whether such contributions are used to satisfy the special nondiscrimination test.

For example, entitlement to an allocation of matching or nonelective contributions could be conditioned on 2 years of service (provided such contributions were nonforfeitable when made). In this example, employees with less than 2 years of service would be treated, for purposes of the special nondiscrimination test, in the same manner as employees with 2 years of service. Thus, if the matching contributions or nonelective contributions are used to satisfy the special test, the deferral percentage of employees with less than 2 years of service may be lower than that of employees with 2 years or more of service. Of course, if the matching contributions were used to satisfy the special test, in addition to being nonforfeitable, they would also have to satisfy the withdrawal restrictions applicable to elective deferrals. The matching or nonelective contributions also are required to meet the requirements of sections 401(a)(4) and 410.

Tax-exempt and State and local government employers

The Act prohibits tax-exempt organizations and State and local governments (or a political subdivision of a State or local government) from establishing qualified cash or deferred arrangements.

However, this restriction does not apply to a rural electric cooperative plan.

The Act provides that the prohibition does not apply to plans adopted before (1) May 6, 1986, in the case of an arrangement maintained by a State or local government (or political subdivision of a State or local government), or (2) July 2, 1986, in the case of an arrangement maintained by a tax-exempt organization. The grandfather treatment is limited to the employers who adopted the plan before the dates specified above. However, the grandfather treatment is not limited to employees (or classes of employees) covered by the plan as of the date the grandfather treatment is provided. Similarly, plans that are grandfathered may be amended in the future. Most such plans will, of course, have to be amended to take into account the new requirements relating to qualified cash or deferred arrangements. Other plan amendments may also be made. For example, a grandfathered plan may be amended in the future to provide for employer matching contributions or to modify the level of employer matching contributions.

Whether or not a tax-exempt organization continues to be an organization eligible for the grandfather treatment depends upon the facts and circumstances of each case. For example, if a tax-exempt organization is restructured or reorganized into a parent and a subsidiary organization (or other related organizations), the grandfather treatment generally would be available as long as the parent and subsidiary organizations (or other related organizations) are successor employers under the principles of section 414(a).

Solely for purposes of determining whether a plan was adopted before the dates specified for grandfather treatment of a plan maintained by a State or local government employer or a tax-exempt organization, an exception is to be provided to the normal requirement that a plan is not considered adopted until the trust that is part of the plan is created. Under this exception, a plan is to be considered adopted as of the date of formal approval by the governing body of the organization under a definite written plan that is binding upon the organization. The requirements of this exception are sufficient, but not necessary, to establish that a plan was adopted prior to the date specified for eligibility for grandfather treatment.

Effective Dates

Limit on elective deferrals

The provision relating to annual limits on elective deferrals generally is effective for taxable years beginning after December 31, 1986. A special effective date applies in the case of a plan maintained pursuant to a collective bargaining agreement with respect to contributions made pursuant to the agreement. The coordination of benefits under an unfunded deferred compensation plan of a State or local government or tax-exempt entity (sec. 457) with elective deferrals under qualified cash or deferred arrangements, simplified employee pensions, tax-sheltered annuities or plans described in section 501(c)(18) is effective for taxable years beginning after December 31, 1988.

Under a special transition rule, the provision limiting elective deferrals does not apply to elective deferrals of an employee made during 1987 and attributable to services performed during 1986 under a qualified cash or deferred arrangement if, under the terms of the arrangement in effect on August 16, 1986, (1) the employee's election to make the elective deferrals is made before January 1, 1987, and (2) the employer identifies the amount of the elective deferral before January 1, 1987.

The Act also contains a special rule for partnerships with fiscal years ending in calendar year 1987. Under this rule, in the case of the taxable year of a partnership which begins before January 1, 1987, and ends after January 1, 1987, elective deferrals are treated as having been made ratably during the taxable year.

Special nondiscrimination test

The provision relating to the special nondiscrimination test for a qualified cash or deferred arrangement is effective for years beginning after December 31, 1986. A special effective date applies to plans maintained pursuant to a collective bargaining agreement.

Withdrawals and other restrictions

The provisions relating to withdrawals from qualified cash or deferred arrangements generally are effective for years beginning after December 31, 1988. A special effective date applies to plans maintained pursuant to a collective bargaining agreement.

However, the provision permitting withdrawals from a qualified cash or deferred arrangement on account of plan termination, a sale of assets, or a sale of a subsidiary is effective for distributions after December 31, 1984, even if the plan termination or sale occurred before December 31, 1984.

The provisions relating to conditioning other benefits on elective deferrals and eligibility to participate are effective for plan years beginning after December 31, 1988. A special effective date applies to plans maintained pursuant to a collective bargaining agreement. Under a special rule, a cash or deferred arrangement will not be treated as violating the conditioning prohibition for plan years beginning before January 1, 1991, to the extent that the cash or deferred arrangement is part of a "qualified offset arrangement" with a defined benefit pension plan which offset arrangement was maintained by the employer on April 16, 1986.

Plans maintained by State or local governments

In the case of a qualified cash or deferred arrangement maintained by a State or local government that was adopted before May 6, 1986 (and is, therefore, eligible for the grandfather rule permitting the employer to maintain the arrangement), the following provisions in the Act applicable to qualified cash or deferred arrangements do not apply until years beginning after December 31, 1988: (1) the modification of the special nondiscrimination test, (2) the new definition of highly compensated employees, (3) the new definition of compensation, and (4) the rule aggregating only highly compensated employees (rather than all employees) for purposes of the special nondiscrimination test.

Revenue Effect

This provision and the provisions discussed in 3., 4., and 6. of this Part A are estimated to increase fiscal year budget receipts by \$310 million in 1987, \$628 million in 1988, \$691 million in 1989, \$809 million in 1990, and \$924 million in 1991.

3. Nondiscrimination requirements for employer matching contributions and employee contributions (sec. 1117 of the Act and secs. 401(m) and 4979 of the Code)¹⁴

Prior Law

Under present and prior law, a qualified plan may permit employees to make after-tax contributions to a qualified plan. Employee contributions to a qualified plan may be voluntary or mandatory. Mandatory employee contributions include those made as a condition of obtaining employer-derived benefits (e.g., employee contributions made as a condition of obtaining employer matching contributions).

Present and prior law provide that a qualified plan may not discriminate in contributions and benefits in favor of employees who are officers, shareholders, or highly compensated. Under prior law, this nondiscrimination requirement was generally satisfied with respect to employee contributions if all participants were entitled to make contributions on the same terms and conditions. Voluntary employee contributions were permitted if all participants were eligible to make such contributions and if no employee was permitted to contribute more than 10 percent of compensation, determined based on cumulative contributions and cumulative compensation during the period of participation.

Reasons for Change

Congress was concerned that the rules relating to employer matching contributions and employee contributions under prior law encouraged employers to shift a greater share of the cost of retirement savings to employees. Congress was also concerned that the prior-law nondiscrimination rules permitted greater tax-favored contributions by or on behalf of highly compensated employees without comparable participation by rank-and-file employees. Accordingly, Congress concluded that it was appropriate to revise the nondiscrimination rules for employer matching contributions and employee contributions in order more closely to achieve this goal.

¹⁴ For legislative background of the provision, see: H.R. 3838, as reported by the House Committee on Ways and Means on December 7, 1985, sec. 1112; H.Rep. 99-426, pp. 694-698; H.R. 3838, as reported by the Senate Committee on Finance on May 29, 1986, sec. 1217; S.Rep. 99-313, pp. 559-563; and H.Rep. 99-841, Vol. II (September 18, 1986), pp. 392-397 (Conference Report).

Explanation of Provisions

Special nondiscrimination test

In general

Under the Act, a special nondiscrimination test is applied to employer matching contributions and employee contributions under qualified defined contribution plans and employee contributions under a defined benefit pension plan (to the extent treated as contributions to a defined contribution plan (sec. 414(k)),¹⁵ including employee contributions under a qualified cost-of-living arrangement (sec. 415(k)). This special nondiscrimination test is similar to the special nondiscrimination test applicable to qualified cash or deferred arrangements. Contributions which satisfy the special nondiscrimination test are treated as satisfying the general nondiscrimination rules (sec. 401(a)(4)) with respect to the amount of contributions.

The term "employer matching contributions" means any employer contribution¹⁶ made on account of (1) an employee contribution or (2) an elective deferral under a qualified cash or deferred arrangement or a tax-sheltered annuity contract.¹⁷ Of course, forfeitures under a plan that are reallocated to participants' accounts on the basis of employee contributions or elective deferrals are also treated as matching contributions.

Employer matching contributions that are treated as elective deferrals for purposes of the special nondiscrimination test applicable to cash or deferred arrangements are not subject to the special test applicable to matching contributions and employee contributions, unless the employer elects otherwise.¹⁸

The special nondiscrimination test is satisfied for a plan year if the contribution percentage for eligible highly compensated employees does not exceed the greater of (1) 125 percent of the contribution percentage for all other eligible employees, or (2) the lesser of 200 percent of the contribution percentage for all other eligible employees, or such percentage plus 2 percentage points. The contribution percentage for a group of employees for a plan year is the average of the ratios (calculated separately for each employee in the group) of the sum of matching and employee contributions on behalf of each such employee to the employee's compensation for the year.

In calculating the contribution percentages, an employee's compensation is determined in accordance with the new uniform definition of compensation (sec. 414(s), see Part B. 1., below). In addition, for plan years beginning after December 31, 1988, the compensation taken into account for purposes of the special nondiscrimination test cannot exceed the new limit on includible compensation (sec. 401(a)(17), see Part D. 1., below).

¹⁵ A technical correction may be needed so that the statute reflects this intent.

¹⁶ A technical correction may be needed so that the statute reflects this intent.

¹⁷ A technical correction may be needed so that the statute reflects this intent.

¹⁸ A technical correction may be needed so that the statute reflects this intent.

Required aggregation

If 2 or more plans of an employer to which matching contributions, employee contributions, or elective deferrals are made are treated as a single plan for purposes of the coverage requirements for qualified plans (sec. 410(b)), then the plans are treated as a single plan for purposes of the special nondiscrimination test. In addition, if a highly compensated employee participates in 2 or more plans of an employer to which contributions subject to the special nondiscrimination test (sec. 401(m)) are made, then all such contributions made on behalf of the highly compensated employee are aggregated for purposes of the special nondiscrimination test.¹⁹

The Act also directs the Secretary to prescribe rules preventing multiple use of the second or alternative part of this special nondiscrimination test and of the special nondiscrimination test applicable to qualified cash or deferred arrangements. For this purpose, the alternative part of the special nondiscrimination tests is that part under which the tests are satisfied if the contribution percentage or actual deferral percentage for eligible highly compensated employees is no greater than the lesser of (1) 200 percent of the contribution percentage or actual deferral percentage for the eligible nonhighly compensated employees or (2) the contribution percentage or actual deferral percentage for the eligible nonhighly compensated employees plus 2 percentage points.

For example, assume an employer maintains one plan under which all employees are eligible. Under the plan, which contains a qualified cash or deferred arrangement, employees may elect to defer up to 5 percent of compensation and the employer will match those deferrals on a dollar-for-dollar basis. The matching contributions are subject to a 5-year vesting schedule. Under the cash or deferred arrangement, the actual deferral percentage of the eligible highly compensated employees is 4 percent and the actual deferral percentage of the nonhighly compensated employees is 2 percent. Thus, the cash or deferred arrangement satisfies the special nondiscrimination test, but does so only by fully using the alternative part of that test. The employer in this situation could not use the alternative part of the test with respect to the matching contributions under section 401(m). Instead, the contribution percentage of the eligible highly compensated employees under section 401(m) could not exceed 125 percent of the contribution percentage of the eligible nonhighly compensated employees. This rule could require the employer in this example to amend the plan to restrict the matching contributions to highly compensated employees or to distribute or forfeit the excess aggregate contributions.

Although the example provided above provides the clearest case of multiple use of the alternative test, there may be cases in which such multiple use is less clear. Thus, it is expected that the prohibition on multiple use of the alternative test is to be effective no earlier than the date specified in final regulations, which may relate back to the date of proposed regulations.

¹⁹ A technical correction may be needed so that the statute reflects this intent.

Permissive aggregation

Under the Act, under rules prescribed by the Secretary, an employer may elect to take into account elective deferrals, matching contributions treated as elective deferrals, and/or qualified nonelective contributions under the plan or under any other plan of the employer. Qualified nonelective contributions are defined to mean any employer contribution (other than a matching contribution) with respect to which (1) the employee may not elect to have the contribution paid to the employee in cash in lieu of being contributed to the plan, and (2) the vesting and withdrawal restrictions applicable to elective deferrals under qualified cash or deferred arrangements are satisfied. These withdrawal restrictions are not satisfied if hardship withdrawals of nonelective contributions (or earnings thereon) are permitted. The Secretary may prescribe such other conditions on aggregating types of contributions for nondiscrimination purposes as are appropriate to carry out the intent of the provisions. (Of course, matching contributions that are treated as elective deferrals are required to be nonforfeitable and must satisfy the withdrawal restrictions applicable to elective deferrals.)

For example, if an employer maintains a qualified cash or deferred arrangement, a plan to which after-tax employee contributions and matching contributions are made, and a profit-sharing plan with employer contributions that are qualified nonelective contributions, then, subject to the rule described below, the employer can elect, for purposes of the special nondiscrimination test for matching contributions and employee contributions, to aggregate (1) elective deferrals under the qualified cash or deferred arrangement, (2) after-tax employee contributions, (3) employer matching contributions, or (4) qualified nonelective contributions. Of course, the employer could elect to aggregate so much of such elective deferrals, etc., as are necessary to satisfy the special nondiscrimination test.

Elective deferrals, matching contributions treated as elective deferrals, or qualified nonelective contributions may only be taken into account for purposes of the special nondiscrimination rules if the deferrals or contributions taken into account satisfy the applicable nondiscrimination rules and other contributions would not fail to satisfy applicable nondiscrimination rules if the deferrals or contributions taken into account were disregarded.

For example, assume an employer maintains 2 plans, each of which covers all employees. One plan contains a qualified cash or deferred arrangement. This plan does not provide for matching contributions but does provide a 2-percent qualified nonelective contribution on behalf of the nonhighly compensated employees. The second plan provides matching contributions for employees who make employee contributions. Assume further that, under the cash or deferred arrangement, the actual deferral percentage for the highly compensated employees is 4 percent while the actual deferral percentage for the nonhighly compensated employees, without regard to the qualified nonelective contribution, is 1 percent.

With the qualified nonelective contribution taken into account for purposes of the special nondiscrimination test applicable to elective deferrals, the respective actual deferral percentages are 4

percent and 3 percent. These percentages satisfy the special nondiscrimination test. In fact, the actual deferral percentage for the nonhighly compensated employees could have been 2 percent and still satisfied the special test. Thus, the nonelective contribution could have been 1 percent instead of 2 percent. The extra 1 percent nonelective contribution, not needed for purposes of the cash or deferred arrangement special nondiscrimination test, may be used to help the other plan satisfy the special test applicable to matching contributions and employee contributions. However, the full 2 percent nonelective contribution may not be used to help the other plan because half of it is needed so that the cash or deferred arrangement satisfies the special test applicable to it.

If the rate of matching contributions favors the highly compensated employees (e.g., because there is a higher rate of matching contributions on elective deferrals or employee contributions in excess of a certain amount and because the highly compensated employees make proportionately more elective deferrals or employee contributions above that amount), then the general nondiscrimination requirements of section 401(a)(4) are violated even if the special nondiscrimination test is satisfied. This rule applies regardless of whether the rate of matching contributions favors the highly compensated employees expressly under the plan formula or by virtue of the fact that highly compensated employees receive matches on excess deferrals, excess contributions, or excess aggregate contributions.

On the other hand, a plan is not treated as automatically violating the general nondiscrimination requirements (sec. 401(a)(4)) merely because (1) employer matching contributions are made both with respect to elective deferrals and with respect to employee after-tax contributions and (2) the highly compensated employees generally make more after-tax employee contributions.

Eligible employees

Under the Act, any employee who is eligible to make an employee contribution (or, if the employer takes elective deferrals into account, is eligible to make elective deferrals) or is eligible to receive a matching contribution that is subject to this special nondiscrimination test (sec. 401(m)) is treated as an eligible employee for purposes of the special nondiscrimination test. In addition, under the Act, if an employee contribution (or elective deferral, if applicable) is required as a condition of participation in a plan, an employee who is eligible to participate, but fails to make a required contribution, is treated as an eligible employee on behalf of whom no contributions are made.

Definition of highly compensated employee

The Act modifies the definition of highly compensated employees to which the special nondiscrimination test applies and provides that this uniform definition applies generally for purposes of the nondiscrimination requirements for qualified plans and employee benefit programs (see the description in Part B.7., below).

Treatment of excess aggregate contributions

As under the provision of the Act relating to qualified cash or deferred arrangements, if the special nondiscrimination test is not satisfied for any year, the plan will not be disqualified if the excess aggregate contributions (plus income allocable to such excess aggregate contributions) are distributed before the close of the following plan year. Generally, the amount of excess aggregate contributions and their allocation to highly compensated employees is determined in the same manner as with respect to excess contributions.

Under the Act, the amount of income attributable to excess aggregate contributions is that portion of the income on the participant's account balance for the year that bears the same ratio as the excess aggregate contributions bear to the total account balance.

In addition, Congress intended that the Secretary will prescribe rules relating to the coordination of an employee's excess deferrals (i.e., amounts in excess of the annual limit on elective deferrals under a qualified cash or deferred arrangement), the excess contributions, and the excess aggregate contributions. Generally, the excess deferrals are to be calculated and distributed first, then the excess contributions are to be allocated and distributed and, finally, the excess aggregate contributions are to be allocated among highly compensated employees and distributed.

Distribution of excess aggregate contributions may be made notwithstanding any other provision of law, and the amount distributed is not subject to the additional income tax on early withdrawals (sec. 72(t)) or the 15-percent tax on excess distributions (sec. 4981A).²⁰ Contributions are not subject to the 10-percent tax on nondeductible contributions (sec. 4972) merely because they are excess aggregate contributions. In addition, Congress intended that a plan is not required to obtain the consent of the participant or the participant and spouse to distribute an excess aggregate contribution.

Also, the Act provides that a plan can distribute excess aggregate contributions without regard to the terms of the plan until the first plan year for which plan amendments are required (see Part E.5., below).²¹

A plan may designate whether excess contributions or excess aggregate contributions are attributable to elective deferrals, qualified nonelective contributions, employee contributions, or employer matching contributions, as long as the ordering designated by the plan is used consistently. Of course, the plan's designation is also subject to the requirement that the order in which amounts are to be calculated and distributed is excess deferrals, excess contributions, and excess aggregate contributions. Further, a plan may not designate an order of distributions that results in the plan violating the general nondiscrimination requirements (sec. 401(a)(4)).

²⁰ A technical correction may be needed so that the statute reflects this intent.

²¹ A technical correction may be needed so that the statute reflects this intent.

Excise tax on excess aggregate contributions

Under the Act, an excise tax is imposed on the employer with respect to excess aggregate contributions (sec. 4979). The tax is equal to 10 percent of the excess aggregate contributions (but not earnings on those contributions) under the plan for the plan year ending in the taxable year.

However, the tax does not apply to any excess aggregate contributions that, together with income allocable to the excess aggregate contributions, are distributed (or, if nonvested, forfeited) no later than 2-1/2 months after the close of the plan year in which the excess aggregate contributions arose.

Excess matching contributions (plus income), excess elective deferrals (plus income), excess qualified nonelective contributions (plus income) and income on excess employee contributions distributed within the applicable 2-1/2 month period are to be treated as received and earned by the employee in the employee's taxable year to which such excess aggregate contributions relate. Excess matching contributions are deemed to relate to the same taxable year to which the employee's mandatory contribution relates, i.e., mandatory contributions that are elective deferrals relate to the taxable year in which the employee would have received (but for the deferral election) the deferral as cash, and mandatory contributions that are employee contributions relate to the taxable year of contribution. For purposes of this rule, the first contributions (of the type distributed) for a plan year are deemed to be excess aggregate contributions.

Effective Dates

The provisions generally are effective for plan years beginning after December 31, 1986. A special effective date applies to plans maintained pursuant to a collective bargaining agreement. In the case of a tax-sheltered annuity, the provisions are generally effective for plan years beginning after December 31, 1988, with a special effective date for tax-sheltered annuities maintained pursuant to a collective bargaining agreement.²²

Revenue Effect

This provision and the provisions discussed in 2., 4., and 6. of this Part A are estimated to increase fiscal year budget receipts by \$310 million in 1987, \$628 million in 1988, \$691 million in 1989, \$809 million in 1990, and \$924 million in 1991.

²² A technical correction may be needed so that the statute reflects this intent.

4. Unfunded deferred compensation arrangements of State and local governments (sec. 1107 of the Act and sec. 457 of the Code)²³

Prior Law

Constructive receipt

Under prior and present law, a taxpayer using the cash receipts and disbursements method of accounting generally is not required to include compensation in income until it is actually or constructively received (sec. 451). Under the doctrine of constructive receipt, a taxpayer ordinarily will be deemed to have received income if the taxpayer had a right to receive that income and the exercise of that right is not subject to substantial restrictions (Treas. reg. sec. 1.451-2(a)).

In applying the doctrine of constructive receipt, a number of courts have held that when a taxpayer enters into an agreement with a payor to receive compensation on a deferred basis, rather than currently, the taxpayer generally would not be in constructive receipt of that compensation so long as the agreement is made before the taxpayer obtained an unqualified and unconditional right to the compensation.²⁴

On February 3, 1978, the Internal Revenue Service issued proposed regulations that provided generally that, if payment of an amount of a taxpayer's fixed basic or regular compensation was deferred at the taxpayer's individual election to a taxable year later than that in which the amount would have been payable but for the election, then the deferred amount would be treated as received in the earlier taxable year.²⁵ These proposed regulations would have applied to plans maintained by taxable employees, State and local governments, and nongovernmental tax-exempt organizations.

In the Revenue Act of 1978, Congress exempted from the scope of the proposed regulations compensation deferred under an unfunded deferred compensation plan maintained by a taxable employer. Under the 1978 Act, the year that deferred compensation was to be included in gross income under certain private deferred compensation plans was determined under the principles set forth in the rulings, regulations, and judicial decisions relating to deferred compensation that were in effect on February 1, 1978.

The 1978 Act also exempted from the scope of the proposed regulations certain unfunded deferrals under an eligible deferred compensation plan of a State or local government (sec. 457). Certain tax-exempt rural electric cooperatives were also eligible for this exemption. Under prior law, there was no specific statutory provision

²⁵ Prop. reg. sec. 1.61-16.

governing deferred compensation arrangements of nongovernmental tax-exempt organizations.

Eligible unfunded deferred compensation plan

Under an eligible unfunded deferred compensation plan of a State or local government, amounts of current compensation that are deferred on behalf of an employee are included in gross income when they are paid or made available. Under present and prior law, the maximum annual deferral under such a plan is the lesser of (1) \$7,500, or (2) 33⅓ percent of compensation (net of the deferral). Amounts contributed to a tax-sheltered annuity (both elective and nonelective) are taken into account in calculating whether an employee's deferrals exceed the limits.

In general, under prior law, amounts deferred under an eligible deferred compensation plan could not be made available to an employee before separation from service with the employer or an unforeseeable emergency. Distributions under the plan were required to commence no later than 60 days after the close of the later of (1) the year in which the employee attained the normal retirement age under the plan or (2) the year in which the employee separated from service. Amounts that were made available to an employee upon separation from service were includible in gross income in the taxable year in which they were made available.

Under an eligible deferred compensation plan, distributions are required to be made primarily for the benefit of participants, rather than beneficiaries. If a participant's benefits commence prior to death, the total amount of payments scheduled to be made to the participant are required to be more than 50 percent of the maximum amount that could have been paid to the participant if no provision were made for payments to the beneficiary.

Under an eligible plan, if a participant died before the date the entire amount deferred had been paid out, the entire amount deferred (or the remaining portion thereof, if payment commenced before death) was required to be paid to the participant's beneficiary over a period not exceeding 15 years, unless the beneficiary was the participant's surviving spouse. If the beneficiary was the participant's surviving spouse, benefits were required to be paid over the life of the surviving spouse or any shorter period.

Under prior and present law, deferrals under any plan, agreement, or arrangement that is not an eligible deferred compensation plan (other than a qualified State judicial plan, a qualified plan, or a tax-sheltered annuity) are includible in an employee's gross income when the amounts are not subject to a substantial risk of forfeiture, regardless of whether constructive receipt has taken place.

Reasons for Change

If adopted, the 1978 proposed regulations would prohibit employees of tax-exempt organizations from participating in unfunded deferred compensation plans as a means of providing tax-deferred retirement income. Congress believed that it was inappropriate to apply constructive receipt principles to employees of nongovernmental tax-exempt entities, thereby precluding their ability to es-
